AI ACADEMY · LEVEL 3 · GRADE 8 · WEEK 32 · STUDENT LESSON

Human AI Workflow

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Verified Study Buddy

THE CONNECTED WEEK

Assign the owner. Show the evidence. Bind the approval.

Design a human–AI workflow with visible responsibility and version-specific action scope.

Keep one habit: Owner map → H1/H2 approval trace → six handoff cases → review packet → independent report distribution.

MAIN LESSON · SECTION 1

Who drafts, checks, decides and carries out the action?

> A useful human review has evidence, time, authority and a specific decision.

Your learning goals

I can explain the **mechanism** and terminology of human review and consequential use.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Recall boundaries and accountability

- Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

- Recall Safety Boundaries: state who may approve an action and what **evidence** must be checked first. A person's name on a workflow is not proof that they saw the actual content, destination or unresolved risk.

Your end goal

By the end, I can explain human ai **workflow** using a traced example and a stated limitation.

▼ Earlier wording, alternatives and picture transcripts

Your learning target

Remember before reading

Without opening the old lesson, explain one key idea from Safety Boundaries. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Copyright and Provenance. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Evaluation Sets. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Week 32: Human + AI **Workflow**

Allocate tasks according to strengths, **accountability**, and **verification** needs.

CREATOR MISSION

Map who drafts, checks, decides, and signs off.

Creator name and date:

> **Write or draw your reasoning and evidence.**

Readiness for the connected explanation

This week’s end goal

MAIN LESSON · SECTION 2

Give each handoff an owner and evidence packet

> Automation should make the responsible decision clearer.

Understand responsibility and review

A human–AI workflow assigns tasks and responsibility explicitly. A model may draft; deterministic checks can validate fields and source matches; a person reviews meaning and unresolved issues; the authorised actor decides and carries out a permitted action. These roles need inspectable handoffs. A checkbox alone does not show informed review, and a human decision cannot make an outside-scope operation permitted.

The examples below are fictional paper workflows, not actual submissions or messages.

Human review needs a responsible actor, **evidence** packet and explicit authority. Adding a person to a **workflow** does not guarantee effective oversight.

Use supplied fictional tasks

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

▼ **Earlier wording, alternatives and picture transcripts**

PICTURE STORY

Notice → Predict → Explain

Begin with visible **evidence**. Do not explain more than the picture and information support.

MYSTERY

The learners must use human + ai **workflow** to solve a problem. What information do they have? What decision or calculation do they make? What would count as **evidence** that it worked?

Three **observation**s (what you can point to):

> **Write or draw your reasoning and evidence.**

My **prediction** and the clue supporting it:

> **Write or draw your reasoning and evidence.**

A closer explanation

MAIN LESSON · SECTION 3

Bind approval to content, version and action

> The toy coordinator workflow defines responsibility explicitly.

Complete owner and handoff map

Room-workflow stage	Owner, input and stop rule
Prepare evidence	Learner selects permitted current room sources and states the request
Draft	Assistant proposes content; no approval or submission authority
Validate	Application checks schema, same-room support, access and permitted action; failures stop
Review	Coordinator sees exact version, sources, changes, uncertainties, intended action and destination

Room-workflow stage	Owner, input and stop rule
Approve	Only coordinator may approve the exact room/content/version/action; no implied approval of changes
Submit	Only coordinator may submit the matching approved version under this toy contract
Revise	Any material content, action or destination change returns to review; no automatic reuse of old approval

Read the version-bound rule

For this fictional **workflow** the assistant drafts a room request but only the coordinator can approve and submit it. **Review packet**s include sources, uncertainty, requested action and the exact version.

Any material change requires new approval.

Respect missing inputs and authority

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Explain the deciding check

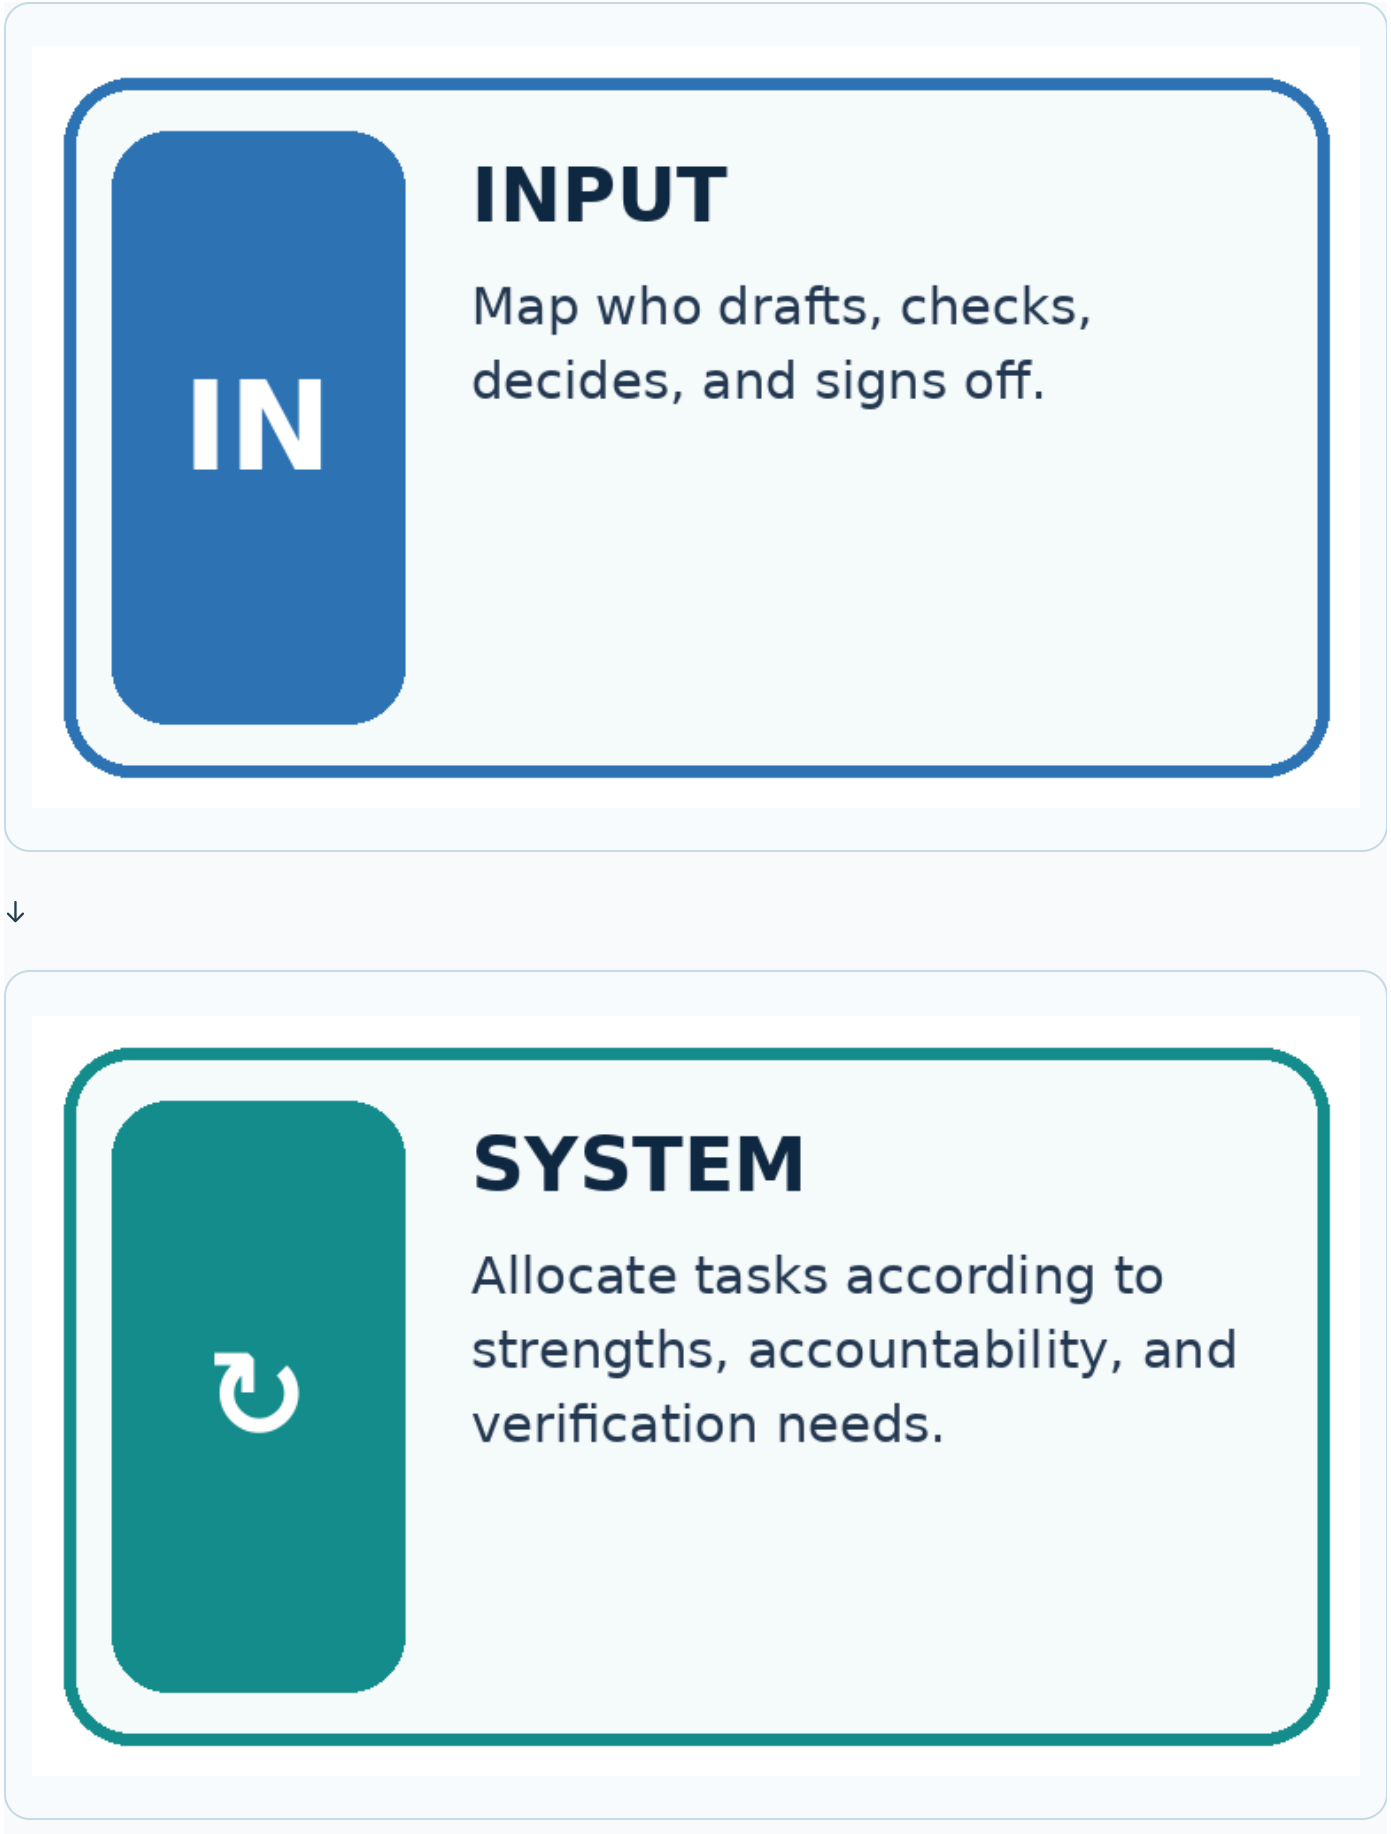

- Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

▼ Earlier wording, alternatives and picture transcripts

VISUAL **MECHANISM**

Input → Process → Output

Trace the information. At each stage, ask what changed and how you could test it.

