Writing results and limitations

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Reproducible AI Research Study

THE CONNECTED WEEK

State the observed result and attach its limits

Keep counts, outcome definitions and failed conditions visible without substituting unmeasured benefits.

Keep one habit: Question and contract → complete main ledger → separate picture → boundary probes → investigation → independent attempt.

MAIN LESSON · SECTION 1

State the observed result and attach its limits

> Keep counts, outcome definitions and failed conditions visible without substituting unmeasured benefits.

Learning goals

I can explain the **mechanism** and terminology of writing results and limitations.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Retrieve before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Writing the methods section. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Negative results and claim revision. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Running the primary experiment. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Starting explanation

- Recall Writing the methods section. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

> **My starting explanation**

End goal

Explain writing results and limitations using the records and boundaries of this fictional investigation.

▼ **Earlier wording, alternatives and picture transcripts**

Your learning target

Remember before reading

This week you will practise:

Explain the **mechanism** and terminology of writing results and limitations

Apply the stated procedure to a new case with a traceable result

Identify an assumption or limitation and design a revealing follow-up

Retrieve what you already know

This week's end goal

MAIN LESSON · SECTION 2

Understand the question and evidence contract

> Keep counts, outcome definitions and failed conditions visible without substituting unmeasured benefits.

Start with the research problem

A strong results paragraph first says what was measured, on which cases and with what counts. It then states the descriptive difference and the limits that matter for interpreting it. A support-score gain is not automatically a learning gain, and one extra pass is not proof of universal reliability.

Use limitations to identify the missing evidence precisely rather than adding a vague sentence that everything needs more research.

Original concept explanation

Results and limitations should state observed estimates before interpreting them. Separate measured comparisons from causal or deployment claims.

Complete case inputs, rules and limits

Results item	Complete supplied exercise contract
Main supplied counts	A eight of twelve passes; B nine of twelve
Main failures	All three B failures concern conflicting sources
Missing conflict denominator	Total number of conflict cases not supplied; no conflict-slice pass rate can be calculated
Main user evidence	No user study occurred
Separate picture	A supports nine of twelve answers; B ten of twelve, one approved collection
Unmeasured picture outcome	User learning is not recorded
Unknown inference	Significance, stable population effect, cause, timings and deployment usefulness not supplied

Name given and missing evidence

List the given facts and one fact that is not supplied.

▼ Earlier wording, alternatives and picture transcripts

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

MAIN LESSON · SECTION 3

Trace the complete main case before interpreting it

> Follow each evidence-to-conclusion step and retain unknown quantities.

Original declared procedure

Give counts, denominators, effect sizes, valid uncertainty and failed conditions. State missing **evidence** and preserve the original primary outcome.

Complete main-case evidence ledger

Main results component	Supported statement
Observed pass rates	A 8/12 ≈ 66.667%; B 9/12 = 75%
Descriptive difference	1/12 ≈ 8.333 percentage points in B's favor
Failure category	Three B failures involve conflicting sources
What category statement does not imply	Not that every conflict case failed; total conflict cases unknown
User-study status	No study occurred; classroom usefulness not measured
Paired identities / statistical effect	Not supplied; no reconstructed transitions or significance
Scoped report	B passed one more of twelve supplied cases, with conflict failures retained

State the scope and explain the visual

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

▼ Earlier wording, alternatives and picture transcripts

Writing results and limitations — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
B passes 9/12, A 8/12; three B failures all concern conflicting sources. No user study occurred.	Give counts, denominators, effect sizes, valid uncertainty and failed conditions. State missing evidence and preserve the original primary outcome.	75% versus 66.667%, gain 8.333 points on 12 cases; conflict failures remain. No classroom usefulness or universal reliability claim is supported.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Connect the picture and the explanation

MAIN LESSON · SECTION 4

Predict the changed case before reading the explanation

> Keep the rule and evidence boundary visible.

Main task and response

- B passes 9/12, A 8/12; three B failures all concern conflicting sources. No user study occurred. Show the intermediate steps and give the conclusion with its scope.

> **Keep the procedure fixed. Explain what changed in the inputs and result.**

Predict the pictured change

- Change: Write "B makes every student smarter".

▼ **Check after predicting**

Prediction: Remove that sentence as unsupported by the study.

Reason: The measured unit was answers, not student understanding or intelligence.

▼ **Earlier wording, alternatives and picture transcripts**

Compare a familiar case with a changed case

Change one thing in the pictured case

MAIN LESSON · SECTION 6

Connect the main result with the separate pictured case

> Keep the two scenarios and their supplied evidence distinct.

Main case and original checked reasoning

B passes 9/12, A 8/12; three B failures all concern conflicting sources. No user study occurred.

75% versus 66.667%, gain 8.333 points on 12 cases; conflict failures remain. No classroom usefulness or universal reliability claim is supported.

