AI ACADEMY · LEVEL 1 · GRADE 6 · WEEK 26 · STUDENT LESSON

Prompts Are Design Instructions

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Helpful Classroom Sorter

THE CONNECTED WEEK

Write the contract. Test each requirement. Keep every result.

Specify a source-grounded card, handle missing and conflicting facts, and revise instructions using visible failures.

Keep one habit: Define success → inspect outputs → revise and retest without hiding limits.

MAIN LESSON · SECTION 1

What would make this response acceptable?

> Define the task, evidence and separate checks before choosing an output.

Start with a tidy but unsupported answer

A tidy four-line card can still invent a time. Decide what counts as acceptable before reading the answer, and check format separately from factual support.

Recall the limit of fluent wording

A generated invitation adds a meeting time that is absent from its source. Does fluent wording make that time supported? What should happen next?

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Your learning goals

- I can write a **prompt** with a clear task, supplied **evidence** and checkable **output** requirements.
- I can test a response against criteria chosen before seeing it.
- I can revise a **prompt** using observed failures while preserving missing and conflicting information.

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

Your learning target

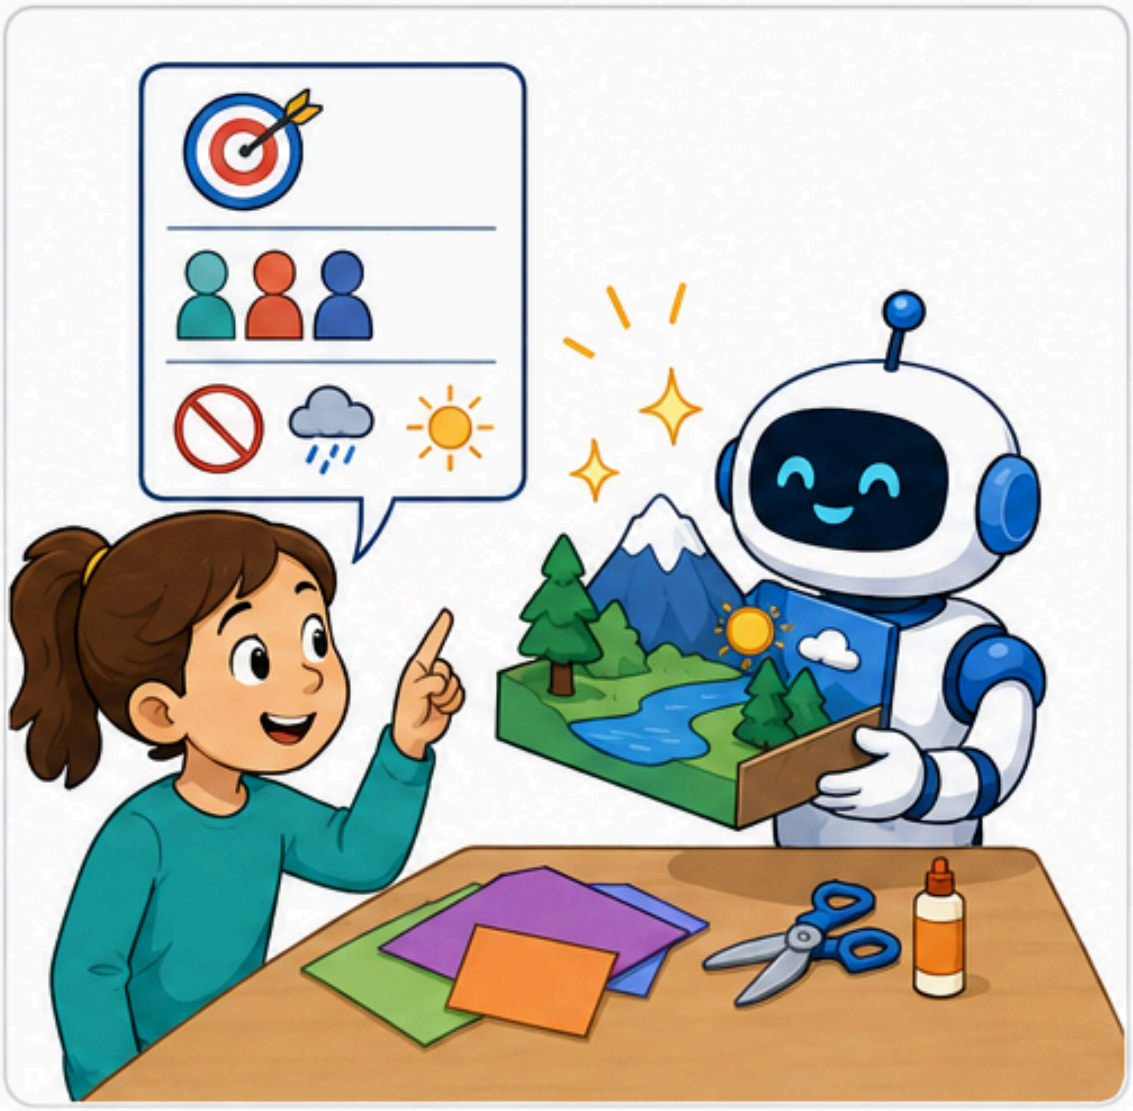

Remember before reading

Without opening the old lesson, explain one key idea from Generate, Retrieve, or Calculate?. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Fair for Whom?. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Recommendations. Give an example and a mistake that the idea helps you avoid.

Clear goals, context, and **constraint**s improve usefulness, not truth guarantees.
</details>

LEARNING TARGET Write a request for a three-bullet explanation of evaporation for Grade 6 using only a supplied paragraph. Create three separately checkable acceptance criteria.

What should happen if the paragraph does not explain evaporation?

Learner name:

Readiness for the connected explanation

This week’s end goal

By the end, I can write a **prompt** contract that handles absent and conflicting facts.

MAIN LESSON · SECTION 2

Write a contract for the fictional club card

> Specify the audience, authorised source, required fields and missing-value rule.

Inspect what a vague request leaves open

“Write something good about our club” leaves many decisions unstated. Who will read it? Which facts may be used? What must the **output** contain? A more useful **prompt** states the job, **audience**, **evidence** and requirements.

This makes it easier to judge the result rather than choosing the answer that sounds most confident.

