Copyright and Provenance

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Verified Study Buddy

THE CONNECTED WEEK

Teach exact fictional terms and honest unknowns.

Supply complete asset cards, distinguish background law from toy conditions and assess a fresh public-use plan.

Keep one habit: Ask which proposed operation matches which condition and what permission evidence is absent.

MAIN LESSON · SECTION 1

Prepare this connected week

> Use one main plan and keep practice separate from the independent first attempt.

Learning goal and precision

Primary target: Explain the **mechanism** and terminology of **copyright** and permitted sources

Two 45-minute sessions. Permission to access a work and permission to redistribute or modify it are separate. Use a classroom **licence** ledger instead of assuming all online material is reusable.

Use the supplied constructed scenarios to make the **mechanism** inspectable. Collect W4 before sharing solutions.

Students should name intermediate **evidence** and limitations; classroom pacing and learning effectiveness remain unvalidated.

By the end, I can explain **copyright** and **provenance** using a traced example and a stated limitation.

What to prepare

- Use the supplied scenario, student illustrations and blank paper. For numeric work, offer counters or a calculator after learners show the setup. Fictional records are supplied; personal data and paid accounts are unnecessary.
- Lesson and workbook; paper and pencil
- Calculator and optional local Python 3 for arithmetic; no live API or private data
- Prepare the fresh retry separately and withhold its solution until after collection

Main teaching plan

Session · Sequence and minutes · Resources

> **Session:** Session 1 · Understand · 45 min
>
> **Sequence and minutes:** 0–7: recall and prerequisite; 7–15: inspect the concrete case and predict; 15–30: teacher models the worked trace; 30–40: learners explain a step using the text and visual; 40–45: check the core idea.
>
> **Resources:** Sections 1–6; record the brief recall in the workbook.

> **Session:** Session 2 · Practise · 45 min
>
> **Sequence and minutes:** 0–5: retrieve the procedure; 5–15: W2 completion practice; 15–23: explain and check with a partner; 23–30: each learner answers the misconception check; 30–40: targeted reteaching or a harder variation; 40–45: prepare the investigation.

> **Resources:** Sections 7–10; use the matching workbook W2 and misconception check.

> **Session:** Session 3 · Investigate and transfer · 45 min
>
> **Sequence and minutes:** 0–5: retrieve the decision rule; 5–20: investigate or trace; 20–30: start the independent case; 30–38: connect the project; 38–43: act on feedback; 43–45: plan the return check.
>
> **Resources:** Use “Run the investigation”, “Connect your project”, “Show what you know”, “Study a complete case” and “Try a new case independently”. Give extra time for the full task set. If this week has a coding lab, use its named section; section numbers can change when extra explanations are included.

This is a starting allocation of 135 minutes, not a validated duration. Preserve all named topics. Schedule extra time for connected examples, the full investigation, independent cases and project building.

Repeated copies of a case share one recorded attempt; they are not new **evidence**.

Opening retrieval and readiness

Without opening the old lesson, explain one key idea from Privacy by Design. Give an example and a mistake that the idea helps you avoid.

Look for: Explain the **mechanism** and terminology of data retention and deletion

Reference example, not the only acceptable wording: Teacher explanation: Retention and deletion cover all declared stores, including caches and logs. Removing a visible row may leave copies elsewhere.

Toy policy retains session content for 7 days and deletes it when age is at least7. Audit metadata may remain for 30 days without content. Track primary storage, cache and backup policy separately.

Without opening the old lesson, explain one key idea from Evaluation Sets. Give an example and a mistake that the idea helps you avoid.

Look for: Explain the **mechanism** and terminology of system evaluation sets

Reference example, not the only acceptable wording: Teacher explanation: A system evaluation set contains cases with expected behaviour and scoring rules.

It should cover retrieval, support, fallback and permissions rather than only easy answerable questions. Record case ID, **evidence** version, expected claims or fallback, permitted actions and scoring rubric.

Separate development from final cases. Aggregate metrics only after checking required conditions individually.

Without opening the old lesson, explain one key idea from Block to Python Bridge. Give an example and a mistake that the idea helps you avoid.

Look for: Translate a short paper calculation into a Python script

Reference example, not the only acceptable wording: packs = 4; per_pack = 6; total = packs * per_pack; print(total), each on its own line. The first two bind quantities, the third computes 24 and the fourth displays 24.

Assignment alone produces no displayed **output** in this script.

A result depends on the **input**s, procedure and conditions that produced it. Preserve data roles and distinguish observed outcomes from **prediction**s or unmeasured conditions.

If the prior concept cannot be explained, use a short retrieval activity before this chapter.

▼ **Earlier wording, alternatives and picture transcripts**

Teach the learning cycle

Retrieval answer guidance

Privacy by Design

Evaluation Sets

Block to Python Bridge

Use the student module and workbook section with this exact week title. The worked case, independent question and answers below form one aligned lesson sequence.

What the learner must demonstrate

A project uses an image found through search. Its author is known but its **licence** is missing. Is naming the author enough to establish reuse permission? Describe a **provenance** record and next action.

Concept to explain

Responsible creation distinguishes source material, transformation, **attribution**, and generated content.

Term	Meaning
copyright	Legal rights concerning original creative expression; the permitted uses depend on the applicable rules and permissions.
provenance	A record of where information or material came from and how it was changed.
attribution	Identifying the source or creator of material; this alone does not establish permission to use it.
license	Terms granting specified permissions to use material or software.

Prepare the class

This compact option is not the full-week schedule. Use the main teaching cycle and allow extra sessions for the investigation, independent work and project.

Allow 80 minutes: recall 8; explanation 12; worked demonstration 15; guided practice 20; independent assessment 15; project and reflection 10. Extend the lab into a second session when needed.

Preparation for the connected explanation

Readiness answer

End goal for the pictorial case

This added worked case illustrates the week’s main idea. Retain all original and connected topics; schedule its practice within the teaching cycle.

Teach condition matching and complete provenance

> Keep real background distinct from invented exercise terms.

Separate access, credit and permission

Permission to access a work and permission to redistribute or modify it are separate. Use a classroom **licence** ledger instead of assuming all online material is reusable.

For this fictional policy, **licence** L permits classroom display with **attribution** but forbids public redistribution. **Licence** M permits adaptation and redistribution with **attribution**.

Unknown permission means seek approval or choose a permitted alternative; this exercise is not a legal ruling.

Ledger field	What to preserve
Asset identity	Stable ID, source location and supplied creator
Terms	Exact fictional permission text and version
Proposed use	Classroom/private/public; unchanged/quoted/adapted
Transformations	Crop, paraphrase, combine or generated contribution
Required credit	Creator/source/terms notice required by this card
Decision and gap	Matches supplied terms, needs revision, or unknown permission
Output provenance	Where used, edits made and fictional/generated labels; no invented authenticity claim

Trace the L/M public-use review

Image A has L; image B has M. The project is a publicly downloadable adapted poster.

A is not permitted for this use under L. B is permitted under the supplied M terms with **attribution**. Keep **licence** version and **provenance**.

Read the complete Fern/Moss case

Read fictional reuse terms before decorating a public study guide.

