AI ACADEMY · LEVEL 7 · GRADE 12 · WEEK 35 · STUDENT LESSON

Presentation and challenge session

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Reproducible AI Research Study

THE CONNECTED WEEK

Make the evidence easy to challenge in a presentation

Show the aggregate result, failure evidence and honest unknowns rather than only a best demonstration.

Keep one habit: Question and contract → complete main ledger → separate picture → boundary probes → investigation → independent attempt.

MAIN LESSON · SECTION 1

Make the evidence easy to challenge in a presentation

> Show the aggregate result, failure evidence and honest unknowns rather than only a best demonstration.

Learning goals

I can explain the **mechanism** and terminology of presentation and **challenge session**.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Retrieve before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Final project manuscript. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Peer review and response. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Figures that preserve **evidence**. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Starting explanation

- Recall Final project manuscript. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

> **My starting explanation**

End goal

Explain presentation and **challenge session** using the records and boundaries of this fictional investigation.

▼ Earlier wording, alternatives and picture transcripts

Your learning target

Remember before reading

This week you will practise:

Explain the **mechanism** and terminology of presentation and **challenge session**

Apply the stated procedure to a new case with a traceable result

Identify an assumption or limitation and design a revealing follow-up

Retrieve what you already know

This week's end goal

MAIN LESSON · SECTION 2

Understand the question and evidence contract

> Show the aggregate result, failure evidence and honest unknowns rather than only a best demonstration.

Start with the research problem

A presentation should help the audience inspect the research, not merely admire an example. Start with the question and design, show the primary counts, then a failure, a limitation and a specific next question. When challenged about an untested device or condition, state the boundary and propose a test.

A confident promise is not a substitute for the missing observations, and a proposed study must remain labelled not run.

Original concept explanation

A presentation should make the **evidence** easy to challenge. Show the baseline, scope, negative cases and uncertainties instead of only a best example.

Complete case inputs, rules and limits

Presentation item	Complete supplied exercise contract
Main study	Fourteen passes among twenty cases
Main displayed item	One perfect output selected for demonstration
Supported main rate	14/20 = 70% under the supplied study summary
Other main cases	Six are not documented as passes; actual failure/unassessed breakdown not supplied here
Separate picture	Camera A only: ten correct of twelve photos
Original camera-B evidence	No records
Changed picture	One camera-B success displayed; selection/coverage not established
Independent challenge	Mobile performance asked about a desktop-only fictional project

Name given and missing evidence

List the given facts and one fact that is not supplied.

▼ **Earlier wording, alternatives and picture transcripts**

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

MAIN LESSON · SECTION 3

Trace the complete main case before interpreting it

> Follow each evidence-to-conclusion step and retain unknown quantities.

Original declared procedure

Use a short sequence:question, design, primary result, failure, limitation, next question. Answer unfamiliar challenges by locating **evidence** or stating it is missing.

Complete main-case evidence ledger

Main presentation step	Evidence-grounded version
Selected perfect output	Identify as one demonstration
Aggregate primary result	Fourteen of twenty, or seventy percent
Remaining six cases	Show actual failure/unassessed record when available; do not invent breakdown
Claim best output is representative	Not established by selecting it
Failure/limitation slide	Retain concrete supplied evidence and gaps
Next question	Propose a bounded test, with not-run status
Audience question outside scope	Locate evidence or state it is absent

State the scope and explain the visual

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

▼ Earlier wording, alternatives and picture transcripts

Presentation and challenge session — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
A presenter shows one perfect output after a 20-case study with 14 passes.	Use a short sequence:question, design, primary result, failure, limitation, next question. Answer unfamiliar challenges by locating evidence or stating it is missing.	The demonstration is one example; study rate 70%. Present aggregate and failures and do not call the best output representative without evidence.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Connect the picture and the explanation

Predict the changed case before reading the explanation

> Keep the rule and evidence boundary visible.

Main task and response

- A presenter shows one perfect **output** after a 20-case study with 14 passes. Show the intermediate steps and give the conclusion with its scope.

> **Keep the procedure fixed. Explain what changed in the inputs and result.**

Predict the pictured change

- Change: The reviewer shows one camera-B success.

▼ **Check after predicting**

Prediction: That is one demonstration, not an estimate of broad camera-B reliability.

Reason: One selected **observation** does not represent the full proposed condition.

▼ **Earlier wording, alternatives and picture transcripts**

Compare a familiar case with a changed case

Change one thing in the pictured case

Connect the main result with the separate pictured case

> Keep the two scenarios and their supplied evidence distinct.

Main case and original checked reasoning

A presenter shows one perfect **output** after a 20-case study with 14 passes.

The demonstration is one example; study rate **70%**. Present aggregate and failures and do not call the best **output** representative without **evidence**.

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Separate pictured inputs and complete explanation

Answer a challenge without inventing **evidence**. At the presentation, a reviewer asks whether the model works on a different camera.

