Final project manuscript

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Reproducible AI Research Study

THE CONNECTED WEEK

Align every manuscript claim with the correct recorded result

Preserve failures, grouping and missing outcomes consistently across abstract, tables, figures and artifacts.

Keep one habit: Question and contract → complete main ledger → separate picture → boundary probes → investigation → independent attempt.

MAIN LESSON · SECTION 1

Align every manuscript claim with the correct recorded result

> Preserve failures, grouping and missing outcomes consistently across abstract, tables, figures and artifacts.

Learning goals

I can explain the **mechanism** and terminology of final project manuscript.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Retrieve before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Independent reproduction check. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Writing results and limitations. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Negative results and claim revision. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Starting explanation

- Recall Independent reproduction check. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

> **My starting explanation**

End goal

Explain final project manuscript using the records and boundaries of this fictional investigation.

▼ Earlier wording, alternatives and picture transcripts

Your learning target

Remember before reading

This week you will practise:

Explain the **mechanism** and terminology of final project manuscript

Apply the stated procedure to a new case with a traceable result

Identify an assumption or limitation and design a revealing follow-up

Retrieve what you already know

This week's end goal

MAIN LESSON · SECTION 2

Understand the question and evidence contract

> Preserve failures, grouping and missing outcomes consistently across abstract, tables, figures and artifacts.

Start with the research problem

A final manuscript is one connected account of question, design, results and limits. Its abstract must not promise more than the tables or records establish. Check each headline against the correct run, denominator and outcome. When a figure omits failures, fix both the figure and the claim; adding a footnote while leaving a false headline is not enough.

Distinguish exploratory revisions and unassessed outcomes from the original evaluated set.

Original concept explanation

A final manuscript integrates question, methods, results, limitations and reproducibility. Each table and claim should point to the correct run.

Complete case inputs, rules and limits

Manuscript item	Complete supplied exercise contract
Main raw result	Eighteen passes among twenty evaluated cases; two failures
Main inconsistency	Abstract says 100%; figure omits two failures
Required main correction	90% over twenty with two failures visible throughout
Separate picture	A correct 7/10, B 8/10; all photos indoor
Picture grouping	Five plants, two views each; ten photos total
Independence evidence	Five identities are not proof of independent sampling
Artifact linkage	Each claim points to its actual run, data and version; do not invent identifiers
Unknown properties	Population superiority, significance, outdoor performance and detailed case outcomes

Name given and missing evidence

List the given facts and one fact that is not supplied.

▼ **Earlier wording, alternatives and picture transcripts**

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

MAIN LESSON · SECTION 3

Trace the complete main case before interpreting it

> Follow each evidence-to-conclusion step and retain unknown quantities.

Original declared procedure

Audit consistency across abstract, figures, raw results and artifact manifest. Remove unsupported universal claims; label exploratory analyses and unassessed outcomes.

Complete main-case evidence ledger

Main manuscript location	Current inconsistency	Supported correction
Raw results table	18/20	Keep original twenty-case record
Abstract	100% success	18/20 = 90% on these evaluated cases
Figure	Two failures absent	Restore both failures and total twenty
Failure count	Hidden by headline/figure	Two failures explicitly reported
Run/artifact references	Need consistency	Identify the actual linked record; no fabricated IDs
Broader claim	Not established	Keep case/outcome scope attached

State the scope and explain the visual

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

▼ Earlier wording, alternatives and picture transcripts

Final project manuscript — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Abstract says 100% success; results table shows 18/20, and two failures are omitted from the figure.	Audit consistency across abstract, figures, raw results and artifact manifest. Remove unsupported universal claims; label exploratory analyses and unassessed outcomes.	Correct to 90% over 20 with two failures; restore figure and align abstract/table/run. Do not hide failures to preserve the headline.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Connect the picture and the explanation

Predict the changed case before reading the explanation

> Keep the rule and evidence boundary visible.

Main task and response

- Abstract says 100% success; results table shows 18/20, and two failures are omitted from the figure. Show the intermediate steps and give the conclusion with its scope.

Keep the procedure fixed. Explain what changed in the inputs and result.

Predict the pictured change

- Change: The abstract calls the study a test on ten independent plants.

▼ **Check after predicting**

Prediction: Correct it to five plants with two views each.

Reason: Five source plants have two views each; independence requires a justified sampling design.

▼ **Earlier wording, alternatives and picture transcripts**

Compare a familiar case with a changed case

Change one thing in the pictured case

Connect the main result with the separate pictured case

> Keep the two scenarios and their supplied evidence distinct.

Main case and original checked reasoning

Abstract says 100% success; results table shows 18/20, and two failures are omitted from the figure.

Correct to 90% over 20 with two failures; restore figure and align abstract/table/run. Do not hide failures to preserve the headline.

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Separate pictured inputs and complete explanation