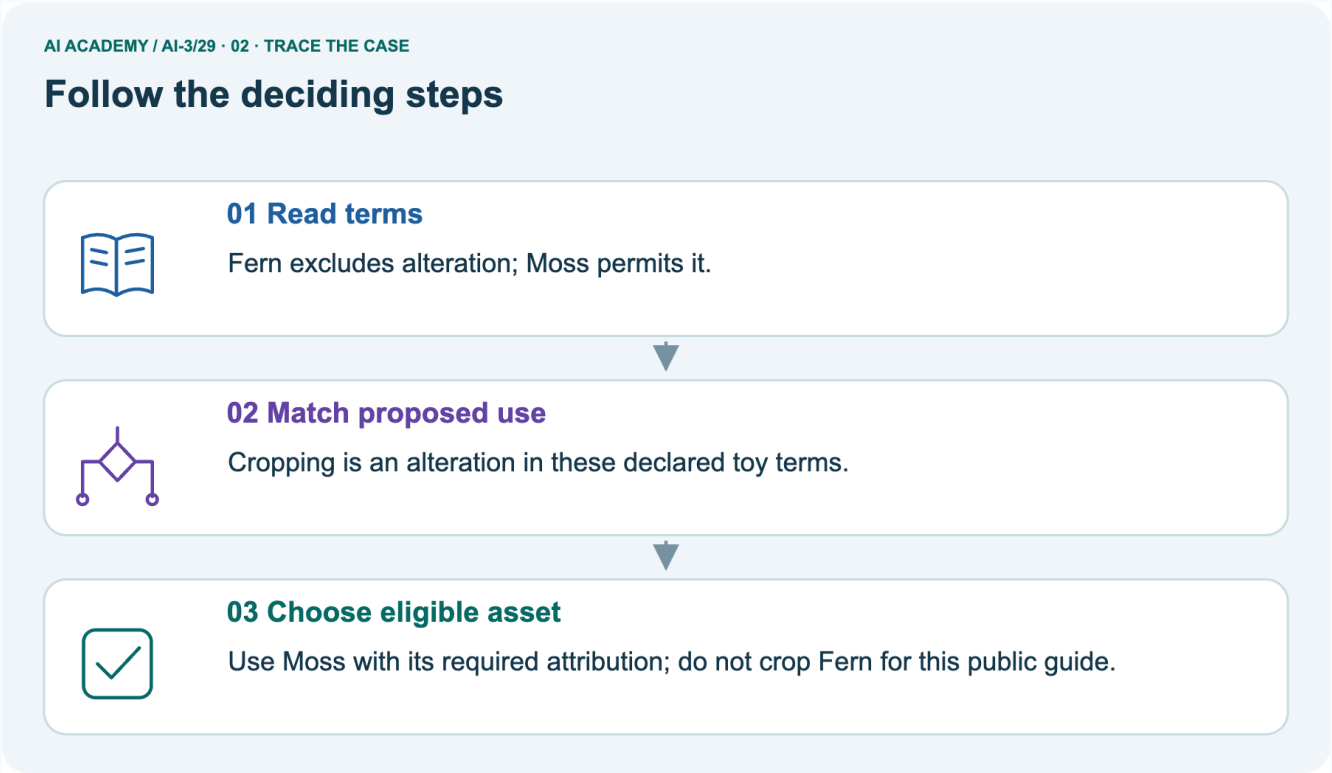

Image Fern allows public redistribution with **attribution** but no alteration. Image Moss allows alteration and public redistribution with **attribution**. The plan crops an image.

All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

Fictional terms version F1: Fern permits public redistribution with attribution but no alteration. Version M1: Moss permits alteration and public redistribution with attribution. In these declared terms cropping counts as alteration. Thus a cropped public guide can use Moss with credit; an unchanged credited Fern is separately allowed.

This is a condition-matching exercise, not a ruling about an actual image or legal exception.

Trace the crop condition

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Read terms	Fern excludes alteration; Moss permits it.
2. Match proposed use	Cropping is an alteration in these declared toy terms.
3. Choose eligible asset	Use Moss with its required attribution; do not crop Fern for this public guide.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Read the picture in order. Use Moss with its required **attribution**; do not crop Fern for this public guide. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Predict unchanged credited use

Change: Use Fern unchanged and include the required **attribution**.

Prediction: That use satisfies the stated fictional permission conditions.

Reason: Its public redistribution is permitted when there is no alteration and **attribution** is included.

State actual-licence and legal-scope limits

Real permission decisions require the actual **licence** and use context. These invented terms teach condition matching, not legal advice.

Cover the result. Ask learners to name the **input**s and predict the next step. Uncover one step, connect the icon to the actual procedure, and explain its **evidence**. Then change the supplied condition and compare.

The picture is a representation; it does not document execution of a real AI model.

▼ Teacher background and official reference

Teacher background: the U.S. Copyright Office explains that fair use has no fixed word-count formula. The 30-word and other limits in these exercises are invented permission conditions, not statutory thresholds. Jurisdiction and actual facts matter; use the supplied terms for scoring this lesson. Primary reference: https://www.copyright.gov/fair-use/more-info.html

▼ Additional practice · Unknown online sources

A slide reuses an online photograph and textbook paragraph.

What **provenance** and reuse checks are needed?

Record creator, source, **licence** or permission, **attribution** requirements and modifications. **Attribution** alone is not permission; classroom context is not a universal exemption.

▼ Earlier wording, alternatives and picture transcripts

Explain the mechanism

Input → **Process** → **Output**

Trace the information. At each stage, ask what changed and how you could test it.

Which stage could fail even when the other two are correct? Explain:

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

1. Source paragraph is quoted within allowed classroom use and cited.

2. Student summary is a transformation but still names the source.

3. Generated image is labeled as generated.

4. **Provenance** record stores creator/source, **license** or permission, transformation, and use.

Recalculate, retrace, or restate the reasoning in your own representation:

CHECK Did the **evidence** answer the exact question? Did the total, path, or source record stay consistent?

Concrete teaching case

Exact explanation to model

Explain the added worked example

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Key terms

Term	Meaning
Licence	Terms specifying permitted uses
Attribution	Credit required by the applicable use terms
Permission ledger	A record linking each asset to its authorised use

Model the reasoning aloud

Use the complete worked example below before asking learners to complete W2. Reveal a small part, invite a **prediction**, then explain the deciding step.

These teacher notes contain solutions; do not reveal the independent case answer during modelling.

