

Multimodal Evidence

Project: Verified Study Buddy

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Speech and Audio Systems

Without opening the old lesson, explain one key idea from Speech and Audio Systems. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Image Generation Models

Without opening the old lesson, explain one key idea from Image Generation Models. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Iterative Prompting

Without opening the old lesson, explain one key idea from Iterative Prompting. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Trace the worked case for Speech pipelines and multimodal evidence. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Speech pipelines and multimodal evidence. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Changed independent case

A description reports two visible plants and a third opaque pot whose contents cannot be seen. A caption says “three plants”. What is supported?

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. Your learning target

A caption says four seedlings; the image shows three and an opaque box. Is a fourth seedling disproved? Write an evidence-aware response.

6. Solve the given case

An image shows three plants; caption claims a fourth outside the frame.

What can the image establish?

Show your trace, calculation or evidence

Write or draw your reasoning and evidence.

7. Check a changed case

A chart image shows 12 plants; its caption says 21. What should a multimodal assistant report before drawing a conclusion?

My independent answer and reason

Write or draw your reasoning and evidence.

Week 13 Test and reflect

8. Design a revealing test

Create a changed input, boundary case or missing-information case. Write the expected answer or safe response before testing.

Test record · My evidence

Test record: Changed input or condition

My evidence: _____

Test record: Expected answer or fallback

My evidence: _____

Test record: Observed result

My evidence: _____

Test record: Why the result occurred

My evidence: _____

9. Project checkpoint

Accept diagrams plus questions only when the source and topic align with the learner's task.

The project change and evidence I will keep

Write or draw your reasoning and evidence.

10. Self check

I can explain the mechanism. I can show evidence. I can handle a changed case. I can name a limit. Mark each as not yet, with help or independently, and attach supporting work.

Teacher review _____ Next step _____

11. Transfer practice from the original programme

A caption says four seedlings; the image shows three and an opaque box. Is a fourth seedling disproved? Write an evidence-aware response.

My independently reasoned answer

Record support used: none, hint or teacher explanation.

12. W1 Explain the mechanism

Explain the weekly mechanism in your own words. Use the worked scenario to name its input, decision rule and output.

My reasoning and evidence

13. W2 Trace the worked case

Audio transcript reads fifteen boxes; a clear written inventory says fifty boxes. The original audio is unavailable and the assistant reports fifteen as certain. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

14. W3 Audit the limit

A report omits this qualification: A stage-level accuracy or authority policy does not establish every modality agrees or every downstream claim is supported. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

15. W4 Apply a new case independently

Transcript says room E; a current written approval says room F. The task requires current approved room. Written approval is declared authoritative; trace the response and the transcription limit.

My reasoning and evidence

16. W5 Design a revealing follow-up

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison. Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

17. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

18. Pictorial case practice: Multimodal Evidence

A fictional Study Buddy audits a desk description and a separate caption.

Description: one open transparent box visibly contains three pencils; one closed opaque box hides its contents.

Caption: "There are five pencils on this desk." No other evidence reveals the closed box.

Multimodal Evidence

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Visible evidence

Three pencils are explicitly visible in the open box.

2. Hidden region

The closed box's pencil count is unknown.

3. Caption claim

Five total requires two additional pencils if these are the only relevant locations.

4. Supported response

At least three are supported; total five is not established by the description.

CHANGE ONE THING

Open the closed box and a verified observation shows two pencils inside, with no other desk locations.

Explain the changed result using the matching lesson.

Why were both “exactly three” and “exactly five” unsupported before opening the box?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: Label Study Buddy claims by their visual, audio or text evidence and retain uncertainty when modalities omit information.

19. Project portfolio milestone

Project: Verified Study Buddy

Current milestone: Test changed cases. Keep normal, boundary and failure cases; compare expected and observed results.

Label Study Buddy claims by their visual, audio or text evidence and retain uncertainty when modalities omit information.

Evidence to keep · My record

Evidence to keep: This week's input and deciding step

My record: _____

Evidence to keep: Prediction and actual result (or labelled paper trace)

My record: _____

Evidence to keep: One change since the previous checkpoint and why

My record: _____

Evidence to keep: One error or limit and the next test

My record: _____

Explain what this week adds to your project. Reuse last week's record rather than starting again.

20. Supported practice and learning evidence

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A fictional Study Buddy audits a desk description and a separate caption.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? At least three are supported; total five is not established by the description.

1. Caption claim
2. Supported response
3. Hidden region
4. Visible evidence

My selected conclusion, deciding fact and explanation

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

After your attempt, compare with the supported explanation: Supported response At least three are supported; total five is not established by the description. A caption is another claim, not a way of seeing through an opaque object. Keep observable information separate from inferences. The visible three give a lower bound under the stated desk scope; there is no supplied maximum for the closed box. Do not replace unknown contents with zero merely because none are visible.

Practice 2: explain the deciding evidence

Changed-case practice: Open the closed box and a verified observation shows two pencils inside, with no other desk locations. Which conclusion is supported by the supplied facts?

1. We can decide the result without examining the changed input or the procedure.
2. The total is now supported as five.
3. This one example guarantees correct results for every future input.

My selected conclusion, deciding fact and explanation

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

After your attempt, compare with the supported explanation: The total is now supported as five. 3 visible initially plus 2 newly observed gives 5 under the complete-location assumption.

Repair a missing building block

Review Speech and Audio Systems (ai-3/12). Goal: Explain the mechanism and terminology of speech pipelines and multimodal evidence. Short practice: Which stage was initially wrong, and which stage was correctly operating on a wrong input?. Return to this week and explain what you changed.

Review Image Generation Models (ai-3/10). Goal: Explain the mechanism and terminology of image generation and provenance. Short practice: What may these two grids explain, and what can they not establish about a real generator?. Return to this week and explain what you changed.

Review Iterative Prompting (ai-3/7). Goal: Explain the mechanism and terminology of controlled prompt experiments. Short practice: What evidence supports improvement here, and what remains unproven?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run evidence. Open the HTML copy to read or print it. Drafts stay in this browser when storage is available; clear drafts on a shared device.

What I repaired, the evidence I kept and the next test
