AI ACADEMY · LEVEL 7 · GRADE 12 · WEEK 3 · STUDENT LESSON

Finding primary research

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Reproducible AI Research Study

THE CONNECTED WEEK

Follow the source. Match the version. Record what you inspected.

Trace claims to exact original records while preserving secondary status, revisions and access gaps.

Keep one habit: Source contract → complete fictional document cards → benchmark-original picture → access/version probes → card inspection protocol → independent dataset mismatch.

MAIN LESSON · SECTION 1

Follow the claim to the exact original record and version

> A search summary helps discovery but cannot substitute for inspected methods/results.

Learning goals

I can explain the **mechanism** and terminology of finding primary research.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Retrieve headline scope, denominators and missing evidence

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Reading a research claim. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Prerequisite and starting response

- Recall Reading a research claim. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

> **My starting explanation**

End goal

Explain finding primary research using the records and boundaries of this fictional investigation.

▼ **Earlier wording, alternatives and picture transcripts**

Your learning target

Remember before reading

This week you will practise:

Explain the **mechanism** and terminology of finding primary research

Apply the stated procedure to a new case with a traceable result

Identify an assumption or limitation and design a revealing follow-up

Retrieve what you already know

This week’s end goal

MAIN LESSON · SECTION 2

Distinguish source type, identity and inspected evidence

> A citation should let another reader locate the actual supporting statement.

Begin with a newsletter and conflicting original counts

Imagine a school newsletter says a study used one hundred cases, but its original methods describe forty. A later revised record says sixty. Do not pick the biggest number or combine them into a new count. Identify which document supports the claim and record its version and location. Primary research reports the study’s own work; it still needs scrutiny.

If the original is unavailable, label the summary as a secondary, unverified account rather than pretending to have inspected it.

Define primary research and summary discovery

Primary research presents a study's own methods and results. A summary can help discovery but should not replace inspection of the original **evidence**.

Complete source-record contract

Source-tracing requirement	Complete classroom meaning
Primary report	Study authors describe their own methods/results; originality alone does not establish quality
Secondary summary	Blog/search summary describes another report; useful discovery lead

Source-tracing requirement	Complete classroom meaning
Source record fields	Title, authors, version, date, identifier, access location and claim locator
Claim context	Dataset, metric, denominator, method and exact scoped result
Version discipline	Keep original/revised records distinct; do not silently mix their counts or methods
Code and data	Separate artifacts with own versions/identifiers; neither automatically substitutes for the paper
Unavailable original	Record access gap and secondary status; no direct-primary verification claim
Exercise status	All document cards and identifiers below are fictional internal labels, not real papers/DOIs/URLs
Missing original data	A reported count can be attributed to its version without claiming an independent raw-data audit

Name supplied and missing evidence

List the given facts and one fact that is not supplied.

▼ **Earlier wording, alternatives and picture transcripts**

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

MAIN LESSON · SECTION 3

Trace the conflicting counts through complete fictional source cards

> Each number belongs to a particular document and locator.

Original bibliographic and version procedure

Record title, authors, version, date, identifier and access location. Distinguish paper, code, data and commentary. Verify that a quoted claim belongs to the cited version.

Complete original/revised/secondary practice cards

Added fictional document card	Identity and access location	Supplied claim locator/content
Blog summary	Title “Room retrieval study overview”; author Fictional Newsletter Team; v1; classroom date 2026-01-03; ID BLOG-R; this table/card BLOG-R	Summary paragraph: study used 100 cases; no supporting primary locator supplied
Original study record	Title “Room Retrieval Pilot”; author Fictional Team R; v1; classroom date 2026-01-01; ID STUDY-R-v1; this table/card STUDY-R-v1	Methods §2: 40 constructed cases; raw case appendix not supplied in this lesson
Revised supplementary record	Title “Room Retrieval Pilot — revised supplement”; author Fictional Team R; v2; classroom date 2026-01-02; ID STUDY-R-v2; this table/card STUDY-R-v2	Revised methods §2: 60 constructed cases; reason/membership relation to v1 not supplied
Faithful versioned record	STUDY-R-v1 §2 → 40; STUDY-R-v2 §2 → 60	Blog’s 100 is unsupported by these supplied originals; do not add counts or infer disjoint cases
Remaining evidence gap	Raw case identities and revision explanation unavailable here	Attribution verified within supplied cards only; no independent raw-data or real-literature verification

State what the cards do not supply

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Explain the visual

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

▼ **Earlier wording, alternatives and picture transcripts**

Finding primary research — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
A blog says experiment had 100 cases; original methods say 40 and supplementary version says 60 after revision.	Record title, authors, version, date, identifier and access location. Distinguish paper, code, data and commentary. Verify that a quoted claim belongs to the cited version.	Track versions and use the correct original record for the claim. The blog is secondary; the two original versions must not be merged silently.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Connect the picture and the explanation

Predict an unavailable original behind a remaining blog

> Missing access does not make a summary primary evidence.

Current task and response

- A blog says experiment had 100 cases; original methods say 40 and supplementary version says 60 after revision. Show the intermediate steps and give the conclusion with its scope.

> **Keep the procedure fixed. Explain what changed in the inputs and result.**

Predict the unavailable-report change

- Change: The original report is unavailable and only the blog remains.

▼ Check after predicting

Prediction: Mark the measurement as unverified rather than filling in absent methods.

Reason: The summary cannot supply details that have not been inspected.