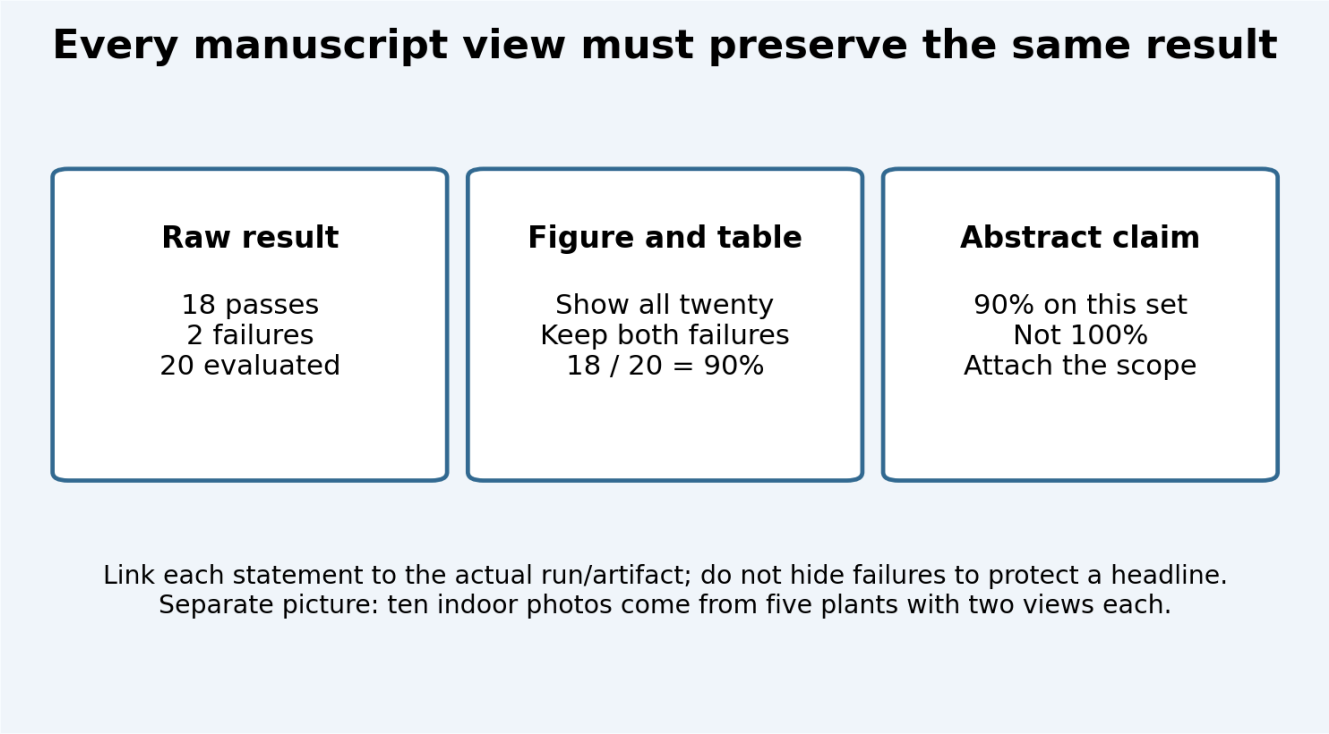

Build a manuscript from claim to record. A capstone manuscript compares two frozen pattern classifiers on ten reserved cases.

A is correct on 7/10; B on 8/10. All cases are indoor, from five plants with two views each.

The separate capstone picture compares A seven correct of ten photos and B eight correct of ten: 70% and 80%, a one-photo or ten-percentage-point observed difference. Those ten indoor photos come from five plants with two views each. They are not ten independent plants, and five source identities alone do not establish independent sampling. Report grouping and use analysis assumptions justified for the actual design.

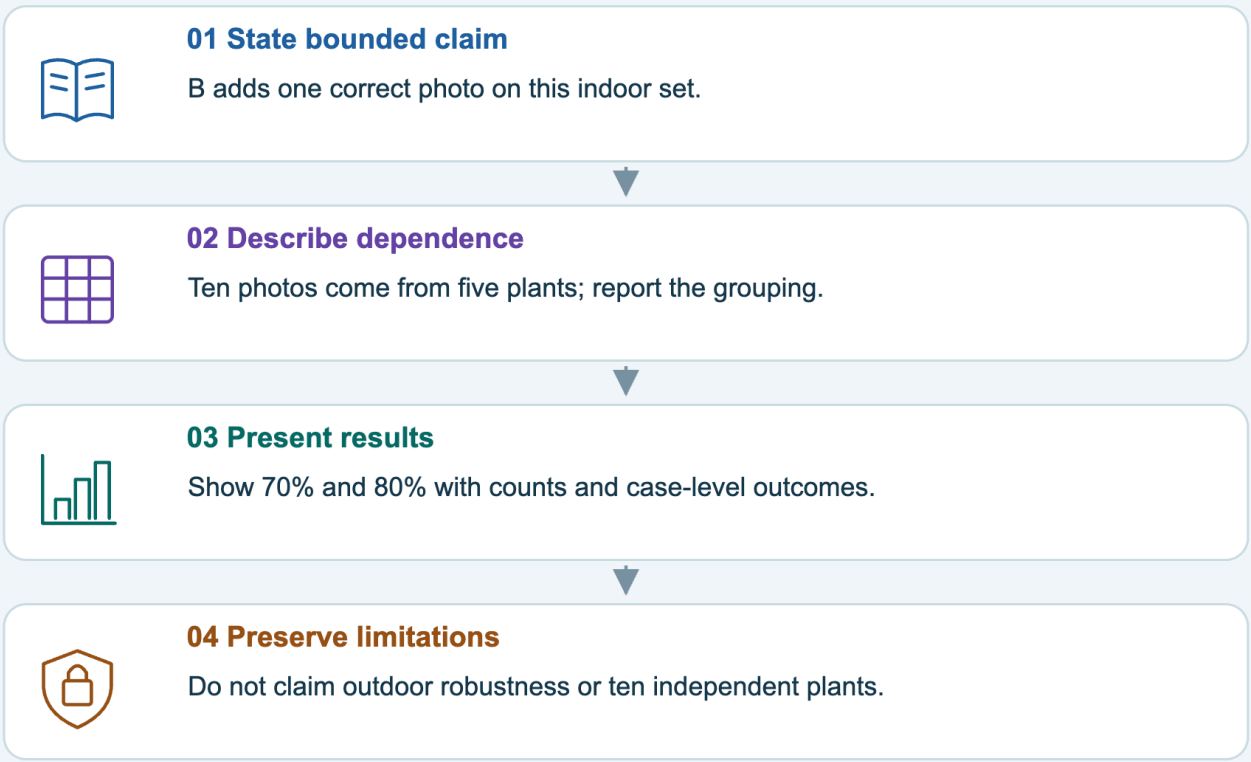

No per-case output table is supplied here, so do not invent which photos changed or a plant-level score. A final manuscript can report the supplied photo-level counts while clearly acknowledging indoor coverage, repeated views and absent population/significance evidence.

Read the labelled representation

AI ACADEMY / AI-7/34 · 02 · TRACE THE CASE

Follow the deciding steps

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. State bounded claim	B adds one correct photo on this indoor set.
2. Describe dependence	Ten photos come from five plants; report the grouping.
3. Present results	Show 70% and 80% with counts and case-level outcomes.
4. Preserve limitations	Do not claim outdoor robustness or ten independent plants.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

A final manuscript aligns question, procedure, **evidence** and scope. Every figure and conclusion should point back to the records that support it.

