

Verify Numbers and Dates

Project: Verified Study Buddy

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Source Quality

Without opening the old lesson, explain one key idea from Source Quality. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Multimodal Evidence

Without opening the old lesson, explain one key idea from Multimodal Evidence. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Image Generation Models

Without opening the old lesson, explain one key idea from Image Generation Models. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Trace the worked case for Claim support and citation evaluation. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Claim support and citation evaluation. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Changed independent case

A draft claims 18 of 24 learners is 60%, and gives an April 31 deadline. Check both statements without inventing a deadline.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. Your learning target

A report says $21/28=70\%$ and gives February 30 as the deadline. Correct what can be computed and identify what must be checked externally.

6. Solve the given case

An answer says $15/20=80\%$ and sets a deadline of February 30.

Verify both.

Show your trace, calculation or evidence

Write or draw your reasoning and evidence.

7. Check a changed case

A report says 12 of 40 responses is 40%. Recalculate and state the correction with the denominator.

My independent answer and reason

Write or draw your reasoning and evidence.

Week 16 Test and reflect

8. Design a revealing test

Create a changed input, boundary case or missing-information case. Write the expected answer or safe response before testing.

Test record · My evidence

Test record: Changed input or condition

My evidence: _____

Test record: Expected answer or fallback

My evidence: _____

Test record: Observed result

My evidence: _____

Test record: Why the result occurred

My evidence: _____

9. Project checkpoint

Route arithmetic to a calculator and dates to direct sources before presenting them.

The project change and evidence I will keep

Write or draw your reasoning and evidence.

10. Self check

I can explain the mechanism. I can show evidence. I can handle a changed case. I can name a limit. Mark each as not yet, with help or independently, and attach supporting work.

Teacher review _____ Next step _____

11. Transfer practice from the original programme

A report says $21/28=70\%$ and gives February 30 as the deadline. Correct what can be computed and identify what must be checked externally.

My independently reasoned answer

Record support used: none, hint or teacher explanation.

12. W1 Explain the mechanism

Explain the weekly mechanism in your own words. Use the worked scenario to name its input, decision rule and output.

My reasoning and evidence

13. W2 Trace the worked case

An answer has four factual claims. Three have citations, but only two are supported by their cited passages. All links exist. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

14. W3 Audit the limit

A report omits this qualification: Citation counts do not establish truth beyond the supplied sources or the correctness of uncited claims. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

15. W4 Apply a new case independently

Five claims; four cited; three supported by cited passages; one cited ID is nonexistent. Compute support and citation presence and explain link limits.

My reasoning and evidence

16. W5 Design a revealing follow-up

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison. Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

17. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

18. Pictorial case practice: Verify Numbers and Dates

A fictional Study Buddy checks a science-club summary against supplied counts and calendar facts.

Record: 15 of 20 fictional model trials passed. Draft: "70% passed; the meeting is on June 31."

June has 30 days. No authoritative record gives the intended meeting date.

Verify Numbers and Dates

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Check denominator

There are 15 passes out of 20 total trials.

2. Calculate percentage

$15 / 20 \times 100 = 75\%$, not 70%.

3. Validate date

June 31 is invalid because June has 30 days.

4. Resolve missing intent

Ask the event owner for the correct date; do not assume June 30 or July 1.

CHANGE ONE THING

The count is revised to 14 passes out of 20, but no date record is added.

Explain the changed result using the matching lesson.

Which part can be corrected immediately from existing evidence, and which needs follow-up?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: Make Study Buddy check quantities, units, dates and source support separately; record unresolved fields instead of guessing.

19. Project portfolio milestone

Project: Verified Study Buddy

Current milestone: Test changed cases. Keep normal, boundary and failure cases; compare expected and observed results.

Make Study Buddy check quantities, units, dates and source support separately; record unresolved fields instead of guessing.

Evidence to keep · My record

Evidence to keep: This week's input and deciding step

My record: _____

Evidence to keep: Prediction and actual result (or labelled paper trace)

My record: _____

Evidence to keep: One change since the previous checkpoint and why

My record: _____

Evidence to keep: One error or limit and the next test

My record: _____

Explain what this week adds to your project. Reuse last week's record rather than starting again.

20. Supported practice and learning evidence

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A fictional Study Buddy checks a science-club summary against supplied counts and calendar facts.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Ask the event owner for the correct date; do not assume June 30 or July 1.

1. Validate date
2. Check denominator
3. Resolve missing intent
4. Calculate percentage

My selected conclusion, deciding fact and explanation

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

After your attempt, compare with the supported explanation: Resolve missing intent Ask the event owner for the correct date; do not assume June 30 or July 1. A percentage requires the correct numerator and denominator. Calendar validation identifies an impossible date, but it cannot discover what date the author intended. These checks use different evidence: arithmetic repairs the percentage from the supplied counts, while the date needs another authoritative source before publication.

Practice 2: explain the deciding evidence

Changed-case practice: The count is revised to 14 passes out of 20, but no date record is added. Which conclusion is supported by the supplied facts?

1. We can decide the result without examining the changed input or the procedure.
2. 70% now matches the count; June 31 remains invalid and unresolved.
3. This one example guarantees correct results for every future input.

My selected conclusion, deciding fact and explanation

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

After your attempt, compare with the supported explanation: 70% now matches the count; June 31 remains invalid and unresolved. $14 \div 20 \times 100 = 70\%$; changing a count provides no new calendar evidence.

Repair a missing building block

Review Source Quality (ai-3/15). Goal: Explain the mechanism and terminology of conflicting and time-sensitive sources. Short practice: Which source fields must be checked before answering day 9?. Return to this week and explain what you changed.

Review Multimodal Evidence (ai-3/13). Goal: Explain the mechanism and terminology of speech pipelines and multimodal evidence. Short practice: Why were both “exactly three” and “exactly five” unsupported before opening the box?. Return to this week and explain what you changed.

Review Image Generation Models (ai-3/10). Goal: Explain the mechanism and terminology of image generation and provenance. Short practice: What may these two grids explain, and what can they not establish about a real generator?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run evidence. Open the HTML copy to read or print it. Drafts stay in this browser when storage is available; clear drafts on a shared device.

What I repaired, the evidence I kept and the next test