▼ Earlier wording, alternatives and picture transcripts

Compare a familiar case with a changed case

Change one thing in the pictured case

Read the original task-set result behind the reliability headline

> Keep an attributed report result distinct from general reliability and direct reanalysis.

Main conflicting-version case and checked repair

A blog says experiment had 100 cases; original methods say 40 and supplementary version says 60 after revision.

Track versions and use the correct original record for the claim. The blog is secondary; the two original versions must not be merged silently.

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Separate benchmark report identity and exact scoped result

Find the source behind a summary. A blog describes a fictional benchmark improvement and links an original study report.

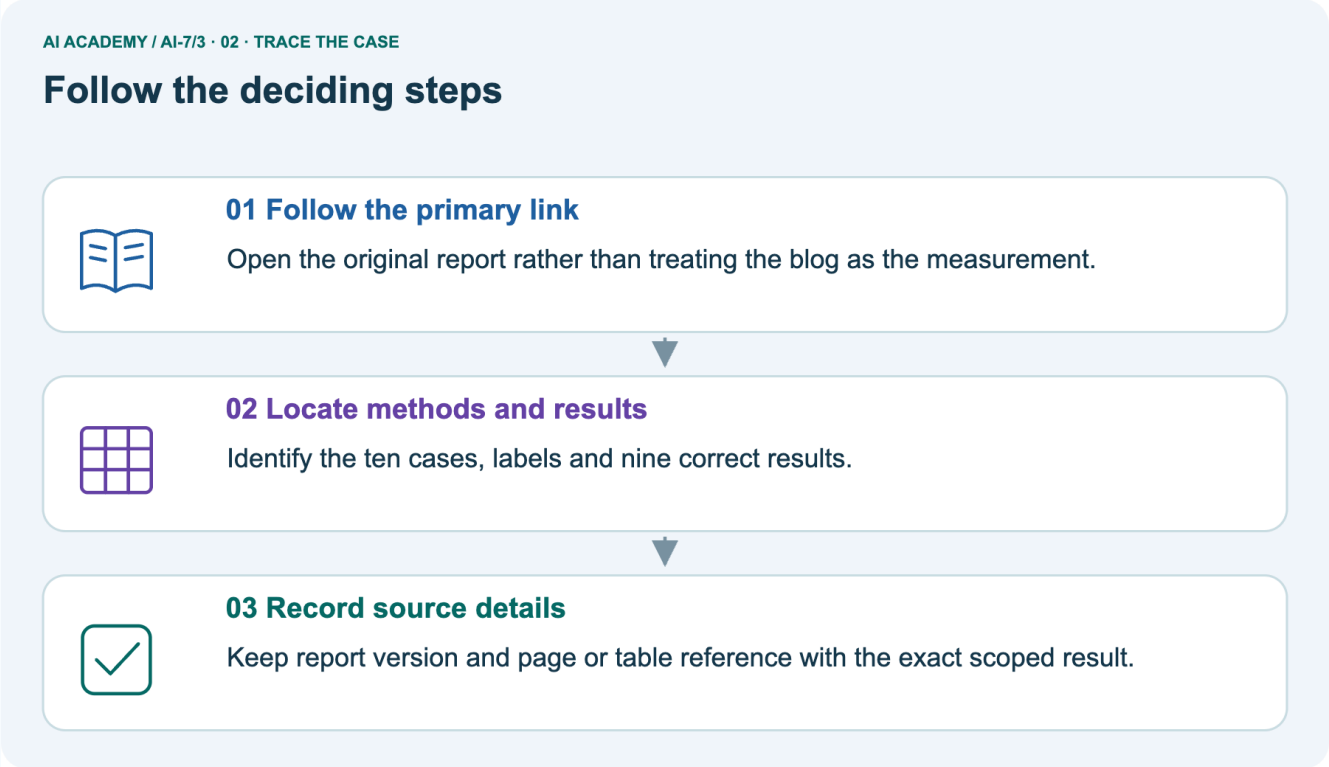

Blog says "90% reliable". Original report records 9/10 correct on one fixed fictional task set and describes its labels.

The picture is a separate fictional ten-case report. Its blog says “90% reliable”; the original records 9/10 correct on one fixed task set and describes the labels. A faithful claim is “the report records nine correct out of ten on its stated cases, ” with exact version and table reference, not general reliability.

For this practice, use fictional report ID BENCH-v1, version 1, results Table 1 and methods §2 as supplied locators, not a real citation. If that original is unavailable, keep the blog claim marked secondary and primary result unverified. Do not say you opened or inspected missing methods, and do not infer raw records from the percentage alone.

Separate fictional picture card	Supplied report detail
Identity	Title “Fixed Task Benchmark Note”; author Fictional Team B; version 1; classroom date 2026-02-01; ID BENCH-v1
Location	This supplied picture/card; methods §2 and results Table 1 are fictional locators
Methods §2	Ten fixed fictional tasks with supplied correct-answer labels
Results Table 1	Nine correct / ten tasks = 90% on this task set
Secondary blog	Headline “90% reliable” omits task-set scope
Unavailable-original variant	Only secondary headline accessible; methods/results verification not performed

Trace primary record, methods/results and locator

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Follow the primary link	Open the original report rather than treating the blog as the measurement.
2. Locate methods and results	Identify the ten cases, labels and nine correct results.
3. Record source details	Keep report version and page or table reference with the exact scoped result.