Complete picture evidence and limits

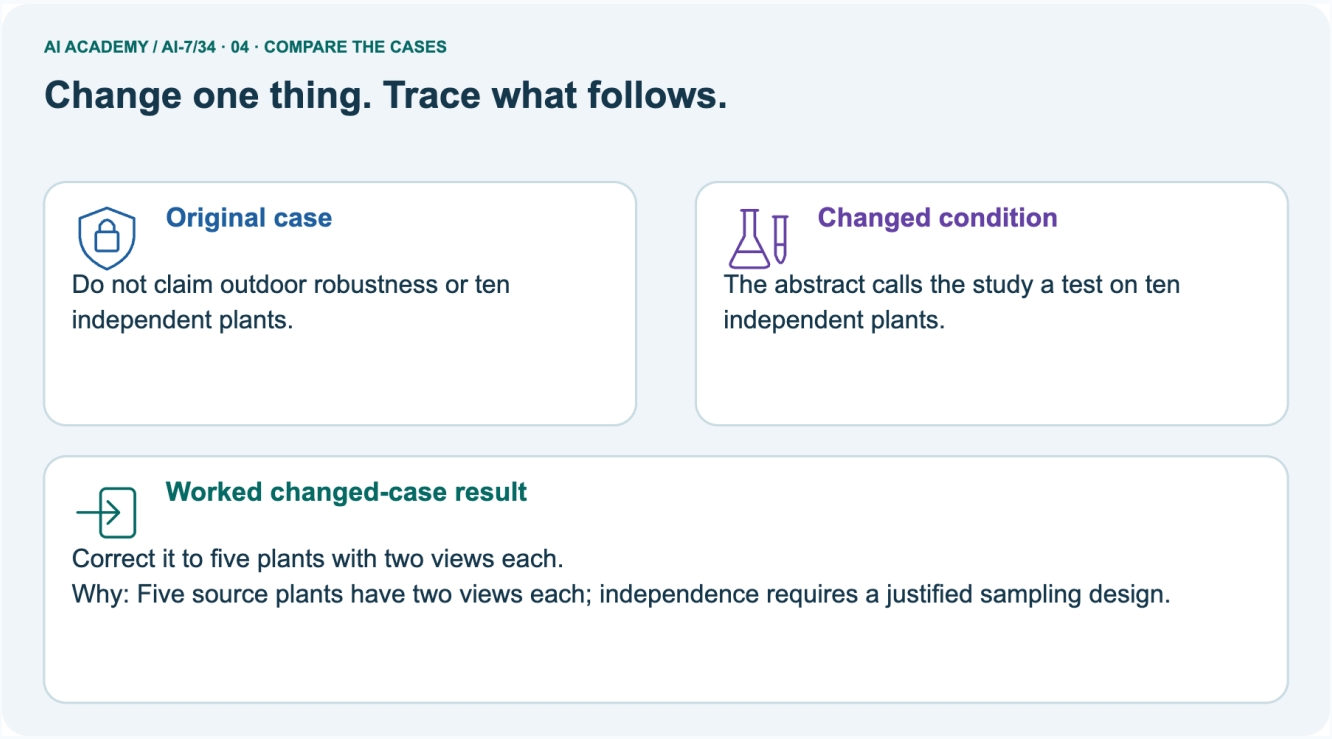

Separate capstone record	Supported value or limit
A photo correctness	7/10 = 70%
B photo correctness	8/10 = 80%
Observed difference	One correct photo; ten percentage points

Separate capstone record	Supported value or limit
Source grouping	Five plants × two views = ten photos
Setting	Indoor only
Ten independent plants claim	Wrong count and unsupported independence premise
Five plant identities	Correct source count; sampling independence still needs justification
Case-level and plant-level outcomes	Not supplied; do not reconstruct them
Outdoor / population / significance	Not established

Predict the changed condition

- Change one thing: The abstract calls the study a test on ten independent plants. Predict the result before checking the explanation. What remains the same?

▼ Check after predicting

Follow the labelled picture with the matching explanation. Open the vector diagram

Explain what remains unknown

- No population superiority or significance claim is supplied; dependence and sample coverage need explicit treatment.

- Read the labelled picture: Connect the manuscript's 7/10 and 8/10 scores to the five-plant grouping. Which abstract claim must be corrected if it says ten independent plants?

