Pilot experiments

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Reproducible AI Research Study

THE CONNECTED WEEK

Use the pilot to repair the procedure before the primary study

Preserve pilot defects and revisions while keeping new primary evidence separate.

Keep one habit: Question and contract → complete main ledger → separate picture → boundary probes → investigation → independent attempt.

MAIN LESSON · SECTION 1

Use the pilot to repair the procedure before the primary study

> Preserve pilot defects and revisions while keeping new primary evidence separate.

Learning goals

I can explain the **mechanism** and terminology of **pilot** experiments.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Retrieve before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Predefining an analysis plan. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Research ethics and consent. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Ablation studies. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Starting explanation

- Recall Predefining an analysis plan. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

> **My starting explanation**

End goal

Explain **pilot** experiments using the records and boundaries of this fictional investigation.

▼ **Earlier wording, alternatives and picture transcripts**

Your learning target

Remember before reading

This week you will practise:

Explain the **mechanism** and terminology of **pilot** experiments

Apply the stated procedure to a new case with a traceable result

Identify an assumption or limitation and design a revealing follow-up

Retrieve what you already know

This week's end goal

MAIN LESSON · SECTION 2

Understand the question and evidence contract

> Preserve pilot defects and revisions while keeping new primary evidence separate.

Start with the research problem

A pilot is a rehearsal of the measurement and study procedure. Can the team capture records, interpret the rubric and calculate the planned result? Discovering a defect is useful development evidence. Once that evidence guides a repair, it is no longer an untouched evaluation of the final procedure. Save what failed, what changed and why, then freeze the revised method before using newly reserved primary cases.

Original concept explanation

A **pilot** checks **feasibility**, measurement and failure handling before the primary study. **Pilot** results used for revision are development **evidence**.

Complete case inputs, rules and limits

Pilot item	Complete supplied exercise contract
Main pilot	Five cases reveal wrong units in duration logs
Known defect	Unit handling is wrong; actual values and conversion direction are not supplied

Pilot item	Complete supplied exercise contract
Repair record	Preserve original log, corrected interpretation, unit definition and method version
Primary comparison	Use newly reserved cases after the revised method is fixed
Separate picture	Two reviewers score four practice answers; agree on three, disagree on one
Picture data role	Practice answers used for revision are excluded from final evaluation
Unknown evidence	No verified reference labels, disagreement cause, actual timings or final-study results

Name given and missing evidence

> **List the given facts and one fact that is not supplied.**

▼ **Earlier wording, alternatives and picture transcripts**

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

MAIN LESSON · SECTION 3

Trace the complete main case before interpreting it

> Follow each evidence-to-conclusion step and retain unknown quantities.

Original declared procedure

Run a small fixture set to test data capture, timing boundaries, rubric and analysis code. Fix defects and freeze the revised plan before new primary cases.

Complete main-case evidence ledger

Main pilot step	Supported action	Unsupported claim
Five-case pilot exposes wrong duration units	Document defect and affected measurement	Pretend the original logs were correct
Correct unit handling	Record expected units, actual units and conversion evidence	Invent a numerical conversion without the missing values
Method revised using pilot	Retain pilot as development evidence	Call revised pilot outcomes an untouched final comparison
Freeze revised procedure	Record new version and planned measurement boundaries	Claim version label alone proves chronology
New primary cases	Reserve and evaluate under the fixed revised plan	Claim primary results before running the study

State the scope and explain the visual

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

▼ Earlier wording, alternatives and picture transcripts

Pilot experiments — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Pilot five cases reveals wrong units in duration logs; team corrects units and reports the pilot as final evidence.	Run a small fixture set to test data capture, timing boundaries, rubric and analysis code. Fix defects and freeze the revised plan before new primary cases.	Preserve pilot defect and correction. Pilot informed the method; use newly reserved primary cases for a final comparison.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Connect the picture and the explanation

MAIN LESSON · SECTION 4

Predict the changed case before reading the explanation

> Keep the rule and evidence boundary visible.

Main task and response

- **Pilot** five cases reveals wrong units in duration logs; team corrects units and reports the **pilot** as final **evidence**. Show the intermediate steps and give the conclusion with its scope.

> **Keep the procedure fixed. Explain what changed in the inputs and result.**

Predict the pictured change

- Change: Add the corrected **pilot** answers into final evaluation.

▼ **Check after predicting**

Prediction: Declare them previously exposed rather than untouched final **evidence**.

Reason: Rubric development already used those answers.

▼ **Earlier wording, alternatives and picture transcripts**

Compare a familiar case with a changed case

Change one thing in the pictured case

MAIN LESSON · SECTION 6

Connect the main result with the separate pictured case

> Keep the two scenarios and their supplied evidence distinct.

Main case and original checked reasoning

Pilot five cases reveals wrong units in duration logs; team corrects units and reports the **pilot** as final **evidence**.

Preserve **pilot** defect and correction. **Pilot** informed the method; use newly reserved primary cases for a final comparison.

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Separate pictured inputs and complete explanation