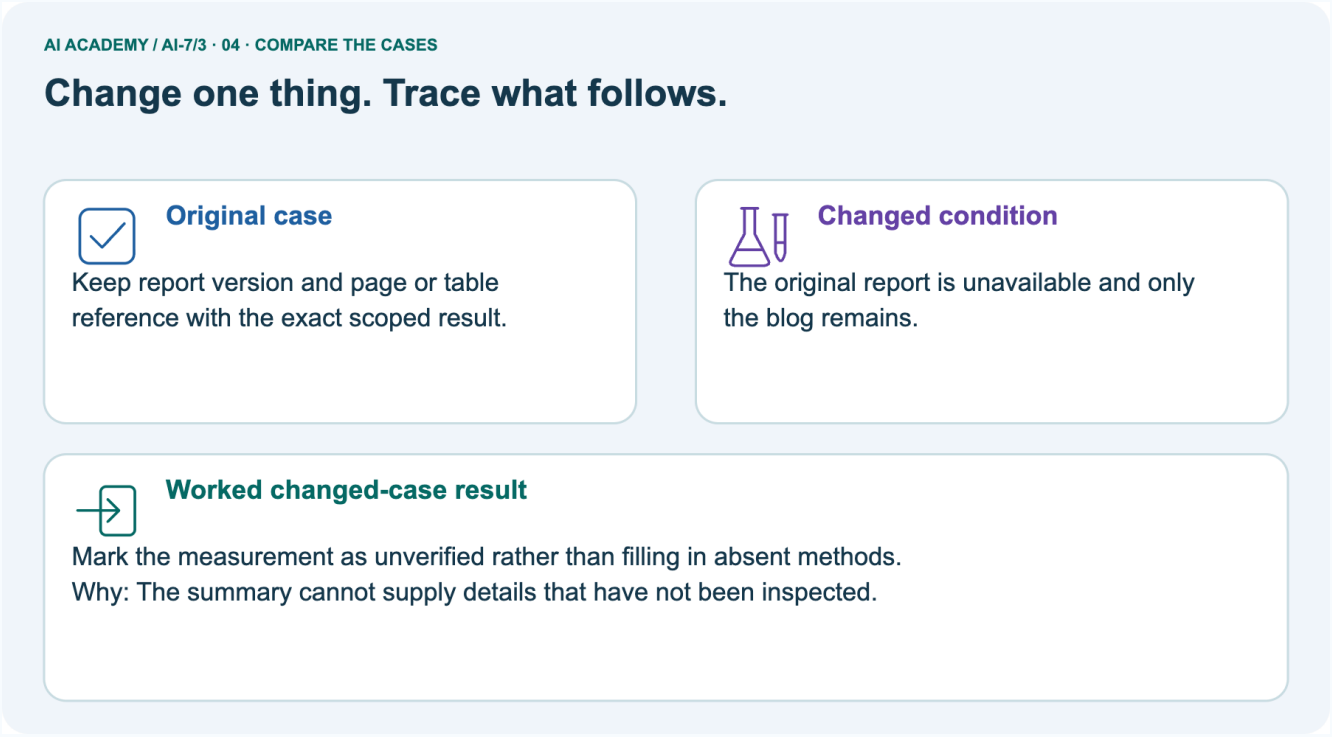

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Primary research exposes the procedure and **observation**s behind a summary. It still needs scrutiny; being original does not make every interpretation correct.

Predict only the blog remains

- Change one thing: The original report is unavailable and only the blog remains. Predict the result before checking the explanation. What remains the same?

▼ Check after predicting

Follow the labelled picture with the matching explanation. Open the vector diagram

Explain fictional-document status and unavailable evidence

- This example names fictional documents; it is a source-tracing exercise, not a real literature citation.

- Read the labelled picture: Separate what the blog claims from what the original report records. Which methods and denominator must be inspected, and what status is honest if the original report is unavailable?

▼ Earlier wording, alternatives and picture transcripts

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Finding primary research

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

MAIN LESSON · SECTION 7

Audit document identity, revision scope and access status

> Keep uncertainty about missing material in the source record.

Core source-tracing qualification and failure analysis

Being primary does not guarantee soundness; methods and **evidence** still require assessment.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Complete version and unavailable-original probes

Source-tracing probe	Expected interpretation
Blog and primary count disagree	Record mismatch; cite the original version supporting the statement
Original40, revised 60	Keep version-specific counts; no silent sum, average or replacement
Version date is newer	Does not make every earlier claim invalid; inspect what changed
Paper identifier known but text unavailable	Bibliographic discovery, not inspected methods/results
Only code or dataset found	Record separate artifact role/version; paper interpretation still needs evidence
Primary paper contains a claim	Still inspect method, metric and limitations; original is not automatically correct

Source-tracing probe	Expected interpretation
Quote has no page/section/table locator	Add the claim’s exact accessible location
Search summary uses different dataset	Do not borrow its number into the linked-paper comparison
Fictional practice cards completed	No real literature search, primary-paper access or raw-data audit claimed

Guided repair and explanation

- A report omits this qualification: Being primary does not guarantee soundness; methods and **evidence** still require assessment. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

State one repair and the checks you would rerun.

▼ Earlier wording, alternatives and picture transcripts

Locate the earliest unsupported step

MAIN LESSON · SECTION 8

Practise writing a traceable source record

> Attach the dataset/metric/locator to the exact version you inspected.

Current explanation and guided check

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Explain your prediction to a partner before comparing results.