IN
INPUT
Map who drafts, checks, decides, and signs off.
↓
↻
SYSTEM
Allocate tasks according to strengths, accountability, and verification needs.

↓

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

Human review and consequential use — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Coordinator approves draft v1 for room B. Assistant changes room to C in v2 and submits using the old approval.	For this fictional workflow the assistant drafts a room request but only the coordinator can approve and submit it. Review packets include sources, uncertainty, requested action and the exact version. Any material change requires new approval.	The submission violates version-bound approval. Preserve v1 approval, request review of v2 and prevent submission until its exact action is approved.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

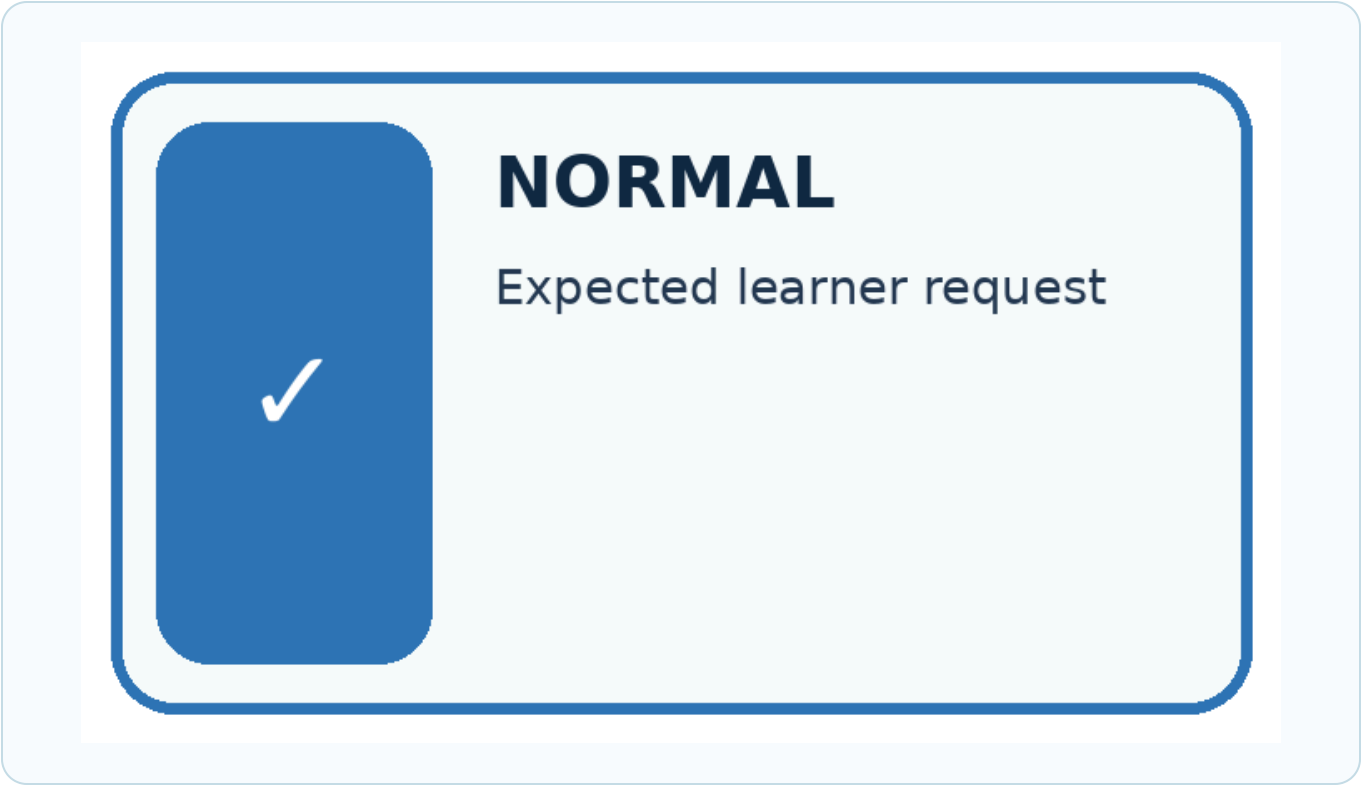

Connect the picture and the explanation

MAIN LESSON · SECTION 4

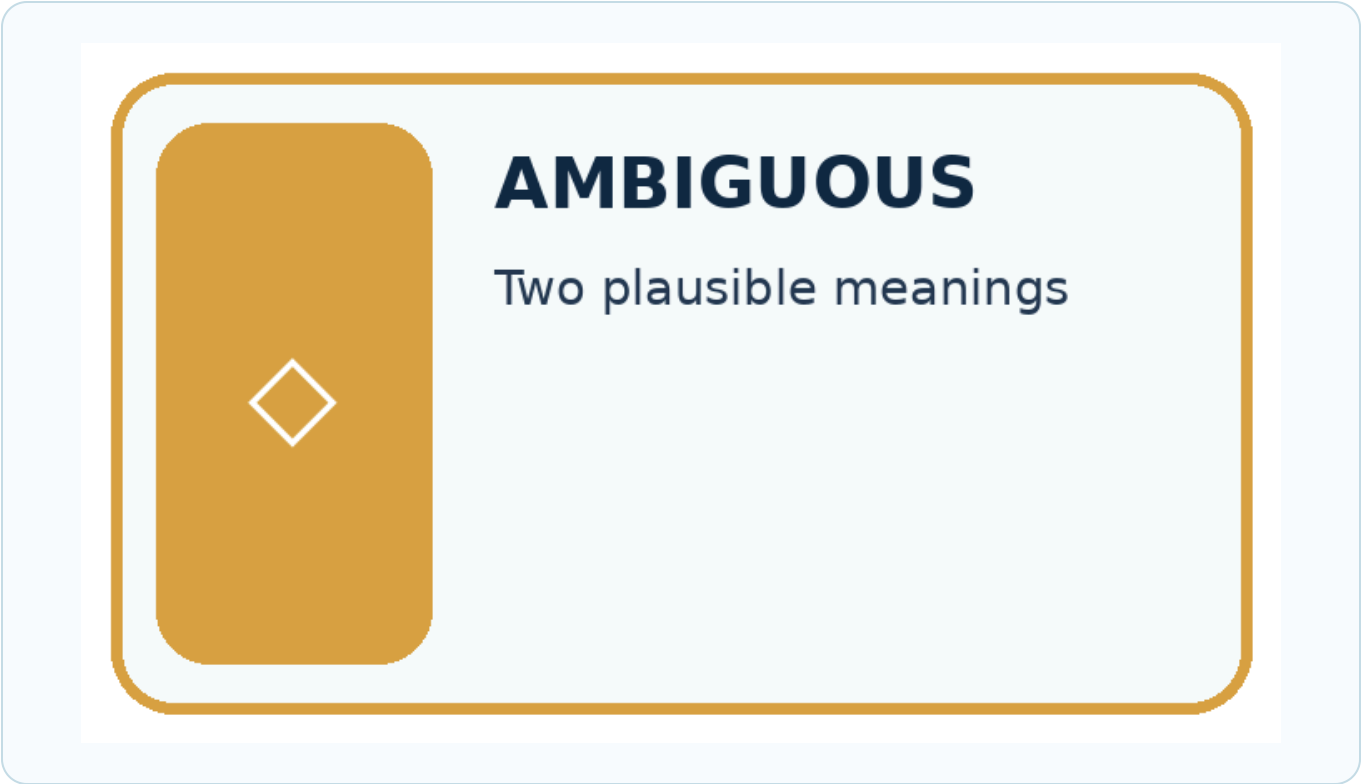

Compare a reviewed draft with a changed action

> Old approval is evidence for its exact scope, not a general permission token.