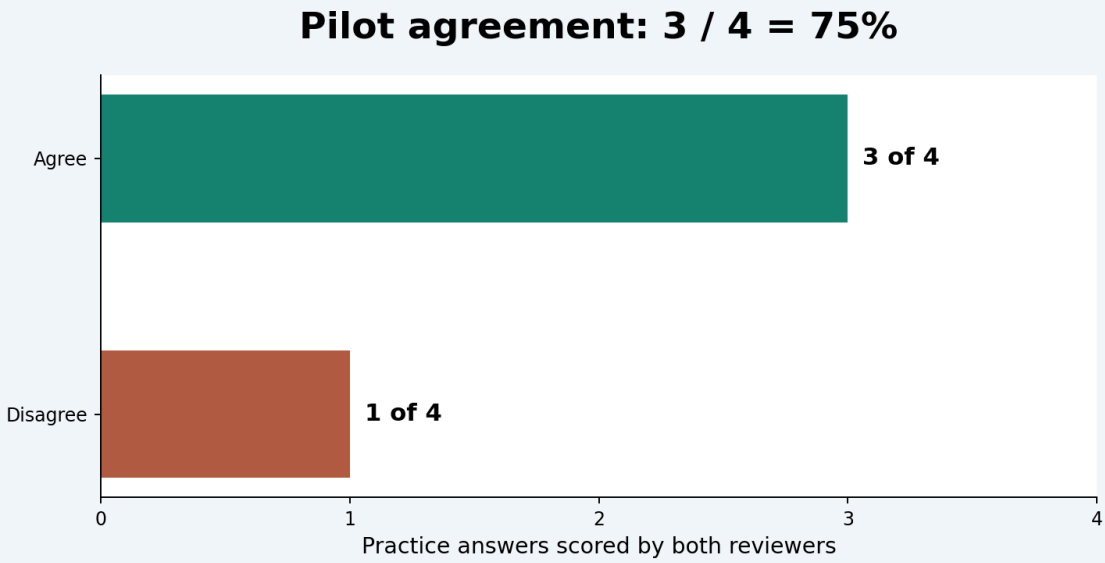

A **pilot** tests the procedure. A **pilot** checks whether the team can score answers consistently before running the main study.

Two reviewers score four practice answers. They agree on three and disagree on one; these answers are excluded from final evaluation.

The separate picture gives four practice answers scored by two reviewers. Three agreements out of four are 75% observed agreement; one disagreement is 25%. We are not told which answer differs, the label categories, who is right or why they disagreed. Inspect the actual scoring record and rubric before choosing a repair. Agreement does not establish correctness, and four answers do not establish long-run reliability.

If these answers help revise the rubric or procedure, retain them as development evidence and keep them separate from untouched final evaluation. Adding the corrected practice cases to the final set would blur that role boundary.

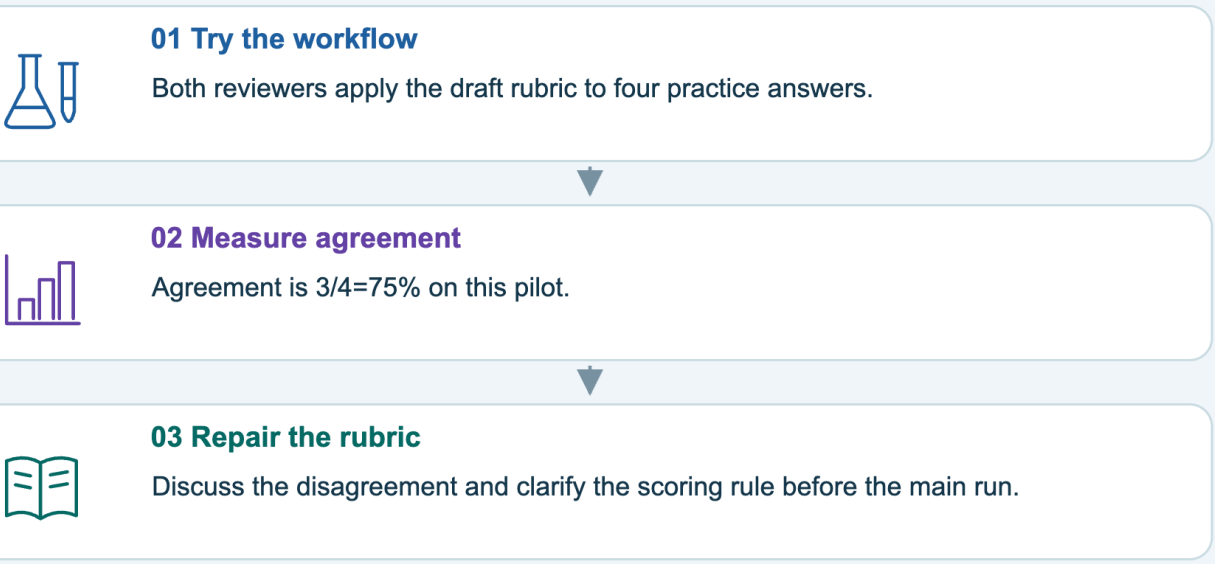

Read the labelled representation

One disagreement can reveal a rubric problem; its cause is not supplied.
These four revised practice answers are development evidence, not untouched final cases.
Agreement is not correctness or a long-run reliability estimate.

AI ACADEMY / AI-7/22 · 02 · TRACE THE CASE

Follow the deciding steps

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Try the workflow	Both reviewers apply the draft rubric to four practice answers.
2. Measure agreement	Agreement is 3/4=75% on this pilot.
3. Repair the rubric	Discuss the disagreement and clarify the scoring rule before the main run.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

A **pilot** can reveal missing instructions, practical delays or ambiguous scoring. It is preparation, not an untouched final estimate after the team uses it to revise methods.