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Separate pictured inputs and complete explanation

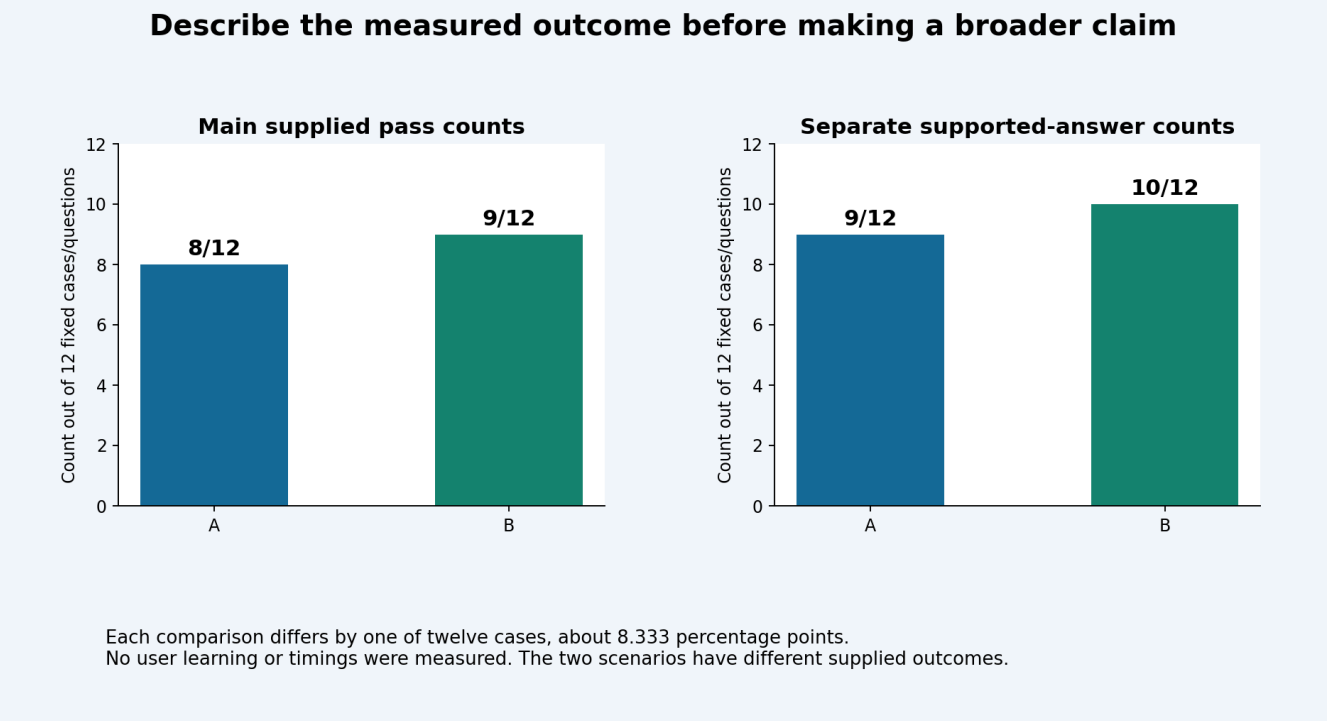

Write results without enlarging them. A fictional study evaluates answer support on twelve fixed questions from one approved collection.

A supports 9/12 answers; B supports 10/12. No user learning outcomes are recorded.

The separate picture measures answer support on twelve fixed questions from one approved collection. A supports nine answers, or 75%; B supports ten, or approximately 83.333%. The difference is one supported answer, about 8.333 percentage points. This is a support outcome, not evidence that any learner became smarter. No user learning, timings, significance or stable population effect is supplied.

Keep the main eight-versus-nine pass case separate from this nine-versus-ten support case. A broader question about learners would require its own appropriate design and evidence, not a stronger adjective in the conclusion.

Read the labelled representation

AI ACADEMY / AI-7/31 · 02 · TRACE THE CASE

Follow the deciding steps

01 Report the observation

A is 75%; B is about 83.3%, a one-case improvement.

02 Link to the method

Name the collection, rubric and twelve-case denominator.

03 State limits

Do not infer that children learn more from this answer-support measure.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Report the observation	A is 75%; B is about 83.3%, a one-case improvement.
2. Link to the method	Name the collection, rubric and twelve-case denominator.
3. State limits	Do not infer that children learn more from this answer-support measure.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Results describe what was measured; limitations prevent substitution of a different outcome or population. A small descriptive improvement needs its scope attached.

