Peer review and response

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Reproducible AI Research Study

THE CONNECTED WEEK

Respond to review with traceable evidence and concrete corrections

Address the concern, preserve original records and distinguish proposed analysis from completed evidence.

Keep one habit: Question and contract → complete main ledger → separate picture → boundary probes → investigation → independent attempt.

MAIN LESSON · SECTION 1

Respond to review with traceable evidence and concrete corrections

> Address the concern, preserve original records and distinguish proposed analysis from completed evidence.

Learning goals

I can explain the **mechanism** and terminology of peer review and response.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Retrieve before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Writing results and limitations. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Figures that preserve **evidence**. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Inspecting failures and anomalies. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Starting explanation

- Recall Writing results and limitations. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

> **My starting explanation**

End goal

Explain peer review and response using the records and boundaries of this fictional investigation.

▼ Earlier wording, alternatives and picture transcripts

Your learning target

Remember before reading

This week you will practise:

Explain the **mechanism** and terminology of peer review and response

Apply the stated procedure to a new case with a traceable result

Identify an assumption or limitation and design a revealing follow-up

Retrieve what you already know

This week's end goal

MAIN LESSON · SECTION 2

Understand the question and evidence contract

> Address the concern, preserve original records and distinguish proposed analysis from completed evidence.

Start with the research problem

A reviewer's concern asks whether the evidence supports the claim. A response should connect that concern to a specific record, correction or justified scope change. Calling a neural network advanced does not answer a request for a baseline comparison. If the needed evidence is absent, either propose a clearly identified new analysis or narrow the existing claim.

Do not write that a test was completed when it has only been suggested.

Original concept explanation

Peer review challenges **evidence**, method and clarity. Responses should explain changes with artifacts rather than merely defend the original wording.

Complete case inputs, rules and limits

Review item	Complete supplied exercise contract
Main concern	Fitted-line baseline comparison is missing
Main response	Neural network is advanced, without comparison results
Evidence status	No new baseline counts, design or raw outcomes supplied
Main repair options	Fair comparison under an explicit plan, labelled new analysis; or narrower claim
Separate picture	Four views of P1 plus four views of P2
Underlying source identities	Eight photos, two plants; not eight independent plants
Review artifact	Concern, response, change location, evidence and status
Limits	No actual reviewer communication, new experiment or source-independence proof

Name given and missing evidence

List the given facts and one fact that is not supplied.

▼ **Earlier wording, alternatives and picture transcripts**

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

MAIN LESSON · SECTION 3

Trace the complete main case before interpreting it

> Follow each evidence-to-conclusion step and retain unknown quantities.

Original declared procedure

For each comment record concern, response, change location and new **evidence** if needed. If no new **evidence** exists, narrow the claim instead of promising an unperformed test.

Complete main-case evidence ledger

Main response step	Evidence-grounded alternative
Identify concern	Does performance differ from a fitted-line baseline under aligned conditions?
Reject unsupported defense	Advanced architecture is not comparative evidence
If no comparison exists	Narrow the claim to the actual recorded comparison
If new comparison is proposed	Specify aligned cases/metric/eligibility and label new analysis
Change location	Identify the actual manuscript section/artifact when revised; do not invent it
Status	Proposed, completed or blocked, with corresponding evidence
Preserve history	Original claim, response and later analysis remain distinguishable

State the scope and explain the visual

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

▼ Earlier wording, alternatives and picture transcripts

Peer review and response — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Reviewer asks for a fitted-line baseline; author responds that the neural network is advanced, without a comparison.	For each comment record concern, response, change location and new evidence if needed. If no new evidence exists, narrow the claim instead of promising an unperformed test.	The response lacks evidence. Add a fair comparison under the plan or narrow the claim to the existing baseline; record any new analysis as such.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Connect the picture and the explanation

Predict the changed case before reading the explanation

> Keep the rule and evidence boundary visible.

Main task and response

- Reviewer asks for a fitted-line baseline; author responds that the neural network is advanced, without a comparison. Show the intermediate steps and give the conclusion with its scope.

> **Keep the procedure fixed. Explain what changed in the inputs and result.**

Predict the pictured change

- Change: The team only changes "photos" to "plants" without revisiting analysis.

▼ Check after predicting

Prediction: The substantive independence issue remains unresolved.

Reason: Renaming records does not change their shared source objects.

▼ Earlier wording, alternatives and picture transcripts

Compare a familiar case with a changed case

Change one thing in the pictured case

Connect the main result with the separate pictured case

> Keep the two scenarios and their supplied evidence distinct.

Main case and original checked reasoning

Reviewer asks for a fitted-line baseline; author responds that the neural network is advanced, without a comparison.

The response lacks **evidence**. Add a fair comparison under the plan or narrow the claim to the existing baseline; record any new analysis as such.

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Separate pictured inputs and complete explanation