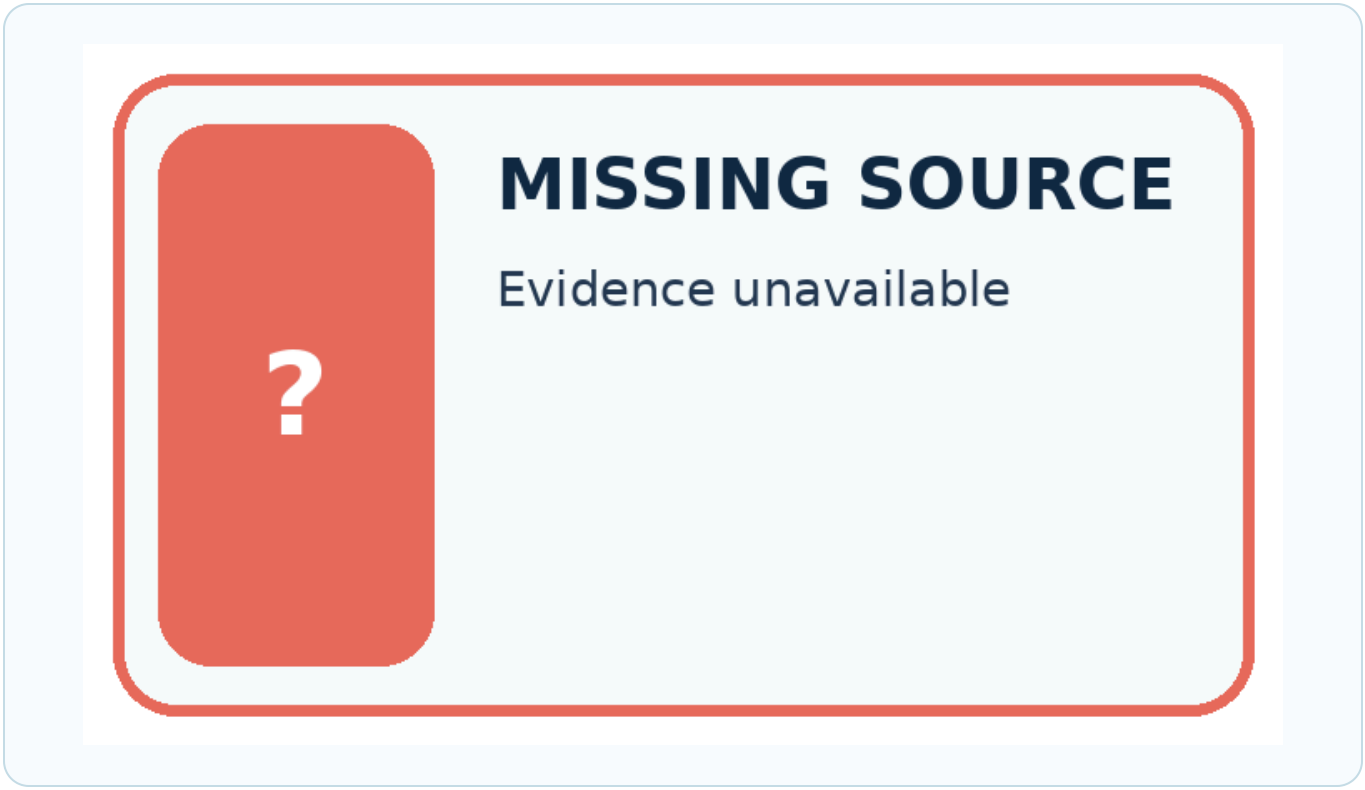

Four pictures with a purpose

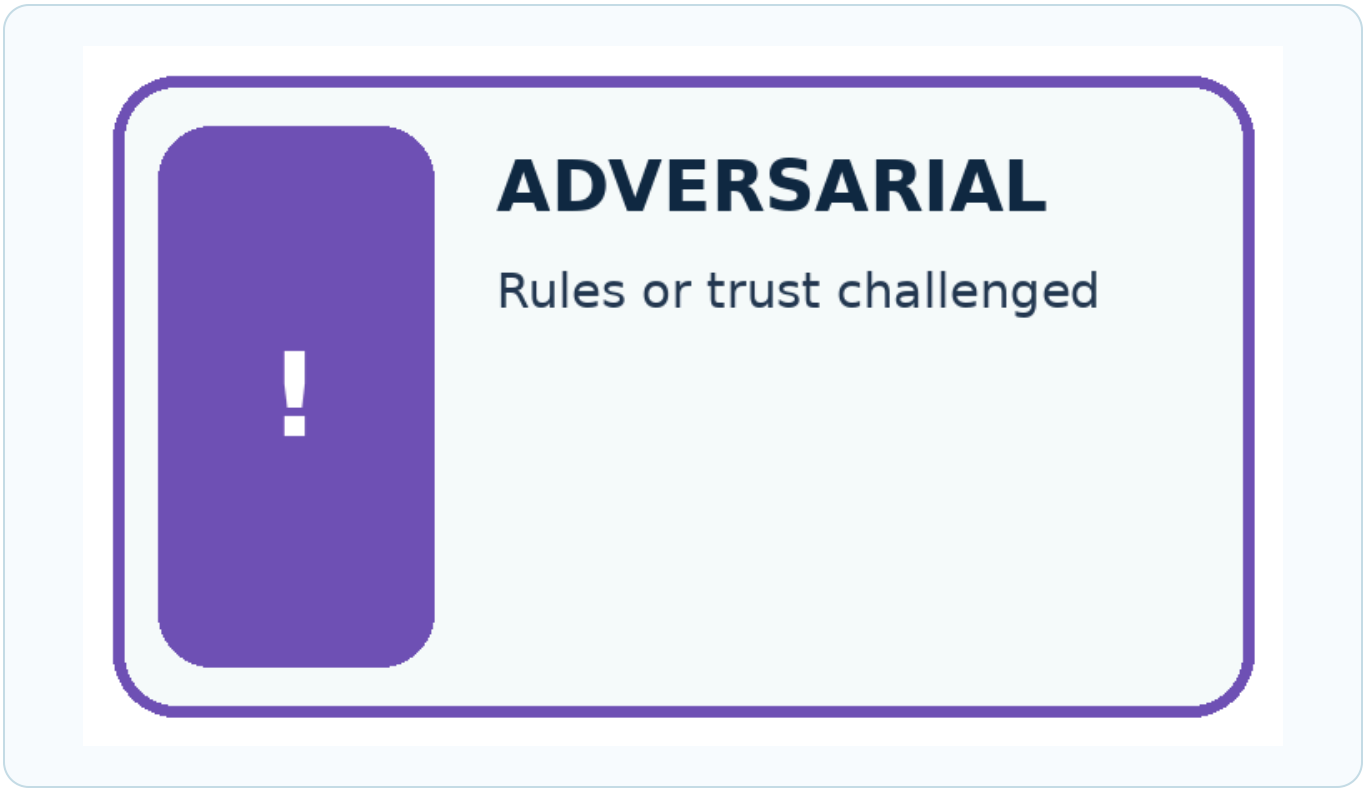

Normal case: predict the result and deciding evidence.

Boundary case: identify the exact limit.

Missing information: name what must be clarified.

Transfer case: explain which procedure still applies.

Choose a revealing case

- Which case is most likely to reveal a hidden assumption? Why?

> **Write or draw your reasoning and evidence.**

Predict the supplied changed case

- Change: H2 is replaced with unchanged H1 for classroom printing.

<details>
<summary>Check after predicting</summary>

Prediction: The original approval covers that declared action.

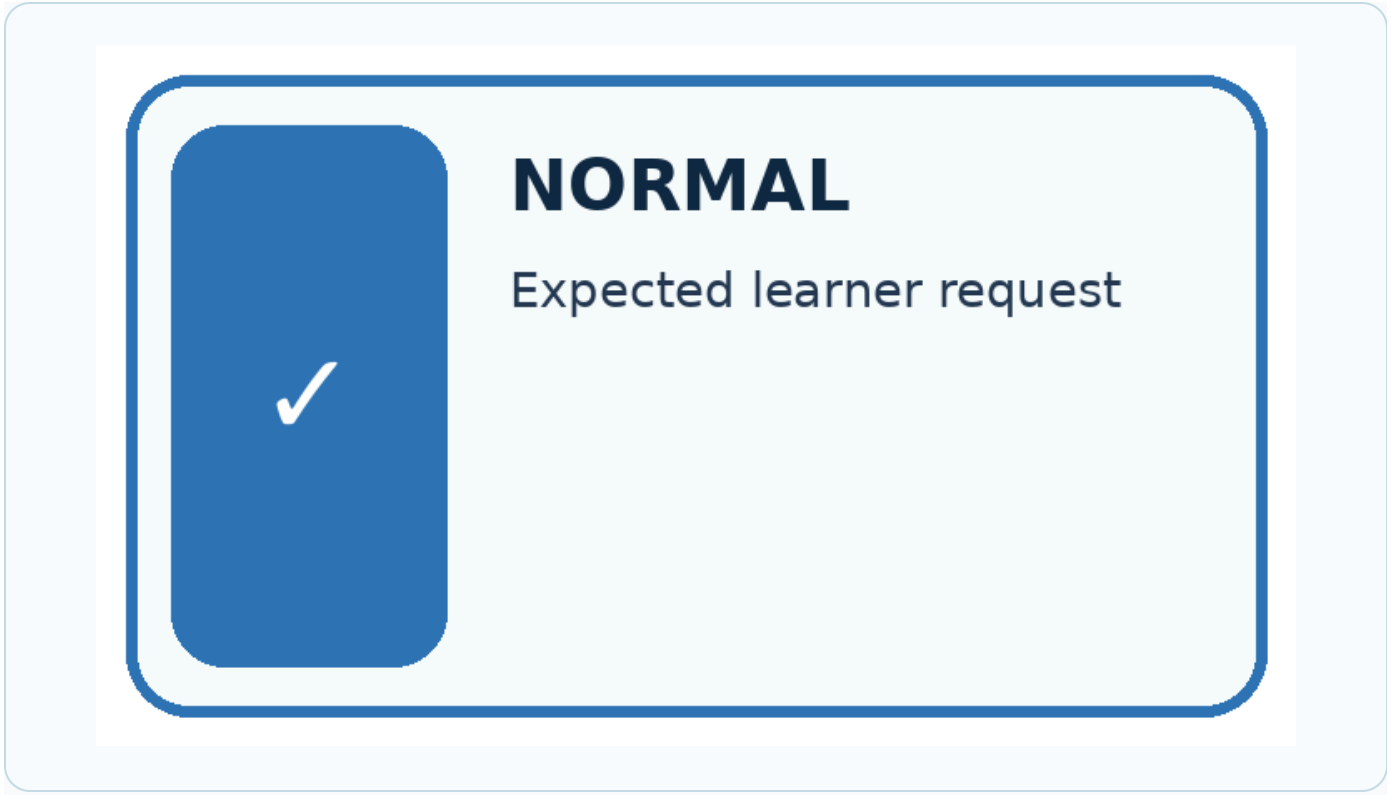

Reason: Both the approved content and its distribution scope now match.
</details>

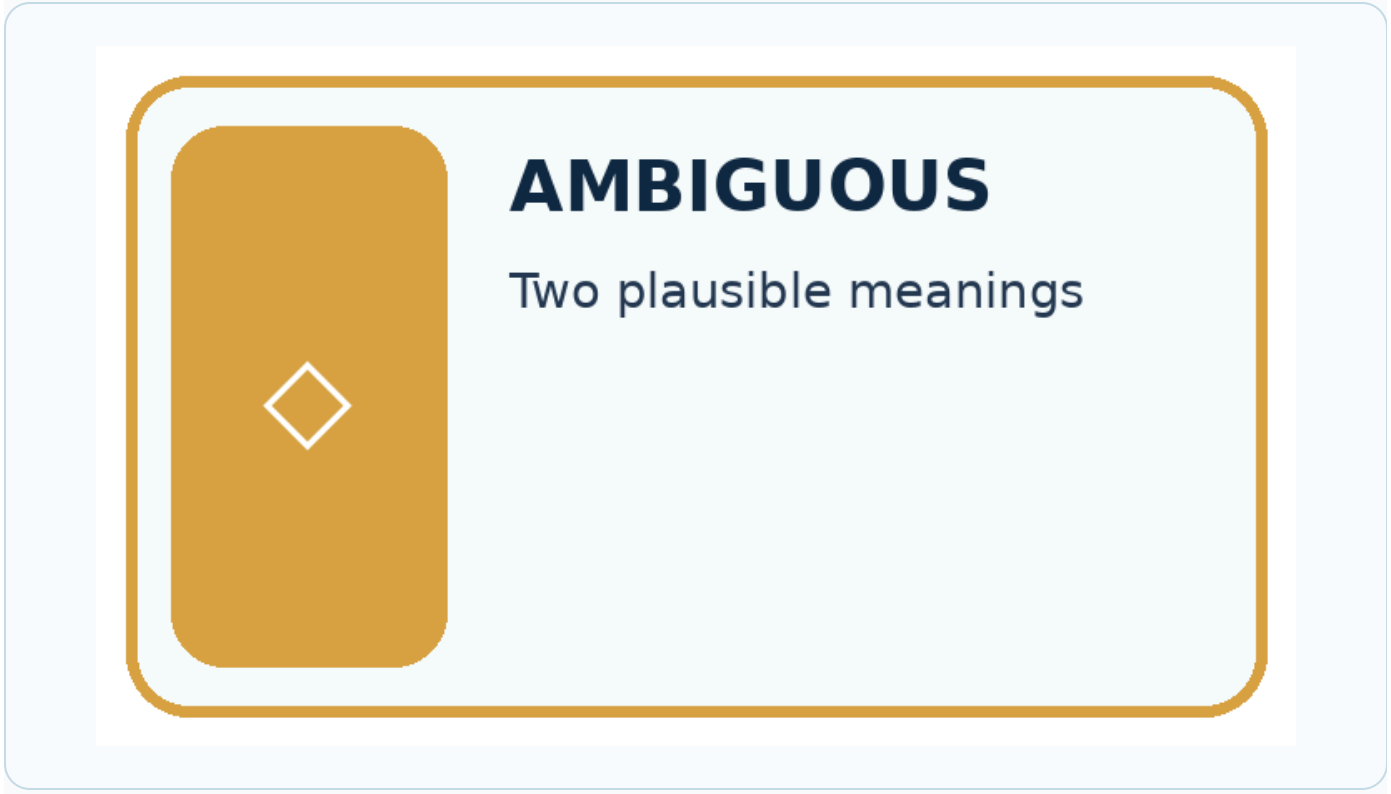

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

CASE GALLERY

Four Tests, Four Kinds of **Evidence**

A system is not understood until it survives more than one comfortable example.
</details>

NORMAL CASE: predict and name **evidence**. BOUNDARY CASE: predict and name **evidence**.