The project tested twelve photos from camera A only. Ten were correct; no camera B records exist.

The separate picture's original project tests twelve camera-A photos and gets ten correct, approximately 83.333%. It contains no camera-B records, so the original study cannot establish performance on camera B. A proposed follow-up uses reserved camera-B cases with labels, source grouping and a fixed scoring rule. In the changed scenario, one camera-B success is displayed.

That provides a single demonstration, not coverage or a broad reliability estimate; do not erase it or pretend it was part of the original study. Keep its selection status separate and continue to state what a planned representative condition test would need.

Read the labelled representation

Answer the challenge from the evidence you have

Camera A: tested

10 / 12 correct

≈83.333% on supplied photos

Camera B: original study

NO RECORDS

Do not promise an untested rate

Later one camera-B success: one demonstration, not broad reliability.

Propose reserved camera-B cases, fixed scoring and recorded grouping.
Mark the proposed test as not run; keep original and demonstration records separate.

AI ACADEMY / AI-7/35 · 02 · TRACE THE CASE

Follow the deciding steps

01 State measured result

Report 10/12 correct on camera A.

02 Address the challenge

Say camera B performance is not measured.

03 Propose a valid next test

Use reserved camera-B cases with labels, grouping and a fixed scoring rule.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. State measured result	Report 10/12 correct on camera A.
2. Address the challenge	Say camera B performance is not measured.
3. Propose a valid next test	Use reserved camera-B cases with labels, grouping and a fixed scoring rule.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

A **challenge session** tests whether the team knows its **evidence** boundary. An honest unknown plus a specific future test is stronger than an unsupported confident promise.

Complete picture evidence and limits

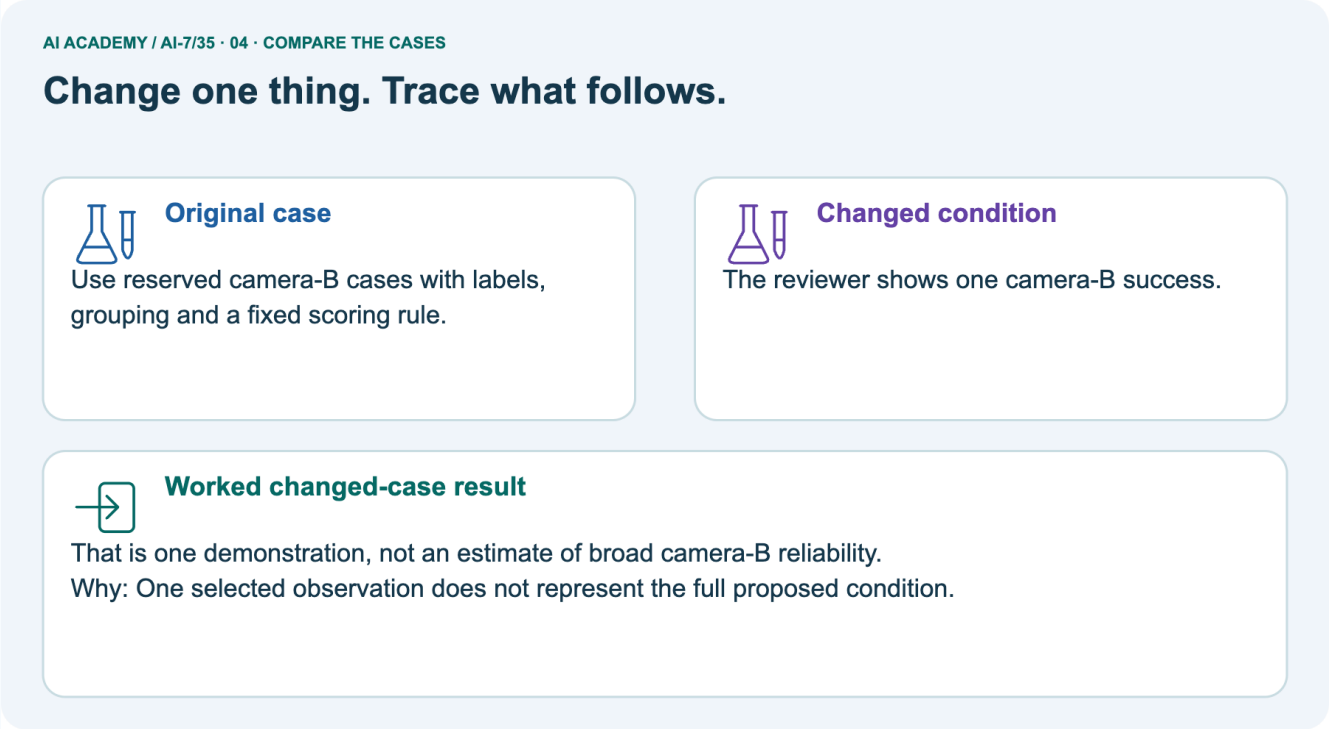

Separate challenge evidence	Honest answer
Original camera A	10/12 correct ≈ 83.333% on those photos
Original camera B	No records; no supported rate
Later displayed B success	One demonstrated observation, selection/coverage unknown
Can claim broad camera-B reliability?	No
Proposed test	Reserved labelled B cases, grouping and fixed scoring
Proposed test status	Not run; no result invented

Separate challenge evidence	Honest answer
Remaining design issues	Sampling and uncertainty still need justification

Predict the changed condition

- Change one thing: The reviewer shows one camera-B success. Predict the result before checking the explanation. What remains the same?