Complete picture evidence and limits

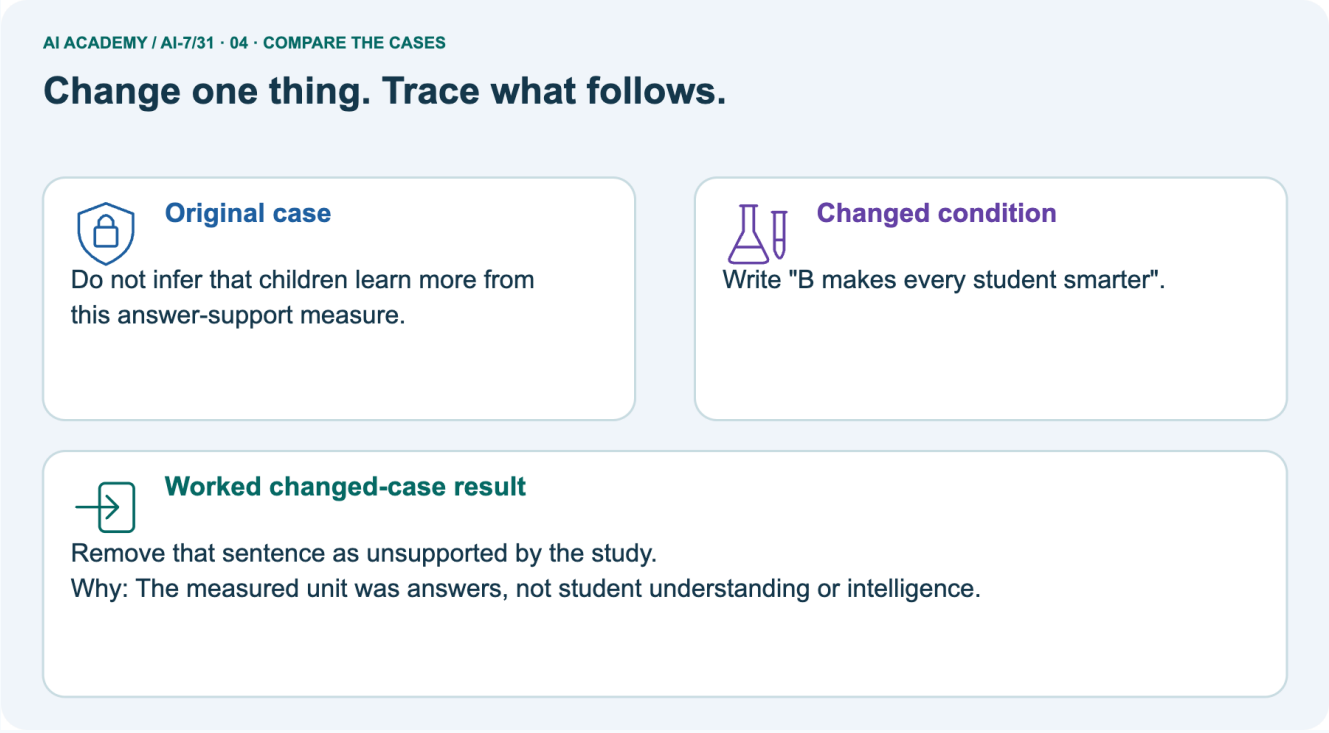

Separate support outcome	A	B
Supported answers	9/12	10/12
Observed rate	75%	≈83.333%
Difference	One additional supported answer	≈8.333 percentage points
Collection	Same stated approved collection	Only this fixed question set
Learner improvement	Not measured	Not measured

Separate support outcome	A	B
Timing / significance	Not supplied	Not supplied
Claim every student becomes smarter	Unsupported outcome substitution	Not a consequence of support counts

Predict the changed condition

- Change one thing: Write "B makes every student smarter". Predict the result before checking the explanation. What remains the same?

▼ Check after predicting

Follow the labelled picture with the matching explanation. Open the vector diagram

Explain what remains unknown

- No significance or stable population effect is established; broader task and learner **evidence** would require another study.

- Read the labelled picture: Compute the supported-answer rates for 9/12 and 10/12. What actual outcome was measured, and why is a claim that every student becomes smarter outside this **evidence**?

▼ **Earlier wording, alternatives and picture transcripts**

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Writing results and limitations

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

AI ACADEMY / AI-7/31

Writing results and limitations

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Report the observation

A is 75%; B is about 83.3%, a one-case improvement.

2. Link to the method

Name the collection, rubric and twelve-case denominator.

3. State limits

Do not infer that children learn more from this answer-support measure.

CHANGE ONE THING

Write "B makes every student smarter".

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

Find the first unsupported inference and repair it

> Use the supplied conditions rather than inventing missing evidence.

Original qualification and repair setup

A limitation should directly bound the corresponding claim rather than contradict an oversized headline.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Complete boundary and misconception probes

Results/limits audit	Checked interpretation
One more observed pass	Report magnitude and denominator
All B failures involve conflict	Failure category known; total conflict slice unknown
No user study	Do not claim measured classroom usefulness
More supported answers	Not measured learning or general intelligence
Higher descriptive count	No automatic significance or causal inference
No timings measured	Do not claim speed improvement
Aggregate paired counts only	Do not invent exact case transitions
A limitation is acknowledged	Does not license keeping the unsupported broad claim

Write and justify the repair

- A report omits this qualification: A limitation should directly bound the corresponding claim rather than contradict an oversized headline.

  Explain how omitting it could change a reader's **interpretation**, and write an accurate replacement.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

> **State one repair and the checks you would rerun.**

▼ Earlier wording, alternatives and picture transcripts

Locate the earliest unsupported step

MAIN LESSON · SECTION 8

Practise the mechanism with progressively less help

> Keep the selected independent case for a first attempt.

Shared explanation

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Explain your prediction to a partner before comparing results.

Supported workbook trace

Use workbook W2 for the connected example “Writing results and limitations”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Individual scope check

- Use the worked case for Writing results and limitations. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

  Point to the step or supplied fact that decides; explain your repair if needed.

- Answer on your own before discussion. If you are unsure, say which step you need help with.

Picture response

- Compute the supported-answer rates for 9/12 and 10/12. What actual outcome was measured, and why is a claim that every student becomes smarter outside this **evidence**?

> **My explanation using a pictured step and the given facts**
>
> _____
>
> _____
>
> _____
>
> _____

Reserve the independent task

This is supported practice. Keep the separately named independent case for an attempt before feedback.

▼ **Earlier wording, alternatives and picture transcripts**

Practise with less help: Trace the worked case

Check your reasoning

Explain the picture

Investigate, record the evidence and check the limits

> Distinguish a prediction, a paper trace and an actual local execution.

Current investigation

B passes 9/12, A 8/12; three B failures all concern conflicting sources. No user study occurred. Show the intermediate steps and give the conclusion with its scope.

Complete investigation instructions

1. Write a two-part main report: first the eight/twelve versus nine/twelve rates and one-case descriptive gain; then the three conflict-related B failures and absence of a user study. Do not calculate a conflict-slice rate because its denominator is missing. Separately draft the picture's nine/twelve versus ten/twelve support result and repair the unmeasured claim about every student.

   Keep all arithmetic as supplied-case description, not statistical significance. Record actual local writing/calculation or paper trace; no model, learner study or timing is run. Reserve the independent fifteen-case report for its first attempt.