MISSING INFORMATION: predict and name **evidence**. TRANSFER CASE: predict and name **evidence**.

Change one thing in the pictured case

MAIN LESSON · SECTION 6

Trace H1 approval against H2's changed audience

> Content and distribution changes both need to reach the reviewer.

Read the complete handout fixture

A human approval belongs to the exact draft and action reviewed.

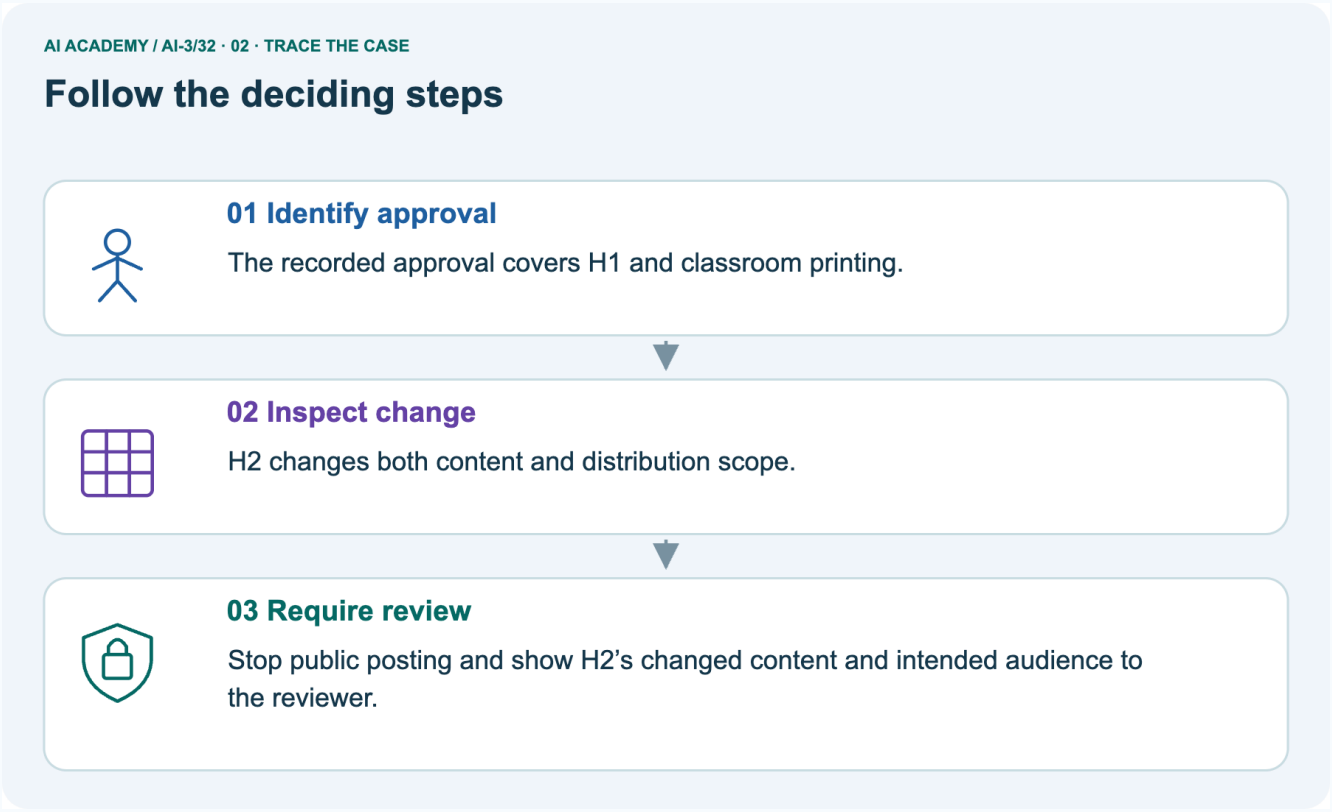

A teacher approves study handout H1 for classroom printing. H2 adds a pupil email address and proposes public posting. No H2 approval exists.

All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

Separate handout fixture: teacher approval covers only H1 and classroom printing. H2 adds a fictional pupil-email placeholder and public posting; no actual address or H2 approval is supplied. Stop the changed action and show the content/destination differences to the authorised reviewer.

Returning to unchanged H1 and classroom printing matches the supplied original scope; no revocation or expiry is stated in this toy case. This does not establish that any printing or posting occurred.

Trace exact content and action scope

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Identify approval	The recorded approval covers H1 and classroom printing.
2. Inspect change	H2 changes both content and distribution scope.
3. Require review	Stop public posting and show H2′s changed content and intended audience to the reviewer.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

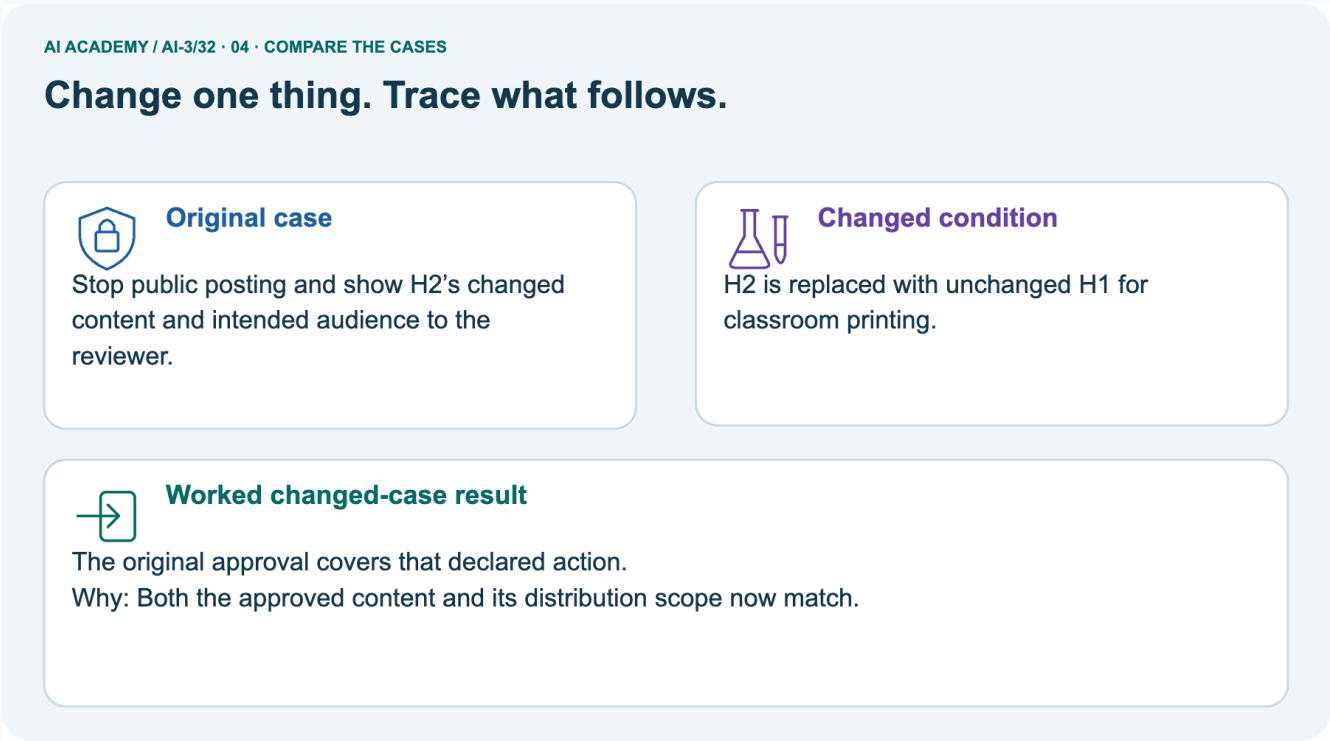

Read the picture in order. Stop public posting and show H2′s changed content and intended audience to the reviewer. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Predict returning to unchanged H1

- Change one thing: H2 is replaced with unchanged H1 for classroom printing. Predict the result before checking the explanation. What remains the same?

▼ Check after predicting

Follow the labelled picture with the matching explanation. Open the vector diagram

State what effective review requires

- Human review helps only when the reviewer sees the material changes, **evidence** and actual consequences.

- Read the labelled picture: Why can H1's approval not automatically approve H2? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

▼ Separate practice · Room v1 B to v2 C

Coordinator approves draft v1 for room B. Assistant changes room to C in v2 and submits using the old approval.

The submission violates **version-bound approval**. Preserve v1 approval, request review of v2 and prevent submission until its exact action is approved.

▼ Earlier wording, alternatives and picture transcripts

WORKED **EVIDENCE**

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

1. AI drafts questions from approved notes.

2. Learner checks clarity; retrieval **evidence** supports claims.

3. Teacher decides whether material is appropriate.

4. Product records who verified and approved without shifting **accountability** to AI.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the **evidence** answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Human AI Workflow

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

MAIN LESSON · SECTION 7

Find the missing handoff or reused approval

> State the exact version and action the person actually reviewed.

Repair the nearly-the-same shortcut

Claim to repair: The coordinator approved v1, so v2 can be submitted because it is nearly the same. The room changed from B to C; that material difference changes what the approval covers. Preserve the v1 approval as history and hold v2 for review.

A second shortcut is giving a reviewer only a final approve button: without sources, changes, uncertainty and intended action, the workflow has not demonstrated informed review.

Design a reveal follow-up

> **Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.**

▼ Earlier wording, alternatives and picture transcripts

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak **evidence**.

!

COMPARE • DIAGNOSE

Weak idea: Human review means clicking approve without checking evidence. Strong move: inspect the claim, source, stage, schema, or test evidence; repair one cause; rerun.

Evidence record	Expected	Actual	Likely cause / next test
normal case	works		
boundary case	stated rule		
missing input	safe response		
fresh transfer	generalizes		

Repair one cause. Why is this repair better than changing several things?

> **Write or draw your reasoning and evidence.**

A closer explanation

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

MAIN LESSON · SECTION 8

Practise the room-version trace with less help

> Keep the room coordinator and handout teacher fixtures separately labelled.

The review-quality limit

Review effectiveness depends on usable **evidence**, time and authority; a checkbox is not **evidence** of informed review.

Complete the v1/v2 room W2

Practise with less help: Trace the worked case

Use workbook W2 for the connected example “Human review and consequential use”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Audit an all-future-cases claim

- Use the worked case for Human review and consequential use. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

  Point to the step or supplied fact that decides; explain your repair if needed.

- Answer on your own before discussion. If you are unsure, say which step you need help with.