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

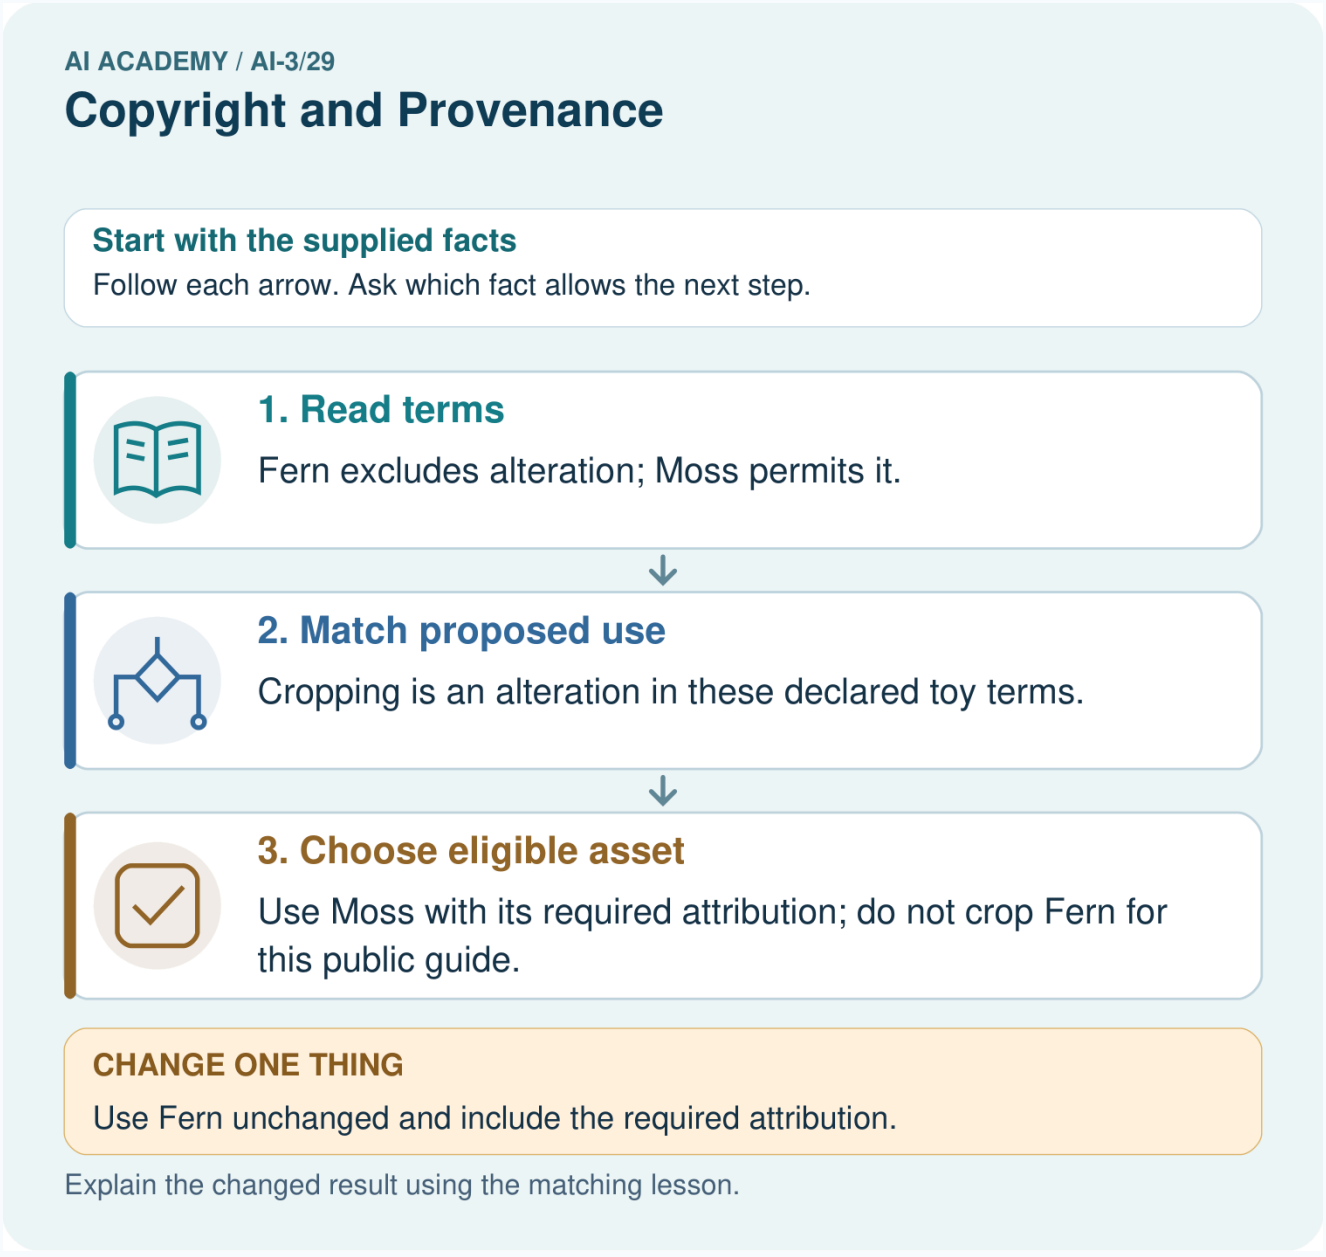

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Thinking move	Teacher prompt
Plan	What is given? What is the question? Which procedure fits these facts?
Do	Point to each input and intermediate step in the worked trace. Name the rule that allows the next step.
Check	Does the output answer the question? Which assumption or limitation prevents a larger claim?

Use the diagram and verbal explanation together. Ask learners to match a sentence to a specific visual step; do not assign learners fixed visual or auditory learning styles.

A pictorial worked case: Copyright and Provenance

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

Change one thing in the pictured case

Ask while showing the picture

MAIN LESSON · SECTION 3

Guide the explanation, then remove help

> Collect each learner's reasoning before showing feedback.

Main completion prompt

Completion task: Image A has L; image B has M. The project is a publicly downloadable adapted poster. Show the intermediate steps and give the conclusion with its scope.

Expected reasoning and fading help

Teacher check: Teacher explanation: A is not permitted for this use under L. B is permitted under the supplied M terms with **attribution**. Keep **licence** version and **provenance**.

Start by identifying the given **input**s together. Leave the intermediate steps blank. If needed, model one step, then withdraw that help on the next step. Move to a full trace only when the partial trace is understood.

For partners, alternate explainer and checker; collect a response from every learner before discussion.

Individual misconception check

Use the worked case for **Copyright** and permitted sources. Proposed explanation: "The worked result establishes every future case". Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Expected correction: Real legal outcomes depend on jurisdiction and facts; supplied **licence** terms define this classroom exercise, not universal **copyright** law.

Collect explanations, not only yes/no votes. If a misunderstanding is common, re-model the relevant step for the class.

If it affects a few learners, give a short targeted group explanation while others solve a more demanding variation.

Pictorial question and changed-case reasoning

Does acknowledging Fern make a cropped version permitted? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

No. **Attribution** is one condition; the no-alteration condition still prohibits cropping under these terms. Changed-case check: That use satisfies the stated fictional permission conditions.

Its public redistribution is permitted when there is no alteration and **attribution** is included.

Changed-case reasoning: That use satisfies the stated fictional permission conditions. Its public redistribution is permitted when there is no alteration and **attribution** is included.

Collect each learner's explanation before discussion. Use the first missing connection between **input**, deciding step and result to choose support. This question is worked-case practice, not fresh mastery **evidence**.

Keep each learner explaining

- Ask: Which facts are given, and which would we have to assume? Learners mark relevant details before discussing answers.
- Say: Predict first. Show the rule, information path or calculation that would produce the result. A correct guess is not yet an explanation.
- In pairs, one learner solves while the other checks **evidence**; exchange roles. Remove the worked answer before independent assessment.

▼ Earlier wording, alternatives and picture transcripts

Demonstrate and guide practice

Board sequence

Write the given facts: A slide reuses an online photograph and textbook paragraph.

Write the question to explain: What **provenance** and reuse checks are needed?

Reveal after **prediction**s: Record creator, source, **licence** or permission, **attribution** requirements and modifications. **Attribution** alone is not permission; classroom context is not a universal exemption.

Use the earlier changed question as optional later practice. Reserve Check the new public-quotation plan independently for the first independent attempt before hints or feedback.

Classroom dialogue

Reveal reasoning one step at a time. Explain why a tempting alternative fails. Write units and denominators for arithmetic, trace conditions for decisions, and identify supporting sources for claims.