Evidence record and reflection

Record	Your evidence
Given input and fixed rule	
Prediction before checking	
Actual result, or "not run"	
First mismatch and one explanation	
Boundary or missing input and expected response	

On paper, trace the supplied procedure. If code is provided, predict before running it in a local practice file. Never write an expected answer as though it were an observed run.

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

▼ **Earlier wording, alternatives and picture transcripts**

Predict, investigate and preserve the evidence

Plan → try → check

MAIN LESSON · SECTION 14

Try the selected new case independently

> Write the candidate/baseline rates and descriptive difference, then two specific limits including the missing timings.

Complete independent task

Candidate 10/15, baseline 9/15; no timings measured. Write result and two limits.

First attempt and support record

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Feedback after trying

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

▼ **Earlier wording, alternatives and picture transcripts**

Independent case: Apply a new case independently

Attempt this without hints

Candidate 10/15, baseline 9/15; no timings measured. Write result and two limits.

> **My independent procedure, result and limitation**
>
> | |
> |---|
> | |
> | |
> | |
> | |

Record support used: none, hint or teacher explanation. After feedback, a different case is needed to demonstrate independence.

Use feedback to improve

MAIN LESSON · SECTION 11

Save the research artifact and unresolved conditions

> Keep supplied evidence, proposed revisions and actual work distinct.

Project task and artifact

Add a labelled writing results and limitations **evidence** sheet to Reproducible AI Research Study. Show how you can explain the **mechanism** and terminology of writing results and limitations.

Use the supplied fictional case and keep its **input**s, intermediate steps, calculation or **prediction**, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

Project evidence	Record
Component and version	
Inputs permitted at prediction time	
Trace and comparison with earlier work	
Failure, limit and human review	

Evidence and limitations

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

▼ **Earlier wording, alternatives and picture transcripts**

Evidence for your project

MAIN LESSON · SECTION 16

Retrieve the mechanism and state the evidence boundary

> Explain what follows and what would require new evidence.

Retrieve and explain

- Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of writing results and limitations

My deciding step, evidence and one remaining question

Plan a changed-case return

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Reference bank and extra practice

Choose the reference that helps your next step.

▼ **Reference · Use research vocabulary precisely**

REFERENCE · SECTION 5

Reference · Use research vocabulary precisely

> Connect each term to the question, comparison, measurement or evidence.

Vocabulary and your explanation

Word	Meaning
Descriptive estimate	A quantity calculated from observed data
Interpretation	A statement about what results establish
Limitation linkage	Connecting each restriction to the claim it limits

Use two terms to explain a step in this week's example.

REFERENCE · SECTION 10

Extra challenge · Explain a stronger case

> Choose the next challenge after the main route.

Explain,repair and extend

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

- A report omits this qualification: A limitation should directly bound the corresponding claim rather than contradict an oversized headline.

  Explain how omitting it could change a reader's **interpretation**, and write an accurate replacement.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Explain → apply → challenge

Explain which evidence supports your conclusion and which claim remains unproved.

▼ Reference · Check the research reasoning and its limits

REFERENCE · SECTION 12

Reference · Check the research reasoning and its limits

> Use after practice; reserve the selected independent case for its first attempt.

Current explanation and response

- Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

  For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

My limited claim and a useful next check

▼ **Extra practice · Revisit the complete trace**

REFERENCE · SECTION 13

Extra practice · Revisit the complete trace

> Predict before reading the supplied steps.

Complete trace and evidence

Complete evidence record

Writing results and limitations — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
B passes 9/12, A 8/12; three B failures all concern conflicting sources. No user study occurred.	Give counts, denominators, effect sizes, valid uncertainty and failed conditions. State missing evidence and preserve the original primary outcome.	75% versus 66.667%, gain 8.333 points on 12 cases; conflict failures remain. No classroom usefulness or universal reliability claim is supported.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Follow the **input** through the stated procedure to its result. Cover the result first, predict it, then explain every intermediate step. The text/table accompanies the figure so the example can be read without colour.

My complete trace of the worked case

▼ Reference · The earlier route checklist

REFERENCE · SECTION 15

Reference · The earlier route checklist

> Use one main route rather than repeating the lesson.

Targets,route and first prediction

Start with this question: Write results without enlarging them. A fictional study evaluates answer support on twelve fixed questions from one approved collection.

By the end, I can	How I will show it
Explain the mechanism and terminology of writing results and limitations	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

▼ Extra practice · Predict,check and repair

REFERENCE · SECTION 17

Extra practice · Predict,check and repair

> Keep supported feedback separate from the independent case.

First supported question and optional hint

- Write results without enlarging them. A fictional study evaluates answer support on twelve fixed questions from one approved collection.
- Which labelled step matches this detail? Do not infer that children learn more from this answer-support measure.
- 1. Report the **observation**
- 2. Link to the method
- 3. State limits
- Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Practice 1: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check after the first attempt**

After your attempt, compare with the supported explanation: State limits Do not infer that children learn more from this answer-support measure.

Results describe what was measured; limitations prevent substitution of a different outcome or population. A small descriptive improvement needs its scope attached.

Changed-case question and optional hint

- Changed-case practice: Write "B makes every student smarter". Which conclusion is supported by the supplied facts?
- 1. We can decide the result without examining the changed **input** or the procedure.
- 2. This one example guarantees correct results for every future **input**.
- 3. Remove that sentence as unsupported by the study.
- Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Practice 2: explain the deciding evidence

My selected conclusion, deciding fact and explanation

▼ **Check after the changed attempt**

After your attempt, compare with the supported explanation: Remove that sentence as unsupported by the study. The measured unit was answers, not student understanding or intelligence.