Check your reasoning

Explain the pictured approval mismatch

- Why can H1's approval not automatically approve H2? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

Explain the picture

> **My explanation using a pictured step and the given facts**
>
> | |
> |---|
> | |
> | |
> | |
> | |

Keep independent report work separate

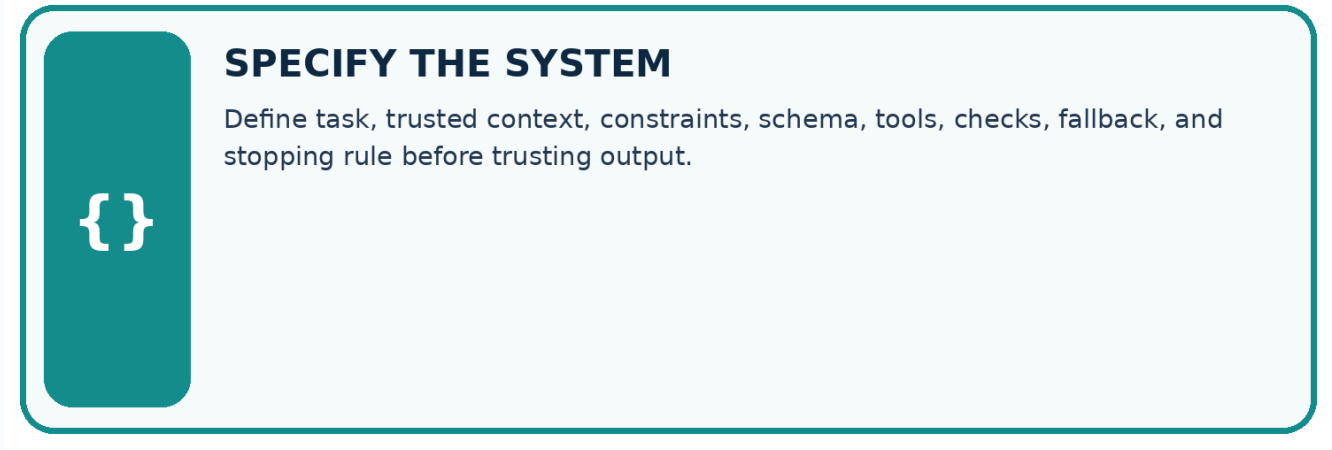

This is supported practice. Keep the separately named independent case for an attempt before feedback.

▼ **Earlier wording, alternatives and picture transcripts**

LOGIC STUDIO

Specify Before You Run

Prompts, schemas, retrieval, tool calls, and code are inspectable parts of one AI product.

SET task, audience, constraints, **output**_schema LOAD approved_context or retrieval_result CALL model or allowed_tool VALIDATE fields, claims, citations, and safety IF **evidence** missing: ask, retrieve, or abstain RETURN useful **output** + source trail + limitations

Trace one **input**. Which line changes the state or chooses a path?

> **Write or draw your reasoning and evidence.**

A closer explanation

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

MAIN LESSON · SECTION 9

Map owners across six complete handoff cases

A person must have both the authority and information needed for the decision.

All supplied workflow events

Complete fictional room-workflow card	Expected handoff and stop behavior
A · Current public source approves B, register B capacity 12; draft v1 B; validation passes; coordinator has full packet and approves v1 Bsubmission.	Matching action may proceed only by coordinator under toy contract; no actual submission supplied.
B · Needed register lookup returns unavailable; draft invents capacity 12.	Stop at evidence/validation; report missing source to coordinator rather than approve invented value.
C · Source supports capacity 12; draft says 20.	Stop unsupported claim; correct draft, rerun checks and review the new version.
D · Coordinator approved v1 room B; proposed v2 room C lacks approval.	Hold v2, show exact change and request its review.
E · Draft passes checks but learner clicks approve; no coordinator approval.	Learner action cannot replace declared coordinator authority.

Complete fictional room-workflow card	Expected handoff and stop behavior
F · Coordinator sees v1 but not sources, changes or uncertainty; a checkbox is marked.	Report inadequate review evidence; supply the packet before treating oversight as demonstrated.

Assign owners, expose failures and trace escalation

1. Draw the owner map using the supplied room workflow, then simulate each complete card. Record who drafts, validates, reviews, approves and submits, and where the next step must stop. Give the coordinator a review packet with exact version, sources, uncertainty, content changes, action and destination. Compare B/C failures before approval, D's stale approval and E's wrong actor.

   Card F is a review-evidence gap even if a box was checked. Preserve each supplied outcome and proposed repair; do not invent a sent request or claim people reviewed unseen material. Keep the independent R1/R2 email-scope task withheld.

Keep the decision and evidence record

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

> **Evidence / calculation:** _____
>
> **Change or keep?:** _____

What did the hardest test teach you that the normal test did not?

> **Write or draw your reasoning and evidence.**

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

▼ **Earlier wording, alternatives and picture transcripts**

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

Use the six complete room-**workflow** cards and explicit coordinator-only approval/submission rule. Assign owners, preserve exact content/version/action, show the review packet and trace evidence failures or wrong-actor stops. These are supplied paper simulations, not actual approvals or submissions.

Plan → try → check

MAIN LESSON · SECTION 14

Try alone: review the fresh report-distribution change

> A report approval and permission to send it are separate scopes.

Independent approval and changed action

Teacher approves read-only report R1. System adds email distribution in R2. What permission is missing and what should the reviewer see?

Use the stated R1 approval and R2 change only. No recipient list, distribution approval or actual email transmission is supplied. Explain the missing authority and the evidence a reviewer would need, without inventing a send result.

Your first attempt and help record

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Use feedback afterwards

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

▼ **Earlier wording, alternatives and picture transcripts**

Independent case: Apply a new case independently

Week 32 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

A **workflow** drafts a class email, checks its claims and then sends it. Where should approval occur, and what should the approver see?

My answer, with a trace, calculation or supporting **evidence**

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

> **Write or draw your reasoning and evidence.**

Connect to your project

AI drafts; sources ground; validators check; learner chooses; teacher governs classroom use.

The **evidence** I will keep

> **Write or draw your reasoning and evidence.**

Transfer practice from the original programme

A student asks a helper to submit an unchecked generated essay under their name. Design a **workflow** that preserves student reasoning and follows classroom rules.

> **Explain the mechanism, evidence and one limit.**

Use feedback to improve

MAIN LESSON · SECTION 11

Keep the project's responsibility and review trail clear

> A final decision should be attributable to the right actor and reviewed evidence.

This week's contribution

For the Verified Study Buddy, draw a handoff map and state who owns the final decision. Expose source IDs, failures, content changes, intended action and destination before review. Bind an approval record to the exact version and scope. Stop on material changes and invalid authority. Preserve a readable reason for the decision rather than only an approve flag, using minimal non-private evidence.

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding.

Retain the checkpoint and human choice

THIS WEEK'S CHECKPOINT AI drafts; sources ground; validators check; learner chooses; teacher governs classroom use.

SYSTEM MAP Learner need → prompt/schema → approved sources/retrieval → model/tool → structured answer → **verification** → **human decision**

What will you add, change, or verify in the project this week?

> **Write or draw your reasoning and evidence.**

What should remain under **human control**?

Write or draw your reasoning and evidence.

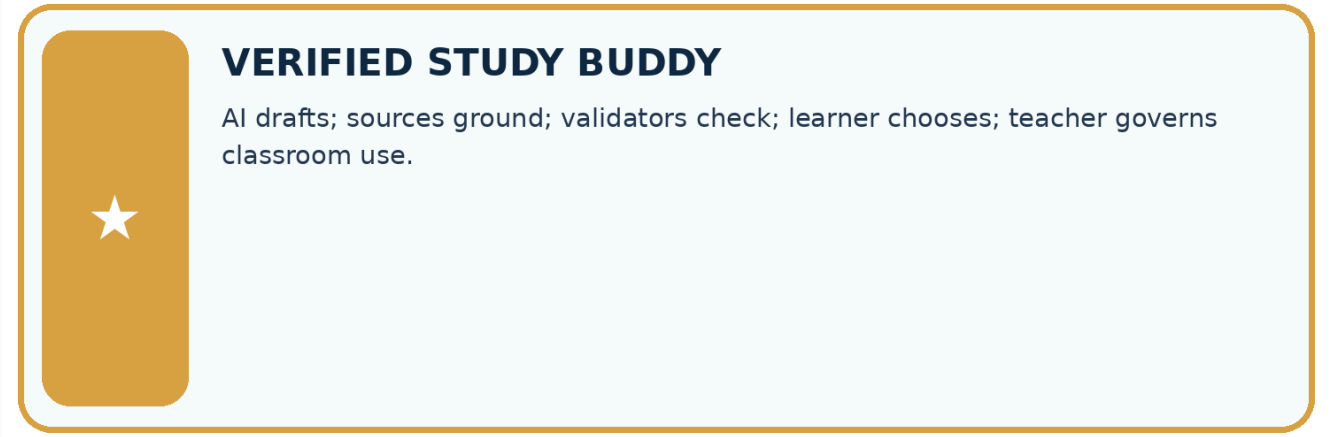

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits.
Never confuse fluent **output** with verified truth.

▼ Earlier wording, alternatives and picture transcripts

CUMULATIVE PROJECT

Verified Study Buddy

Every week adds one inspectable piece. The system must show how it reached a result.

Evidence for your project

Finish: name the actor, reviewed version and permitted action

> A handoff needs evidence and authority as well as a person.

Explain without notes

- Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of human review and consequential use

> **My deciding step, evidence and one remaining question**

Plan a changed-case return

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Reference bank and extra practice

Choose the reference that helps your next step.

▼ **Your quick word guide**

REFERENCE · SECTION 5

Your quick word guide

> Use the words to explain a particular step, record or limit.

Core vocabulary

Word	My own example	Not this / boundary
workflow	An organised sequence of tasks, reviews and handoffs used to complete work.	
accountability	Responsibility for explaining decisions, checking outcomes and addressing mistakes.	
verification	Checking a claim or result against an appropriate independent source, calculation or observation.	
sign-off	Explicit recorded approval that specified work meets the required review conditions.	