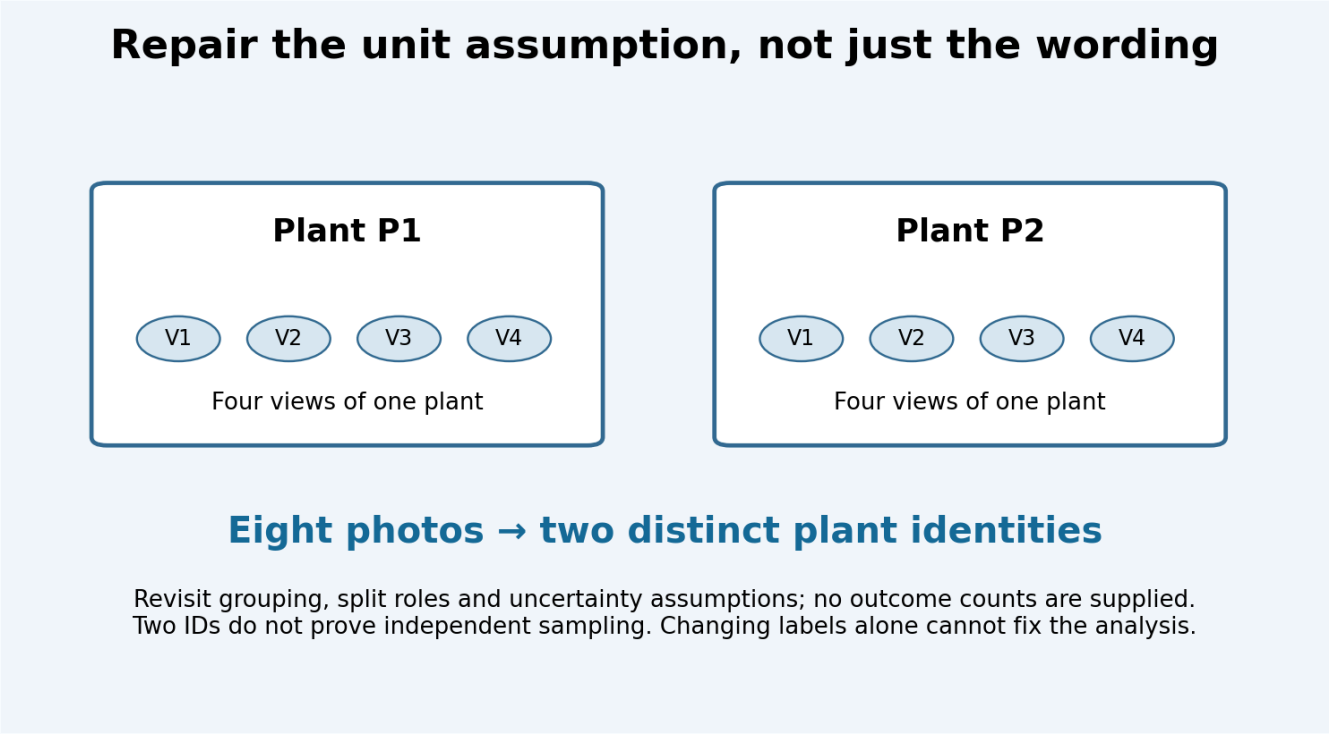

Respond to a reviewer with **evidence**. A reviewer asks why four photos of one plant were treated as four independent plants.

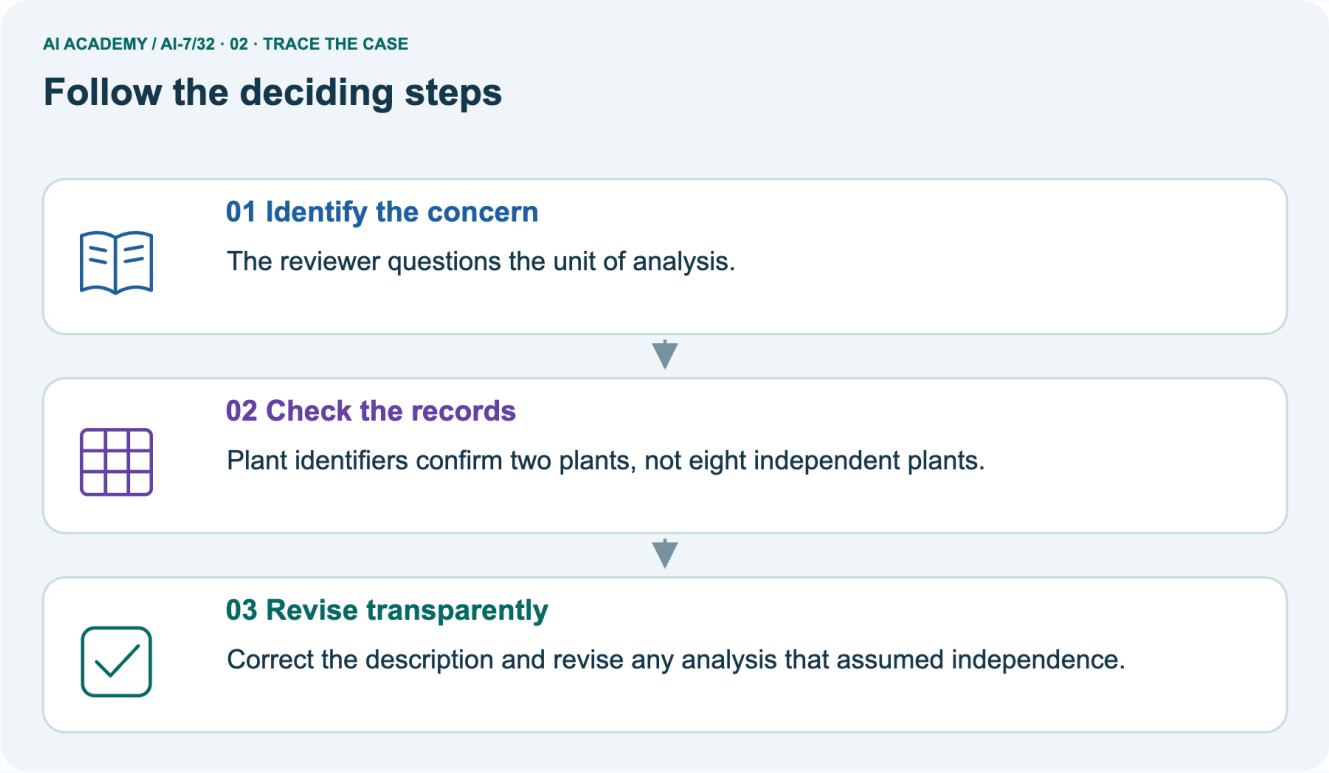

The original table contains four views of P1 and four views of P2: eight photos from two plants.

The separate picture has four views of plant P1 and four of P2, so eight photos represent two distinct plant IDs. A claim of eight independent plants is unsupported. Changing the word photos to plants does not change the source structure. Revisit the sampling/inference unit, group allocation across data roles and any uncertainty calculation that assumed eight independent plant observations.

The picture supplies no correctness labels or split assignment, so neither a revised accuracy nor actual leakage can be inferred. Correct grouping does not create more plants, and two different IDs do not prove independent sampling.

Read the labelled representation

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Identify the concern	The reviewer questions the unit of analysis.
2. Check the records	Plant identifiers confirm two plants, not eight independent plants.
3. Revise transparently	Correct the description and revise any analysis that assumed independence.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Peer review should connect a criticism to the actual records and a concrete correction or reasoned response. Polite language alone cannot repair a methodological error.