Repair and retain the record

Review Writing the methods section (ai-7/30). Goal: Explain the **mechanism** and terminology of writing the methods section. Short practice: Apply the inclusive four-character rule to oak, pine and willow.

Which label changes under greater-than-four, and what method detail allows another team to reproduce the distinction?. Return to this week and explain what you changed.

Review Negative results and claim revision (ai-7/28). Goal: Explain the **mechanism** and terminology of negative results and claim revision. Short practice: Does a 6/8 tie support the **prediction** that B scores higher?

Explain why one newly selected favourable demonstration does not replace the original result or prove equivalence.. Return to this week and explain what you changed.

Review Running the primary experiment (ai-7/25). Goal: Explain the **mechanism** and terminology of running the primary experiment. Short practice: Compute A's and B's six-case counts and identify the cases that favour each.

How must a B revision tuned on case four be labelled when evaluated again on the same set?. Return to this week and explain what you changed.

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

▼ **Earlier wording, alternatives and picture transcripts**

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Repair a missing building block

Keep your completed work

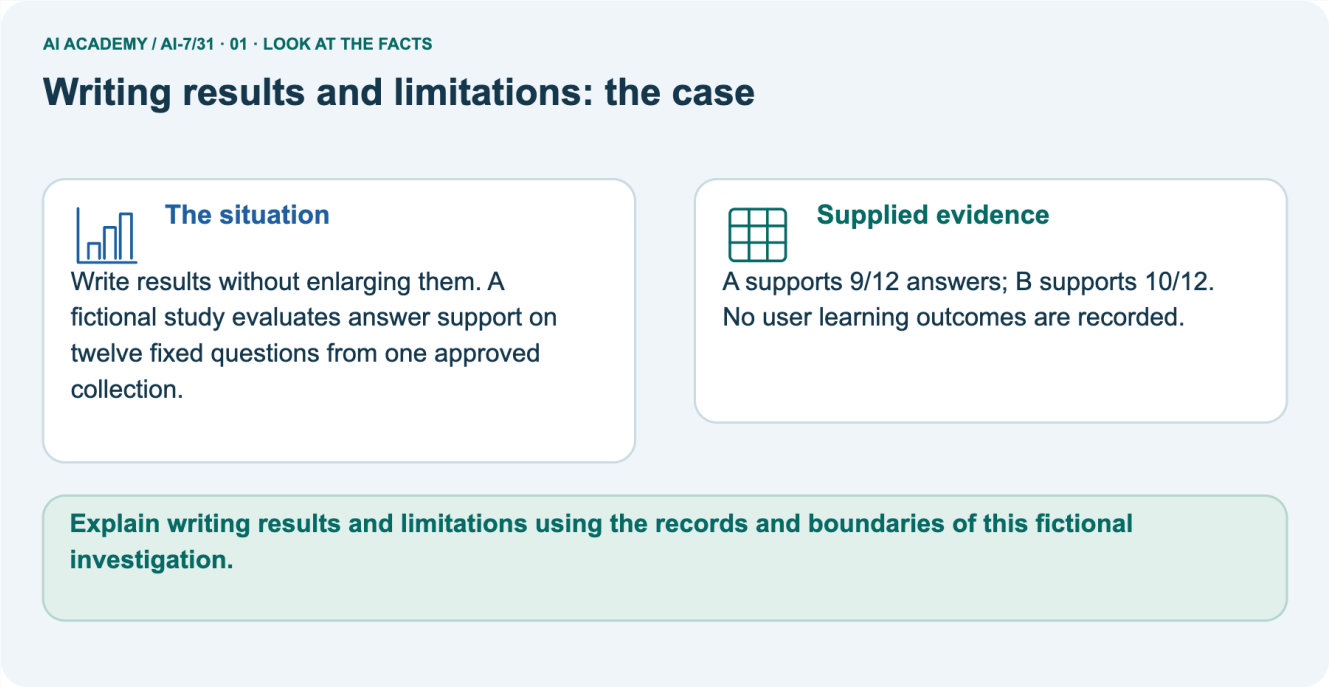

▼ **Reference · Six-picture concept journey**

REFERENCE · SECTION 18

Reference · Six-picture concept journey

> Choose the picture that supports the current explanation.