Complete picture evidence and limits

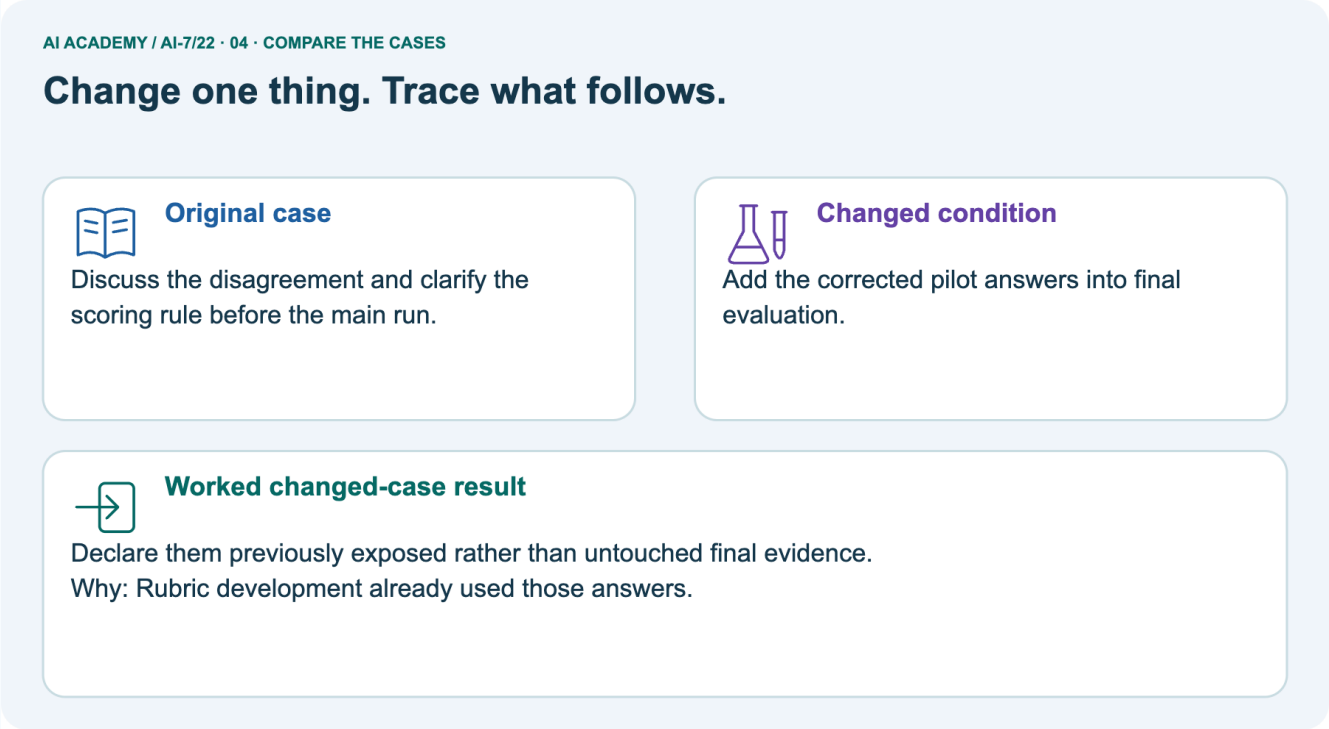

Picture quantity	Supported value or limit
Answers scored by both reviewers	Four
Agree	Three; 3/4 = 75%
Disagree	One; 1/4 = 25%
Who is correct	Not supplied; agreement is not a reference label
Cause of disagreement	Unknown; inspect records and rubric
After used for revision	Development evidence, excluded from final evaluation under this plan

Picture quantity	Supported value or limit
Long-run reliability / final effect	Not established by four practice answers

Predict the changed condition

- Change one thing: Add the corrected **pilot** answers into final evaluation. Predict the result before checking the explanation. What remains the same?

▼ Check after predicting

Follow the labelled picture with the matching explanation. Open the vector diagram

Explain what remains unknown

- Four **pilot** answers do not establish long-run reviewer reliability or a stable performance effect.

- Read the labelled picture: Calculate reviewer agreement on the four **pilot** answers. What can the disagreement improve, and why are those revised practice answers not untouched final **evidence**?

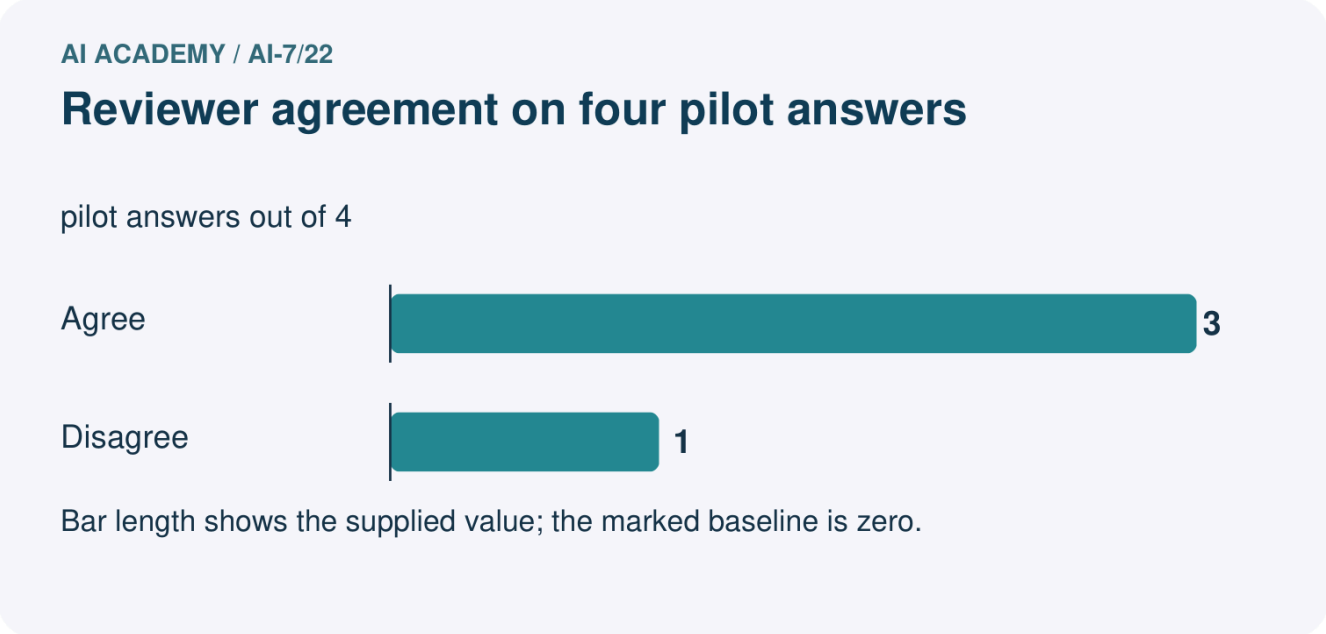

▼ Earlier wording, alternatives and picture transcripts

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Pilot experiments

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

AI ACADEMY / AI-7/22

Pilot experiments

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Try the workflow

Both reviewers apply the draft rubric to four practice answers.

2. Measure agreement

Agreement is 3/4=75% on this pilot.

3. Repair the rubric

Discuss the disagreement and clarify the scoring rule before the main run.

CHANGE ONE THING

Add the corrected pilot answers into final evaluation.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

Find the first unsupported inference and repair it

> Use the supplied conditions rather than inventing missing evidence.