Complete picture evidence and limits

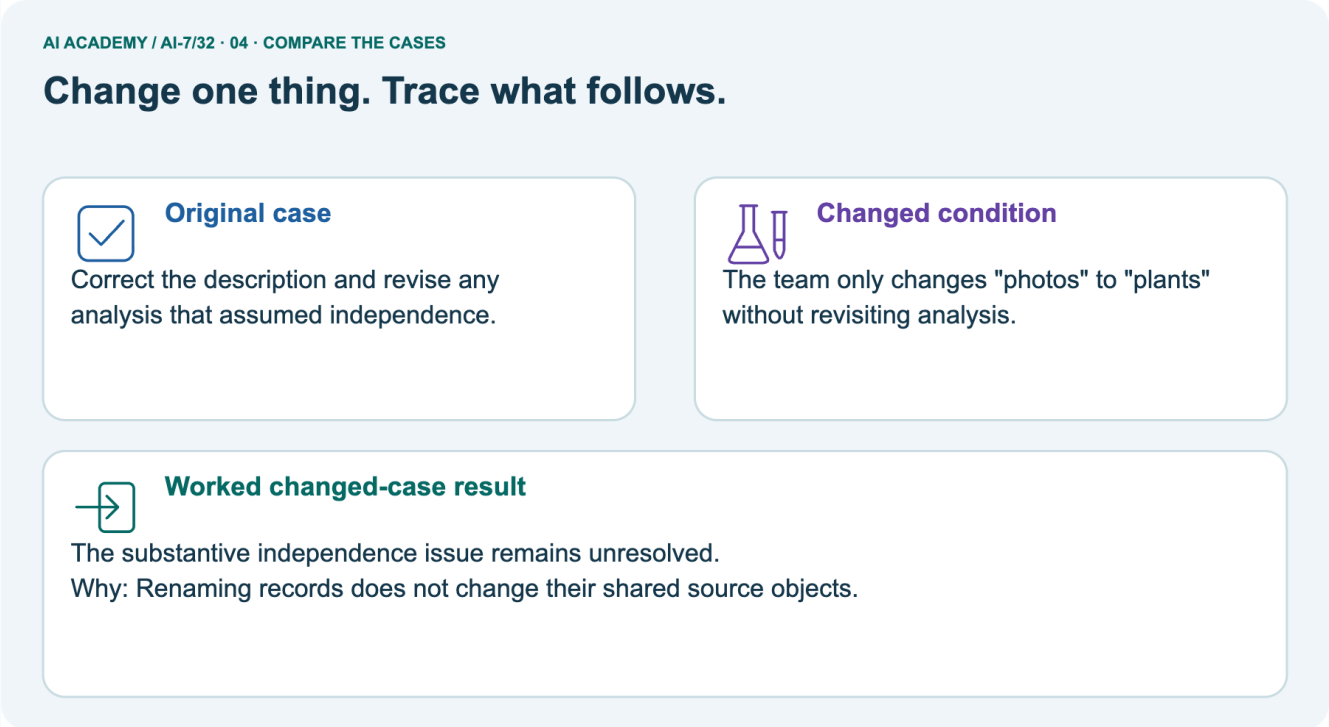

Source grouping	Photo views	Plant identities
P1	V1, V2, V3, V4	One
P2	V1, V2, V3, V4	One
Total	Eight photos	Two distinct plant IDs
Unsupported analysis premise	Eight independent plants	Source structure contradicts this count
Required reconsideration	Grouping, split roles and uncertainty assumptions	Not just a word replacement

Source grouping	Photo views	Plant identities
Outcome/split evidence	Not supplied	No invented revised score or known leakage

Predict the changed condition

- Change one thing: The team only changes "photos" to "plants" without revisiting analysis. Predict the result before checking the explanation. What remains the same?

▼ Check after predicting

Follow the labelled picture with the matching explanation. Open the vector diagram

Explain what remains unknown

- Two plants provide limited coverage; grouping correctly does not create more independent **evidence**.

- Read the labelled picture: Count photos and underlying plants in the reviewer's concern. What analysis assumption needs revision, and why does changing only the word photos to plants fail to repair it?