01. Writing results and limitations: the case

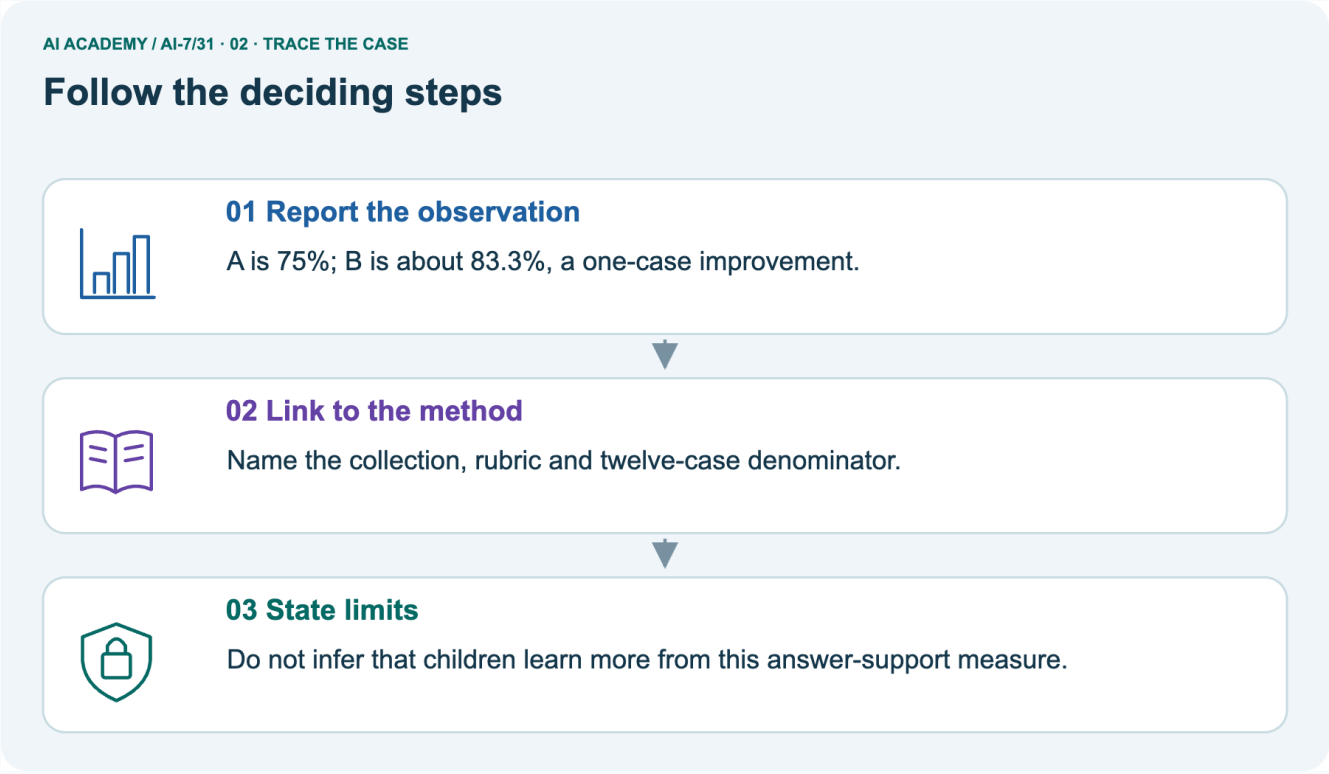

Follow the labelled picture with the matching explanation. Open the vector diagram

Write results without enlarging them. A fictional study evaluates answer support on twelve fixed questions from one approved collection. Supplied facts: A supports 9/12 answers; B supports 10/12.

No user learning outcomes are recorded.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

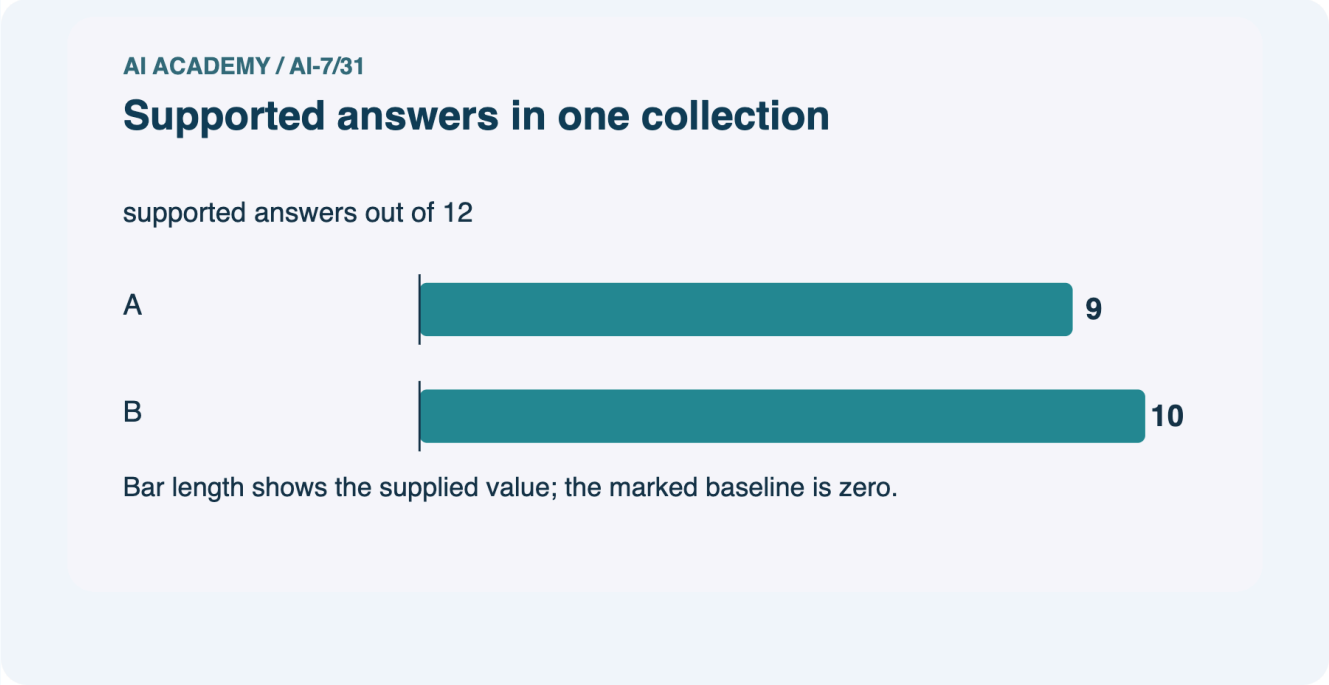

Follow the labelled picture with the matching explanation. Open the vector diagram

Report the **observation**: A is 75%; B is about 83.3%, a one-case improvement. → Link to the method: Name the collection, rubric and twelve-case denominator. → State limits: Do not infer that children learn more from this answer-support measure.