▼ Check after predicting

Follow the labelled picture with the matching explanation. Open the vector diagram

Explain what remains unknown

- The original result and proposed study still need sampling and uncertainty discussion.

- Read the labelled picture: Answer the camera-B challenge using only the twelve camera-A records. Why is one displayed camera-B success a demonstration rather than broad **evidence** of camera-B reliability?

▼ **Earlier wording, alternatives and picture transcripts**

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Presentation and challenge session

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

MAIN LESSON · SECTION 7

Find the first unsupported inference and repair it

> Use the supplied conditions rather than inventing missing evidence.

Original qualification and repair setup

A confident response should not replace missing **evidence** with speculation.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Complete boundary and misconception probes

Presentation audit	Checked interpretation
One perfect output	Demonstration, not the whole study
14/20 study passes	Seventy percent, not perfect performance
Six not documented as passes	Do not invent their exact missing/failure breakdown
No camera-B records originally	State scope; do not promise performance
One later camera-B success	Record separately, not a broad reliability estimate
Question about mobile after desktop-only test	Unknown in that fictional project
Future test proposed	Keep status not run

Presentation audit	Checked interpretation
Honest limitation stated	Retain the primary result; do not hide it behind a demonstration

Write and justify the repair

- A report omits this qualification: A confident response should not replace missing **evidence** with speculation. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

State one repair and the checks you would rerun.

▼ Earlier wording, alternatives and picture transcripts

Locate the earliest unsupported step

Practise the mechanism with progressively less help

> Keep the selected independent case for a first attempt.

Shared explanation

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

> **Explain your prediction to a partner before comparing results.**

Supported workbook trace

Use workbook W2 for the connected example “Presentation and **challenge session**”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Individual scope check

- Use the worked case for Presentation and **challenge session**. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

  Point to the step or supplied fact that decides; explain your repair if needed.

- Answer on your own before discussion. If you are unsure, say which step you need help with.

Picture response

- Answer the camera-B challenge using only the twelve camera-A records. Why is one displayed camera-B success a demonstration rather than broad **evidence** of camera-B reliability?

> **My explanation using a pictured step and the given facts**
>
> _____
>
> _____
>
> _____
>
> _____

Reserve the independent task

This is supported practice. Keep the separately named independent case for an attempt before feedback.

▼ **Earlier wording, alternatives and picture transcripts**

Practise with less help: Trace the worked case

Check your reasoning

Explain the picture

MAIN LESSON · SECTION 9

Investigate, record the evidence and check the limits

> Distinguish a prediction, a paper trace and an actual local execution.

Current investigation

A presenter shows one perfect **output** after a 20-case study with 14 passes. Show the intermediate steps and give the conclusion with its scope.

Complete investigation instructions

1. Draft a six-part paper presentation: question, design, primary result, failure evidence, limitation and next question. For the main study show fourteen of twenty, seventy percent, and label the perfect output as a selected demonstration. Do not invent the other six cases' exact statuses. Then rehearse the camera-B answer using the original ten/twelve camera-A evidence and separately labelled later demonstration.

   Outline a reserved-condition follow-up without claiming it ran. No audience message, model evaluation or new photo collection is performed. Reserve the independent mobile-versus-desktop question.

Evidence record and reflection

Record	Your evidence
Given input and fixed rule	
Prediction before checking	
Actual result, or "not run"	
First mismatch and one explanation	
Boundary or missing input and expected response	

On paper, trace the supplied procedure. If code is provided, predict before running it in a local practice file. Never write an expected answer as though it were an observed run.

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

▼ Earlier wording, alternatives and picture transcripts

Predict, investigate and preserve the evidence

Plan → try → check

MAIN LESSON · SECTION 14

Try the selected new case independently

> Answer the fictional mobile challenge from the supplied desktop-only evidence and propose a specific unperformed follow-up.

Complete independent task

Audience asks if result holds on mobile; only desktop was tested. Give an honest answer.

First attempt and support record

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Feedback after trying

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

Independent case: Apply a new case independently

Attempt this without hints

Audience asks if result holds on mobile; only desktop was tested. Give an honest answer.

> **My independent procedure, result and limitation**
>
> | |
> |---|
> | |
> | |
> | |

Record support used: none, hint or teacher explanation. After feedback, a different case is needed to demonstrate independence.