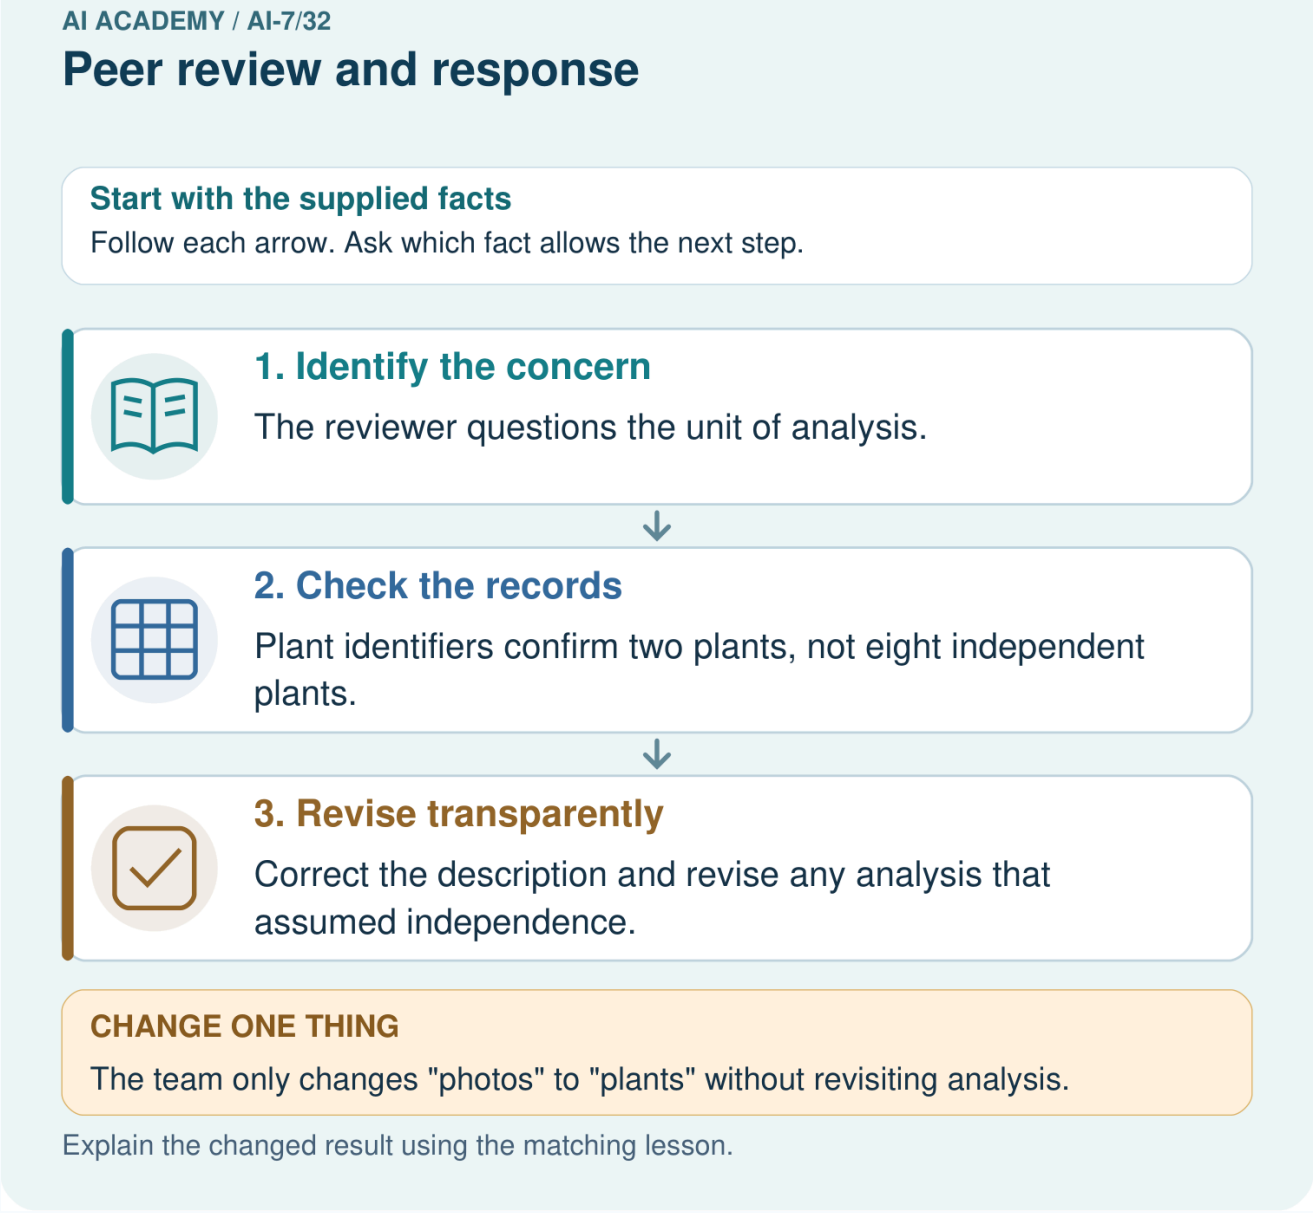

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.
</details>

A pictorial worked case: Peer review and response

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

MAIN LESSON · SECTION 7

Find the first unsupported inference and repair it

> Use the supplied conditions rather than inventing missing evidence.

Original qualification and repair setup

Agreement with a reviewer is not required, but a disagreement needs explicit reasoning and **evidence**.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Complete boundary and misconception probes

Review-response audit	Checked interpretation
Reviewer asks for baseline	Answer with a comparison or a narrower claim
Author says advanced	Architecture praise is not evidence
New analysis planned	Keep status proposed until artifacts/results exist
Eight photos from two plants	Do not count eight independent plants
Correct the word only	Does not repair downstream unit assumptions
Two plant IDs	Not proof of independent sampling
Missing failure counts	Provide actual counts/denominators or disclose absence
Delete limitation paragraph	Hides concern rather than resolving it

Write and justify the repair

- A report omits this qualification: Agreement with a reviewer is not required, but a disagreement needs explicit reasoning and **evidence**.

  Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

> **State one repair and the checks you would rerun.**

▼ Earlier wording, alternatives and picture transcripts

Locate the earliest unsupported step

MAIN LESSON · SECTION 8

Practise the mechanism with progressively less help

> Keep the selected independent case for a first attempt.

Shared explanation

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

> **Explain your prediction to a partner before comparing results.**

Supported workbook trace

Use workbook W2 for the connected example “Peer review and response”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Individual scope check

- Use the worked case for Peer review and response. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

  Point to the step or supplied fact that decides; explain your repair if needed.

- Answer on your own before discussion. If you are unsure, say which step you need help with.

Picture response

- Count photos and underlying plants in the reviewer’s concern. What analysis assumption needs revision, and why does changing only the word photos to plants fail to repair it?

My explanation using a pictured step and the given facts

Reserve the independent task

This is supported practice. Keep the separately named independent case for an attempt before feedback.

▼ **Earlier wording, alternatives and picture transcripts**

Practise with less help: Trace the worked case

Check your reasoning

Explain the picture

Investigate, record the evidence and check the limits

> Distinguish a prediction, a paper trace and an actual local execution.

Current investigation

Reviewer asks for a fitted-line baseline; author responds that the neural network is advanced, without a comparison. Show the intermediate steps and give the conclusion with its scope.

Complete investigation instructions

1. Create a paper response record for the missing baseline: concern, supplied evidence, proposed response, proposed change location and status. State that no new baseline experiment is supplied. Then count picture photos and plants and list the analysis assumptions needing review, without inventing outcomes or split leakage. Any manuscript location is a proposed destination until an actual edit exists.

   Preserve original and revised reasoning. This exercise sends no message and performs no model run. Reserve the independent missing-failure-count response for its first attempt.

Evidence record and reflection

Record	Your evidence
Given input and fixed rule	
Prediction before checking	
Actual result, or “not run”	
First mismatch and one explanation	
Boundary or missing input and expected response	

On paper, trace the supplied procedure. If code is provided, predict before running it in a local practice file. Never write an expected answer as though it were an observed run.

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

▼ **Earlier wording, alternatives and picture transcripts**

Predict, investigate and preserve the evidence

Plan → try → check

MAIN LESSON · SECTION 14

Try the selected new case independently

> Explain how an evidence-backed response should handle missing failure counts while retaining limitations.

Complete independent task

Reviewer notes missing failure counts; author deletes the limitation paragraph. What is an adequate response?

First attempt and support record

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Feedback after trying

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

▼ Earlier wording, alternatives and picture transcripts

Independent case: Apply a new case independently

Attempt this without hints

Reviewer notes missing failure counts; author deletes the limitation paragraph. What is an adequate response?

> **My independent procedure, result and limitation**
>
> | |
> |---|
> | |
> | |
> | |
> | |

Record support used: none, hint or teacher explanation. After feedback, a different case is needed to demonstrate independence.

Use feedback to improve

MAIN LESSON · SECTION 11

Save the research artifact and unresolved conditions

> Keep supplied evidence, proposed revisions and actual work distinct.

Project task and artifact

Add a labelled peer review and response **evidence** sheet to Reproducible AI Research Study. Show how you can explain the **mechanism** and terminology of peer review and response.

Use the supplied fictional case and keep its **input**s, intermediate steps, calculation or **prediction**, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

Project evidence	Record
Component and version	
Inputs permitted at prediction time	
Trace and comparison with earlier work	
Failure, limit and human review	

Evidence and limitations

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

▼ **Earlier wording, alternatives and picture transcripts**

Evidence for your project

MAIN LESSON · SECTION 16

Retrieve the mechanism and state the evidence boundary

> Explain what follows and what would require new evidence.