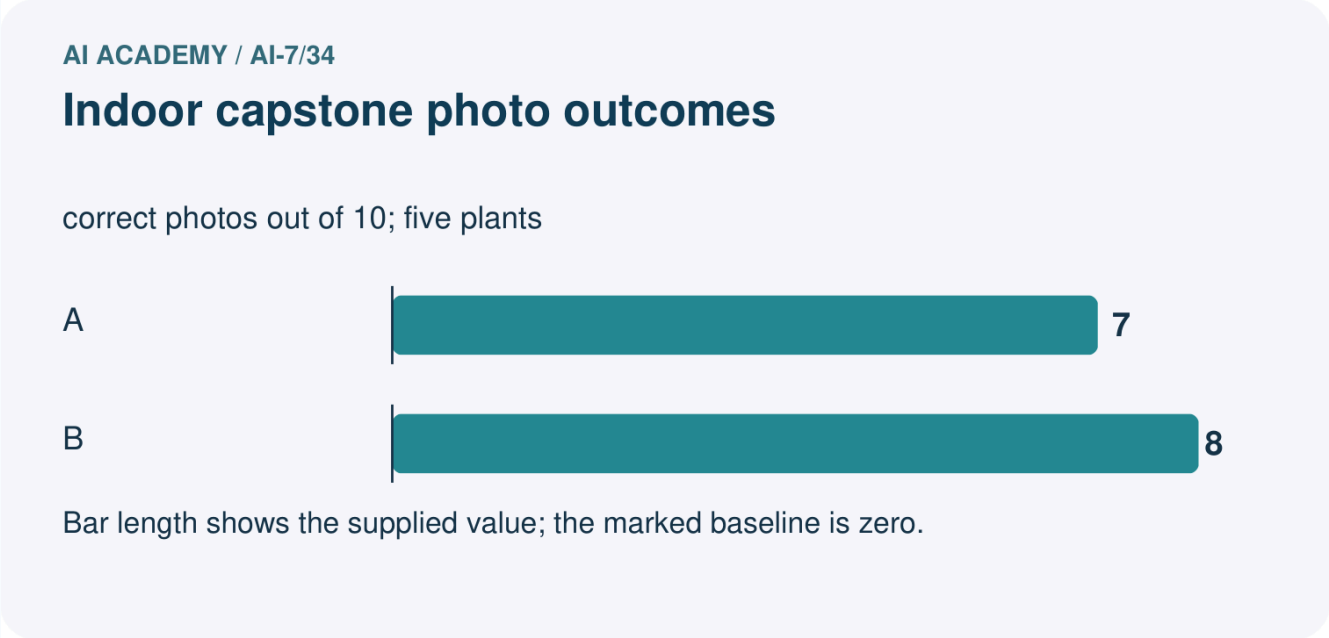

▼ Earlier wording, alternatives and picture transcripts

Learn from the worked case

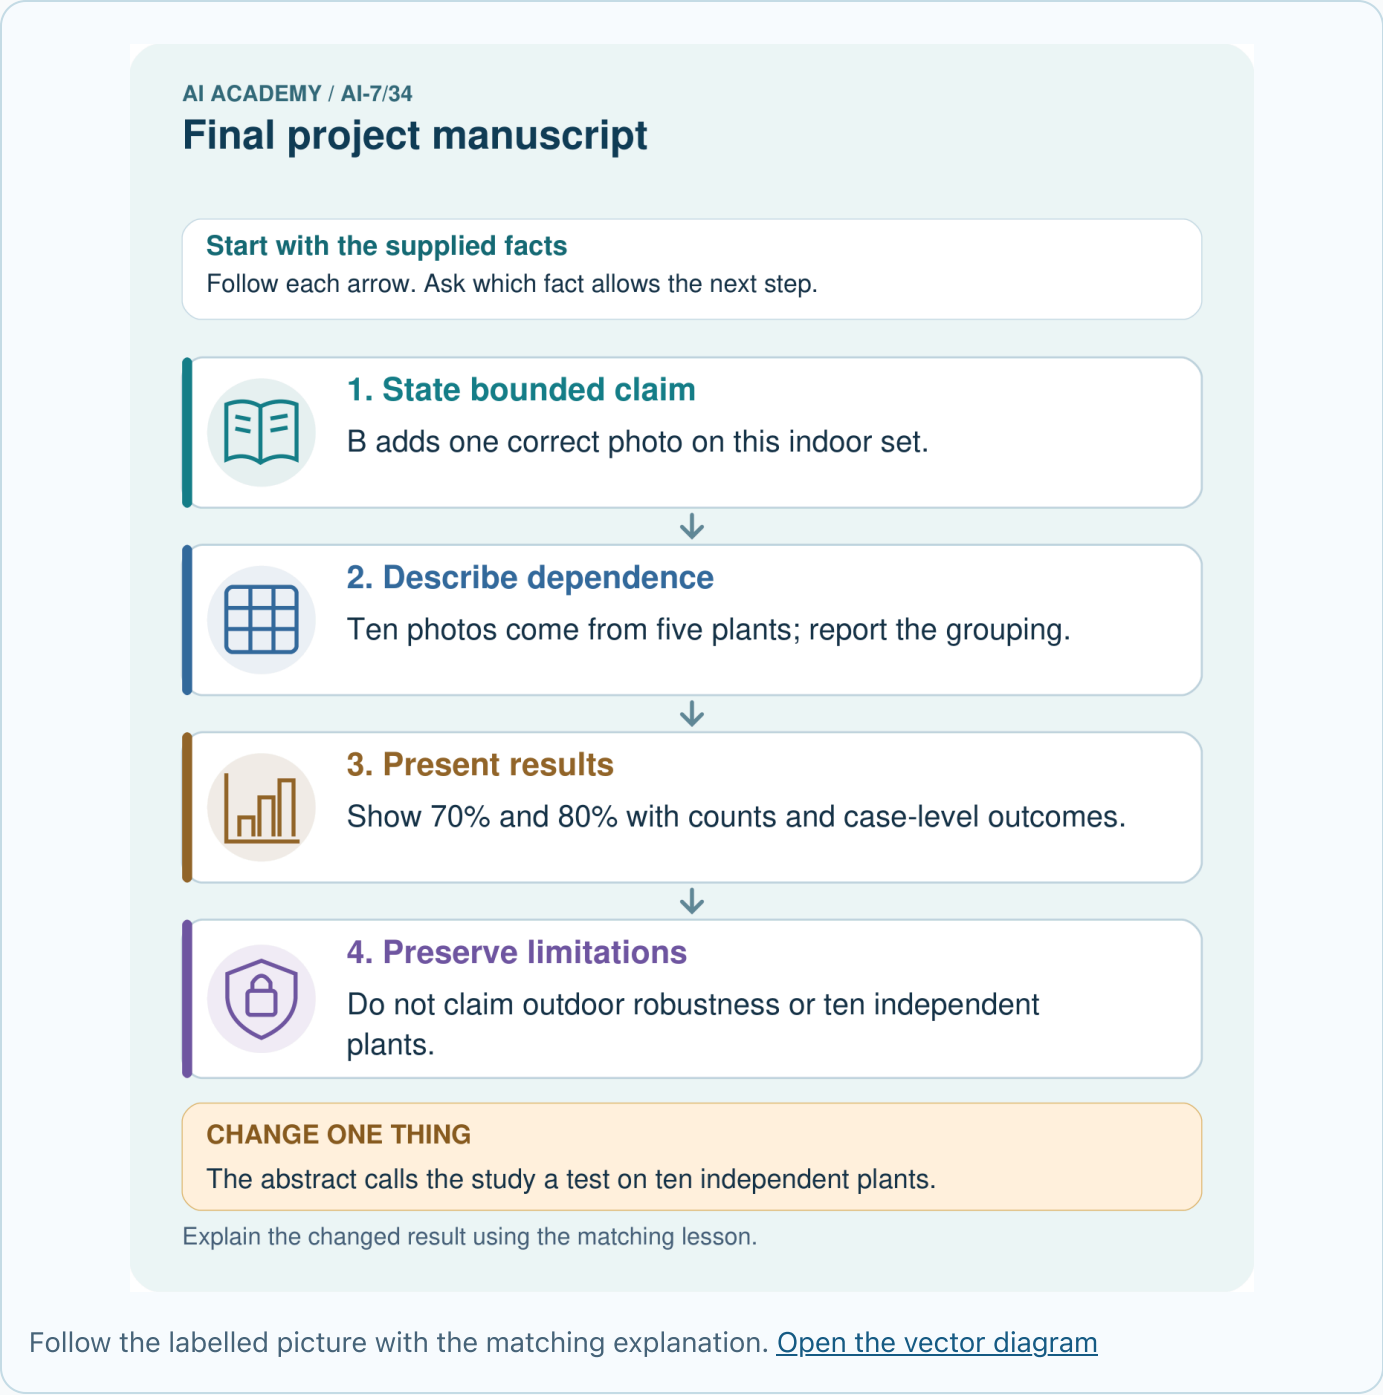

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Final project manuscript

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

Find the first unsupported inference and repair it

> Use the supplied conditions rather than inventing missing evidence.

Original qualification and repair setup

A manuscript is ready only when its claims and artifacts align; formatting alone cannot certify **evidence**.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Complete boundary and misconception probes

Manuscript audit	Checked interpretation
Abstract 100%, raw 18/20	Correct headline to 90%; retain two failures
Figure hides failures	Restore them and denominator, not just a caveat
One manuscript has multiple runs	Point every table/claim to the correct version
Ten photos from five plants	Report repeated source views
Plant IDs are distinct	Not automatic sampling independence
Raw case-level outputs absent	Do not invent transitions or a plant-level score
Two missing cases	Report coverage and unassessed status, not evaluated-as-complete
Polished manuscript	Does not create evidence or erase limitations

Write and justify the repair

- A report omits this qualification: A manuscript is ready only when its claims and artifacts align; formatting alone cannot certify **evidence**.

  Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

> **State one repair and the checks you would rerun.**

▼ Earlier wording, alternatives and picture transcripts

Locate the earliest unsupported step

MAIN LESSON · SECTION 8

Practise the mechanism with progressively less help

> Keep the selected independent case for a first attempt.

Shared explanation

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

> **Explain your prediction to a partner before comparing results.**

Supported workbook trace

Use workbook W2 for the connected example “Final project manuscript”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Individual scope check

- Use the worked case for Final project manuscript. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

  Point to the step or supplied fact that decides; explain your repair if needed.

- Answer on your own before discussion. If you are unsure, say which step you need help with.