Model these guided questions

Guided: A is not permitted for this use under L. B is permitted under the supplied M terms with **attribution**. Keep **licence** version and **provenance**.

Qualification: Real legal outcomes depend on jurisdiction and facts; supplied **licence** terms define this classroom exercise, not universal **copyright** law.

Exit: accept a concrete variation with its predicted outcome and a stated condition that would challenge the **mechanism**; reject a claim resting on unmeasured **evidence**.

Case-specific teaching sequence

Stage	Teacher action
Session 1: 0–7 minutes	Retrieve the prerequisite; identify the input, procedure and evidence source.
7–18 minutes	Explain section 1 and vocabulary. Complete W1 with a mechanism-based explanation.
18–32 minutes	Trace the declared procedure and worked case. Complete W2, recording intermediate steps.
32–45 minutes	Discuss the diagram with the worked input; use W3 to distinguish measured claims and limitations.
Session 2: 0–8 minutes	Retrieve the worked reasoning and collect the guided response before discussing it.

Stage	Teacher action
8–20 minutes	Compare a proposed boundary variant with the original case; identify what remains fixed.
20–35 minutes	Collect W4 independently. Require the procedure trace and the bounded conclusion.
35–45 minutes	Use W5 and exit responses for feedback. Administer the fresh retry after feedback and preserve both attempts.

Reduce help deliberately

Individual reasoning check

Pictorial practice question

Reasoned teacher answer

MAIN LESSON · SECTION 4

Run the supplied investigation

> Keep expected results, observed paper traces and remaining limits distinguishable.

Supplied materials and answer guidance

Mixed-poster key: cropped Fern fails F1 alteration condition; cropped credited Moss fits M1; 11-word D quotation fits declared 30-word credited allowance; O is declared fictional original; G generated origin does not supply missing terms; U permission unknown.

Independent C internal reading does not supply public reuse, D 40 words exceeds 30; shorten to at most 30 with credit or obtain appropriate permission under the toy terms. No fixed legal word threshold is taught.

Run and record

1. Predict → Test → Record → Explain
2. Keep expected and actual results separate. Surprises are useful data when recorded honestly.
3. Use the six fictional mixed-poster asset cards. Record **provenance**, proposed use, transformations, supplied terms and attribution; keep generated-origin labels separate from reuse permission. Preserve missing rights information as unresolved and apply only the declared classroom terms.
4. What did the hardest test teach you that the normal test did not?

Keep an inspectable record

Record	What to capture
Input or evidence	Exact data, instruction or claim
Expected result	Answer or safe fallback declared before the run
Observed result	Actual result, including errors
Explanation	Rule, calculation or evidence explaining the outcome
Next test	One justified change and a new prediction

Diagnose the first misunderstanding

The worked result establishes every future case: Real legal outcomes depend on jurisdiction and facts; supplied **licence** terms define this classroom exercise, not universal **copyright** law.

A missing **input** may be replaced without recording the change: A replacement changes the **evidence** or contract. Record the change and its justification; do not silently turn unknown into a measured value.

Repeating an assessed case is new independent **evidence**: A replay checks consistency. An example used for feedback or revision cannot later be described as untouched final evaluation.

Choose support from the response

What the response shows	Next teaching action
Missing or misread facts	Read the case aloud, mark supplied versus unknown facts, and let the learner restate it.
Wrong procedure	Return to the deciding step in the worked case. Contrast it with the proposed incorrect explanation.
Arithmetic or implementation error	Trace intermediate values or lines; preserve the first mismatch and retry that step.
Correct result without a reason	Ask for a trace and a changed case before marking independent understanding.
An unsupported wider claim	Ask which supplied evidence supports the claim and which further observation would be needed.

Offer an oral explanation, drawing, enlarged visual or fewer examples when that removes a reading/writing barrier. Keep the same reasoning goal.

Stretch secure learners by changing a boundary or assumption and asking them to defend the effect, not simply by assigning more of the same questions.

▼ Earlier wording, alternatives and picture transcripts

Run the weekly evidence lab

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

Make the lab runnable

Use the supplied investigation for shared practice. Keep predictions and observed paper-trace results separate. Reserve Check the new public-quotation plan independently for the individual first attempt before feedback; do not use the reserved case as a paired lab task.

Diagnose and reteach

For guessing, return to given facts and request a trace. For vocabulary without application, use one example and one non-example. For arithmetic errors, check the setup before the calculation.

Finish with a different uncoached case before recording mastery.

Address these additional misconceptions

Match the support to the first error

MAIN LESSON · SECTION 5

Assess the selected new case

> Keep this key until after the first attempt; accept valid alternatives with defensible reasoning.

Selected independent question and key

Selected case: Text C permits internal reading only; D permits public quotation up to 30 words with **attribution**. Proposed public handout reproduces 40 words. Apply the fictional terms.

Teacher explanation: C lacks public-use permission; 40 exceeds D limit. Revise D quotation to at most 30 words with **attribution** or obtain permission. Do not infer legal exceptions from this fictional policy.

Judge explanation, trace and limits

Dimension	Evidence required
Explanation	Names the applicable idea or procedure and ties it to the supplied facts.
Trace and result	Preserves the given inputs and shows the relevant intermediate steps; distinguishes a prediction from an observed execution.
Limits	States the assumptions, missing evidence or conditions under which the result would change.

Record each dimension as not yet, with support, or independent. Accept a valid alternative procedure with a defensible trace.

Do not penalise an honestly recorded model failure if the learner correctly explains its **evidence** and limits.

Give one usable repair action

Name the earliest unsupported step and give one action to repair it. Have the learner make that repair now and explain why. Then assess the relevant skill on a fresh, fully specified case.

Confirm it was not previously practised with feedback; solve and check the new case before assigning it. A follow-up design prompt is a starting brief, not automatically an equivalent test.

W1 Explain the mechanism

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

Teacher explanation: Permission to access a work and permission to redistribute or modify it are separate. Use a classroom **licence** ledger instead of assuming all online material is reusable.

For this fictional policy, **licence** L permits classroom display with **attribution** but forbids public redistribution. **Licence** M permits adaptation and redistribution with **attribution**.

Unknown permission means seek approval or choose a permitted alternative; this exercise is not a legal ruling.

W2 Trace the worked case

Image A has L; image B has M. The project is a publicly downloadable adapted poster. Show the intermediate steps and give the conclusion with its scope.

Teacher explanation: A is not permitted for this use under L. B is permitted under the supplied M terms with **attribution**. Keep **licence** version and **provenance**.

W3 Audit the limit

A report omits this qualification: Real legal outcomes depend on jurisdiction and facts; supplied **licence** terms define this classroom exercise, not universal **copyright** law.

Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

Teacher explanation: Real legal outcomes depend on jurisdiction and facts; supplied **licence** terms define this classroom exercise, not universal **copyright** law.

State the observed result separately from the unverified or out-of-scope claim; preserve the original **evidence** rather than inventing a missing fact.

W5 Design a revealing follow-up

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

Teacher explanation: Accept a concrete variant of the worked **input** or a missing/conflicting/boundary condition, with an expectation derived from the declared procedure.

Require preserved settings, original **output**s and data roles. Real legal outcomes depend on jurisdiction and facts; supplied **licence** terms define this classroom exercise, not universal **copyright** law.