Retrieve and explain

- Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of peer review and response

My deciding step, evidence and one remaining question

Plan a changed-case return

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Reference bank and extra practice

Choose the reference that helps your next step.

▼ **Reference · Use research vocabulary precisely**

REFERENCE · SECTION 5

Reference · Use research vocabulary precisely

> Connect each term to the question, comparison, measurement or evidence.

Vocabulary and your explanation

Word	Meaning
Review comment	A concern about evidence, method or presentation
Response record	A mapping from comment to change or justified disagreement
Claim narrowing	Reducing a statement to the evidence actually available

Use two terms to explain a step in this week's example.

▼ Extra challenge · Explain a stronger case

REFERENCE · SECTION 10

Extra challenge · Explain a stronger case

> Choose the next challenge after the main route.

Explain,repair and extend

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

- A report omits this qualification: Agreement with a reviewer is not required, but a disagreement needs explicit reasoning and **evidence**.

  Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Explain → apply → challenge

> **Explain which evidence supports your conclusion and which claim remains unproved.**

▼ Reference · Check the research reasoning and its limits

REFERENCE · SECTION 12

Reference · Check the research reasoning and its limits

> Use after practice; reserve the selected independent case for its first attempt.

Current explanation and response

- Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

  For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

My limited claim and a useful next check

▼ **Extra practice · Revisit the complete trace**

REFERENCE · SECTION 13

Extra practice · Revisit the complete trace

> Predict before reading the supplied steps.

Complete trace and evidence

Complete evidence record

Peer review and response — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Reviewer asks for a fitted-line baseline; author responds that the neural network is advanced, without a comparison.	For each comment record concern, response, change location and new evidence if needed. If no new evidence exists, narrow the claim instead of promising an unperformed test.	The response lacks evidence. Add a fair comparison under the plan or narrow the claim to the existing baseline; record any new analysis as such.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Follow the **input** through the stated procedure to its result. Cover the result first, predict it, then explain every intermediate step. The text/table accompanies the figure so the example can be read without colour.

My complete trace of the worked case

▼ Reference · The earlier route checklist

REFERENCE · SECTION 15

Reference · The earlier route checklist

> Use one main route rather than repeating the lesson.

Targets,route and first prediction

Start with this question: Respond to a reviewer with **evidence**. A reviewer asks why four photos of one plant were treated as four independent plants.

By the end, I can	How I will show it
Explain the mechanism and terminology of peer review and response	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

▼ Extra practice · Predict,check and repair

REFERENCE · SECTION 17

Extra practice · Predict,check and repair

> Keep supported feedback separate from the independent case.

First supported question and optional hint

- Respond to a reviewer with **evidence**. A reviewer asks why four photos of one plant were treated as four independent plants.
- Which labelled step matches this detail? Correct the description and revise any analysis that assumed independence.
- 1. Revise transparently
- 2. Check the records
- 3. Identify the concern
- Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Practice 1: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check after the first attempt**

After your attempt, compare with the supported explanation: Revise transparently Correct the description and revise any analysis that assumed independence.

Peer review should connect a criticism to the actual records and a concrete correction or reasoned response. Polite language alone cannot repair a methodological error.

Changed-case question and optional hint

- Changed-case practice: The team only changes "photos" to "plants" without revisiting analysis. Which conclusion is supported by the supplied facts?
- 1. This one example guarantees correct results for every future **input**.
- 2. The substantive independence issue remains unresolved.
- 3. We can decide the result without examining the changed **input** or the procedure.
- Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Practice 2: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check after the changed attempt**

After your attempt, compare with the supported explanation: The substantive independence issue remains unresolved. Renaming records does not change their shared source objects.

Repair and retain the record

Review Writing results and limitations (ai-7/31). Goal: Explain the **mechanism** and terminology of writing results and limitations. Short practice: Compute the supported-answer rates for 9/12 and 10/12.

What actual outcome was measured, and why is a claim that every student becomes smarter outside this **evidence**?. Return to this week and explain what you changed.

Review Figures that preserve **evidence** (ai-7/29). Goal: Explain the **mechanism** and terminology of figures that preserve **evidence**. Short practice: Draw count bars for 6/10 and 8/10 using the stated axis.

Why must the denominator and fixed task context remain visible, and what distortion arises from an undisclosed axis start at five?. Return to this week and explain what you changed.

Review Inspecting failures and anomalies (ai-7/26). Goal: Explain the **mechanism** and terminology of inspecting failures and anomalies. Short practice: Calculate mean and median for 2,2,2,10.

What does the timeout log establish, and why is deleting that inconvenient record incompatible with the stated plan?. Return to this week and explain what you changed.

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

▼ **Earlier wording, alternatives and picture transcripts**

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Repair a missing building block

