

Untrusted input boundaries

Project: Grounded Learning Service

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

External side effects and recovery

Without opening the old lesson, explain one key idea from External side effects and recovery. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Approval gates and idempotency

Without opening the old lesson, explain one key idea from Approval gates and idempotency. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Logs traces and privacy

Without opening the old lesson, explain one key idea from Logs traces and privacy. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Trace the worked case for Untrusted input boundaries. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Untrusted input boundaries. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Changed independent case

Input format is exactly one ASCII uppercase letter followed by one digit, with no trimming. Evaluate C0, c0, C00, "C0 ", and None. Does a valid format grant access?

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. W1 Explain the mechanism

Explain the weekly mechanism in your own words. Use the worked scenario to name its input, decision rule and output.

My reasoning and evidence

6. W2 Trace the worked case

Inputs A1 and delete_all() are supplied to room lookup. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

7. W3 Audit the limit

A report omits this qualification: A format check does not grant resource access; authorisation follows separately. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

8. W4 Apply a new case independently

Classify B2, b2, B22 and B2; DROP under the exact format.

My reasoning and evidence

9. W5 Design a revealing follow-up

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison. Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

10. Project checkpoint and reflection

Add a labelled untrusted input boundaries evidence sheet to Grounded Learning Service. Show how you can explain the mechanism and terminology of untrusted input boundaries. Use the supplied fictional case and keep its inputs, intermediate steps, calculation or prediction, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

My project change, supporting evidence and remaining limit

11. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

12. Pictorial case practice: Untrusted input boundaries

Check shape before permission. A toy tool accepts exactly one ASCII lowercase letter followed by one digit, with no trimming.

Inputs h3, H3, h30 and "h3 ". Shape acceptance never grants access by itself.

Untrusted input boundaries

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Validate h3

Two characters with the required case and digit pass.

2. Reject wrong shapes

H3 has wrong case; h30 and the trailing-space input have wrong length.

3. Check authority next

An accepted identifier still needs trusted authorisation.

CHANGE ONE THING

Replace h3 with z0.

Explain the changed result using the matching lesson.

Classify h3, H3, h30 and the trailing-space input by the stated shape contract. Does a valid z0 grant record access, and which separate gate still remains?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or evidence that makes the deciding step valid, so another team can review it.

13. Project portfolio milestone

Project: Grounded Learning Service

Current milestone: Test changed cases. Keep normal, boundary and failure cases; compare expected and observed results.

For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or evidence that makes the deciding step valid, so another team can review it.

Evidence to keep · My record

Evidence to keep: This week's input and deciding step

My record: _____

Evidence to keep: Prediction and actual result (or labelled paper trace)

My record: _____

Evidence to keep: One change since the previous checkpoint and why

My record: _____

Evidence to keep: One error or limit and the next test

My record: _____

Explain what this week adds to your project. Reuse last week's record rather than starting again.

14. Supported practice and learning evidence

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Check shape before permission. A toy tool accepts exactly one ASCII lowercase letter followed by one digit, with no trimming.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? An accepted identifier still needs trusted authorisation.

1. Reject wrong shapes
2. Check authority next
3. Validate h3

My selected conclusion, deciding fact and explanation

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

After your attempt, compare with the supported explanation: Check authority next An accepted identifier still needs trusted authorisation. Input shape and permission answer different questions. Silently normalising these inputs would change the stated contract.

Practice 2: explain the deciding evidence

Changed-case practice: Replace h3 with z0. Which conclusion is supported by the supplied facts?

1. We can decide the result without examining the changed input or the procedure.
2. The shape passes; resource access is still undecided.
3. This one example guarantees correct results for every future input.

My selected conclusion, deciding fact and explanation

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

After your attempt, compare with the supported explanation: The shape passes; resource access is still undecided. Structure contains no evidence of ownership or user permission.

Repair a missing building block

Review External side effects and recovery (ai-6/17). Goal: Explain the mechanism and terminology of external side effects and recovery. Short practice: Distinguish a missing printer acknowledgement from confirmed failure. What should happen if J6 is complete, and what evidence changes when J6 is reliably reported absent?. Return to this week and explain what you changed.

Review Approval gates and idempotency (ai-6/15). Goal: Explain the mechanism and terminology of approval gates and idempotency. Short practice: Trace the two deliveries of approved K9. How many reservations should occur, and why can a new K10 for desk 5 not borrow K9's approval?. Return to this week and explain what you changed.

Review Logs traces and privacy (ai-6/12). Goal: Explain the mechanism and terminology of logs traces and privacy. Short practice: Identify the purpose of R17, C8 and 240 ms in the trace. Which field is deliberately omitted, and why would logging the whole question violate this design?. Return to this week and explain what you changed.

Predict, run and debug

The browser lab lets you edit the supported Python examples already included in this lesson. Predict first, run, inspect the actual output or error, change one input, then run again. Keep code, predictions, actual results and a reasoned revision together. On paper, label your result as a trace rather than an execution.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run evidence. Open the HTML copy to read or print it. Drafts stay in this browser when storage is available; clear drafts on a shared device.

What I repaired, the evidence I kept and the next test