The new case should test this particular **mechanism** rather than merely restate the original result.

▼ Earlier wording, alternatives and picture transcripts

Assess and explain the answers

Worked case answer

Record creator, source, **licence** or permission, **attribution** requirements and modifications. **Attribution** alone is not permission; classroom context is not a universal exemption.

Additional transfer practice question

You find an attractive illustration online with no **license** information. What should you record and check before reusing it in a public project?

Reasoned practice answer

Record its source and creator if known, check permission or **license** terms for the intended reuse, and choose an appropriately **license**d alternative if rights remain unclear.

What counts as evidence

Criterion	0 points	1 point	2 points
Result	Incorrect or absent	Partly correct	Correct with necessary conditions
Reasoning	No supporting trace	Some steps	Clear mechanism, calculation or source support
Limit	Overclaims certainty	Vague limitation	Relevant uncertainty or missing fact

Criterion	0 points	1 point	2 points
Transfer	Copies without adapting	Adapts with prompts	Solves a changed case independently

Use 6/8 as a classroom checkpoint, with 2 required for both Result and Reasoning. This is a proposed teaching rule, not a validated certification threshold.

Do not count a coached answer as independent mastery; correct unsafe or unsupported claims regardless of total.

Feedback

Ask the learner to find the **evidence** that challenges this claim: “Being visible online grants permission for any reuse.” Keep the first attempt and an uncoached retry separate.

Original transfer answer

No. Record creator, source URL, **licence** or permission **evidence**, required **attribution** and modifications. If permission is unclear, use an appropriately **license**d alternative or seek guidance from the teacher.

Do not assume search visibility or classroom use provides universal permission.

Explanations for the additional workbook examples

W1 Explain the mechanism

W2 Trace the worked case

W3 Audit the limit

W4 Apply a new case independently

Text C permits internal reading only; D permits public quotation up to 30 words with **attribution**. Proposed public handout reproduces 40 words. Apply the fictional terms.

Teacher explanation: C lacks public-use permission; 40 exceeds D limit. Revise D quotation to at most 30 words with **attribution** or obtain permission. Do not infer legal exceptions from this fictional policy.

W5 Design a revealing follow-up

Assess independent transfer

Selected case answer

Feedback that the learner uses

MAIN LESSON · SECTION 6

Connect, adapt and return

> Retain the project evidence and revisit the reasoning on a changed case.

Project evidence to keep

Attach citations and **provenance** metadata to every Study Buddy learning asset.

Keep the decision, **input**, result, explanation and remaining limitation in the project **evidence** record. Retrieve this record next week rather than restarting the project.

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding.

Support while preserving the reasoning goal

Provide one short approved passage; separate instruction, **input**, **output** and **evidence**. Stretch: introduce an unsupported claim or conflicting source and validate claim by claim with a fallback.

Provide an **input**/procedure/result/limit frame and a calculator when needed. Ask students to identify the first step before completing the whole trace.

Extension: compare two concrete variants of this **mechanism** while holding unrelated conditions fixed; report both successful and unsuccessful outcomes.

W4: C lacks public-use permission; 40 exceeds D limit. Revise D quotation to at most 30 words with **attribution** or obtain permission. Do not infer legal exceptions from this fictional policy.

Require intermediate reasoning and the stated scope. Fresh retry: **Licence** permits 20 attributed words; handout includes 25.

Expected reasoning: Reduce to at most 20 or obtain permission under this policy; unknown rights are not assumed granted.

If students need support, record it and reassess with another new case rather than awarding independence to a copied answer.

Plan the delayed check

Suggested return points in this level: ai-3/30, ai-3/32, ai-3/35. Use actual classroom dates, adjusting for holidays and gaps. One, three and six teaching weeks are scheduling choices, not a claimed optimal spacing.

At a delayed check, ask for the idea from memory and a changed application. Compare with the earlier independent response and record support used.

For a new level, revisit the previous capstone before checking the new prerequisites.

Record	Teacher evidence
Learner code and date	
Concept and case used; prior exposure	
Explanation / trace / limits	
Support and first repair	
Changed case and delayed outcome	
Next teaching action	

Use the **evidence** to choose reteaching or the next step. A completed page, confidence rating or attractive project does not by itself demonstrate understanding.

Bridge to next week

Ask for one decision the learner can now justify and one situation requiring more **evidence** or human review. Confidence ratings are separate from correct independent performance.

Next: Week 30: Bias and Representation. Retrieve today's **evidence** and identify what carries forward and what is new.

Next is Week 30: Bias and Representation. Carry forward source provenance and explicit scope when inspecting whose situations and outcomes a dataset represents.

▼ **Reference: alternative planning checklist**

REFERENCE · SECTION 7

Reference: alternative planning checklist

> Use as a reminder alongside the main route rather than teaching the cycle twice.

Preparation and schedule

Teaching target: Explain the **mechanism** and terminology of **copyright** and permitted sources

Prepare the labelled worked-case picture, the matching workbook, fictional **input** cards and a place for individual responses. No paid AI account is required for the paper reasoning activities.

Session · Plan · Resources

> **Session:** Session 1 · Understand · 45 min
>
> **Plan:** 0–7: recall and prerequisite; 7–15: inspect the concrete case and predict; 15–30: teacher models the worked trace; 30–40: learners explain a step using the text and visual; 40–45: check the core idea.
>
> **Resources:** Sections 1–6; record the brief recall in the workbook.

> **Session:** Session 2 · Practise · 45 min

> **Plan:** 0–5: retrieve the procedure; 5–15: W2 completion practice; 15–23: explain and check with a partner; 23–30: each learner answers the misconception check; 30–40: targeted reteaching or a harder variation; 40–45: prepare the investigation.
>
> **Resources:** Sections 7–10; use the matching workbook W2 and misconception check.

> **Session:** Session 3 · Investigate and transfer · 45 min
>
> **Plan:** 0–5: retrieve the decision rule; 5–20: investigate or trace; 20–30: start the independent case; 30–38: connect the project; 38–43: act on feedback; 43–45: plan the return check.
>
> **Resources:** Use “Run the investigation”, “Connect your project”, “Show what you know”, “Study a complete case” and “Try a new case independently”. Give extra time for the full task set. If this week has a coding lab, use its named section; section numbers can change when extra explanations are included.

Practice and assessment reminders

Before class, solve the supported practice: Image A has L; image B has M. The project is a publicly downloadable adapted poster. Show the intermediate steps and give the conclusion with its scope.

Reasoned practice answer: Teacher explanation: A is not permitted for this use under L. B is permitted under the supplied M terms with **attribution**. Keep **licence** version and **provenance**.

Check every learner before discussion: Use the worked case for **Copyright** and permitted sources. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Misconception repair: Real legal outcomes depend on jurisdiction and facts; supplied **licence** terms define this classroom exercise, not universal **copyright** law.

Support: read the exact case aloud, enlarge the labelled picture, supply **input** cards and model only the first deciding step. Accept a spoken explanation or drawing; retain the reasoning goal.

Extension: Use Fern unchanged and include the required **attribution**. Require a **prediction** and a reason before comparing. Expected result: That use satisfies the stated fictional permission conditions.

Reason: Its public redistribution is permitted when there is no alteration and **attribution** is included.

Independent assessment: withhold the reserved answer until the learner has attempted the new case. Record support separately from correctness.