Keep your completed work

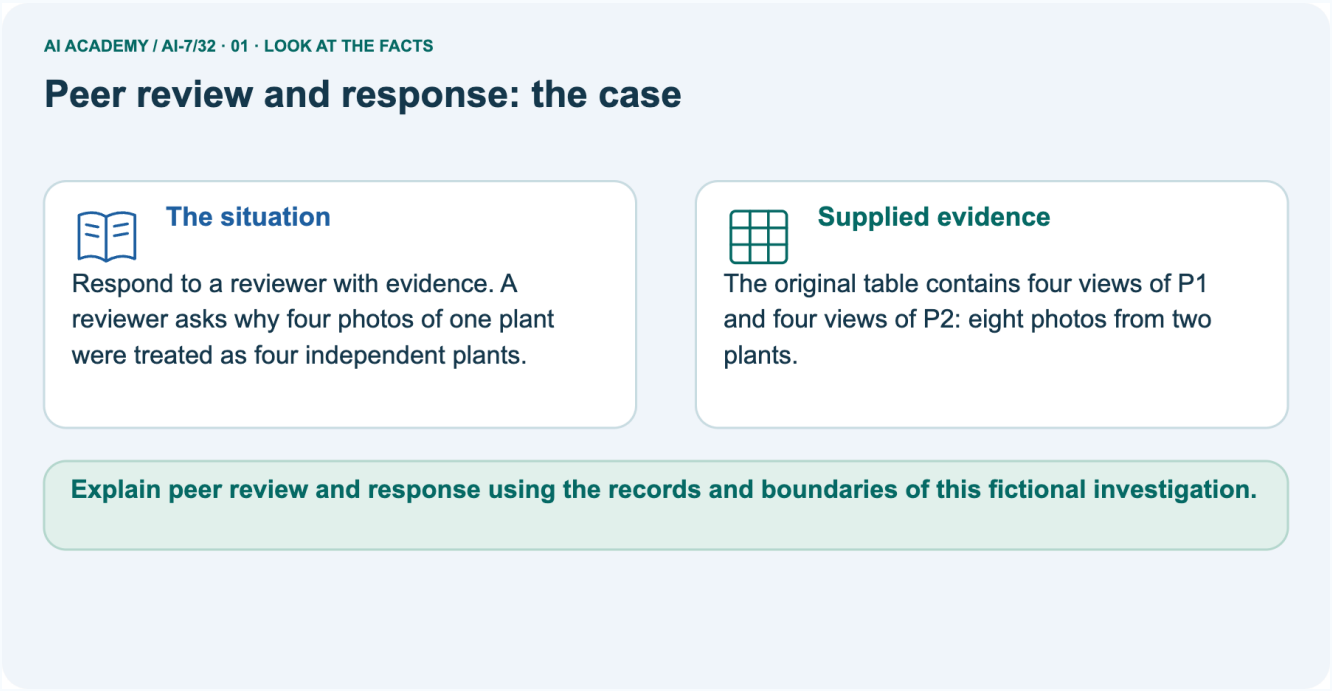

▼ **Reference · Six-picture concept journey**

REFERENCE · SECTION 18

Reference · Six-picture concept journey

> Choose the picture that supports the current explanation.

01. Peer review and response: the case

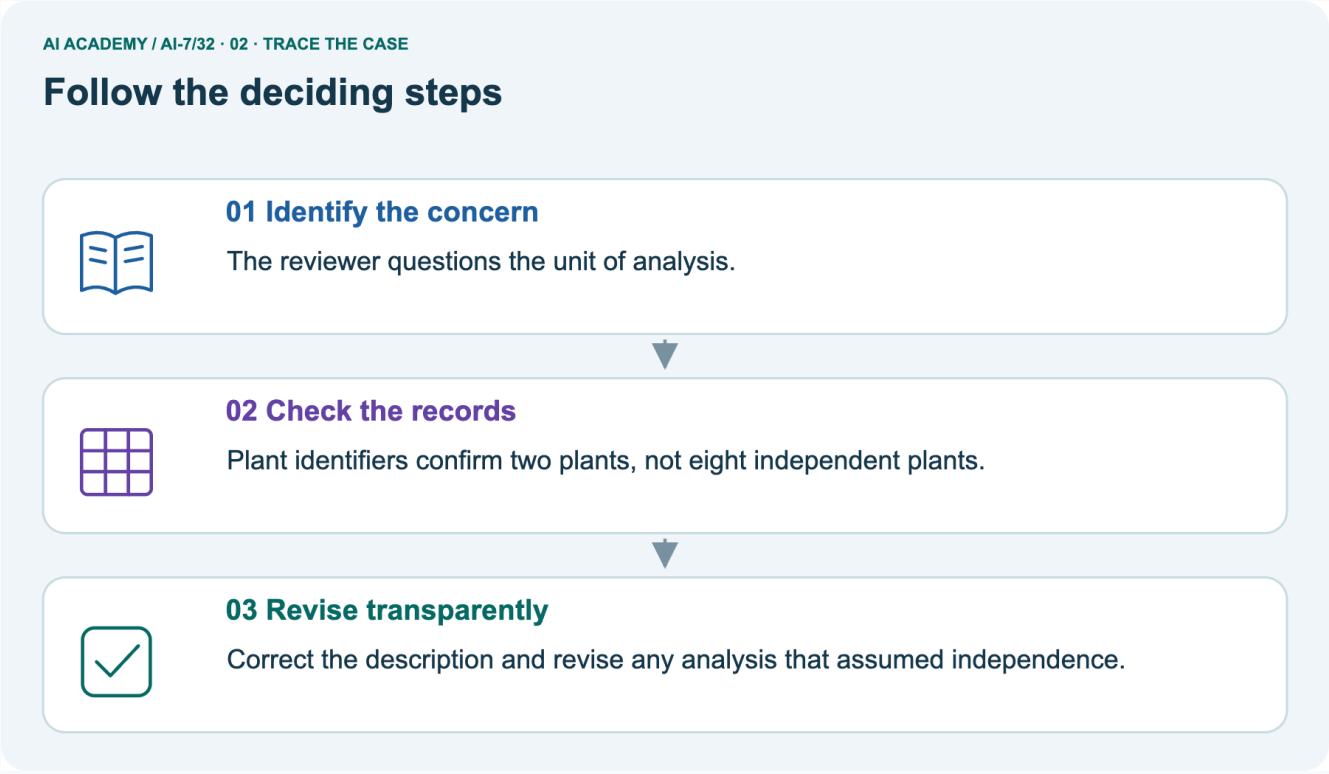

Follow the labelled picture with the matching explanation. Open the vector diagram

Respond to a reviewer with **evidence**. A reviewer asks why four photos of one plant were treated as four independent plants.

Supplied facts: The original table contains four views of P1 and four views of P2: eight photos from two plants.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