Supported W2 trace

Use workbook W2 for the connected example “Finding primary research”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Individual scope check

- Use the worked case for Finding primary research. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

  Point to the step or supplied fact that decides; explain your repair if needed.

- Answer on your own before discussion. If you are unsure, say which step you need help with.

Picture response

- Separate what the blog claims from what the original report records. Which methods and denominator must be inspected, and what status is honest if the original report is unavailable?

> **My explanation using a pictured step and the given facts**
>
> | |
> |---|
> | |
> | |
> | |
> | |

Reserve the selected search-summary dataset mismatch

This is supported practice. Keep the separately named independent case for an attempt before feedback.

▼ Earlier wording, alternatives and picture transcripts

Practise with less help: Trace the worked case

Check your reasoning

Explain the picture

MAIN LESSON · SECTION 9

Complete a source-tracing record from the supplied document cards

> Inspect identity, version, claim location and unavailable evidence together.

Current conflicting-source investigation

A blog says experiment had 100 cases; original methods say 40 and supplementary version says 60 after revision. Show the intermediate steps and give the conclusion with its scope.

Complete card-by-card investigation protocol

Complete offline source investigation	Expected traceable record
Read BLOG-R	Secondary summary says 100; no supplied primary support for that number
Inspect STUDY-R-v1 §2	Original v1 reports 40 constructed cases; retain identity/date/locator
Inspect STUDY-R-v2 §2	Revised record reports 60; retain separate identity/date/locator
Compare without merging	Write two versioned statements and mark blog mismatch; relationship of case memberships remains unknown
Inspect separate BENCH-v1 card	Methods §2 fixed ten labelled tasks; Table 1 reports 9/10 correct

Complete offline source investigation	Expected traceable record
Remove original card in changed scenario	Label blog-only/secondary, original unavailable and primary claim unverified
Save access/evidence status	Supplied-card inspection versus not inspected; no live browsing or real citation claimed

Expected records and fiction/access limits

Use the complete fictional document cards, not a web search, for this investigation. Copy the identity and locator of each supporting count before deciding which claim it can support. The main 40/60 records are revisions, not automatically independent case groups. In the separate picture, 9/10 belongs to one task set, not all reliability. If an original card is unavailable, leave primary verification unperformed.

A later real-paper exercise should follow actual accessible source links and record exact versions/locators; do not invent those details or present these fictional IDs as real citations.

Evidence ledger and reflection

Record	Your evidence
Given input and fixed rule	
Prediction before checking	
Actual result, or “not run”	
First mismatch and one explanation	
Boundary or missing input and expected response	

On paper, trace the supplied procedure. If code is provided, predict before running it in a local practice file. Never write an expected answer as though it were an observed run.

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

▼ Earlier wording, alternatives and picture transcripts

Predict, investigate and preserve the evidence

Plan → try → check

MAIN LESSON · SECTION 14

Try alone: summary score belongs to a different dataset

> Record the mismatch instead of borrowing the search result's number.

Complete selected independent task

A search result describes a benchmark score, but the linked paper uses a different dataset. What should the comparison record contain?

First attempt and support record

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Feedback after trying

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

▼ Earlier wording, alternatives and picture transcripts

Independent case: Apply a new case independently

Attempt this without hints

A search result describes a benchmark score, but the linked paper uses a different dataset. What should the comparison record contain?

> **My independent procedure, result and limitation**
>
> | |
> |---|
> | |
> | |
> | |
> | |

Record support used: none, hint or teacher explanation. After feedback, a different case is needed to demonstrate independence.

Use feedback to improve

MAIN LESSON · SECTION 11

Save a source trail that another reader can retrace

> Keep primary report, code, data and commentary roles separate.

Project task and artifact

Add a labelled finding primary research **evidence** sheet to Reproducible AI Research Study. Show how you can explain the **mechanism** and terminology of finding primary research.

Use the supplied fictional case and keep its **input**s, intermediate steps, calculation or **prediction**, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

Project evidence	Record
Component and version	
Inputs permitted at prediction time	
Trace and comparison with earlier work	
Failure, limit and human review	

Actual supplied-card inspection and remaining access limits

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

▼ **Earlier wording, alternatives and picture transcripts**

Evidence for your project

MAIN LESSON · SECTION 16

Explain which version supports the claim and what remains inaccessible

> A source lead and inspected primary evidence are different achievements.

Retrieve and explain

- Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of finding primary research

My deciding step, evidence and one remaining question

Plan a changed-case return

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Reference bank and extra practice

Choose the reference that helps your next step.

▼ **Reference · Use research vocabulary precisely**

REFERENCE · SECTION 5

Reference · Use research vocabulary precisely

> Connect each term to the question, comparison, measurement or evidence.

Vocabulary and your explanation

Word	Meaning
Primary source	A record reporting its own study
Version identifier	A label distinguishing revisions
Secondary source	A summary or interpretation of another source

Use two terms to explain a step in this week's example.

REFERENCE · SECTION 10

Extra challenge · Explain a stronger case

> Choose the next challenge after the main route.

Explain,repair and extend

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

- A report omits this qualification: Being primary does not guarantee soundness; methods and **evidence** still require assessment. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Explain → apply → challenge

> **Explain which evidence supports your conclusion and which claim remains unproved.**

▼ Reference · Check the research reasoning and its limits

REFERENCE · SECTION 12

Reference · Check the research reasoning and its limits

> Use after practice; reserve the selected independent case for its first attempt.