Use feedback to improve

</details>

MAIN LESSON · SECTION 11

Save the research artifact and unresolved conditions

> Keep supplied evidence, proposed revisions and actual work distinct.

Project task and artifact

For Reproducible AI Research Study, use this week's independent task as a rehearsal for the final **evidence** pack: Audience asks if result holds on mobile; only desktop was tested. Give an honest answer.

Keep actual **observation**s separate from expected results, preserve failures, compare a baseline and explain the limits.

Project evidence	Record
Component and version	
Inputs permitted at prediction time	
Trace and comparison with earlier work	
Failure, limit and human review	

Evidence and limitations

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

▼ **Earlier wording, alternatives and picture transcripts**

Evidence for your project

MAIN LESSON · SECTION 16

Retrieve the mechanism and state the evidence boundary

> Explain what follows and what would require new evidence.

Retrieve and explain

- Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of presentation and **challenge session**

> **My deciding step, evidence and one remaining question**
>
> _____
>
> _____
>
> _____
>
> _____

Plan a changed-case return

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Reference bank and extra practice

Choose the reference that helps your next step.

▼ **Reference · Use research vocabulary precisely**

REFERENCE · SECTION 5

Reference · Use research vocabulary precisely

> Connect each term to the question, comparison, measurement or evidence.

Vocabulary and your explanation

Word	Meaning
Challenge session	Questions testing the basis of a presentation
Representative example	An example whose selection is justified for the stated purpose
Evidence response	An answer grounded in records or explicit absence

Use two terms to explain a step in this week's example.

▼ Extra challenge · Explain a stronger case

REFERENCE · SECTION 10

Extra challenge · Explain a stronger case

> Choose the next challenge after the main route.

Explain,repair and extend

- Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

- A report omits this qualification: A confident response should not replace missing **evidence** with speculation. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Explain → apply → challenge

> **Explain which evidence supports your conclusion and which claim remains unproved.**

▼ Reference · Check the research reasoning and its limits

REFERENCE · SECTION 12

Reference · Check the research reasoning and its limits

> Use after practice; reserve the selected independent case for its first attempt.

Current explanation and response

- Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

  For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

- For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

  Do not reuse W4 as a new final test after receiving feedback.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

My limited claim and a useful next check

▼ **Extra practice · Revisit the complete trace**

REFERENCE · SECTION 13

Extra practice · Revisit the complete trace

> Predict before reading the supplied steps.

Complete trace and evidence

Complete evidence record

Presentation and challenge session — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
A presenter shows one perfect output after a 20-case study with 14 passes.	Use a short sequence:question, design, primary result, failure, limitation, next question. Answer unfamiliar challenges by locating evidence or stating it is missing.	The demonstration is one example; study rate 70%. Present aggregate and failures and do not call the best output representative without evidence.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Follow the **input** through the stated procedure to its result. Cover the result first, predict it, then explain every intermediate step. The text/table accompanies the figure so the example can be read without colour.

My complete trace of the worked case

▼ Reference · The earlier route checklist

REFERENCE · SECTION 15

Reference · The earlier route checklist

> Use one main route rather than repeating the lesson.

Targets,route and first prediction

Start with this question: Answer a challenge without inventing **evidence**. At the presentation, a reviewer asks whether the model works on a different camera.

By the end, I can	How I will show it
Explain the mechanism and terminology of presentation and challenge session	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

▼ Extra practice · Predict,check and repair

REFERENCE · SECTION 17

Extra practice · Predict,check and repair

> Keep supported feedback separate from the independent case.

First supported question and optional hint

- Answer a challenge without inventing **evidence**. At the presentation, a reviewer asks whether the model works on a different camera.
- Which labelled step matches this detail? Use reserved camera-B cases with labels, grouping and a fixed scoring rule.
- 1. Propose a valid next test
- 2. State measured result
- 3. Address the challenge
- Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Practice 1: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check after the first attempt**

After your attempt, compare with the supported explanation: Propose a valid next test Use reserved camera-B cases with labels, grouping and a fixed scoring rule.

A **challenge session** tests whether the team knows its **evidence** boundary. An honest unknown plus a specific future test is stronger than an unsupported confident promise.

Changed-case question and optional hint

- Changed-case practice: The reviewer shows one camera-B success. Which conclusion is supported by the supplied facts?
- 1. We can decide the result without examining the changed **input** or the procedure.
- 2. That is one demonstration, not an estimate of broad camera-B reliability.
- 3. This one example guarantees correct results for every future **input**.
- Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Practice 2: explain the deciding evidence

My selected conclusion, deciding fact and explanation

▼ **Check after the changed attempt**

After your attempt, compare with the supported explanation: That is one demonstration, not an estimate of broad camera-B reliability. One selected **observation** does not represent the full proposed condition.

Repair and retain the record

Review Final project manuscript (ai-7/34). Goal: Explain the **mechanism** and terminology of final project manuscript. Short practice: Connect the manuscript's 7/10 and 8/10 scores to the five-plant grouping.

