

Human escalation workflows

Project: Grounded Learning Service

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Incident investigation

Without opening the old lesson, explain one key idea from Incident investigation. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Release and rollback

Without opening the old lesson, explain one key idea from Release and rollback. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Caching and stale information

Without opening the old lesson, explain one key idea from Caching and stale information. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Trace the worked case for Human escalation workflows. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Human escalation workflows. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Apply a new case independently

Reviewer deadline is 16:00; no reply by 16:00. Policy says remain pending, not auto-approve. Decide.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. W1 Explain the mechanism

Explain the weekly mechanism in your own words. Use the worked scenario to name its input, decision rule and output.

My reasoning and evidence

6. W2 Trace the worked case

Conflict is detected, but no reviewer is assigned and the system silently books the first room. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

7. W3 Audit the limit

A report omits this qualification: Escalation without a responsible actor and declared fallback cannot guarantee resolution. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

8. W4 Apply a new case independently

Reviewer deadline is 16:00; no reply by 16:00. Policy says remain pending, not auto-approve. Decide.

My reasoning and evidence

9. W5 Design a revealing follow-up

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison. Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

10. Project checkpoint and reflection

Add a labelled human escalation workflows evidence sheet to Grounded Learning Service. Show how you can explain the mechanism and terminology of human escalation workflows. Use the supplied fictional case and keep its inputs, intermediate steps, calculation or prediction, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

My project change, supporting evidence and remaining limit

11. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

12. Pictorial case practice: Human escalation workflows

A useful human handoff. A learner asks whether a damaged laboratory bottle is safe; the bot handles lesson notes only.

The contract excludes equipment certification. An assigned adult supervisor handles equipment concerns.

Human escalation workflows

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Recognise boundary

The requested judgement is outside this service's authority.

2. Route the question

Give the designated supervisor route without inventing a verdict.

3. Preserve reported facts

Record the concern as reported, not as a confirmed diagnosis.

CHANGE ONE THING

No supervisor is currently reachable.

Explain the changed result using the matching lesson.

Identify the exact service boundary in the bottle question. What accurate information belongs in the supervisor handoff, and what remains unresolved if nobody is reachable?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or evidence that makes the deciding step valid, so another team can review it.

13. Project portfolio milestone

Project: Grounded Learning Service

Current milestone: Prepare the demonstration. Gather reproducible instructions, evidence, access checks and remaining limitations.

For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or evidence that makes the deciding step valid, so another team can review it.

Evidence to keep · My record

Evidence to keep: This week's input and deciding step

My record: _____

Evidence to keep: Prediction and actual result (or labelled paper trace)

My record: _____

Evidence to keep: One change since the previous checkpoint and why

My record: _____

Evidence to keep: One error or limit and the next test

My record: _____

Explain what this week adds to your project. Reuse last week's record rather than starting again.

14. Supported practice and learning evidence

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A useful human handoff. A learner asks whether a damaged laboratory bottle is safe; the bot handles lesson notes only.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Record the concern as reported, not as a confirmed diagnosis.

1. Recognise boundary
2. Route the question
3. Preserve reported facts

My selected conclusion, deciding fact and explanation

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

After your attempt, compare with the supported explanation: Preserve reported facts Record the concern as reported, not as a confirmed diagnosis. Escalation needs an appropriate person and accurate context. Model confidence cannot replace required authority or physical inspection.

Practice 2: explain the deciding evidence

Changed-case practice: No supervisor is currently reachable. Which conclusion is supported by the supplied facts?

1. State unresolved status and use the institution's approved waiting procedure.
2. We can decide the result without examining the changed input or the procedure.
3. This one example guarantees correct results for every future input.

My selected conclusion, deciding fact and explanation

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

After your attempt, compare with the supported explanation: State unresolved status and use the institution's approved waiting procedure. Lack of a human reply does not expand the bot's authority.

Repair a missing building block

Review Incident investigation (ai-6/26). Goal: Explain the mechanism and terminology of incident investigation. Short practice: Order the three incident records and locate the old evidence version. How does the investigation change if the trace instead retrieves version 6 but drafts room C?. Return to this week and explain what you changed.

Review Release and rollback (ai-6/24). Goal: Explain the mechanism and terminology of release and rollback. Short practice: Compute A's and B's correctness percentages. Why is B still blocked, and does passing a fresh privacy check automatically satisfy every release gate?. Return to this week and explain what you changed.

Review Caching and stale information (ai-6/21). Goal: Explain the mechanism and terminology of caching and stale information. Short practice: Identify the version mismatch in the cached 09:00 answer. What should the first version-5 request return, and what permits a later version-5 cache hit?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run evidence. Open the HTML copy to read or print it. Drafts stay in this browser when storage is available; clear drafts on a shared device.

What I repaired, the evidence I kept and the next test