Criterion	Not yet	With support	Independent
Explanation	Names an answer without a deciding fact	Uses a hint to link fact and decision	Explains the deciding fact in own words
Trace or test	Cannot connect input and result	Completes steps with prompts	Traces or tests a changed case accurately
Limits and revision	Claims more than evidence supports	Names a limit after a prompt	States a defensible limit and useful next test

Project checkpoint: Prepare the demonstration. Gather reproducible instructions, **evidence**, access checks and remaining limitations.

Use the weekly teacher answer for topic-specific reasoning. A saved progress tick is an activity record; judge mastery from the learner's explanation and **evidence**.

▼ **Reference: feedback and records**

REFERENCE · SECTION 8

Reference: feedback and records

> Use digital tools where they help retain an explanation and its evidence.

Keep practice and independent evidence separate

Use the two formative questions as supported practice, not as independent mastery scores. Discuss the deciding **evidence** rather than accepting a guessed selection.

The feedback comes from the reviewed public worked case. Do not reveal the separately reserved independent teacher answer until the learner has attempted that case.

Repair and portfolio records

Use the earlier worked-explanation links to address a specific missing building block, then return to the current question. Adapt this suggestion after observing the learner; it is not an automatic diagnosis.

Collect the completed-work portfolio as **evidence**. Record support separately from correctness, and assess explanation, trace/test and limitations. Progress ticks and quiz selections alone do not establish mastery.

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

This week has no code block. Use this routine when a later lesson includes an executable lab.

Ask students to predict before running code. Preserve errors and actual **output**s; collect a changed test and an explanation. The branch-boundary and indexing lessons deliberately include failure cases.

REFERENCE · SECTION 9

Reference: teach with the six pictures

> Choose the picture for the teaching move and connect it to the explanation.

01. Copyright and Provenance: the case

Follow the labelled picture with the matching explanation. Open the vector diagram

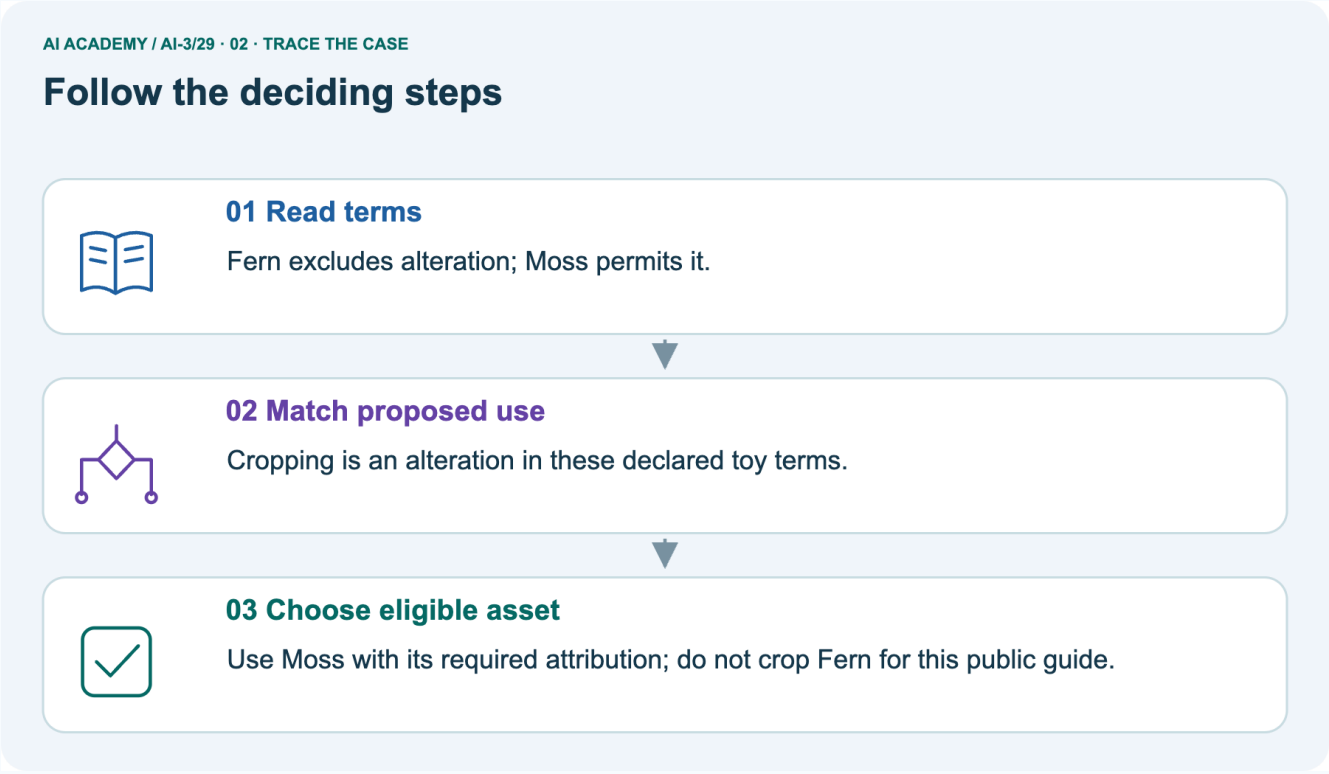

Read fictional reuse terms before decorating a public study guide. Supplied facts: Image Fern allows public redistribution with **attribution** but no alteration.

Image Moss allows alteration and public redistribution with **attribution**. The plan crops an image. All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

Point to the given fact that matters most. Explain why it matters.

Teacher prompt: Point to the given fact that matters most. Explain why it matters. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

