

Deployment environments

Project: Grounded Learning Service

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Queues and asynchronous work

Without opening the old lesson, explain one key idea from Queues and asynchronous work. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Data retention and deletion

Without opening the old lesson, explain one key idea from Data retention and deletion. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

External side effects and recovery

Without opening the old lesson, explain one key idea from External side effects and recovery. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Trace the worked case for Deployment environments. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Deployment environments. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Apply a new case independently

Development uses fake records but a production token. What boundary is violated?

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. W1 Explain the mechanism

Explain the weekly mechanism in your own words. Use the worked scenario to name its input, decision rule and output.

My reasoning and evidence

6. W2 Trace the worked case

Staging configuration points to production storage while the interface displays staging. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

7. W3 Audit the limit

A report omits this qualification: Passing staging tests does not prove production limits or operational conditions are identical. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

8. W4 Apply a new case independently

Development uses fake records but a production token. What boundary is violated?

My reasoning and evidence

9. W5 Design a revealing follow-up

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison. Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

10. Project checkpoint and reflection

Add a labelled deployment environments evidence sheet to Grounded Learning Service. Show how you can explain the mechanism and terminology of deployment environments. Use the supplied fictional case and keep its inputs, intermediate steps, calculation or prediction, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

My project change, supporting evidence and remaining limit

11. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

12. Pictorial case practice: Deployment environments

Separate rehearsal and live service. Staging rehearses a new answer version with fictional records; production serves approved school records.

Staging card names trial room Z; production card names room A. Credentials and stores are separate.

Deployment environments

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Use staging data

The rehearsal reads fictional room Z.

2. Check actual connection

Staging credentials must not reach production storage.

3. Review evidence

A passing rehearsal supports release review, not automatic promotion.

CHANGE ONE THING

Point staging at the production credential.

Explain the changed result using the matching lesson.

Identify the staging data and credential boundary. Why must the rehearsal stop if its credential reaches production even though the process is labelled staging?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or evidence that makes the deciding step valid, so another team can review it.

13. Project portfolio milestone

Project: Grounded Learning Service

Current milestone: Evaluate and revise. Compare with your starting method, explain errors and record a justified revision.

For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or evidence that makes the deciding step valid, so another team can review it.

Evidence to keep · My record

Evidence to keep: This week's input and deciding step

My record: _____

Evidence to keep: Prediction and actual result (or labelled paper trace)

My record: _____

Evidence to keep: One change since the previous checkpoint and why

My record: _____

Evidence to keep: One error or limit and the next test

My record: _____

Explain what this week adds to your project. Reuse last week's record rather than starting again.

14. Supported practice and learning evidence

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Separate rehearsal and live service. Staging rehearses a new answer version with fictional records; production serves approved school records.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? A passing rehearsal supports release review, not automatic promotion.

1. Use staging data
2. Check actual connection
3. Review evidence

My selected conclusion, deciding fact and explanation

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

After your attempt, compare with the supported explanation: Review evidence A passing rehearsal supports release review, not automatic promotion. An environment includes code, configuration, permissions and data. A staging label alone cannot create separation.

Practice 2: explain the deciding evidence

Changed-case practice: Point staging at the production credential. Which conclusion is supported by the supplied facts?

1. This one example guarantees correct results for every future input.
2. We can decide the result without examining the changed input or the procedure.
3. Stop the rehearsal because its separation boundary is breached.

My selected conclusion, deciding fact and explanation

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

After your attempt, compare with the supported explanation: Stop the rehearsal because its separation boundary is breached. Actual access matters more than the environment label.

Repair a missing building block

Review Queues and asynchronous work (ai-6/22). Goal: Explain the mechanism and terminology of queues and asynchronous work. Short practice: Explain what the queued J12 submission response proves and what it does not. Which event permits succeeded status, and what status is honest after a worker crash?. Return to this week and explain what you changed.

Review Data retention and deletion (ai-6/20). Goal: Explain the mechanism and terminology of data retention and deletion. Short practice: Apply the seven-day boundary to T1 and T2. How many T2 locations need verification, and may deletion be called complete if its backup remains?. Return to this week and explain what you changed.

Review External side effects and recovery (ai-6/17). Goal: Explain the mechanism and terminology of external side effects and recovery. Short practice: Distinguish a missing printer acknowledgement from confirmed failure. What should happen if J6 is complete, and what evidence changes when J6 is reliably reported absent?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run evidence. Open the HTML copy to read or print it. Drafts stay in this browser when storage is available; clear drafts on a shared device.

What I repaired, the evidence I kept and the next test