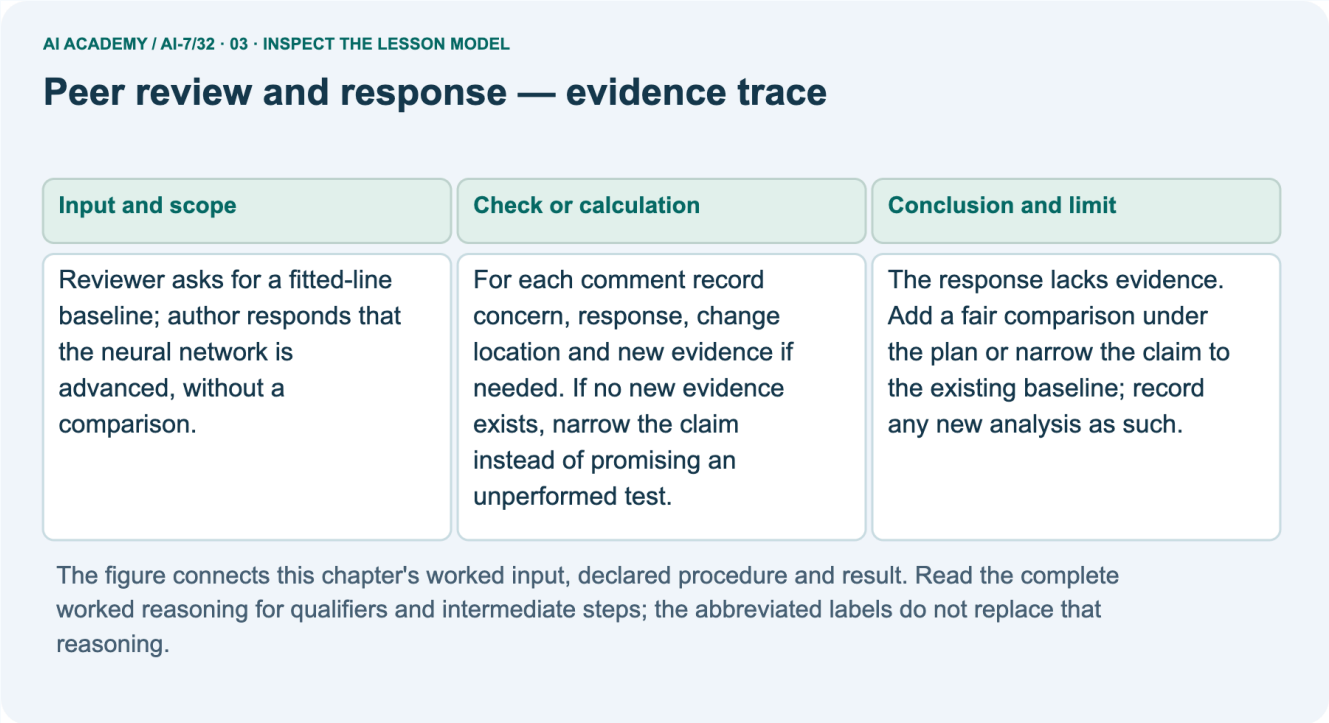

Follow the labelled picture with the matching explanation. Open the vector diagram

Identify the concern: The reviewer questions the unit of analysis. → Check the records: Plant identifiers confirm two plants, not eight independent plants. → Revise transparently: Correct the description and revise any analysis that assumed independence.

Point to each numbered stage and explain which recorded **input** it uses.

03. Peer review and response — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

Peer review and response — **evidence** trace.

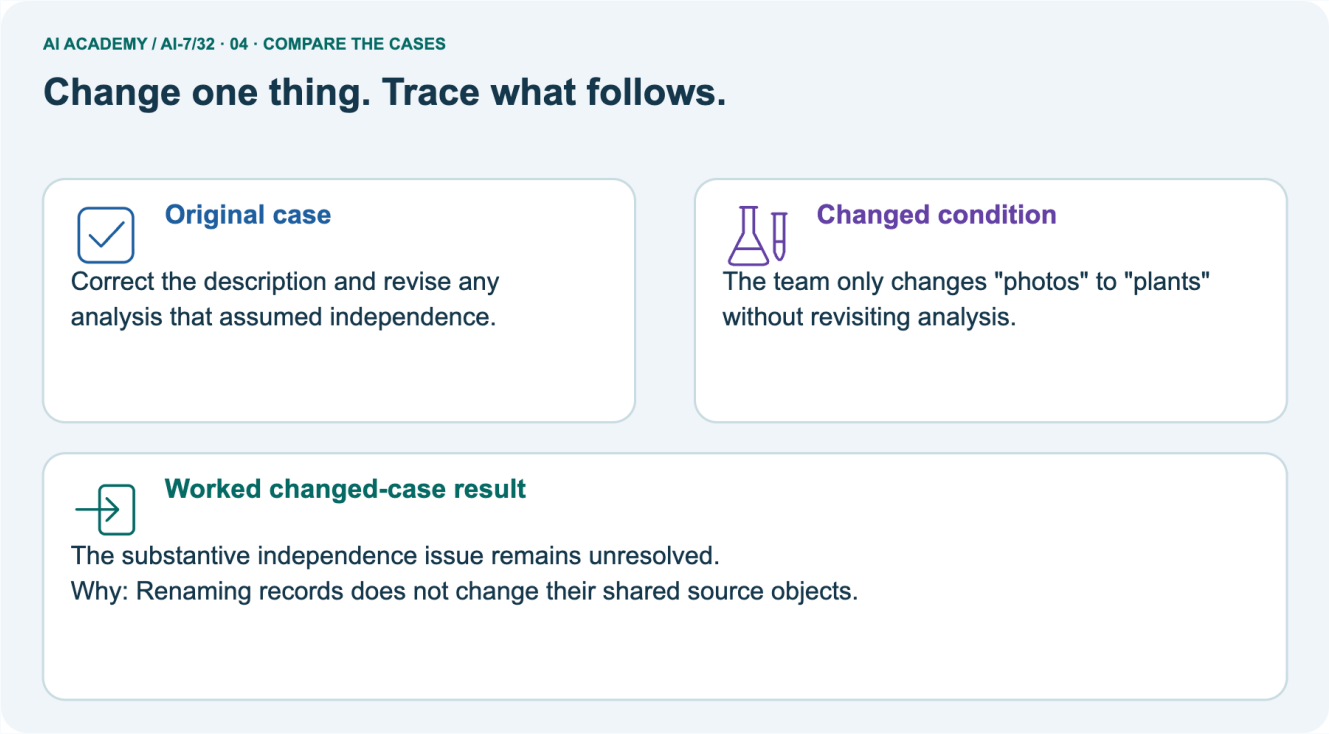

Reviewer asks for a fitted-line baseline; author responds that the neural network is advanced, without a comparison. | For each comment record concern, response, change location and new **evidence** if needed.

If no new **evidence** exists, narrow the claim instead of promising an unperformed test. | The response lacks **evidence**.

Add a fair comparison under the plan or narrow the claim to the existing baseline; record any new analysis as such.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