Point to each numbered stage and explain which recorded **input** it uses.

03. Supported answers in one collection

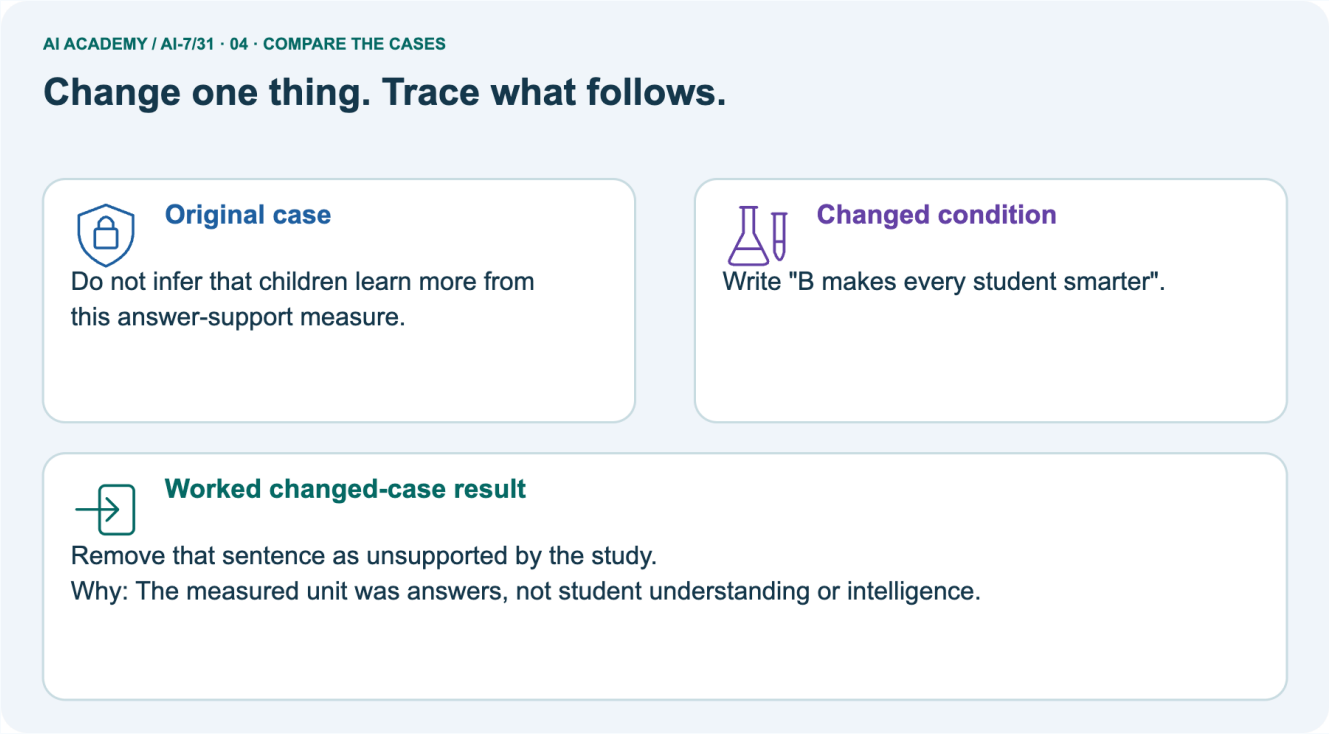

Follow the labelled picture with the matching explanation. Open the vector diagram

Supported answers in one collection. Units: supported answers out of 12. A: 9. B: 10.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