Current explanation and response

- Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

  For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

My limited claim and a useful next check

▼ **Extra practice · Revisit the complete trace**

REFERENCE · SECTION 13

Extra practice · Revisit the complete trace

> Predict before reading the supplied steps.

Complete trace and evidence

Complete evidence record

Finding primary research — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
A blog says experiment had 100 cases; original methods say 40 and supplementary version says 60 after revision.	Record title, authors, version, date, identifier and access location. Distinguish paper, code, data and commentary. Verify that a quoted claim belongs to the cited version.	Track versions and use the correct original record for the claim. The blog is secondary; the two original versions must not be merged silently.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Follow the **input** through the stated procedure to its result. Cover the result first, predict it, then explain every intermediate step. The text/table accompanies the figure so the example can be read without colour.

My complete trace of the worked case

▼ Reference · The earlier route checklist

REFERENCE · SECTION 15

Reference · The earlier route checklist

> Use one main route rather than repeating the lesson.

Targets,route and first prediction

Start with this question: Find the source behind a summary. A blog describes a fictional benchmark improvement and links an original study report.

By the end, I can	How I will show it
Explain the mechanism and terminology of finding primary research	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

▼ Extra practice · Predict,check and repair

REFERENCE · SECTION 17

Extra practice · Predict,check and repair

> Keep supported feedback separate from the independent case.

First supported question and optional hint

- Find the source behind a summary. A blog describes a fictional benchmark improvement and links an original study report.
- Which labelled step matches this detail? Keep report version and page or table reference with the exact scoped result.
- 1. Record source details
- 2. Locate methods and results
- 3. Follow the primary link
- Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Practice 1: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check after the first attempt**

After your attempt, compare with the supported explanation: Record source details Keep report version and page or table reference with the exact scoped result.

Primary research exposes the procedure and **observation**s behind a summary. It still needs scrutiny; being original does not make every interpretation correct.

Changed-case question and optional hint

- Changed-case practice: The original report is unavailable and only the blog remains. Which conclusion is supported by the supplied facts?
- 1. This one example guarantees correct results for every future **input**.
- 2. We can decide the result without examining the changed **input** or the procedure.
- 3. Mark the measurement as unverified rather than filling in absent methods.
- Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Practice 2: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check after the changed attempt**

After your attempt, compare with the supported explanation: Mark the measurement as unverified rather than filling in absent methods. The summary cannot supply details that have not been inspected.

Repair and retain the record

Review Reading a research claim (ai-7/2). Goal: Explain the **mechanism** and terminology of reading a research claim. Short practice: Calculate the baseline and new rates for 2/10 and 4/10.

Explain both twice the rate and the percentage-point change, and say why neither measures every learner's improvement.. Return to this week and explain what you changed.

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Repair a missing building block

Keep your completed work
</details>

<details>
<summary>Reference · Six-picture concept journey</summary>
</details>

REFERENCE · SECTION 18

Reference · Six-picture concept journey

> Choose the picture that supports the current explanation.