Which abstract claim must be corrected if it says ten independent plants?. Return to this week and explain what you changed.

Review Peer review and response (ai-7/32). Goal: Explain the **mechanism** and terminology of peer review and response. Short practice: Count photos and underlying plants in the reviewer’s concern.

What analysis assumption needs revision, and why does changing only the word photos to plants fail to repair it?. Return to this week and explain what you changed.

Review Figures that preserve **evidence** (ai-7/29). Goal: Explain the **mechanism** and terminology of figures that preserve **evidence**. Short practice: Draw count bars for 6/10 and 8/10 using the stated axis.

Why must the denominator and fixed task context remain visible, and what distortion arises from an undisclosed axis start at five?. Return to this week and explain what you changed.

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

▼ **Earlier wording, alternatives and picture transcripts**

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Repair a missing building block

Keep your completed work

▼ **Reference · Six-picture concept journey**

REFERENCE · SECTION 18

Reference · Six-picture concept journey

> Choose the picture that supports the current explanation.

01. Presentation and challenge session: the case

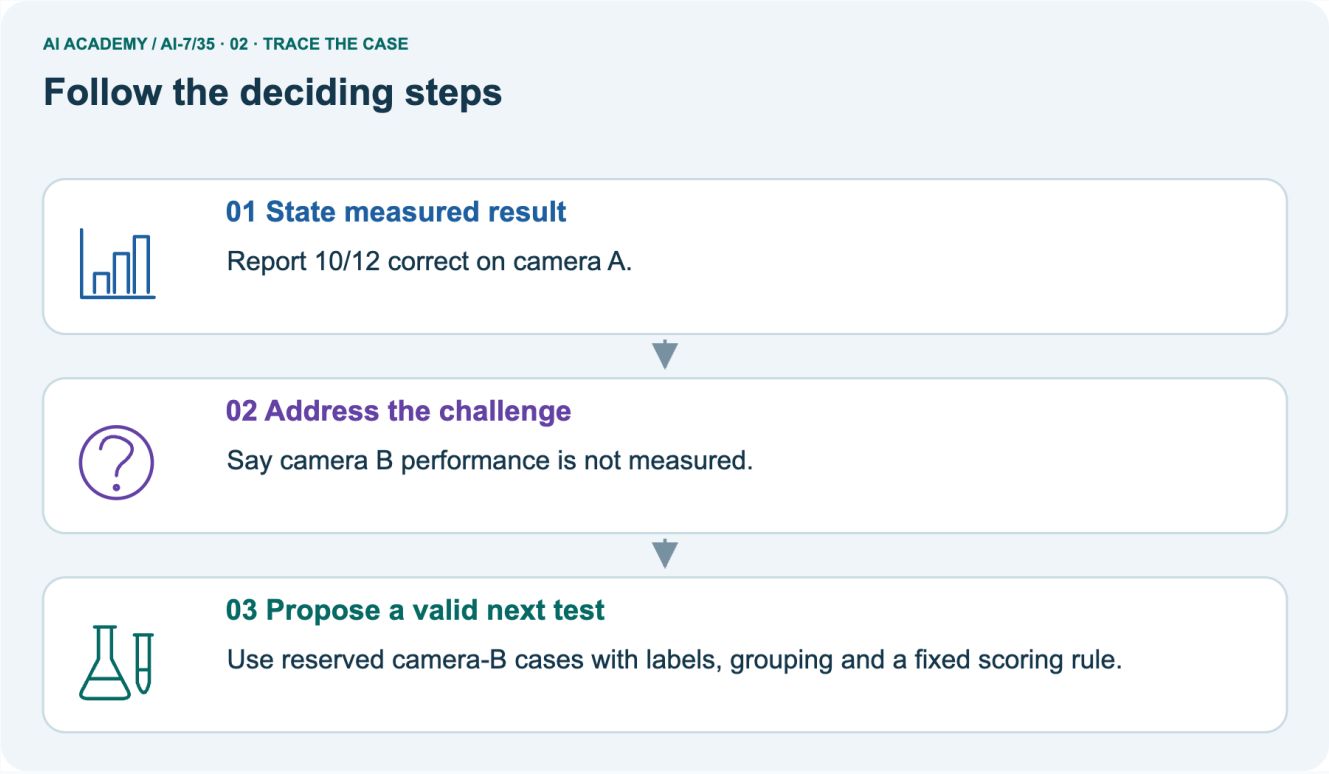

Follow the labelled picture with the matching explanation. Open the vector diagram

Answer a challenge without inventing **evidence**. At the presentation, a reviewer asks whether the model works on a different camera. Supplied facts: The project tested twelve photos from camera A only.