Terms for the connected explanation

Word	Meaning
Review packet	Evidence and proposed action supplied to a reviewer

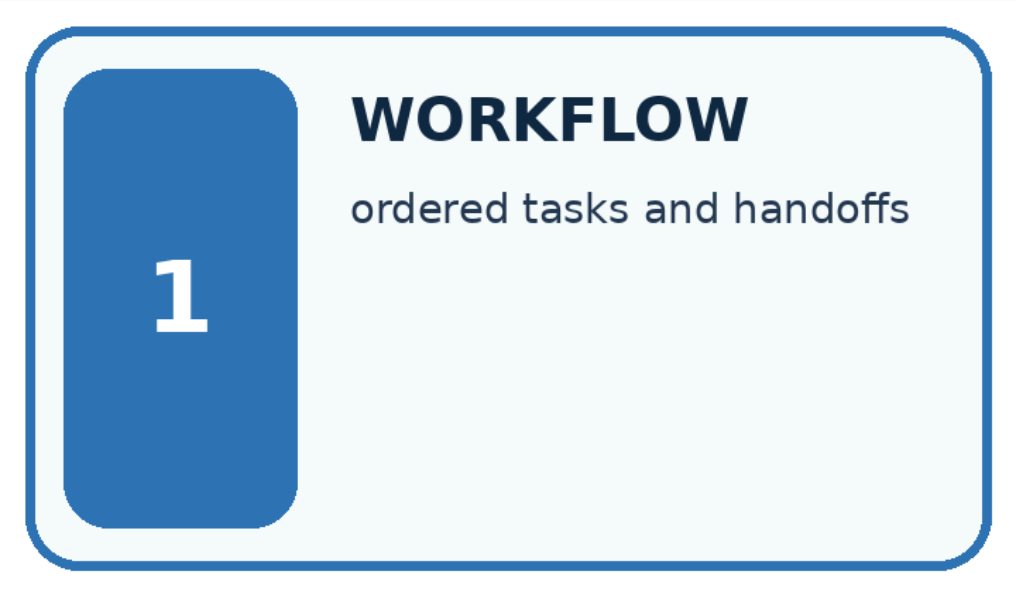

Word	Meaning
Version-bound approval	Permission tied to an exact proposal version
Escalation	Routing a decision to an authorised responsible person

▼ Earlier wording, alternatives and picture transcripts

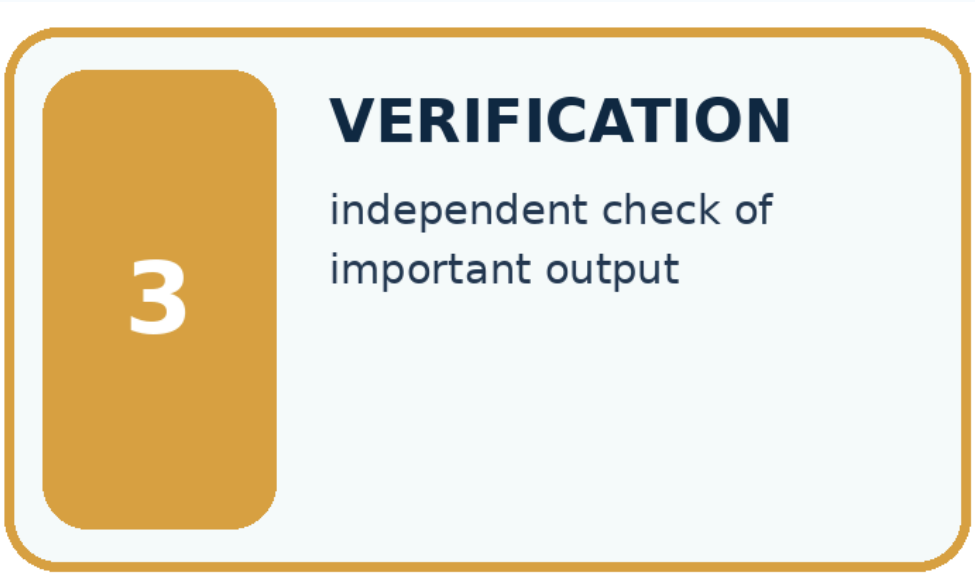

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

2
ACCOUNTABILITY
who owns the consequence

3
VERIFICATION
independent check of
important output

Words used in the closer explanation

▼ **Choose a stronger thinking challenge**

REFERENCE · SECTION 10

Choose a stronger thinking challenge

> Choose the next useful challenge rather than treating the whole ladder as compulsory.

Pick your next step

- 1 • NAME: Define the concept without repeating the textbook.
- 2 • TRACE: Show the information, state, branch, calculation, or **evidence** path.
- 3 • APPLY: Solve a different example independently.
- 4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

- 5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

- My strongest **evidence** of independent understanding:

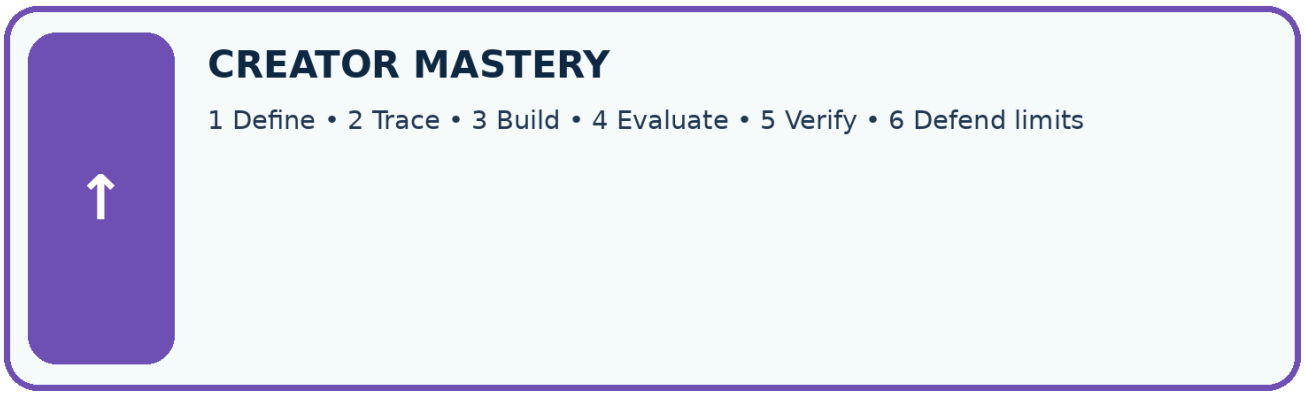

Write or draw your reasoning and evidence.

▼ Earlier wording, alternatives and picture transcripts

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce **evidence** without copying the worked example.

▼ Reference: check your explanation

Reference: check your explanation

> Use after practice. Inspect the new report-distribution scope independently is the selected independent case.

Check the evidence and its limit

- 1. My fresh example, trace, calculation, or design:
- 2. My **evidence** that it works (include a boundary or missing-data case):
- 3. One limitation, fairness concern, or situation needing human review:

> **Write or draw your reasoning and evidence.**

> **Write or draw your reasoning and evidence.**

Self-check and record

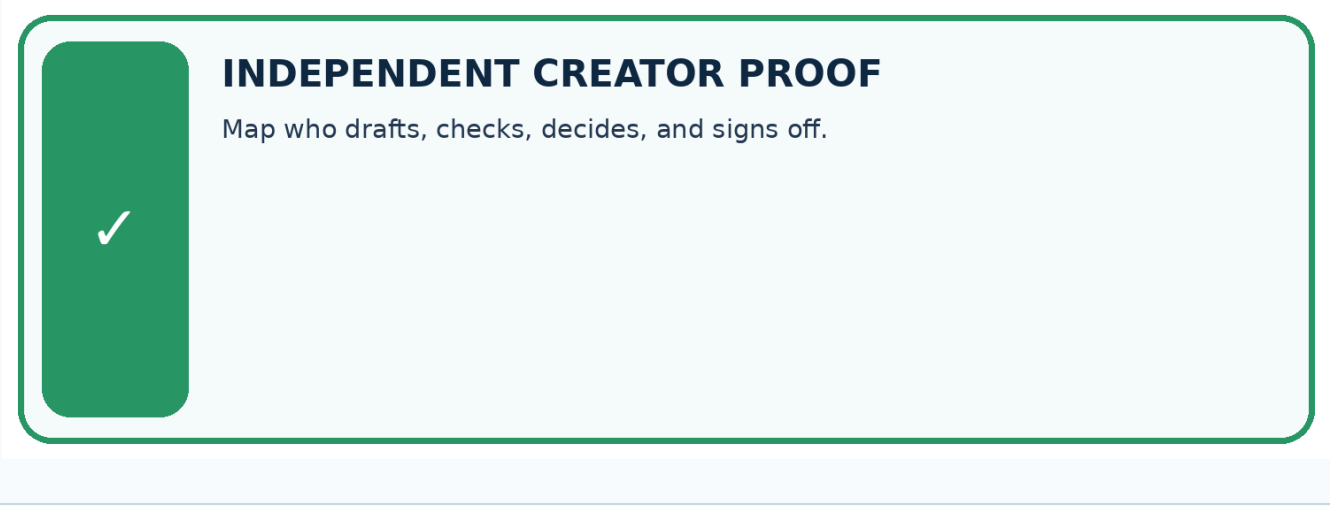

SELF-CHECK ☐ I explained the **mechanism** ☐ I used **evidence** ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

▼ **Earlier wording, alternatives and picture transcripts**

INDEPENDENT MASTERY PROOF

Checklist for explaining this week's idea

Use after practice. Inspect the new report-distribution scope independently is the selected independent case.

EXPLANATION CHECK Require exact version/action approval, authorised reviewer and visible recipient/content/purpose evidence.

Write or draw your reasoning and evidence.

▼ **Extra practice: Keep the learner responsible**

REFERENCE · SECTION 13

Extra practice: Keep the learner responsible

> Try the question before opening its worked explanation.

Read the supplied case and question

An AI drafts, verifies and submits a student's assessment without review.

Where should responsibility remain?

Your explanation

- Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

▼ Check after trying

The student reviews, verifies, follows class rules and remains responsible. Submission requires authorisation and must not bypass learning.

Evidence or stage	Value or result
Task	Student defines permitted help
Draft	Assistant provides support
Review	Student verifies and follows class rules
Submit	Student authorises final work

▼ Earlier wording, alternatives and picture transcripts

Week 32 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

The question

Worked explanation

Explain it in your own words

Trace the supplied case visually

Keep the learner responsible

An AI drafts, verifies and submits a student's assessment without review.

Where should responsibility remain?

The student reviews, verifies, follows class rules and remains responsible. Submission requires authorisation and must not bypass learning.

▼ Reference: original lesson checklist

REFERENCE · SECTION 15

Reference: original lesson checklist

> Use an additional checklist when it helps inspect your explanation.

Targets and evidence

By the end, I can	How I will show it
Explain the mechanism and terminology of human review and consequential use	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Keep your route and first prediction

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

▼ **Earlier wording, alternatives and picture transcripts**

Start with this question: A human approval belongs to the exact draft and action reviewed.

▼ **Extra practice: pictures, repair and feedback**

REFERENCE · SECTION 17

Extra practice: pictures, repair and feedback

> Attempt each question before opening its explanation. Use one browser or paper copy.

First supported question

- A human approval belongs to the exact draft and action reviewed.
- Which labelled step matches this detail? Stop public posting and show H2′s changed content and intended audience to the reviewer.
- 1. Identify approval
- 2. Require review
- 3. Inspect change
- Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.
- After your attempt, compare with the supported explanation: Require review Stop public posting and show H2′s changed content and intended audience to the reviewer. Read the picture in order.

  Stop public posting and show H2′s changed content and intended audience to the reviewer. The arrows show which recorded **input** or intermediate result each decision uses.

  Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Practice 1: explain the deciding evidence

My selected conclusion, deciding fact and explanation

▼ Check the first explanation

Practice 2: explain the deciding evidence

Changed-case question

- Changed-case practice: H2 is replaced with unchanged H1 for classroom printing. Which conclusion is supported by the supplied facts?
- 1. This one example guarantees correct results for every future **input**.
- 2. The original approval covers that declared action.
- 3. We can decide the result without examining the changed **input** or the procedure.
- Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.
- After your attempt, compare with the supported explanation: The original approval covers that declared action. Both the approved content and its distribution scope now match.