Original qualification and repair setup

A **pilot** may assess **feasibility** but is not automatically powered or independent **evidence** for the final hypothesis.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Complete boundary and misconception probes

Pilot audit	Checked interpretation
Pilot uncovers a defect	Useful evidence about procedure readiness
Units wrong but values absent	Do not invent a conversion or repaired timing
Pilot used to change method	Retain development role; do not call it untouched final evidence
Reviewers agree	May still share an incorrect interpretation
Reviewers disagree	Cause and correct label require inspection
Four-answer agreement is 75%	Observed agreement only, not proven long-run reliability
New primary study planned	No results exist until it is actually performed
Ambiguous cases found	Revise and check rubric; do not silently delete difficult primary cases

Write and justify the repair

- A report omits this qualification: A **pilot** may assess **feasibility** but is not automatically powered or independent **evidence** for the final hypothesis.

  Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

State one repair and the checks you would rerun.

▼ Earlier wording, alternatives and picture transcripts

Locate the earliest unsupported step

MAIN LESSON · SECTION 8

Practise the mechanism with progressively less help

> Keep the selected independent case for a first attempt.

Shared explanation

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

> **Explain your prediction to a partner before comparing results.**

Supported workbook trace

Use workbook W2 for the connected example "**Pilot** experiments". First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Individual scope check

- Use the worked case for **Pilot** experiments. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

  Point to the step or supplied fact that decides; explain your repair if needed.

- Answer on your own before discussion. If you are unsure, say which step you need help with.

Picture response

- Calculate reviewer agreement on the four **pilot** answers. What can the disagreement improve, and why are those revised practice answers not untouched final **evidence**?

> **My explanation using a pictured step and the given facts**

Reserve the independent task

This is supported practice. Keep the separately named independent case for an attempt before feedback.

▼ **Earlier wording, alternatives and picture transcripts**

Practise with less help: Trace the worked case

Check your reasoning

Explain the picture

Investigate, record the evidence and check the limits

> Distinguish a prediction, a paper trace and an actual local execution.

Current investigation

Pilot five cases reveals wrong units in duration logs; team corrects units and reports the **pilot** as final **evidence**. Show the intermediate steps and give the conclusion with its scope.

Complete investigation instructions

1. Perform a paper readiness audit of the five-case unit defect. List the missing duration values and unit definitions rather than inventing a conversion. Propose a controlled fixture with known expected units to check the repaired logger; label it proposed, not run. Then calculate picture agreement 3/4 = 75% and disagreement 1/4 = 25%.

   Record which scoring details are missing and how inspecting them could guide rubric revision. Preserve the original pilot, proposed correction, revised method and separately reserved primary role. Do not recruit reviewers, claim actual timings or add corrected pilot answers to the final evaluation.

Evidence record and reflection

Record	Your evidence
Given input and fixed rule	
Prediction before checking	
Actual result, or “not run”	
First mismatch and one explanation	
Boundary or missing input and expected response	

On paper, trace the supplied procedure. If code is provided, predict before running it in a local practice file. Never write an expected answer as though it were an observed run.

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

▼ **Earlier wording, alternatives and picture transcripts**

Predict, investigate and preserve the evidence

Plan → try → check

MAIN LESSON · SECTION 14

Try the selected new case independently

> Explain what the two ambiguous pilot labels require before the primary study; distinguish proposed repairs from completed checks.

Complete independent task

Pilot six cases exposes ambiguous labels in two. What should happen before the primary study?

First attempt and support record

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Feedback after trying

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

▼ **Earlier wording, alternatives and picture transcripts**

Independent case: Apply a new case independently

Attempt this without hints

Pilot six cases exposes ambiguous labels in two. What should happen before the primary study?

> **My independent procedure, result and limitation**
>
> | |
> |---|
> | |
> | |
> | |
> | |

Record support used: none, hint or teacher explanation. After feedback, a different case is needed to demonstrate independence.

Use feedback to improve

MAIN LESSON · SECTION 11

Save the research artifact and unresolved conditions

> Keep supplied evidence, proposed revisions and actual work distinct.

Project task and artifact

Add a labelled **pilot** experiments **evidence** sheet to Reproducible AI Research Study. Show how you can explain the **mechanism** and terminology of **pilot** experiments.

Use the supplied fictional case and keep its **input**s, intermediate steps, calculation or **prediction**, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

Project evidence	Record
Component and version	
Inputs permitted at prediction time	
Trace and comparison with earlier work	
Failure, limit and human review	

Evidence and limitations

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

▼ **Earlier wording, alternatives and picture transcripts**

Evidence for your project

MAIN LESSON · SECTION 16

Retrieve the mechanism and state the evidence boundary

> Explain what follows and what would require new evidence.

Retrieve and explain

- Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of **pilot** experiments

My deciding step, evidence and one remaining question

Plan a changed-case return

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Reference bank and extra practice

Choose the reference that helps your next step.

▼ **Reference · Use research vocabulary precisely**

REFERENCE · SECTION 5

Reference · Use research vocabulary precisely

> Connect each term to the question, comparison, measurement or evidence.

Vocabulary and your explanation

Word	Meaning
Pilot	A preliminary study of the procedure
Feasibility	Whether the planned method can be carried out
Measurement defect	A failure in collecting the intended outcome

Use two terms to explain a step in this week's example.

▼ Extra challenge · Explain a stronger case

REFERENCE · SECTION 10

Extra challenge · Explain a stronger case

> Choose the next challenge after the main route.

Explain,repair and extend

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

- A report omits this qualification: A **pilot** may assess **feasibility** but is not automatically powered or independent **evidence** for the final hypothesis.

  Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Explain → apply → challenge

> **Explain which evidence supports your conclusion and which claim remains unproved.**

▼ Reference · Check the research reasoning and its limits

REFERENCE · SECTION 12

Reference · Check the research reasoning and its limits

> Use after practice; reserve the selected independent case for its first attempt.

Current explanation and response

- Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

  For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

My limited claim and a useful next check

▼ **Extra practice · Revisit the complete trace**

REFERENCE · SECTION 13

Extra practice · Revisit the complete trace

> Predict before reading the supplied steps.