02. Follow the deciding steps

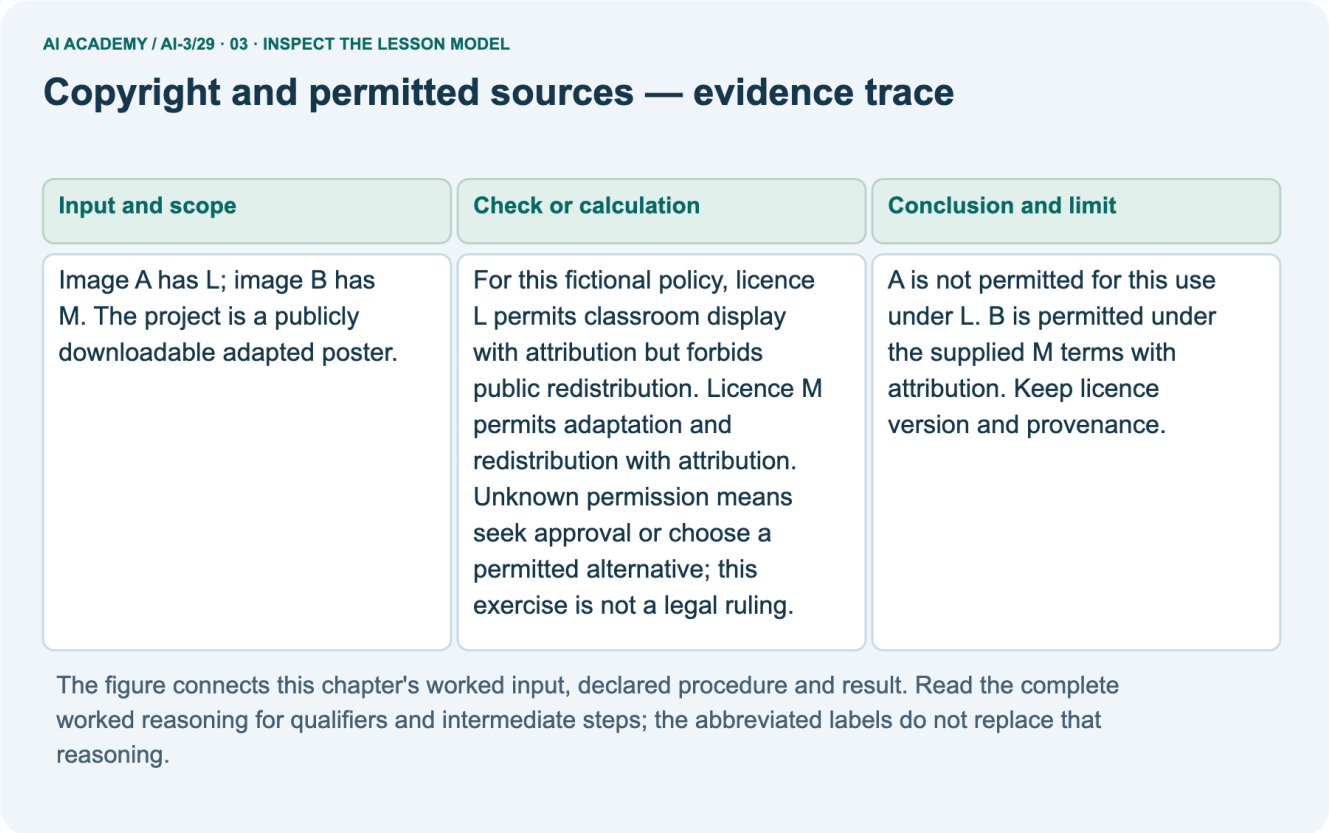

Follow the labelled picture with the matching explanation. Open the vector diagram

Read terms: Fern excludes alteration; Moss permits it. → Match proposed use: Cropping is an alteration in these declared toy terms. → Choose eligible asset: Use Moss with its required **attribution**; do not crop Fern for this public guide.

Point to each numbered stage and explain which recorded **input** it uses.

Teacher prompt: Point to each numbered stage and explain which recorded **input** it uses. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

03. Copyright and permitted sources — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

Copyright and permitted sources — **evidence** trace. Image A has L; image B has M.

The project is a publicly downloadable adapted poster. | For this fictional policy, **licence** L permits classroom display with **attribution** but forbids public redistribution.

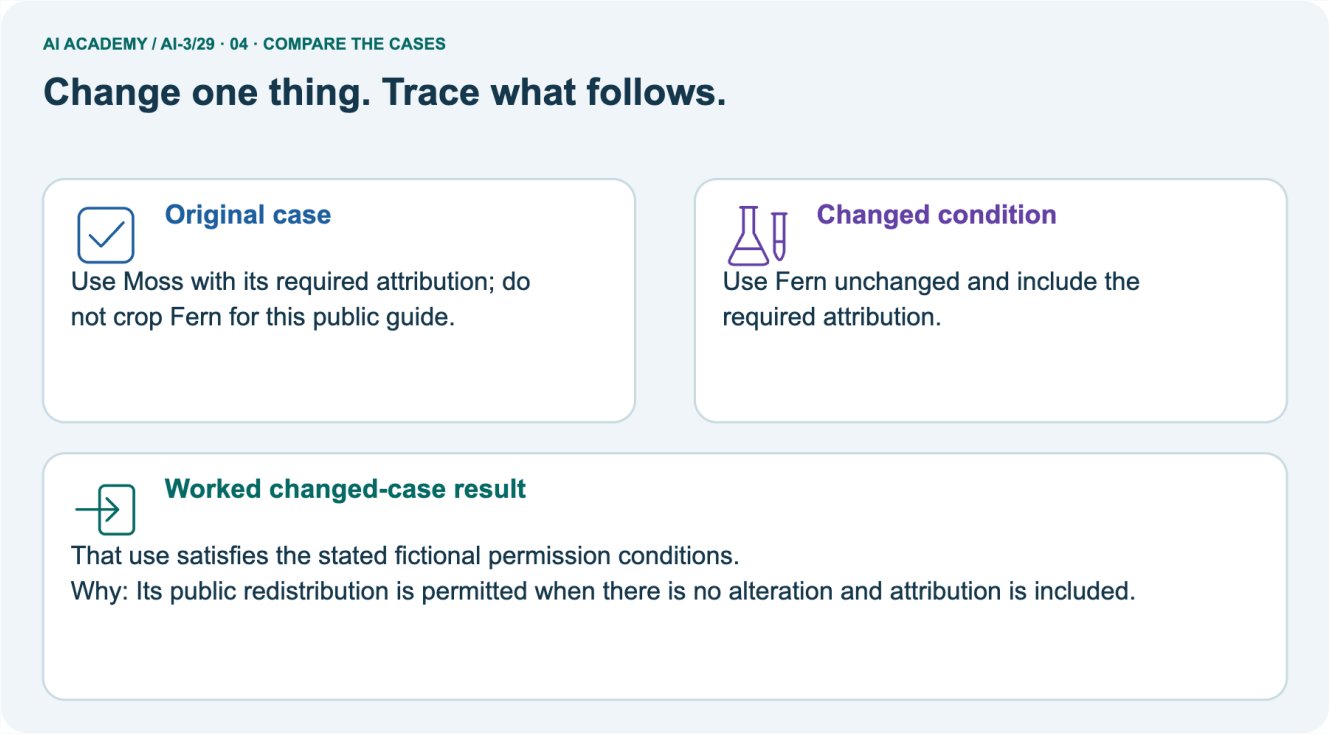

Licence M permits adaptation and redistribution with **attribution**. Unknown permission means seek approval or choose a permitted alternative; this exercise is not a legal ruling. | A is not permitted for this use under L.

B is permitted under the supplied M terms with **attribution**. Keep **licence** version and **provenance**.

Read the labels and values. Explain the relationship the model shows.

Teacher prompt: Read the labels and values. Explain the relationship the model shows. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

04. Change one thing. Trace what follows.

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Use Moss with its required **attribution**; do not crop Fern for this public guide. Changed condition: Use Fern unchanged and include the required **attribution**.