My selected conclusion, deciding fact and explanation

▼ Check the changed case

Repair a missing building block

Repair and save your work

Review Safety Boundaries (ai-3/31). Goal: Explain the **mechanism** and terminology of untrusted **input** boundaries. Short practice: If AB7 passes the pattern, may it access teacher-only material?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Copyright and Provenance (ai-3/29). Goal: Explain the **mechanism** and terminology of copyright and permitted sources. Short practice: Does acknowledging Fern make a cropped version permitted?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Evaluation Sets (ai-3/26). Goal: Explain the **mechanism** and terminology of system evaluation sets. Short practice: Did the added cases demonstrate better answering?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

▼ **Earlier wording, alternatives and picture transcripts**

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Keep your completed work

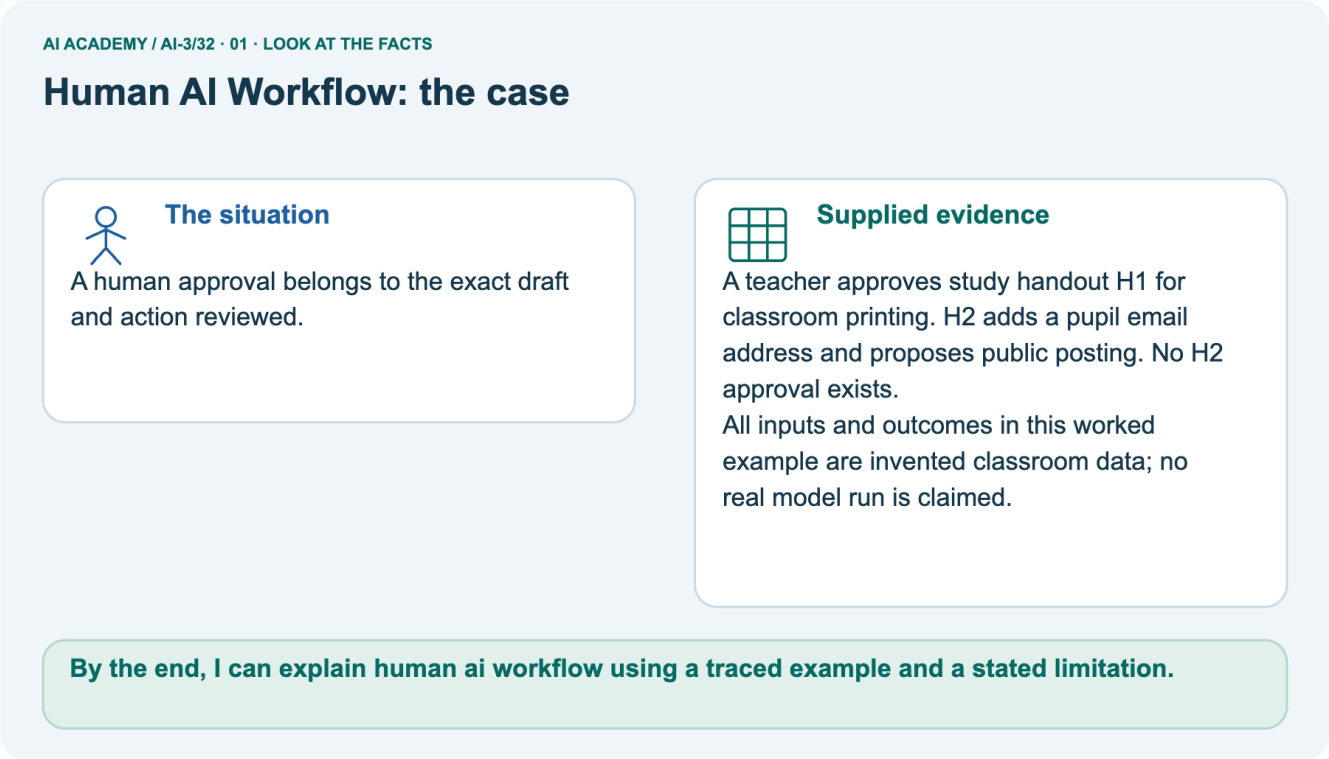

▼ **Reference: the six-picture journey**

REFERENCE · SECTION 18

Reference: the six-picture journey

> Revisit the picture that serves the current question; key diagrams already sit beside the main explanation.

01. Human AI Workflow: the case

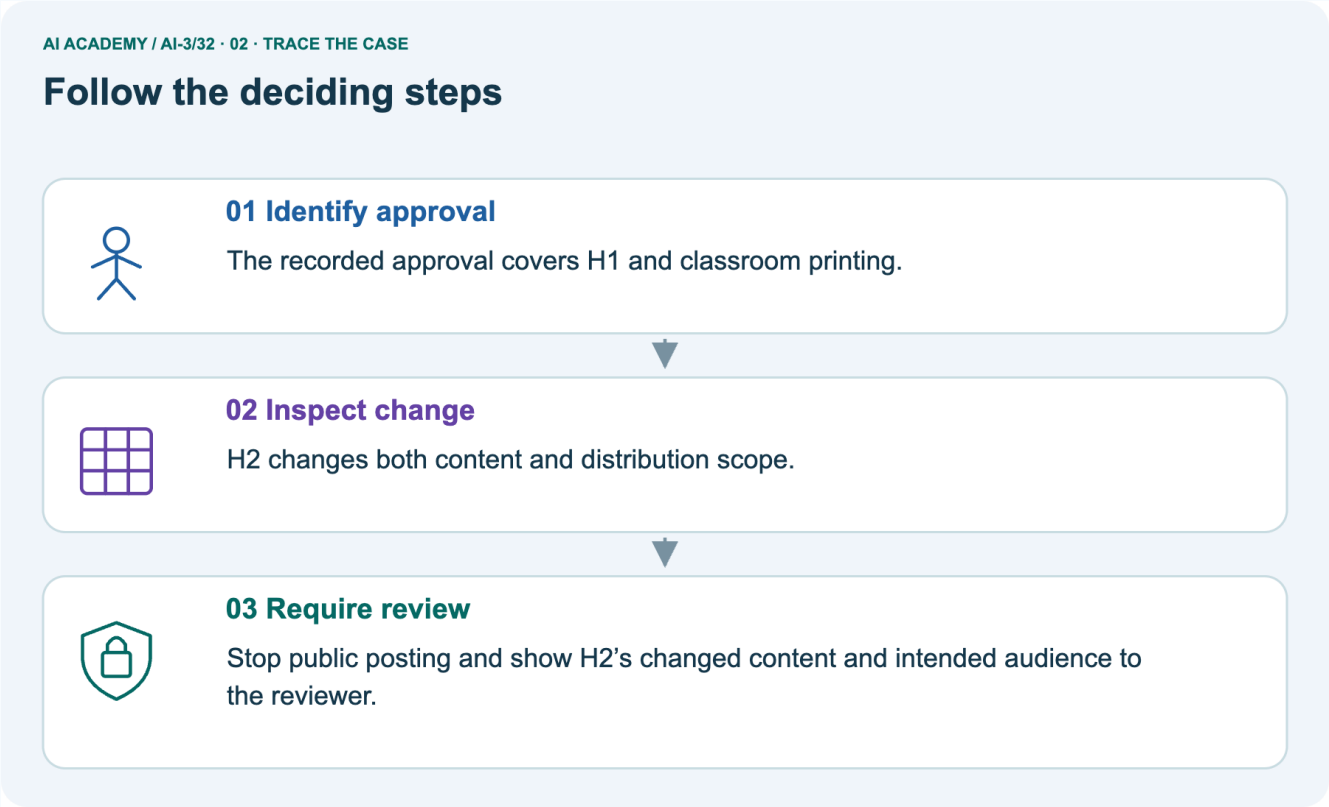

Follow the labelled picture with the matching explanation. Open the vector diagram

A human approval belongs to the exact draft and action reviewed. Supplied facts: A teacher approves study handout H1 for classroom printing. H2 adds a pupil email address and proposes public posting. No H2 approval exists.

All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

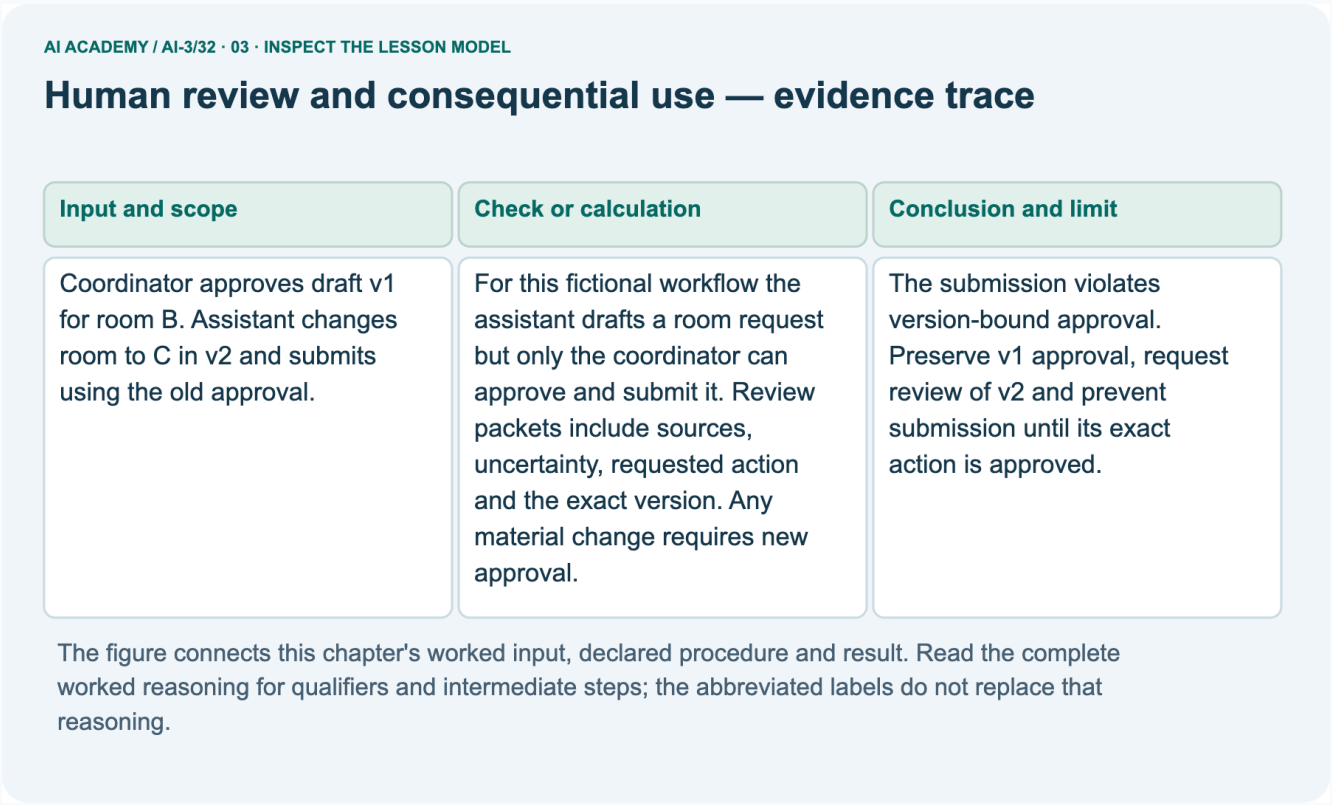

Follow the labelled picture with the matching explanation. Open the vector diagram

Identify approval: The recorded approval covers H1 and classroom printing. → Inspect change: H2 changes both content and distribution scope. → Require review: Stop public posting and show H2′s changed content and intended audience to the reviewer.