Complete trace and evidence

Complete evidence record

Pilot experiments — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Pilot five cases reveals wrong units in duration logs; team corrects units and reports the pilot as final evidence.	Run a small fixture set to test data capture, timing boundaries, rubric and analysis code. Fix defects and freeze the revised plan before new primary cases.	Preserve pilot defect and correction. Pilot informed the method; use newly reserved primary cases for a final comparison.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Follow the **input** through the stated procedure to its result. Cover the result first, predict it, then explain every intermediate step. The text/table accompanies the figure so the example can be read without colour.

My complete trace of the worked case

▼ Reference · The earlier route checklist

REFERENCE · SECTION 15

Reference · The earlier route checklist

> Use one main route rather than repeating the lesson.

Targets,route and first prediction

Start with this question: A **pilot** tests the procedure. A **pilot** checks whether the team can score answers consistently before running the main study.

By the end, I can	How I will show it
Explain the mechanism and terminology of pilot experiments	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

▼ Extra practice · Predict,check and repair

REFERENCE · SECTION 17

Extra practice · Predict,check and repair

> Keep supported feedback separate from the independent case.

First supported question and optional hint

- A **pilot** tests the procedure. A **pilot** checks whether the team can score answers consistently before running the main study.
- Which labelled step matches this detail? Discuss the disagreement and clarify the scoring rule before the main run.
- 1. Try the workflow
- 2. Repair the rubric
- 3. Measure agreement
- Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Practice 1: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check after the first attempt**

After your attempt, compare with the supported explanation: Repair the rubric Discuss the disagreement and clarify the scoring rule before the main run.

A **pilot** can reveal missing instructions, practical delays or ambiguous scoring. It is preparation, not an untouched final estimate after the team uses it to revise methods.

Changed-case question and optional hint

- Changed-case practice: Add the corrected **pilot** answers into final evaluation. Which conclusion is supported by the supplied facts?
- 1. Declare them previously exposed rather than untouched final **evidence**.
- 2. We can decide the result without examining the changed **input** or the procedure.
- 3. This one example guarantees correct results for every future **input**.
- Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Practice 2: explain the deciding evidence

My selected conclusion, deciding fact and explanation

▼ **Check after the changed attempt**

After your attempt, compare with the supported explanation: Declare them previously exposed rather than untouched final **evidence**. Rubric development already used those answers.

Repair and retain the record

Review Predefining an analysis plan (ai-7/21). Goal: Explain the **mechanism** and terminology of predefining an analysis plan. Short practice: Apply the recorded exclusion rule.

Can two readable model failures be removed, and how must a necessary later plan change be disclosed?. Return to this week and explain what you changed.

Review Research ethics and consent (ai-7/19). Goal: Explain the **mechanism** and terminology of research ethics and consent. Short practice: Identify which uses the drawing consent permits and excludes.

Can the unrelated project reuse the drawings under this agreement, and what new authorisation would be needed?. Return to this week and explain what you changed.

Review Ablation studies (ai-7/16). Goal: Explain the **mechanism** and terminology of ablation studies. Short practice: Calculate the filter ablation's two rates and count change.

Which single component is altered, and why does also changing the model prevent isolating the filter?. Return to this week and explain what you changed.

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

▼ **Earlier wording, alternatives and picture transcripts**

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Repair a missing building block

Keep your completed work

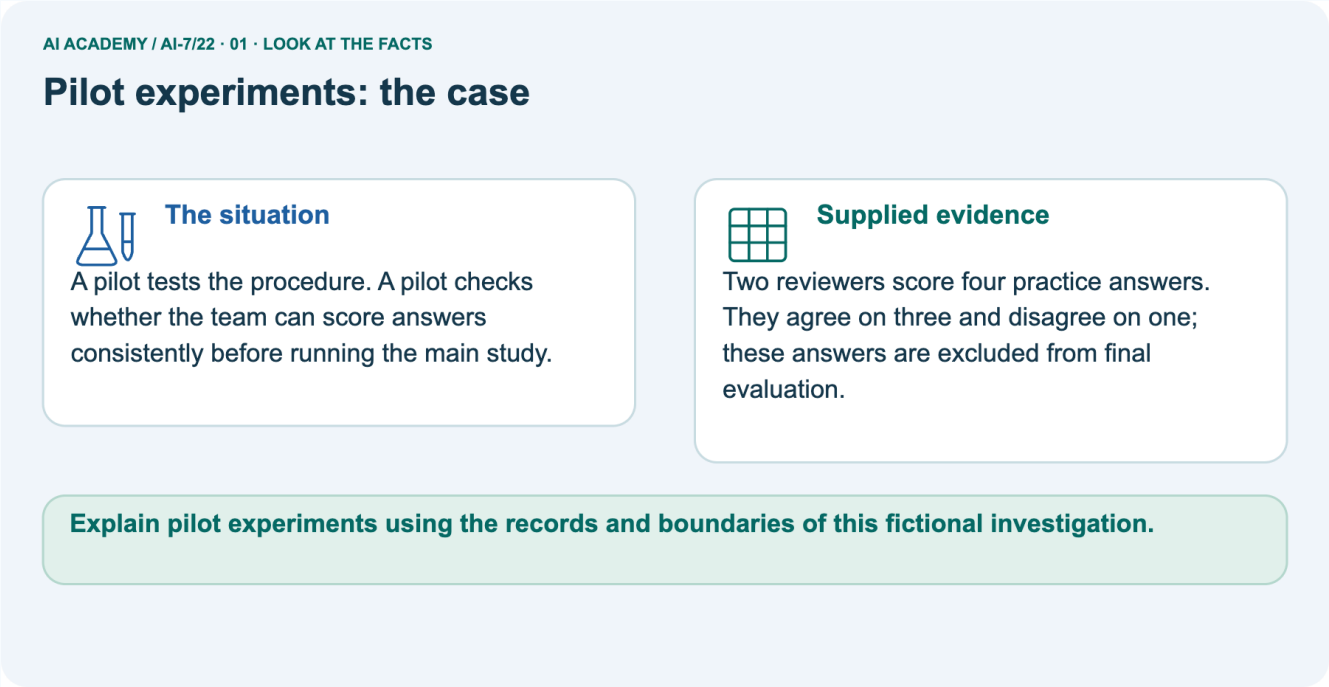

▼ **Reference · Six-picture concept journey**

REFERENCE · SECTION 18

Reference · Six-picture concept journey

> Choose the picture that supports the current explanation.