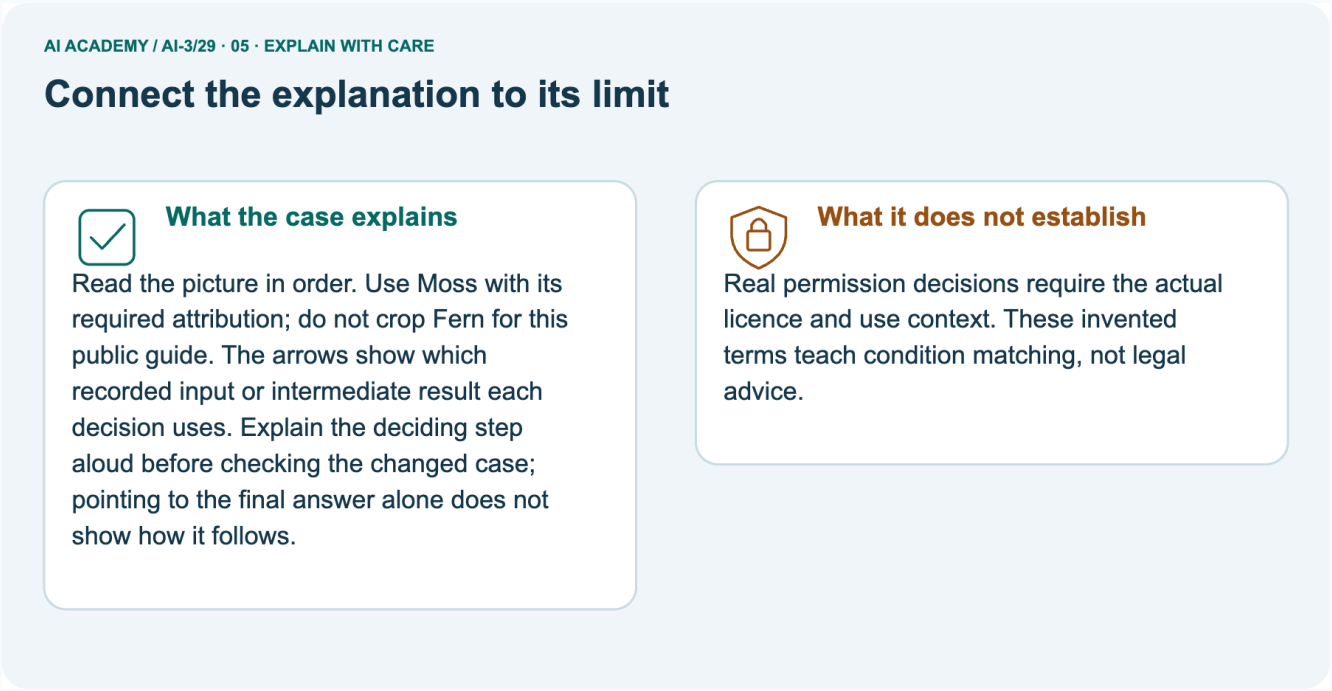

Expected result: That use satisfies the stated fictional permission conditions. Reason: Its public redistribution is permitted when there is no alteration and **attribution** is included.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

Teacher prompt: Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude. Ask learners to describe one label or arrow in ordinary words.

Use the adjacent transcript if the image is difficult to see. Changed-case reasoning: Its public redistribution is permitted when there is no alteration and **attribution** is included.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture in order. Use Moss with its required **attribution**; do not crop Fern for this public guide. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows. Limit: Real permission decisions require the actual **licence** and use context.

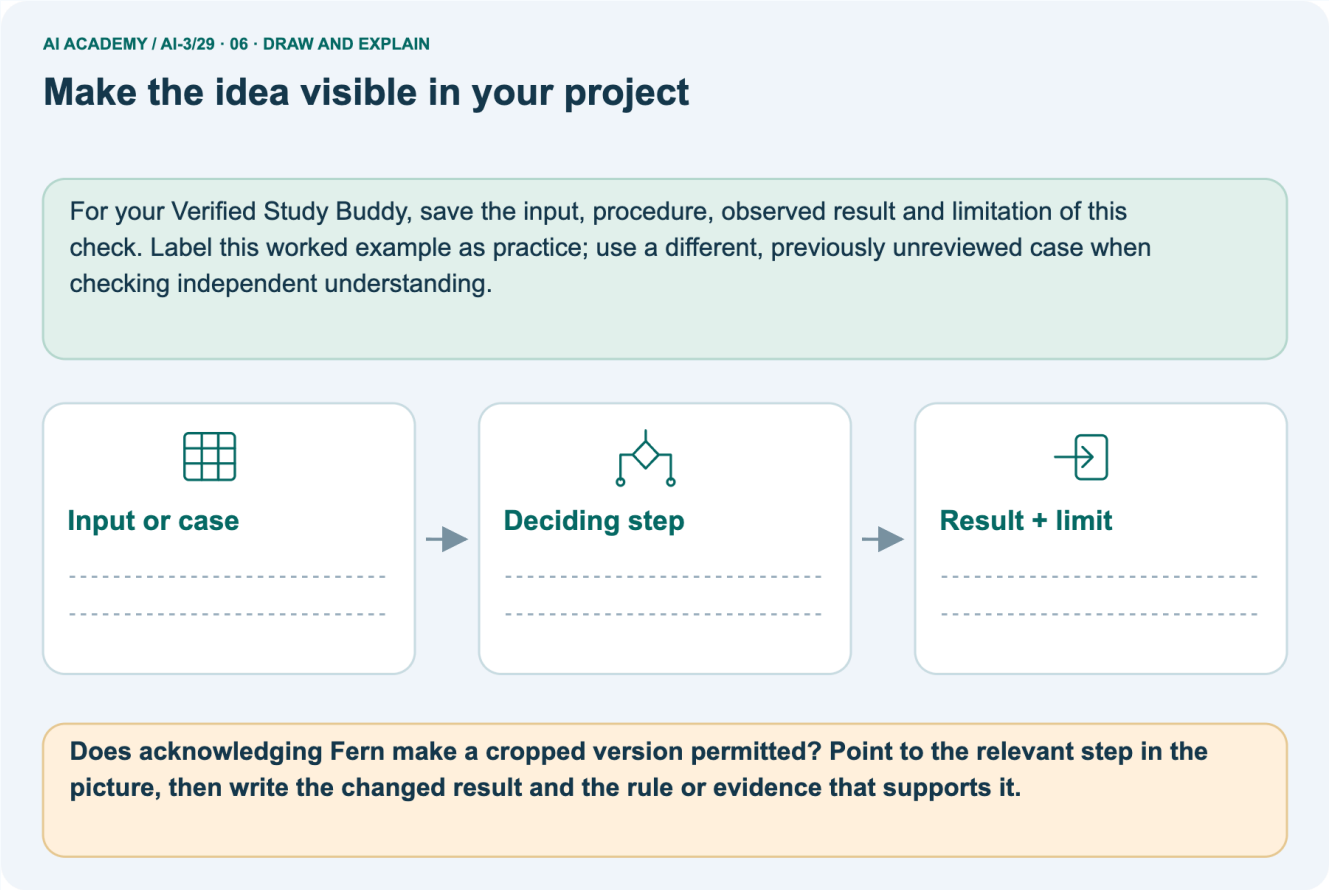

These invented terms teach condition matching, not legal advice.

Explain the case, then point to a limit on the claim.

Teacher prompt: Explain the case, then point to a limit on the claim. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

Keep the stated scope: Real permission decisions require the actual **licence** and use context. These invented terms teach condition matching, not legal advice.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding. Draw your **input**, deciding step, result and limit.

Supported question: Does acknowledging Fern make a cropped version permitted? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

Draw your project trace and justify the deciding step using **evidence**.

Teacher prompt: Draw your project trace and justify the deciding step using **evidence**. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

Supported practice key: No. **Attribution** is one condition; the no-alteration condition still prohibits cropping under these terms. Changed-case check: That use satisfies the stated fictional permission conditions.

Its public redistribution is permitted when there is no alteration and **attribution** is included.

▼ Earlier wording, alternatives and picture transcripts

Use one picture at a time. Hide a worked result before asking for a **prediction**, then reveal it for feedback. These are supported teaching cases; retain the separate independent assessment for a fresh first attempt.

01. Copyright and Provenance: the case

02. Follow the deciding steps

03. Copyright and permitted sources — evidence trace

04. Change one thing. Trace what follows.

05. Connect the explanation to its limit

06. Make the idea visible in your project

▼ Optional interactive practice and completed work

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