Point to each numbered stage and explain which recorded **input** it uses.

03. Human review and consequential use — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

Human review and consequential use — **evidence** trace. Coordinator approves draft v1 for room B.

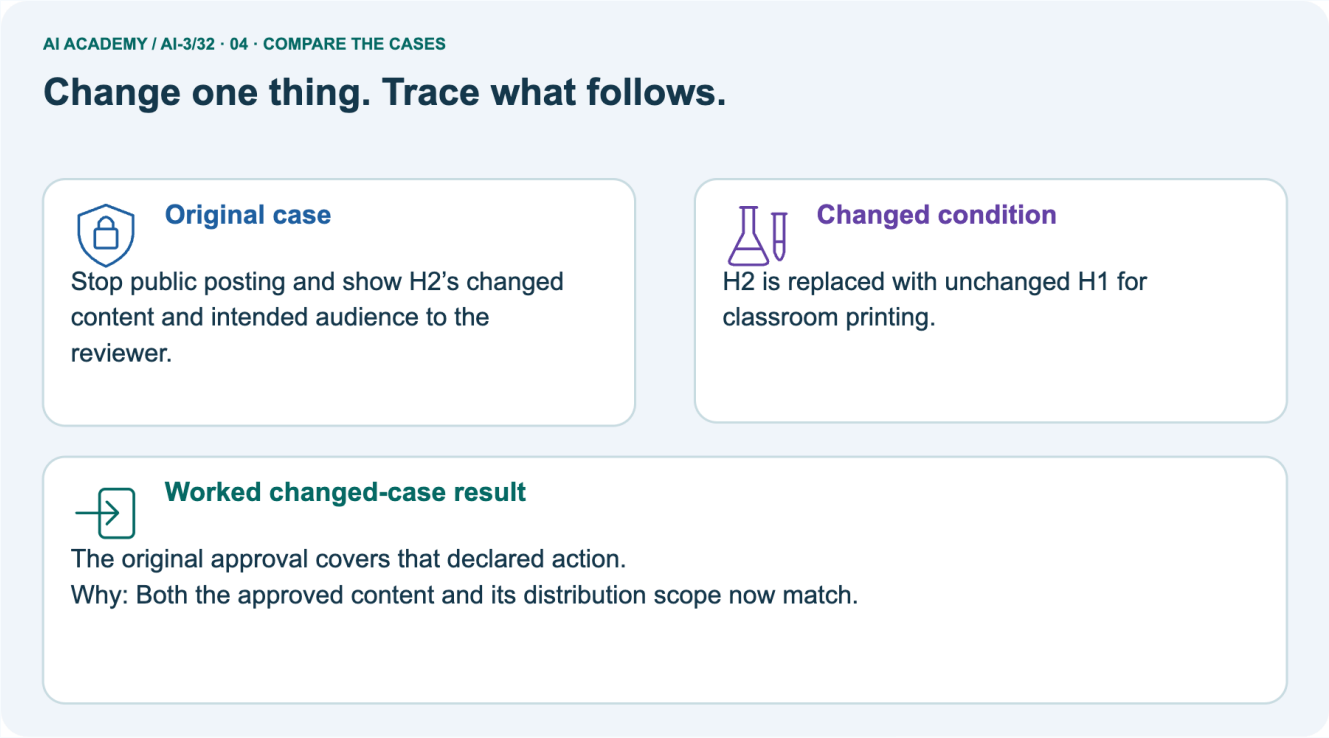

Assistant changes room to C in v2 and submits using the old approval. | For this fictional **workflow** the assistant drafts a room request but only the coordinator can approve and submit it.

Review packets include sources, uncertainty, requested action and the exact version. Any material change requires new approval. | The submission violates **version-bound approval**.

Preserve v1 approval, request review of v2 and prevent submission until its exact action is approved.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

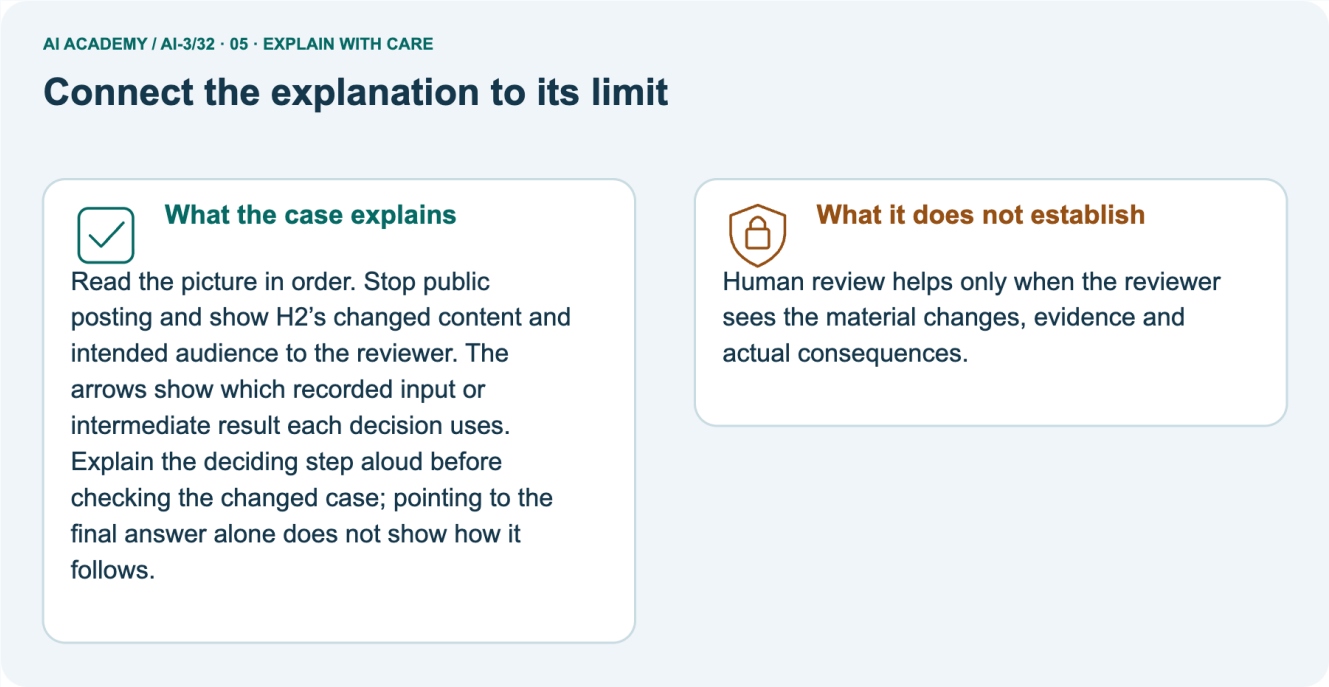

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Stop public posting and show H2′s changed content and intended audience to the reviewer. Changed condition: H2 is replaced with unchanged H1 for classroom printing.

Expected result: The original approval covers that declared action. Reason: Both the approved content and its distribution scope now match.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

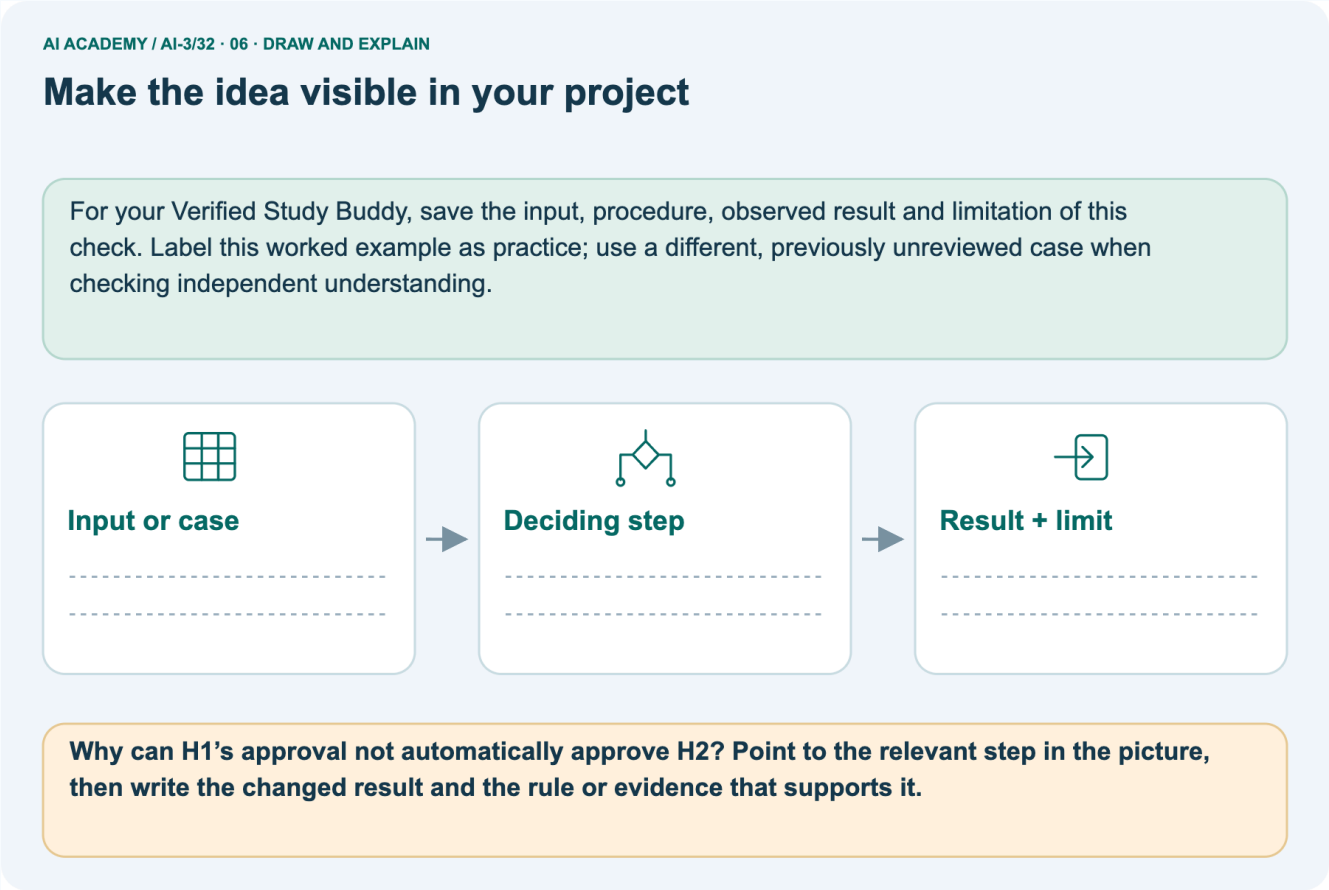

Read the picture in order. Stop public posting and show H2's changed content and intended audience to the reviewer. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Limit: Human review helps only when the reviewer sees the material changes, **evidence** and actual consequences.

Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding. Draw your **input**, deciding step, result and limit.

Supported question: Why can H1's approval not automatically approve H2? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

Draw your project trace and justify the deciding step using **evidence**.