Picture response

- Connect the manuscript’s 7/10 and 8/10 scores to the five-plant grouping. Which abstract claim must be corrected if it says ten independent plants?

My explanation using a pictured step and the given facts

Reserve the independent task

This is supported practice. Keep the separately named independent case for an attempt before feedback.

▼ **Earlier wording, alternatives and picture transcripts**

Practise with less help: Trace the worked case

Check your reasoning

Explain the picture

Investigate, record the evidence and check the limits

> Distinguish a prediction, a paper trace and an actual local execution.

Current investigation

Abstract says 100% success; results table shows 18/20, and two failures are omitted from the figure. Show the intermediate steps and give the conclusion with its scope.

Complete investigation instructions

1. Perform a paper consistency audit of the abstract, table, figure and run reference. Repair the main result to eighteen of twenty, ninety percent, with two failures retained in every view. Use actual artifact identifiers only when provided; otherwise mark them not supplied. For the separate picture, connect 7/10 and 8/10 photo counts to five plants with repeated views, correcting the ten-independent-plants claim.

   Keep independence justification and case-level outputs unresolved rather than inventing them. This exercise edits a fictional manuscript account, not a real experiment. Reserve the independent completed/missing-case summary.

Evidence record and reflection

Record	Your evidence
Given input and fixed rule	
Prediction before checking	
Actual result, or “not run”	
First mismatch and one explanation	
Boundary or missing input and expected response	

On paper, trace the supplied procedure. If code is provided, predict before running it in a local practice file. Never write an expected answer as though it were an observed run.

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

▼ **Earlier wording, alternatives and picture transcripts**

Predict, investigate and preserve the evidence

Plan → try → check

MAIN LESSON · SECTION 14

Try the selected new case independently

> Correct the summary using completed-case performance, coverage and explicit missing outcomes, retaining the metric denominator.

Complete independent task

Manuscript says 12 evaluated cases, raw record has 10 completed and 2 missing with 8 passes. Correct the summary.

First attempt and support record

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Feedback after trying

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

▼ Earlier wording, alternatives and picture transcripts

Independent case: Apply a new case independently

Attempt this without hints

Manuscript says 12 evaluated cases, raw record has 10 completed and 2 missing with 8 passes. Correct the summary.

> **My independent procedure, result and limitation**
>
> | |
> |---|
> | |
> | |
> | |
> | |

Record support used: none, hint or teacher explanation. After feedback, a different case is needed to demonstrate independence.

Use feedback to improve

MAIN LESSON · SECTION 11

Save the research artifact and unresolved conditions

> Keep supplied evidence, proposed revisions and actual work distinct.

Project task and artifact

For Reproducible AI Research Study, use this week's independent task as a rehearsal for the final **evidence** pack: Manuscript says 12 evaluated cases, raw record has 10 completed and 2 missing with 8 passes. Correct the summary. Keep actual **observation**s separate from expected results, preserve failures, compare a baseline and explain the limits.

Project evidence	Record
Component and version	
Inputs permitted at prediction time	
Trace and comparison with earlier work	
Failure, limit and human review	

Evidence and limitations

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

▼ **Earlier wording, alternatives and picture transcripts**

Evidence for your project

MAIN LESSON · SECTION 16

Retrieve the mechanism and state the evidence boundary

> Explain what follows and what would require new evidence.

Retrieve and explain

- Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of final project manuscript

My deciding step, evidence and one remaining question

Plan a changed-case return

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Reference bank and extra practice

Choose the reference that helps your next step.

▼ **Reference · Use research vocabulary precisely**

REFERENCE · SECTION 5

Reference · Use research vocabulary precisely

> Connect each term to the question, comparison, measurement or evidence.

Vocabulary and your explanation

Word	Meaning
Manuscript audit	A consistency check across research records and prose
Run linkage	Connecting reported numbers to exact results
Evidence alignment	Agreement between claims and their supporting artifacts

Use two terms to explain a step in this week's example.

▼ Extra challenge · Explain a stronger case

REFERENCE · SECTION 10

Extra challenge · Explain a stronger case

> Choose the next challenge after the main route.

Explain,repair and extend

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

- A report omits this qualification: A manuscript is ready only when its claims and artifacts align; formatting alone cannot certify **evidence**.

  Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Explain → apply → challenge

> **Explain which evidence supports your conclusion and which claim remains unproved.**

▼ Reference · Check the research reasoning and its limits

REFERENCE · SECTION 12

Reference · Check the research reasoning and its limits

> Use after practice; reserve the selected independent case for its first attempt.

Current explanation and response

- Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

  For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

My limited claim and a useful next check

▼ **Extra practice · Revisit the complete trace**

REFERENCE · SECTION 13

Extra practice · Revisit the complete trace

> Predict before reading the supplied steps.

Complete trace and evidence

Complete evidence record

Final project manuscript — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Abstract says 100% success; results table shows 18/20, and two failures are omitted from the figure.	Audit consistency across abstract, figures, raw results and artifact manifest. Remove unsupported universal claims; label exploratory analyses and unassessed outcomes.	Correct to 90% over 20 with two failures; restore figure and align abstract/table/run. Do not hide failures to preserve the headline.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Follow the **input** through the stated procedure to its result. Cover the result first, predict it, then explain every intermediate step. The text/table accompanies the figure so the example can be read without colour.

My complete trace of the worked case

▼ Reference · The earlier route checklist

REFERENCE · SECTION 15

Reference · The earlier route checklist

> Use one main route rather than repeating the lesson.

Targets,route and first prediction

Start with this question: Build a manuscript from claim to record. A capstone manuscript compares two frozen pattern classifiers on ten reserved cases.

By the end, I can	How I will show it
Explain the mechanism and terminology of final project manuscript	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

▼ Extra practice · Predict,check and repair

REFERENCE · SECTION 17

Extra practice · Predict,check and repair

> Keep supported feedback separate from the independent case.

First supported question and optional hint

- Build a manuscript from claim to record. A capstone manuscript compares two frozen pattern classifiers on ten reserved cases.
- Which labelled step matches this detail? Do not claim outdoor robustness or ten independent plants.
- 1. Present results
- 2. Describe dependence
- 3. State bounded claim
- 4. Preserve limitations
- Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Practice 1: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check after the first attempt**

After your attempt, compare with the supported explanation: Preserve limitations Do not claim outdoor robustness or ten independent plants. A final manuscript aligns question, procedure, **evidence** and scope.

Every figure and conclusion should point back to the records that support it.

Changed-case question and optional hint

- Changed-case practice: The abstract calls the study a test on ten independent plants. Which conclusion is supported by the supplied facts?
- 1. We can decide the result without examining the changed **input** or the procedure.
- 2. Correct it to five plants with two views each.
- 3. This one example guarantees correct results for every future **input**.
- Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Practice 2: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check after the changed attempt**

After your attempt, compare with the supported explanation: Correct it to five plants with two views each. Five source plants have two views each; independence requires a justified sampling design.