Ten were correct; no camera B records exist.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

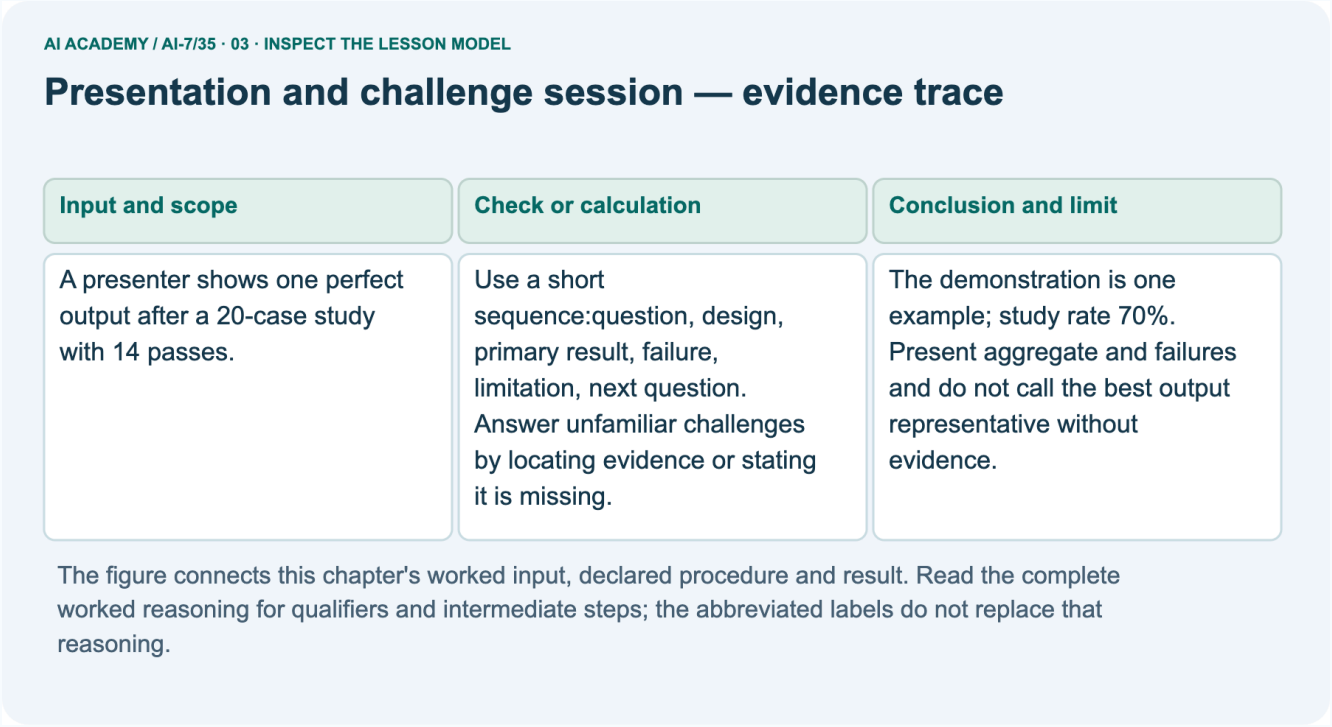

Follow the labelled picture with the matching explanation. Open the vector diagram

State measured result: Report 10/12 correct on camera A. → Address the challenge: Say camera B performance is not measured. → Propose a valid next test: Use reserved camera-B cases with labels, grouping and a fixed scoring rule.

Point to each numbered stage and explain which recorded **input** it uses.