01. Finding primary research: the case

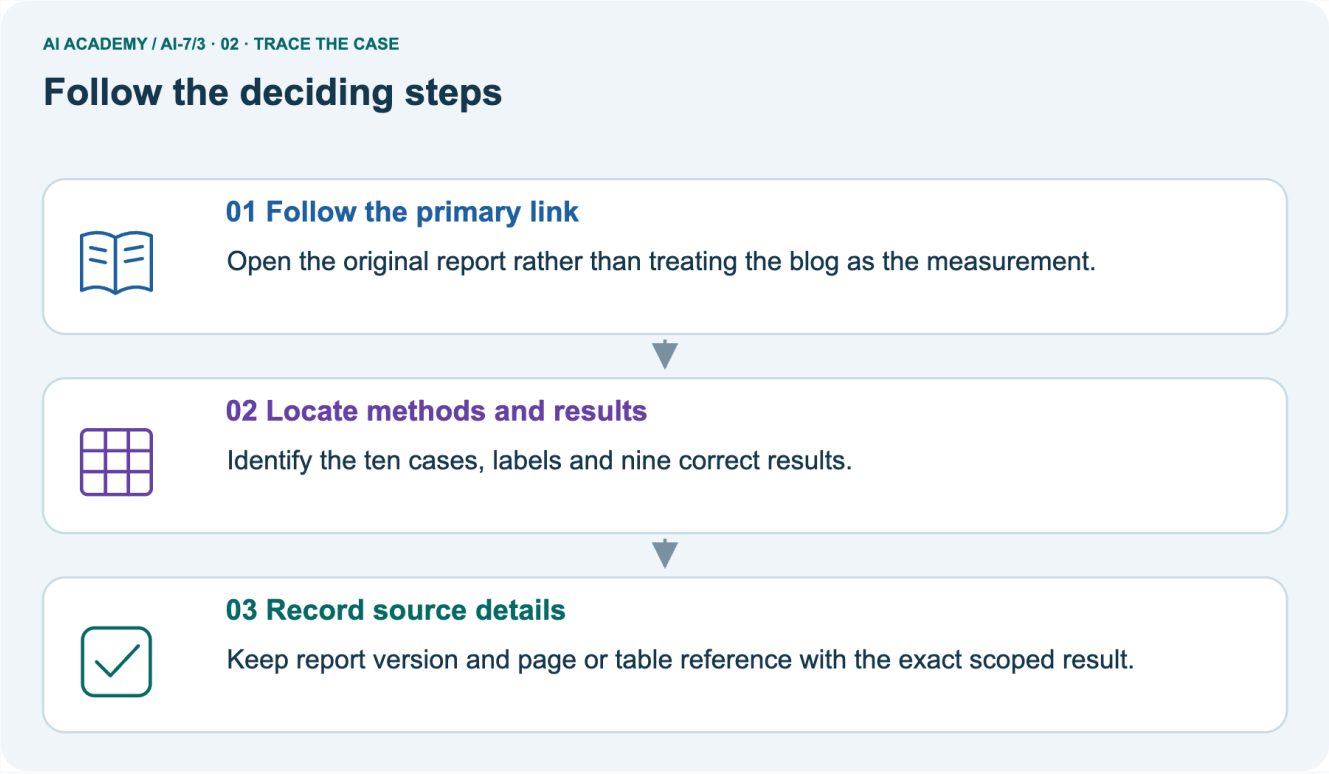

Follow the labelled picture with the matching explanation. Open the vector diagram

Find the source behind a summary. A blog describes a fictional benchmark improvement and links an original study report. Supplied facts: Blog says "90% reliable".

Original report records 9/10 correct on one fixed fictional task set and describes its labels.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

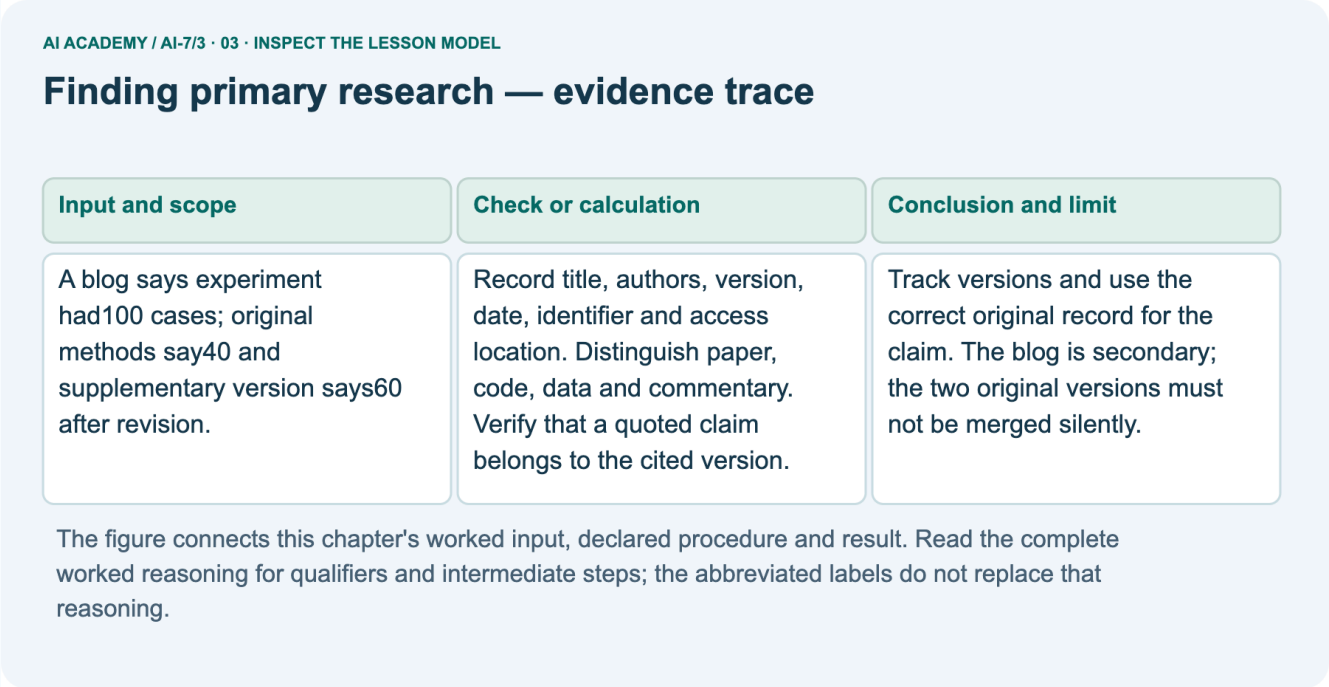

Follow the labelled picture with the matching explanation. Open the vector diagram

Follow the primary link: Open the original report rather than treating the blog as the measurement. → Locate methods and results: Identify the ten cases, labels and nine correct results. → Record source details: Keep report version and page or table reference with the exact scoped result.

Point to each numbered stage and explain which recorded **input** it uses.