Repair and retain the record

Review Independent reproduction check (ai-7/33). Goal: Explain the **mechanism** and terminology of independent reproduction check. Short practice: Locate the Q3 scoring disagreement between 5/6 and 4/6.

What should the teams inspect before choosing a score, and what limitation follows if the saved Q3 file is missing?. Return to this week and explain what you changed.

Review Writing results and limitations (ai-7/31). Goal: Explain the **mechanism** and terminology of writing results and limitations. Short practice: Compute the supported-answer rates for 9/12 and 10/12.

What actual outcome was measured, and why is a claim that every student becomes smarter outside this **evidence**?. Return to this week and explain what you changed.

Review Negative results and claim revision (ai-7/28). Goal: Explain the **mechanism** and terminology of negative results and claim revision. Short practice: Does a 6/8 tie support the **prediction** that B scores higher?

Explain why one newly selected favourable demonstration does not replace the original result or prove equivalence.. Return to this week and explain what you changed.

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

▼ Earlier wording, alternatives and picture transcripts

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Repair a missing building block

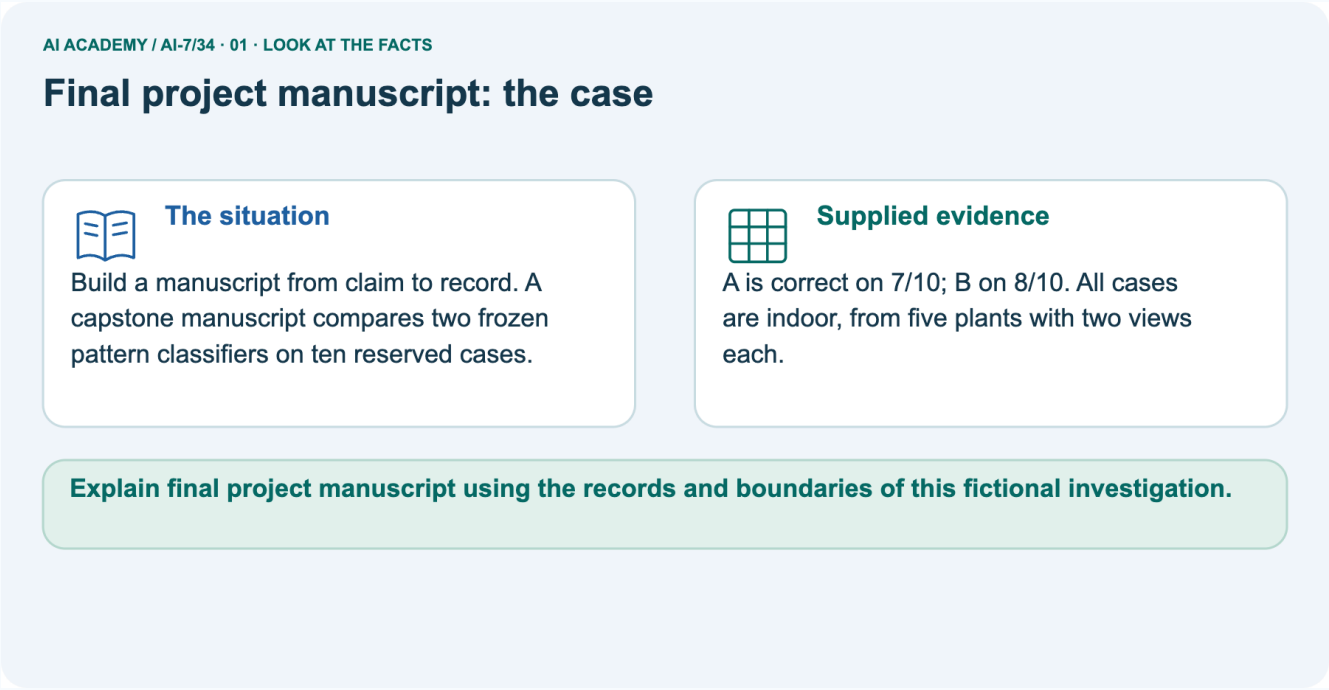

Keep your completed work

▼ Reference · Six-picture concept journey

Reference · Six-picture concept journey

> Choose the picture that supports the current explanation.