01. Pilot experiments: the case

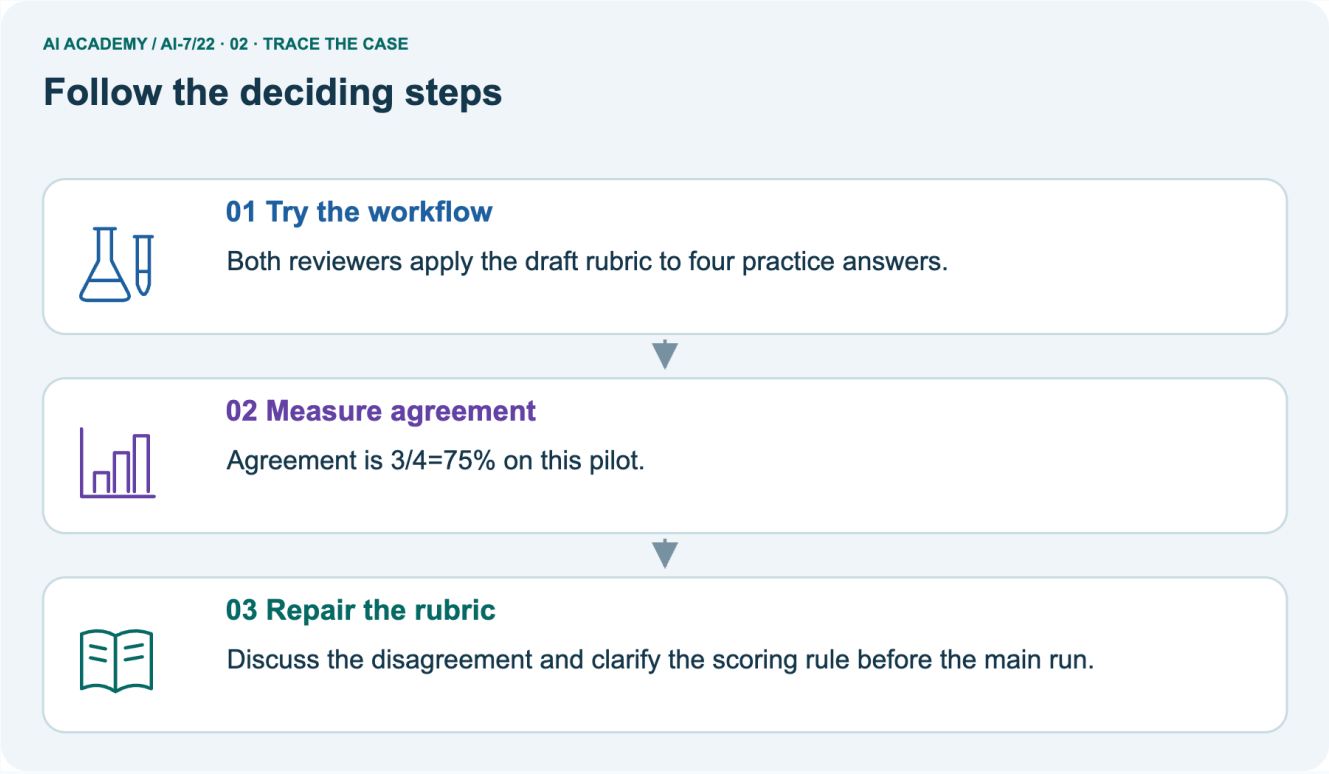

Follow the labelled picture with the matching explanation. Open the vector diagram

A **pilot** tests the procedure. A **pilot** checks whether the team can score answers consistently before running the main study. Supplied facts: Two reviewers score four practice answers.

They agree on three and disagree on one; these answers are excluded from final evaluation.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

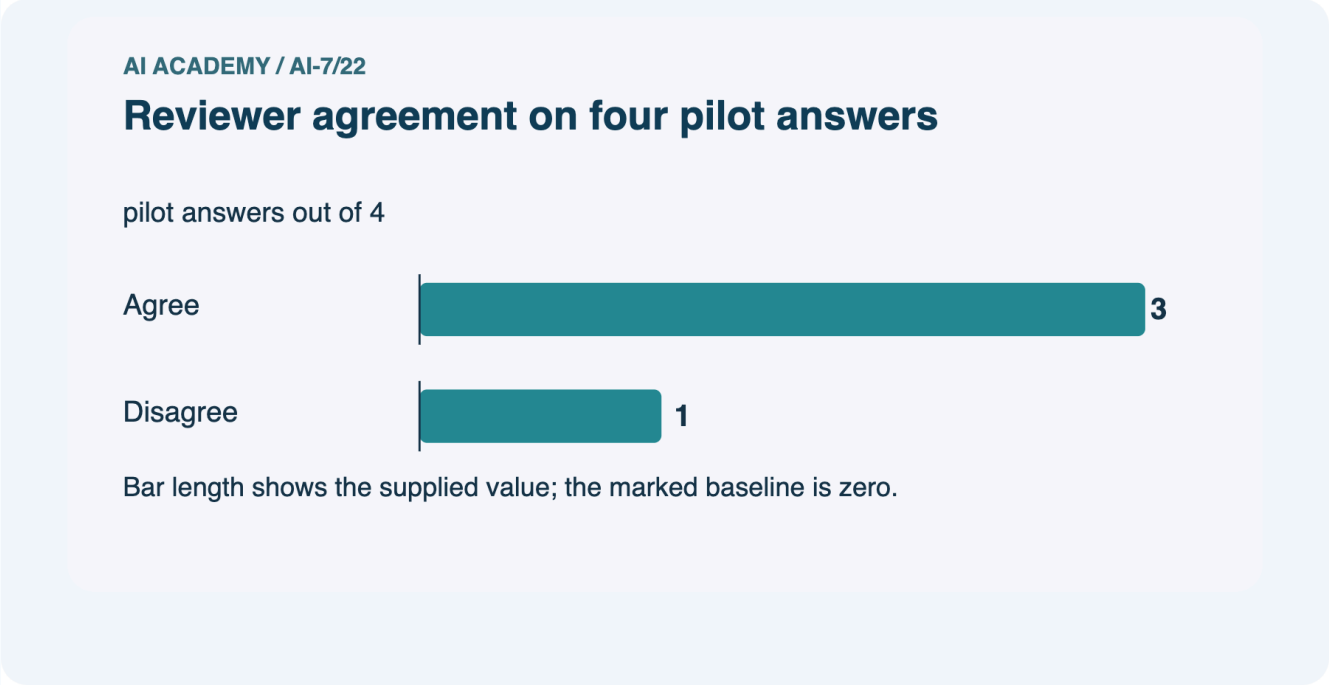

Follow the labelled picture with the matching explanation. Open the vector diagram