03. Finding primary research — evidence trace

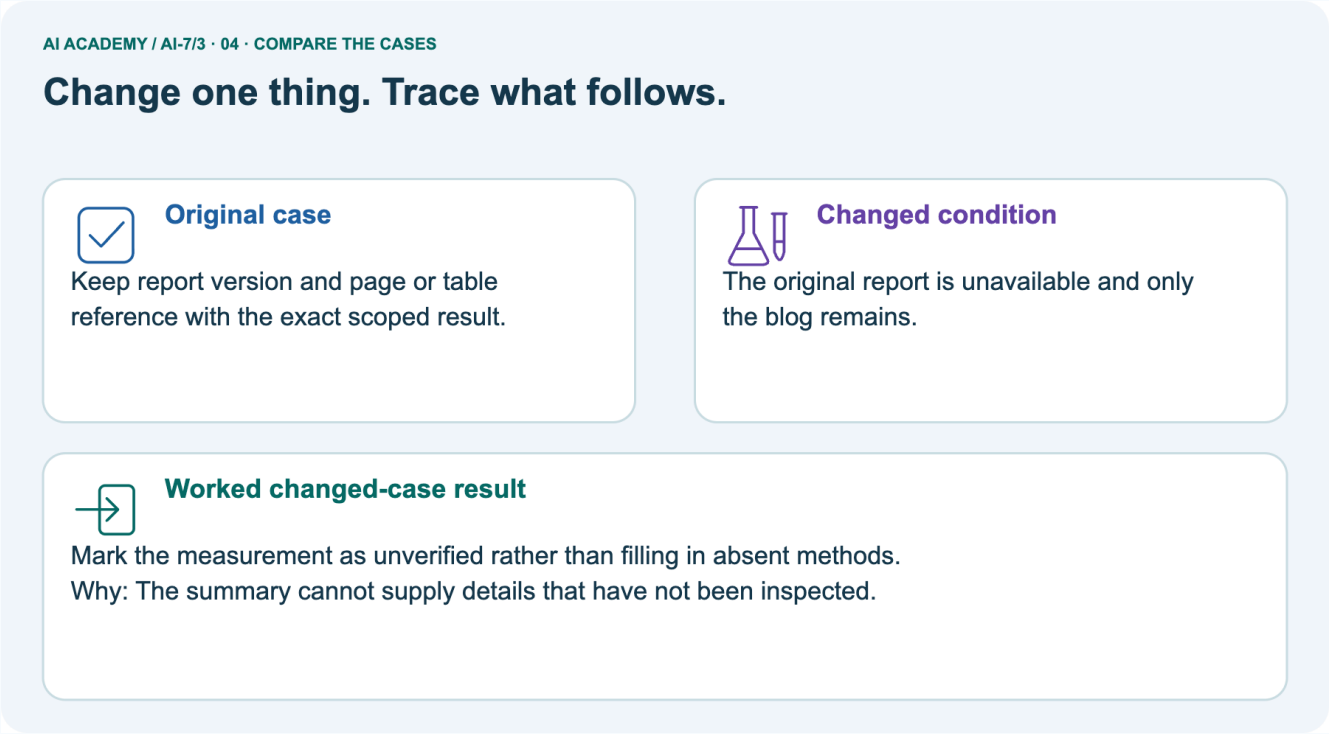

Follow the labelled picture with the matching explanation. Open the vector diagram

Finding primary research — **evidence** trace. A blog says experiment had 100 cases; original methods say 40 and supplementary version says 60 after revision. | Record title, authors, version, date, identifier and access location. Distinguish paper, code, data and commentary. Verify that a quoted claim belongs to the cited version. | Track versions and use the correct original record for the claim. The blog is secondary; the two original versions must not be merged silently.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

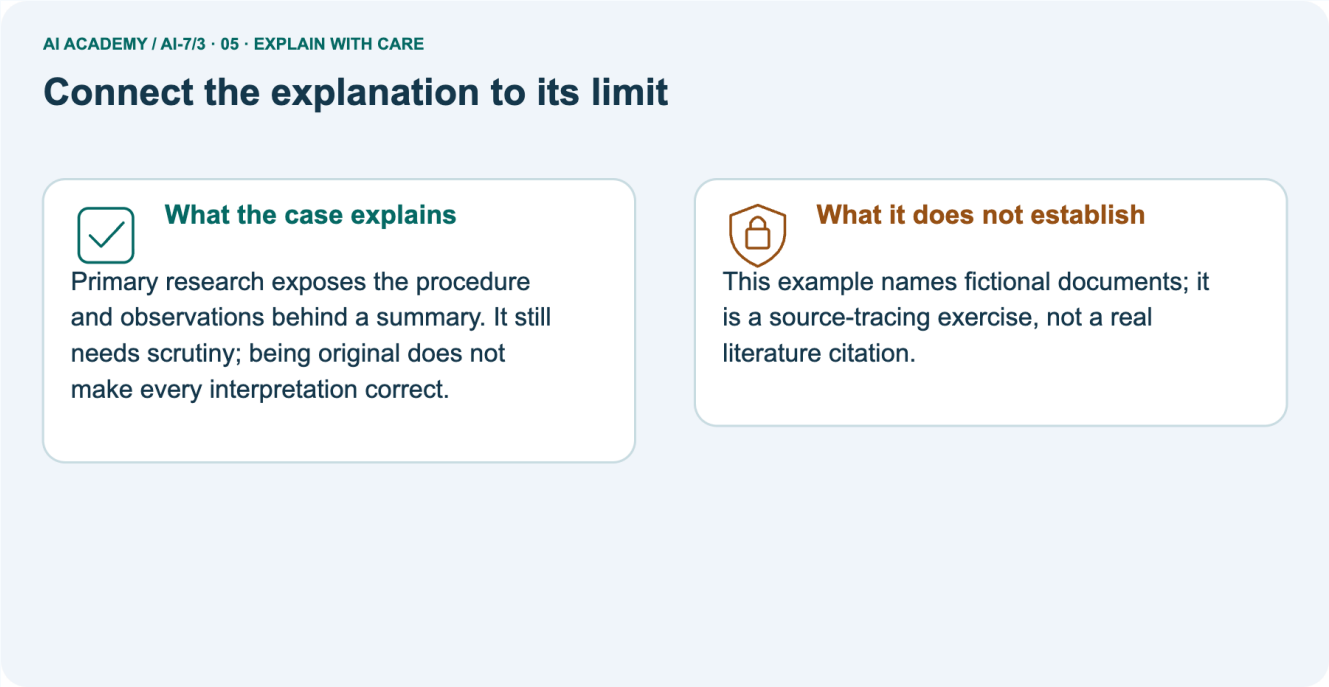

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Keep report version and page or table reference with the exact scoped result.
Changed condition: The original report is unavailable and only the blog remains.