01. Final project manuscript: the case

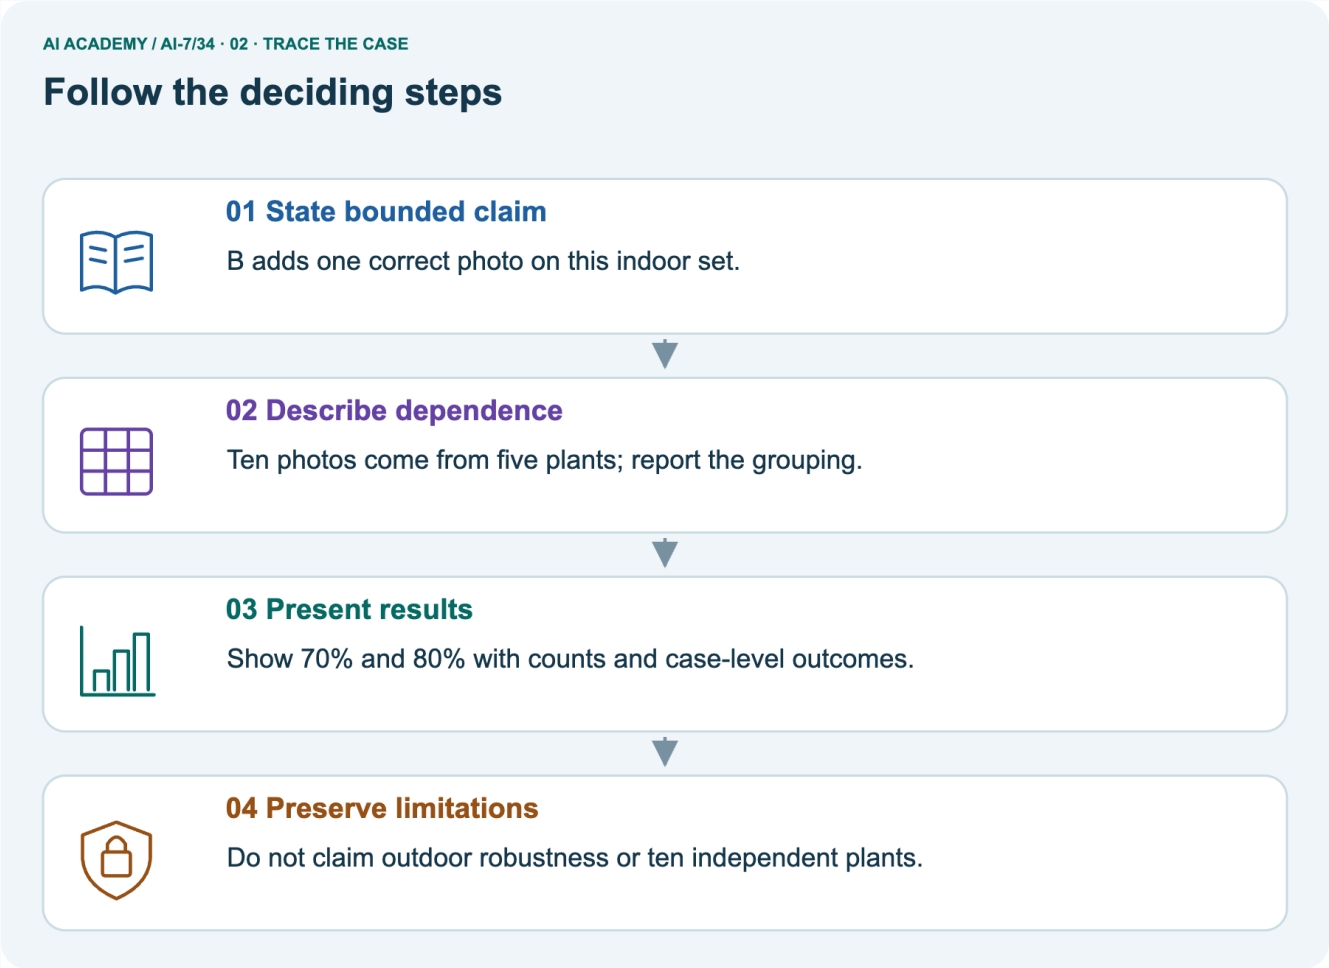

Follow the labelled picture with the matching explanation. Open the vector diagram

Build a manuscript from claim to record. A capstone manuscript compares two frozen pattern classifiers on ten reserved cases. Supplied facts: A is correct on 7/10; B on 8/10.

All cases are indoor, from five plants with two views each.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

Follow the labelled picture with the matching explanation. Open the vector diagram

State bounded claim: B adds one correct photo on this indoor set. → Describe dependence: Ten photos come from five plants; report the grouping. → Present results: Show **70%** and **80%** with counts and case-level outcomes. → Preserve limitations: Do not claim outdoor robustness or ten independent plants.

Point to each numbered stage and explain which recorded **input** it uses.

03. Indoor capstone photo outcomes

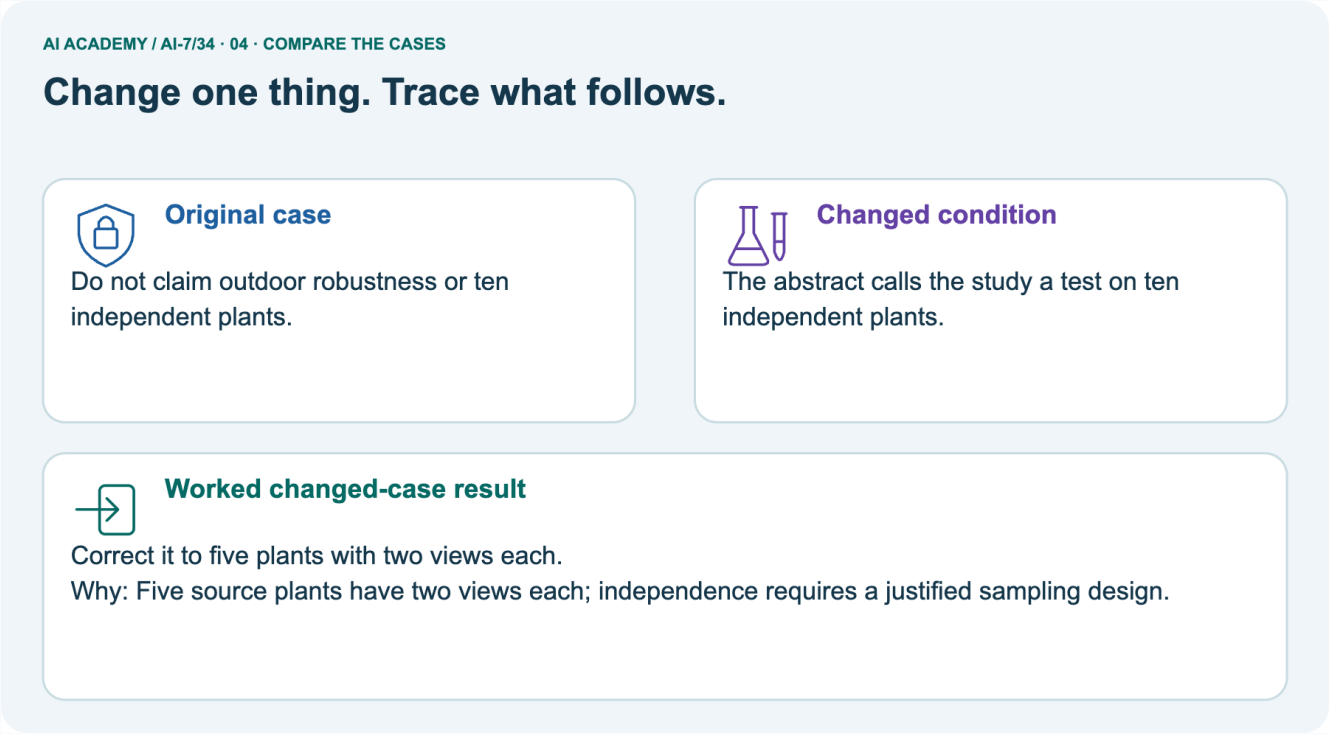

Follow the labelled picture with the matching explanation. Open the vector diagram

Indoor capstone photo outcomes. Units: correct photos out of 10; five plants. A: 7. B: 8.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

