

Configuration and secrets

Project: Grounded Learning Service

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Typed contracts and schemas

Without opening the old lesson, explain one key idea from Typed contracts and schemas. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Requirements and service boundaries

Without opening the old lesson, explain one key idea from Requirements and service boundaries. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Trace the worked case for Configuration and secrets. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Configuration and secrets. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Apply a new case independently

Server secret exists, but a browser error includes its full value. What failed and what record should be produced instead?

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. W1 Explain the mechanism

Explain the weekly mechanism in your own words. Use the worked scenario to name its input, decision rule and output.

My reasoning and evidence

6. W2 Trace the worked case

A startup script prints every environment variable while debugging a missing data version. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

7. W3 Audit the limit

A report omits this qualification: A classroom mock is not a production credential-management design; no real secrets are needed here. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

8. W4 Apply a new case independently

Server secret exists, but a browser error includes its full value. What failed and what record should be produced instead?

My reasoning and evidence

9. W5 Design a revealing follow-up

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison. Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

10. Project checkpoint and reflection

Add a labelled configuration and secrets evidence sheet to Grounded Learning Service. Show how you can explain the mechanism and terminology of configuration and secrets. Use the supplied fictional case and keep its inputs, intermediate steps, calculation or prediction, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

My project change, supporting evidence and remaining limit

11. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

12. Pictorial case practice: Configuration and secrets

Settings and a sealed credential. A classroom bot needs a public answer-length setting and a private access token.

maximum_words=80 is public configuration. A separate protected store holds a placeholder credential.

Configuration and secrets

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Load setting

Read the reviewed maximum_words value of 80.

2. Load credential

The runtime obtains the token through its protected path.

3. Log safely

Record startup success without printing the token.

CHANGE ONE THING

Change maximum_words to 60.

Explain the changed result using the matching lesson.

Point to the public setting and the protected credential. What changes when maximum_words becomes 60, and which information must never appear in the startup log?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or evidence that makes the deciding step valid, so another team can review it.

13. Project portfolio milestone

Project: Grounded Learning Service

Current milestone: Frame the need. Name the user, the problem, allowed inputs and a safe simple starting method.

For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or evidence that makes the deciding step valid, so another team can review it.

Evidence to keep · My record

Evidence to keep: This week's input and deciding step

My record: _____

Evidence to keep: Prediction and actual result (or labelled paper trace)

My record: _____

Evidence to keep: One change since the previous checkpoint and why

My record: _____

Evidence to keep: One error or limit and the next test

My record: _____

Explain what this week adds to your project. Reuse last week's record rather than starting again.

14. Supported practice and learning evidence

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Settings and a sealed credential. A classroom bot needs a public answer-length setting and a private access token.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Record startup success without printing the token.

1. Load credential
2. Log safely
3. Load setting

My selected conclusion, deciding fact and explanation

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

After your attempt, compare with the supported explanation: Log safely Record startup success without printing the token. Configuration controls behaviour. A credential grants access and needs different storage and handling.

Practice 2: explain the deciding evidence

Changed-case practice: Change maximum_words to 60. Which conclusion is supported by the supplied facts?

1. This one example guarantees correct results for every future input.
2. The configured answer limit becomes 60; the private token stays unchanged.
3. We can decide the result without examining the changed input or the procedure.

My selected conclusion, deciding fact and explanation

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

After your attempt, compare with the supported explanation: The configured answer limit becomes 60; the private token stays unchanged. An ordinary length setting does not require replacing the credential.

Repair a missing building block

Review Typed contracts and schemas (ai-6/3). Goal: Explain the mechanism and terminology of typed contracts and schemas. Short practice: Compare A's count 4 with B's count "4". Which record passes, which gate rejects B, and why does changing A's count to -1 create a different failure?. Return to this week and explain what you changed.

Review Requirements and service boundaries (ai-6/1). Goal: Explain the mechanism and terminology of requirements and service boundaries. Short practice: Split the museum visitor's request into two operations. Which can the service perform for P, and what happens to each operation when Q has no approved card?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run evidence. Open the HTML copy to read or print it. Drafts stay in this browser when storage is available; clear drafts on a shared device.

What I repaired, the evidence I kept and the next test