Expected result: Mark the measurement as unverified rather than filling in absent methods.
Reason: The summary cannot supply details that have not been inspected.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

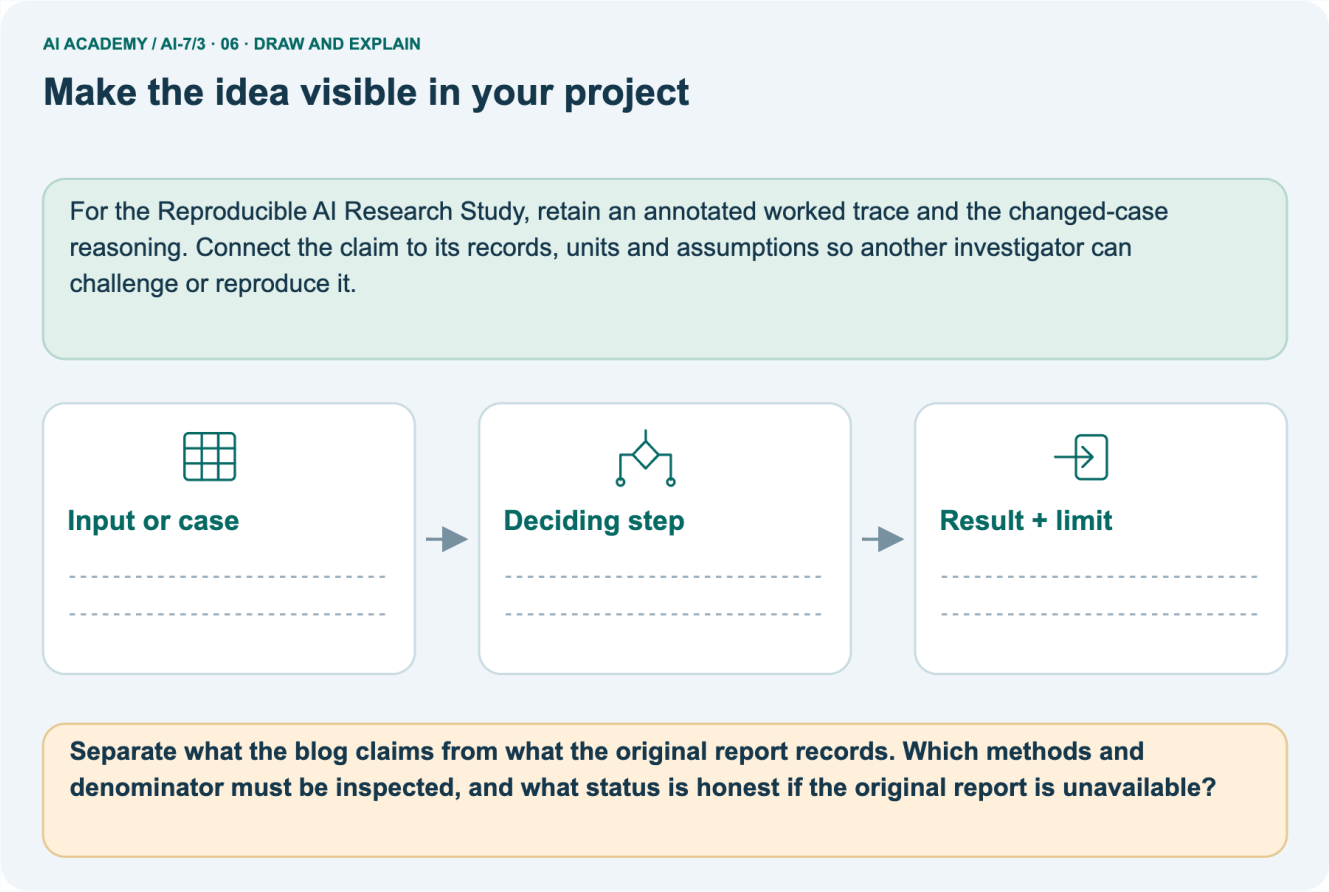

Follow the labelled picture with the matching explanation. Open the vector diagram

Primary research exposes the procedure and **observation**s behind a summary. It still needs scrutiny; being original does not make every interpretation correct.

Limit: This example names fictional documents; it is a source-tracing exercise, not a real literature citation.

Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Draw your **input**, deciding step, result and limit. Supported question: Separate what the blog claims from what the original report records.

Which methods and denominator must be inspected, and what status is honest if the original report is unavailable?

Draw your project trace and justify the deciding step using **evidence**.

▼ Earlier wording, alternatives and picture transcripts

01. Finding primary research: the case

02. Follow the deciding steps

03. Finding primary research — evidence trace

04. Change one thing. Trace what follows.

05. Connect the explanation to its limit

06. Make the idea visible in your project

▼ Optional interactive practice and completed work

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