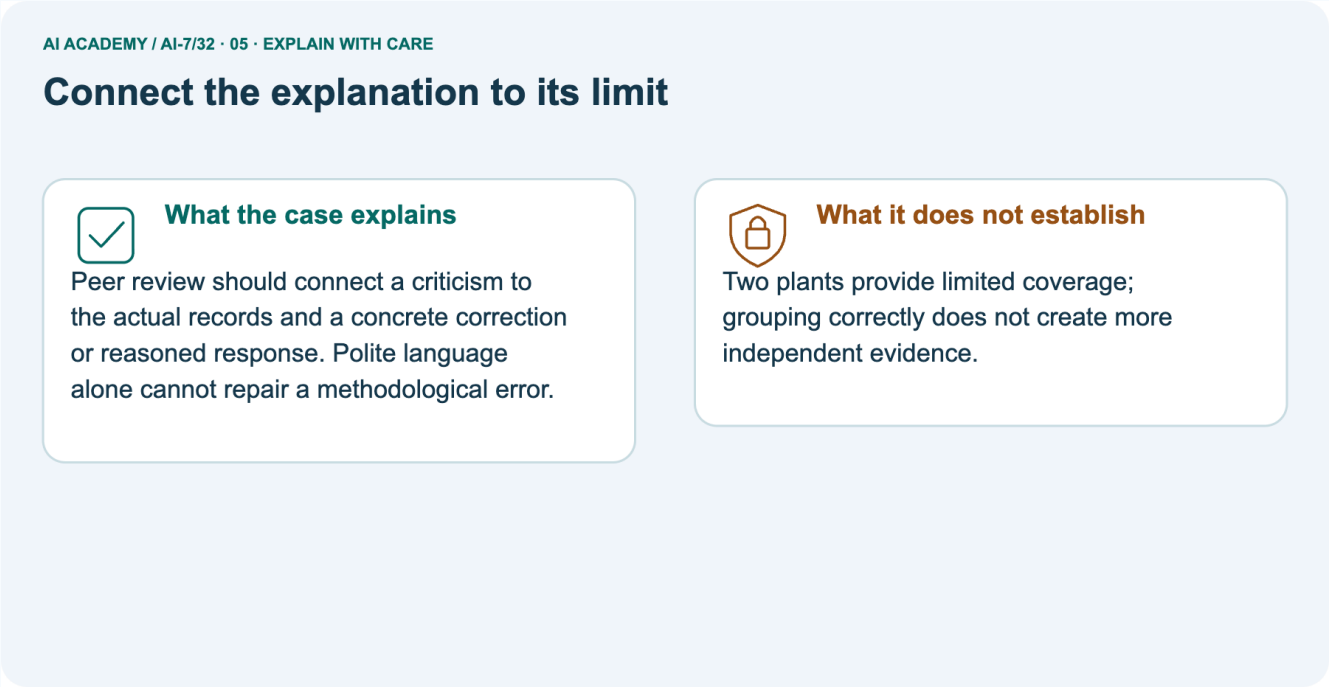

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Correct the description and revise any analysis that assumed independence.
Changed condition: The team only changes "photos" to "plants" without revisiting analysis.

Expected result: The substantive independence issue remains unresolved. Reason: Renaming records does not change their shared source objects.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

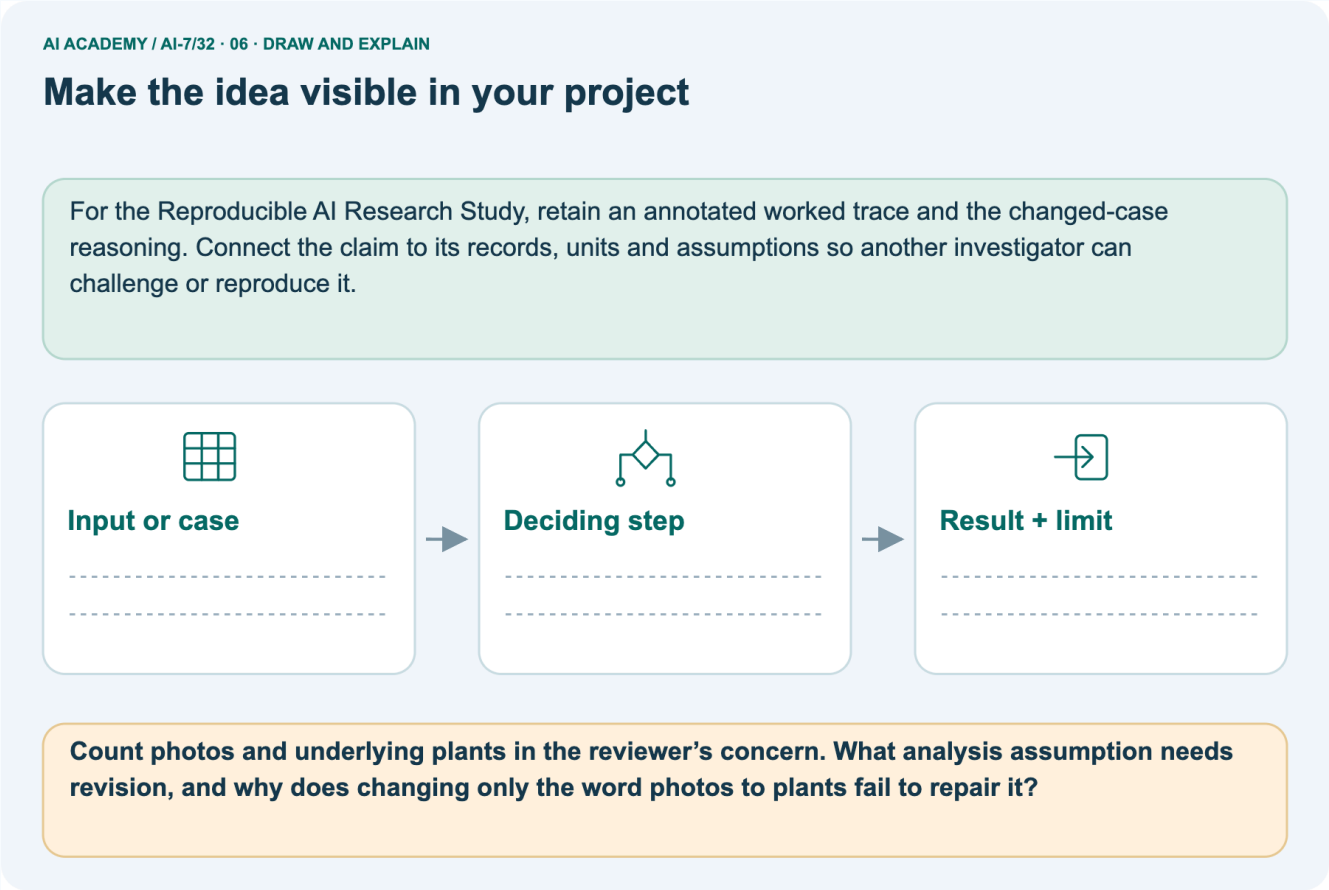

Follow the labelled picture with the matching explanation. Open the vector diagram

Peer review should connect a criticism to the actual records and a concrete correction or reasoned response. Polite language alone cannot repair a methodological error.

Limit: Two plants provide limited coverage; grouping correctly does not create more independent **evidence**.

Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Draw your **input**, deciding step, result and limit. Supported question: Count photos and underlying plants in the reviewer's concern.

What analysis assumption needs revision, and why does changing only the word photos to plants fail to repair it?

Draw your project trace and justify the deciding step using **evidence**.