03. Presentation and challenge session — evidence trace

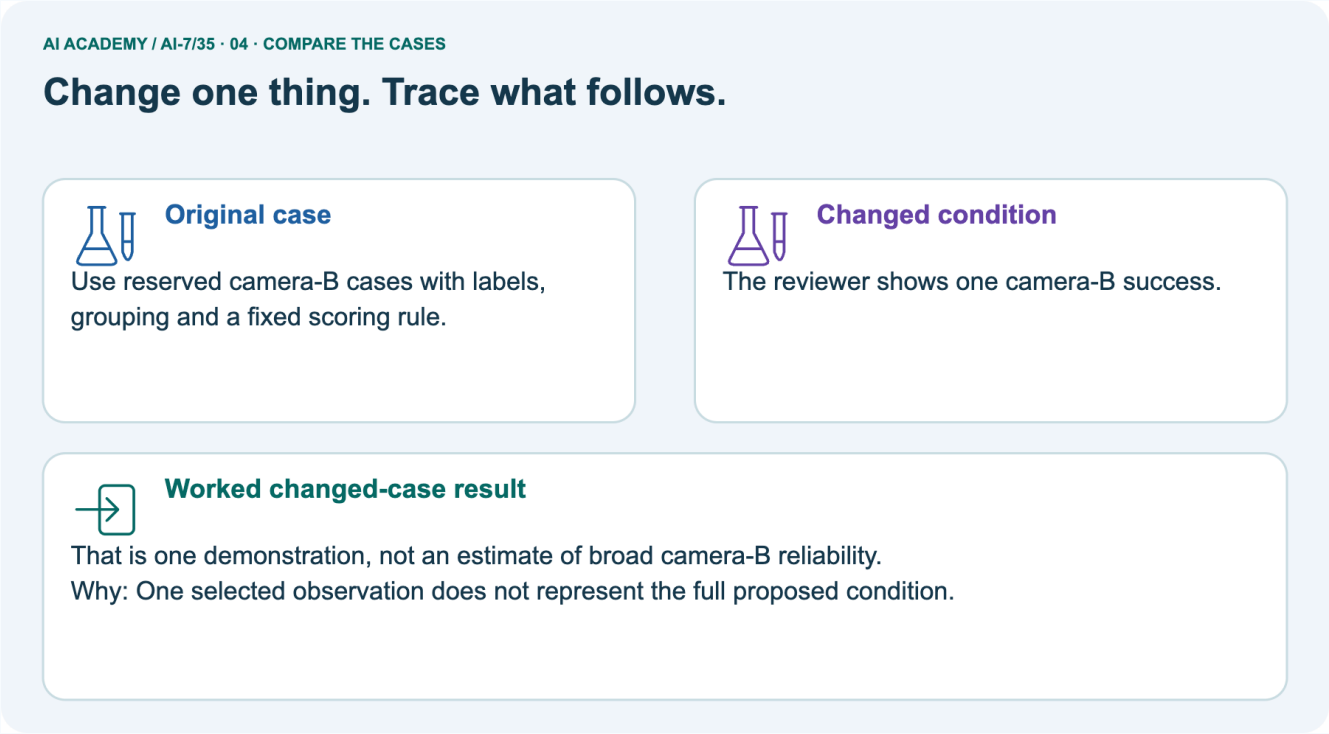

Follow the labelled picture with the matching explanation. Open the vector diagram

Presentation and **challenge session** — **evidence** trace. A presenter shows one perfect **output** after a 20-case study with 14 passes. | Use a short sequence:question, design, primary result, failure, limitation, next question. Answer unfamiliar challenges by locating **evidence** or stating it is missing. | The demonstration is one example; study rate **70%**. Present aggregate and failures and do not call the best **output** representative without **evidence**.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

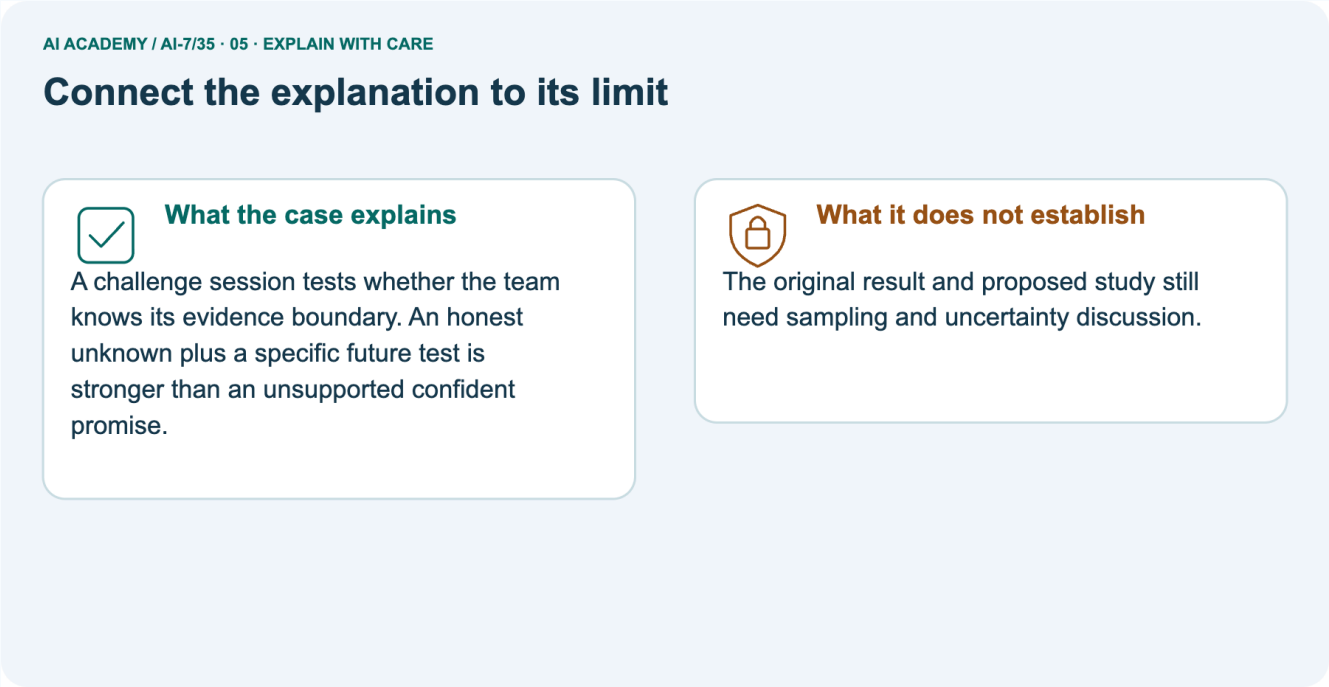

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Use reserved camera-B cases with labels, grouping and a fixed scoring rule.
Changed condition: The reviewer shows one camera-B success.