Try the workflow: Both reviewers apply the draft rubric to four practice answers. → Measure agreement: Agreement is 3/4=75% on this **pilot**. → Repair the rubric: Discuss the disagreement and clarify the scoring rule before the main run.

Point to each numbered stage and explain which recorded **input** it uses.

03. Reviewer agreement on four pilot answers

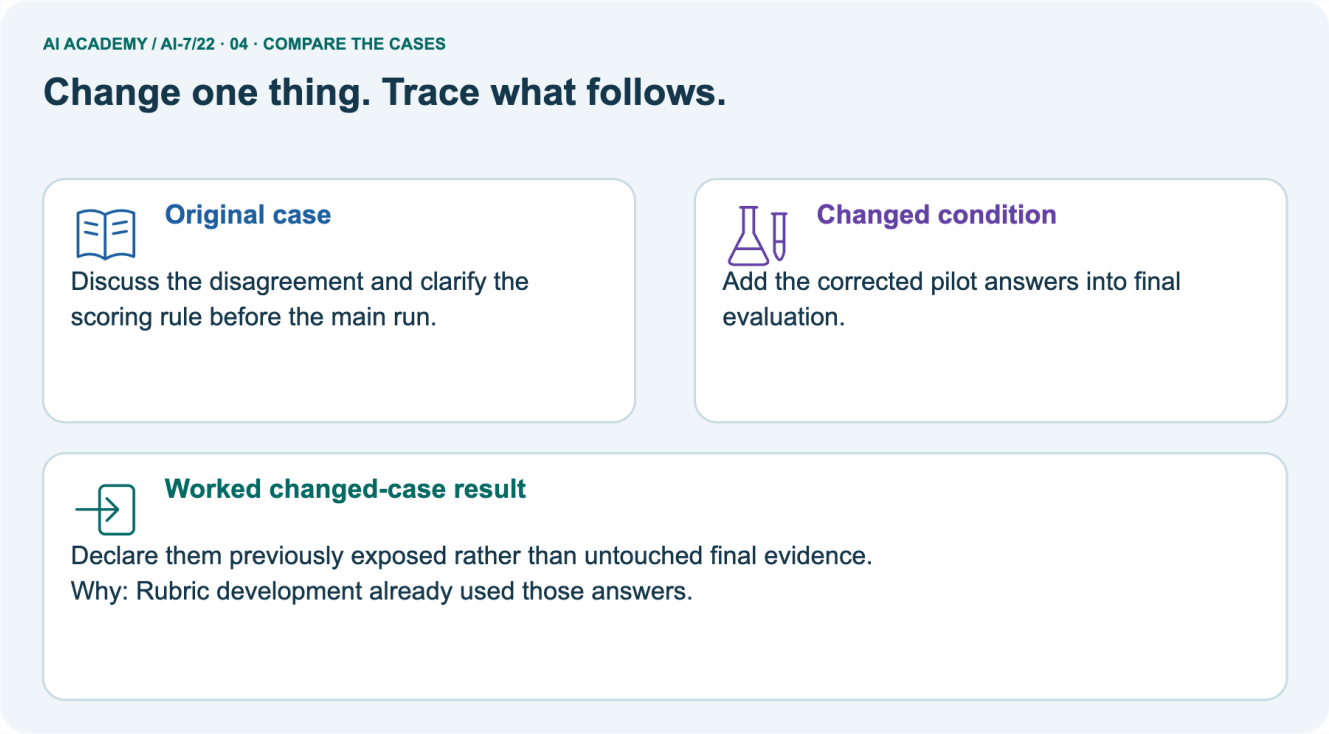

Follow the labelled picture with the matching explanation. Open the vector diagram

Reviewer agreement on four **pilot** answers. Units: **pilot** answers out of 4. Agree: 3. Disagree: 1.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