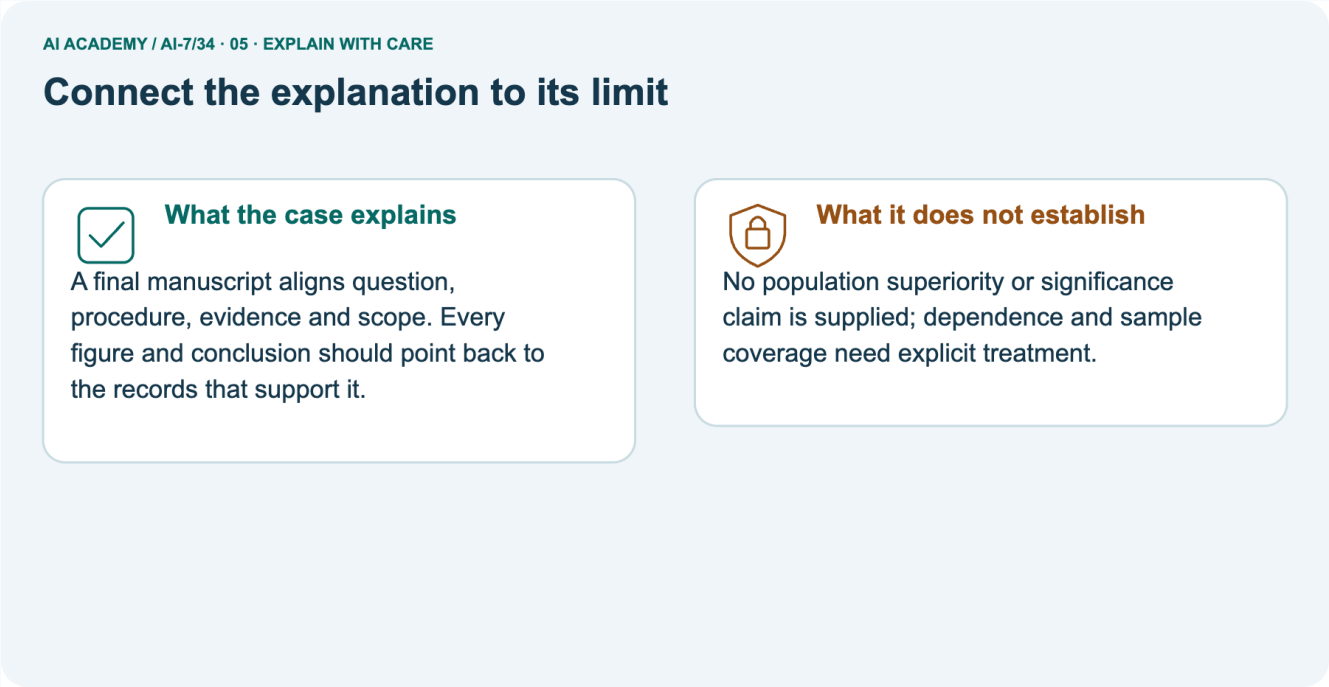

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Do not claim outdoor robustness or ten independent plants. Changed condition: The abstract calls the study a test on ten independent plants. Expected result: Correct it to five plants with two views each. Reason: Five source plants have two views each; independence requires a justified sampling design.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

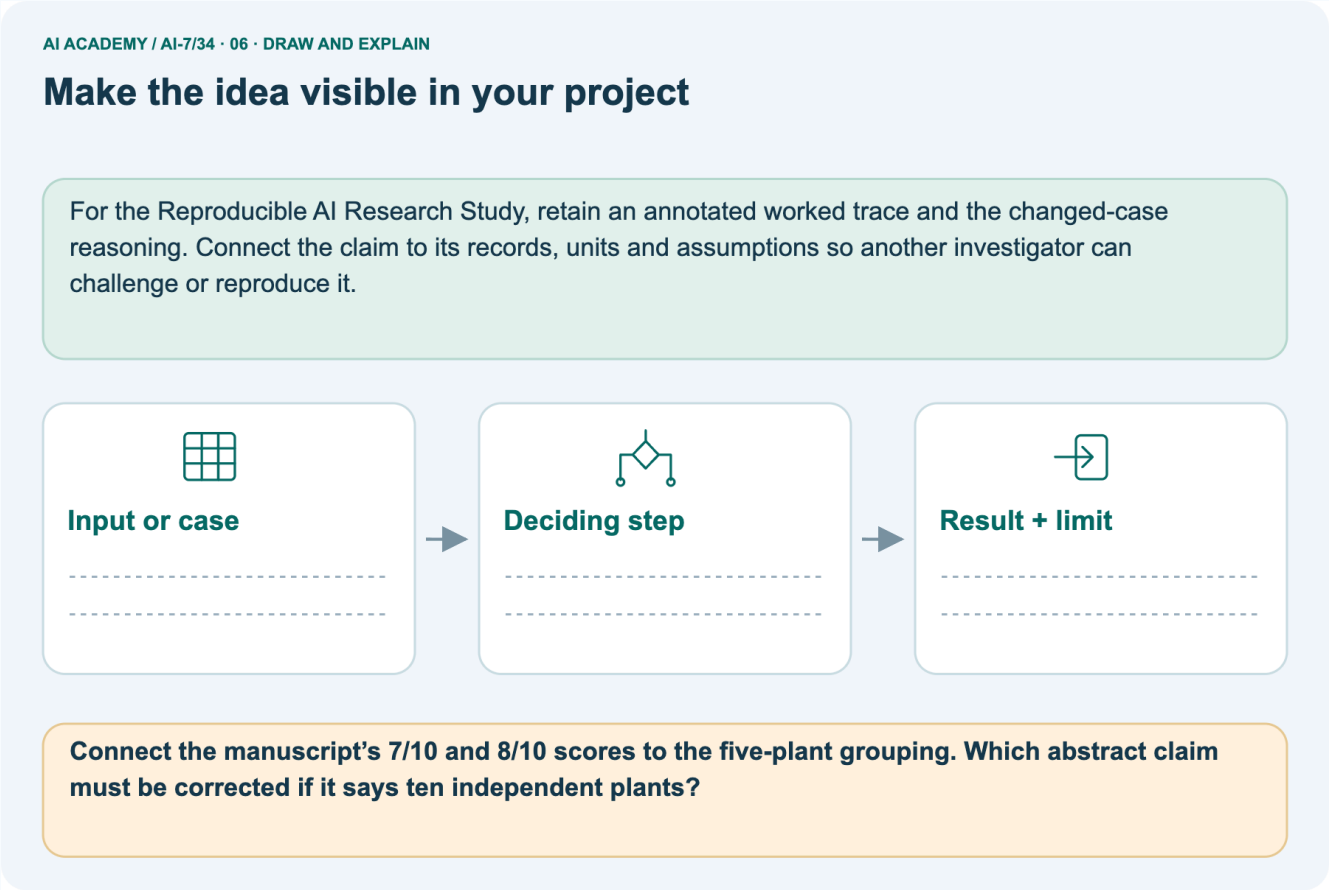

Follow the labelled picture with the matching explanation. Open the vector diagram

A final manuscript aligns question, procedure, **evidence** and scope. Every figure and conclusion should point back to the records that support it.

Limit: No population superiority or significance claim is supplied; dependence and sample coverage need explicit treatment.

Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Draw your **input**, deciding step, result and limit. Supported question: Connect the manuscript's 7/10 and 8/10 scores to the five-plant grouping. Which abstract claim must be corrected if it says ten independent plants?

Draw your project trace and justify the deciding step using **evidence**.

▼ Earlier wording, alternatives and picture transcripts

01. Final project manuscript: the case

02. Follow the deciding steps

03. Indoor capstone photo outcomes

04. Change one thing. Trace what follows.