Expected result: That is one demonstration, not an estimate of broad camera-B reliability.
Reason: One selected **observation** does not represent the full proposed condition.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

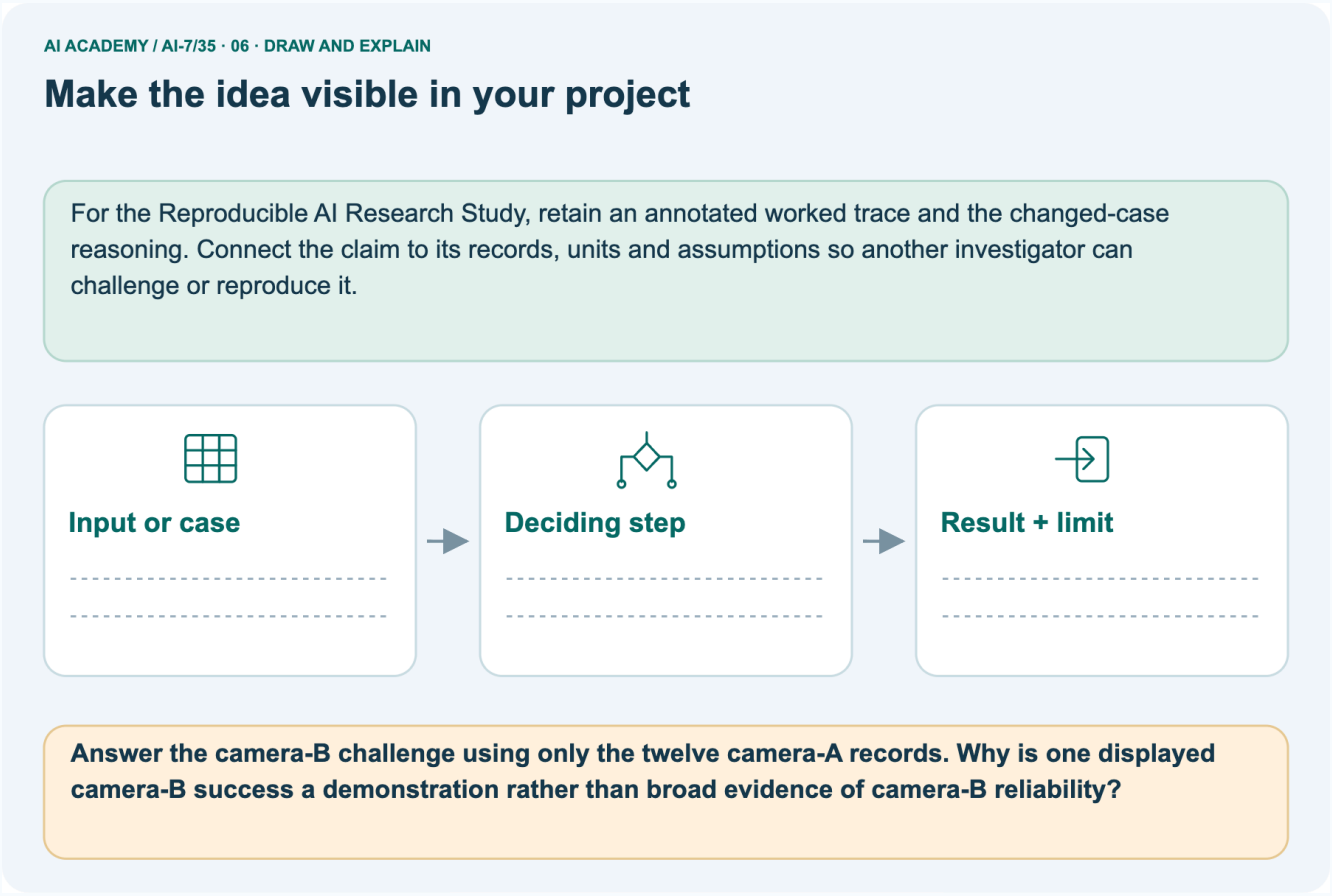

Follow the labelled picture with the matching explanation. Open the vector diagram

A **challenge session** tests whether the team knows its **evidence** boundary. An honest unknown plus a specific future test is stronger than an unsupported confident promise.

Limit: The original result and proposed study still need sampling and uncertainty discussion.

Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Draw your **input**, deciding step, result and limit. Supported question: Answer the camera-B challenge using only the twelve camera-A records.

Why is one displayed camera-B success a demonstration rather than broad **evidence** of camera-B reliability?

Draw your project trace and justify the deciding step using **evidence**.