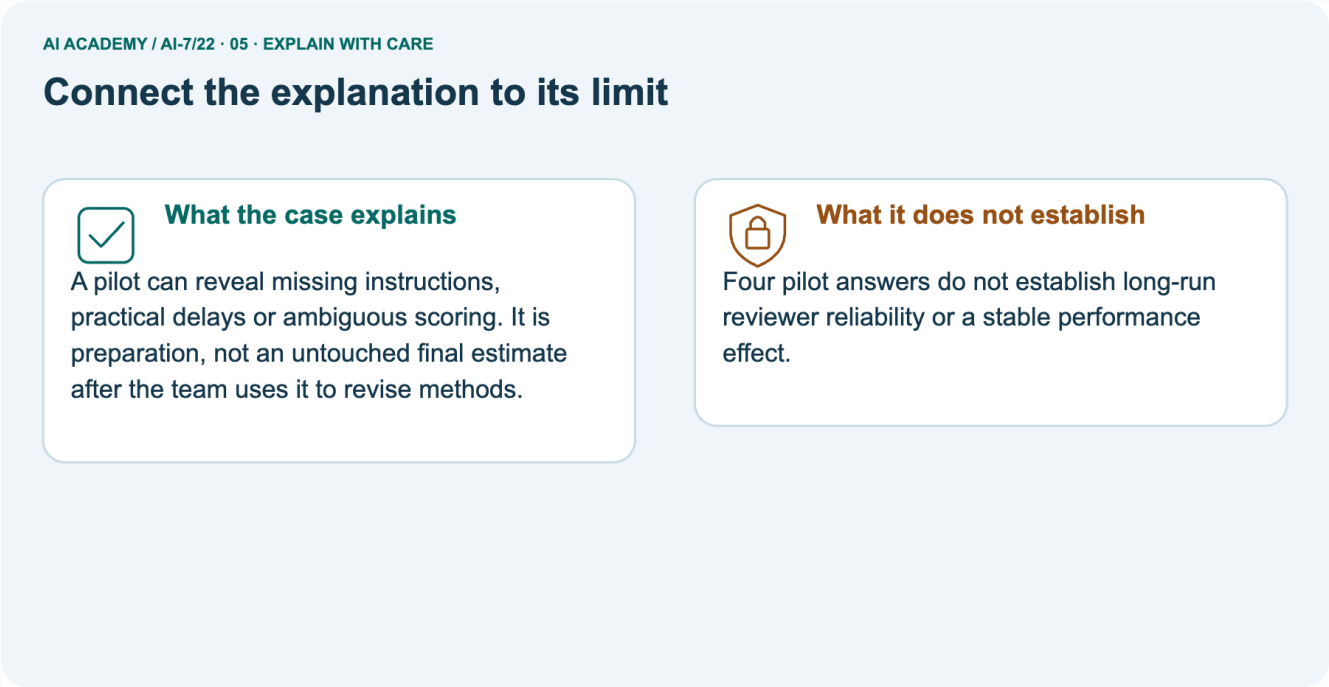

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Discuss the disagreement and clarify the scoring rule before the main run.
Changed condition: Add the corrected **pilot** answers into final evaluation.

Expected result: Declare them previously exposed rather than untouched final **evidence**.
Reason: Rubric development already used those answers.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

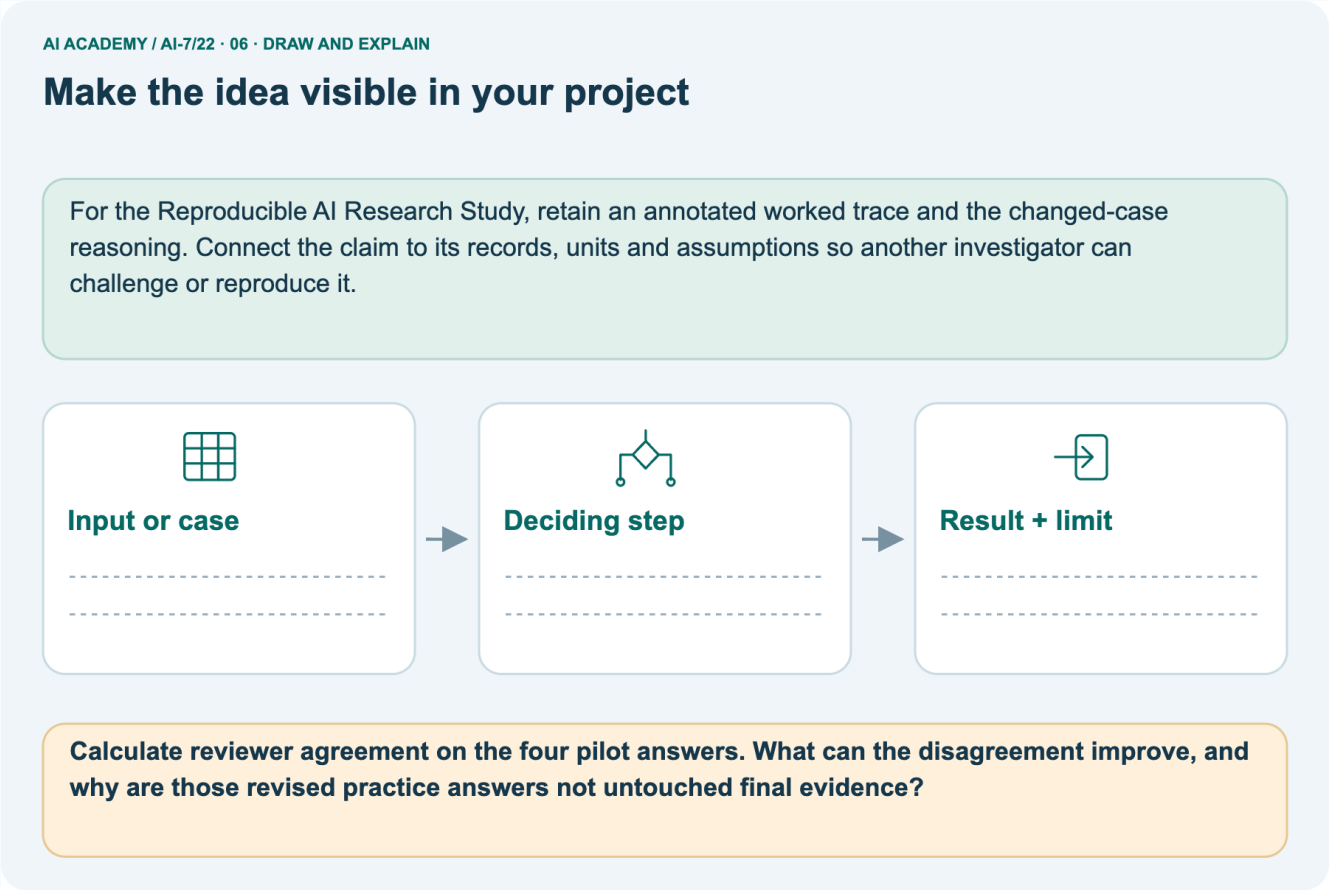

Follow the labelled picture with the matching explanation. Open the vector diagram

A **pilot** can reveal missing instructions, practical delays or ambiguous scoring. It is preparation, not an untouched final estimate after the team uses it to revise methods.

Limit: Four **pilot** answers do not establish long-run reviewer reliability or a stable performance effect.

Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Draw your **input**, deciding step, result and limit. Supported question: Calculate reviewer agreement on the four **pilot** answers.

What can the disagreement improve, and why are those revised practice answers not untouched final **evidence**?

Draw your project trace and justify the deciding step using **evidence**.