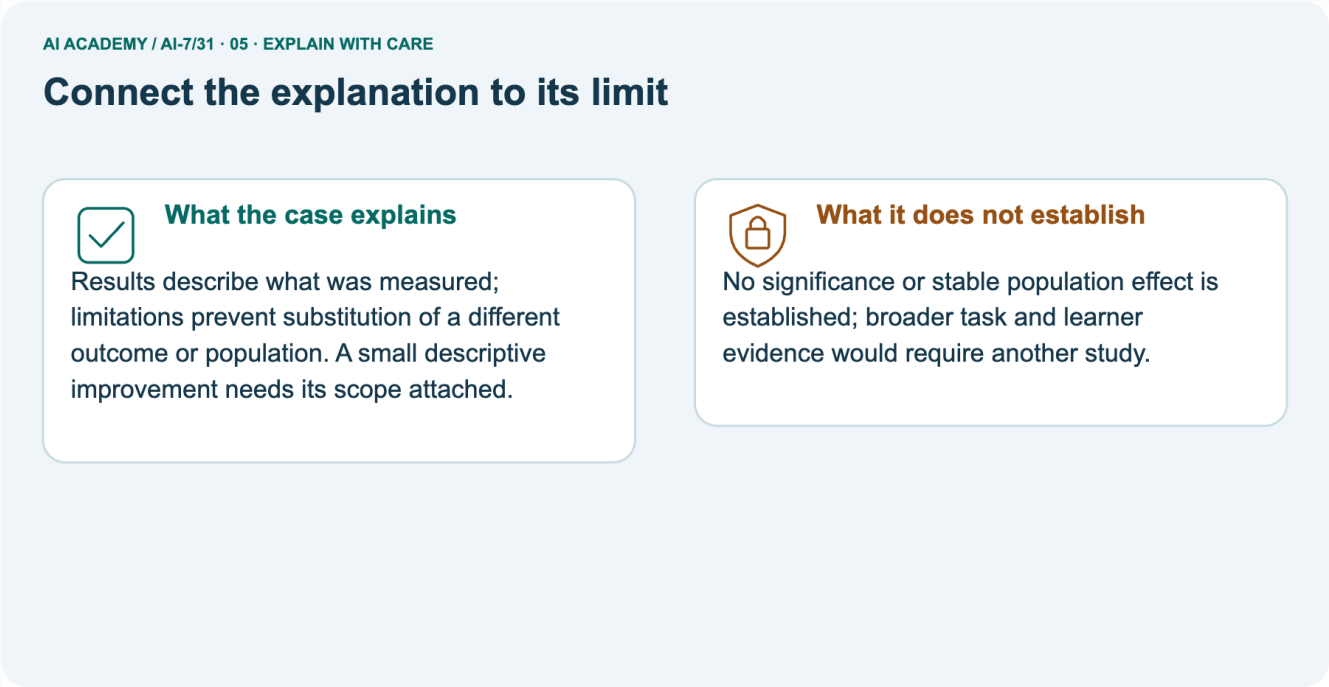

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Do not infer that children learn more from this answer-support measure. Changed condition: Write "B makes every student smarter". Expected result: Remove that sentence as unsupported by the study.

Reason: The measured unit was answers, not student understanding or intelligence.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

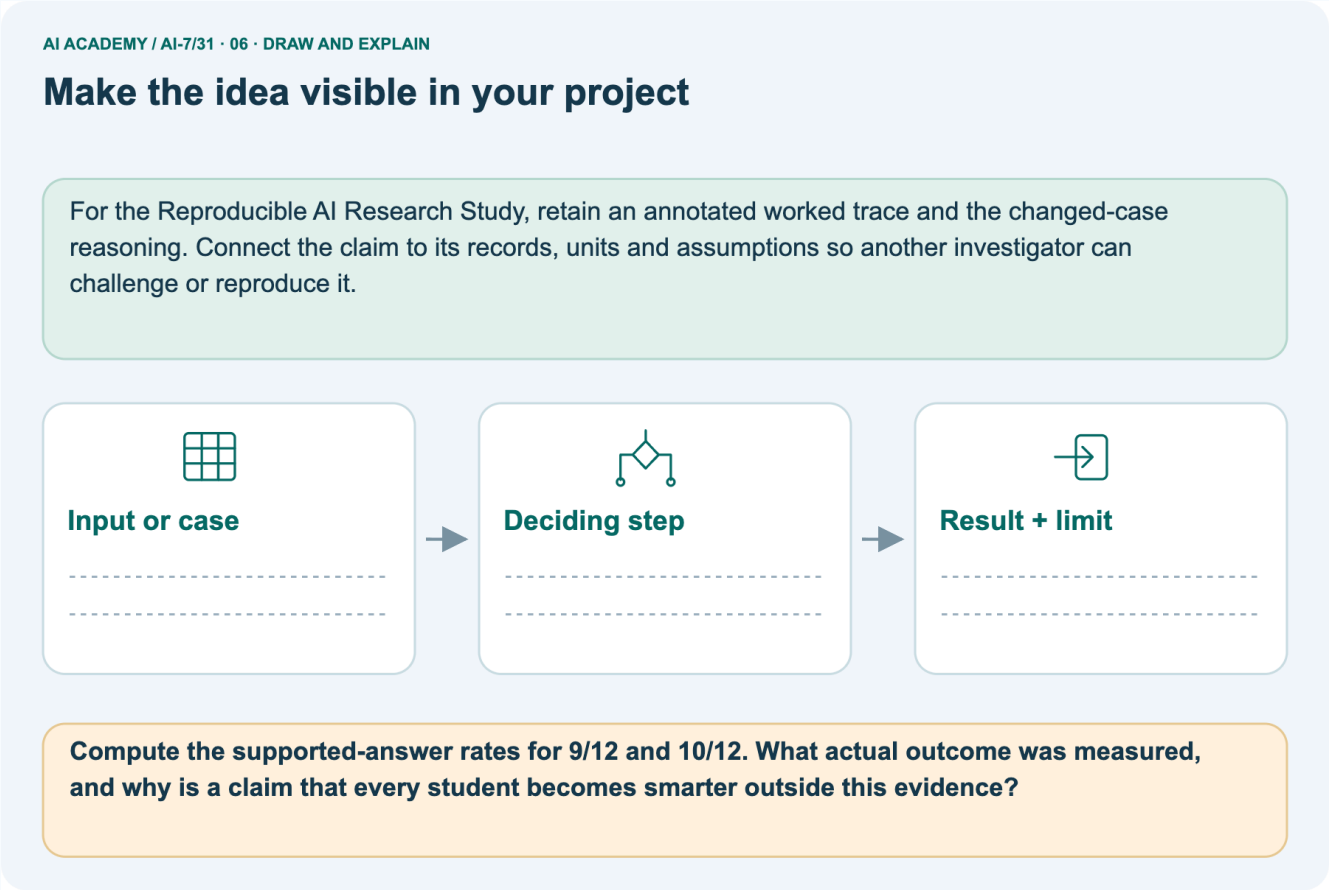

Follow the labelled picture with the matching explanation. Open the vector diagram

Results describe what was measured; limitations prevent substitution of a different outcome or population. A small descriptive improvement needs its scope attached.

Limit: No significance or stable population effect is established; broader task and learner **evidence** would require another study.

Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Draw your **input**, deciding step, result and limit. Supported question: Compute the supported-answer rates for 9/12 and 10/12.

What actual outcome was measured, and why is a claim that every student becomes smarter outside this **evidence**?

Draw your project trace and justify the deciding step using **evidence**.

▼ Earlier wording, alternatives and picture transcripts

01. Writing results and limitations: the case