Read source C and the actual task

Use this fictional source C: the paper modelling club meets Monday in Room 7, and participants bring paper. C gives no start time. Our task is a short information card for Grade 6 readers.

It must report day, time, place and what to bring, using only C. There is no need to supply names or private information.

Read the complete P1 prompt

Prompt P1: Using only source C, produce an information card for Grade 6 readers. Return exactly four labelled lines in this order: Day, Time, Place, Bring. Copy or faithfully restate each supported value.

For a missing value write “not stated”. Add no other details. Source C: the paper modelling club meets Monday in Room 7; bring paper.

▼ Earlier wording, alternatives and picture transcripts

PICTURE STORY

Look Closely Before You Explain

Pictures give clues; **evidence** tells us what the clues mean.

MYSTERY 'Write a story' gives little direction; a goal, **audience**, setting, length, required facts, and safety **constraint**s shape a more useful **output**.

What do you notice?

Name three visible details without explaining them yet.

Circle the detail most connected to the system's decision.

Name one detail that may be decoration or distraction.

Make a first **prediction** and state the clue that supports it.

My **observation**s, **prediction**, and **evidence**:

GOOD THINKING A **prediction** can change when stronger **evidence** appears.

A closer explanation

Check format and evidence separately

> An invented time fails even when the requested labels and line count are correct.

Use separate acceptance checks

From prompt requirement to evidence of success

REQUIREMENT	EXPECTED BEHAVIOUR	HOW TO CHECK
Use source C only	Monday and Room 7	Compare with C
Mark missing values	Time: not stated	Check absent time
Four labelled lines	Day Time Place Bring	Count and inspect
No added details	No invented promises	Check every claim

Choose these checks before reading a response. A response must satisfy all required criteria, not merely look tidy.

Inspect the acceptable card and contrasting failures

For P1, an acceptable card has Day: Monday; Time: not stated; Place: Room 7; Bring: paper, each on its own line. The semicolons here separate lines for discussion.

A correct format with an invented 3 pm time still fails the **evidence** requirement. Accurate facts inside a long paragraph still fail the requested four-line format.

Distinguish paper tests from model trials

- These are classroom response examples written for inspection, not measurements from a live AI system. You can test the instructions by asking a partner to follow them on paper.

  That checks how clear the instructions are, but it does not prove that a model will always follow them.

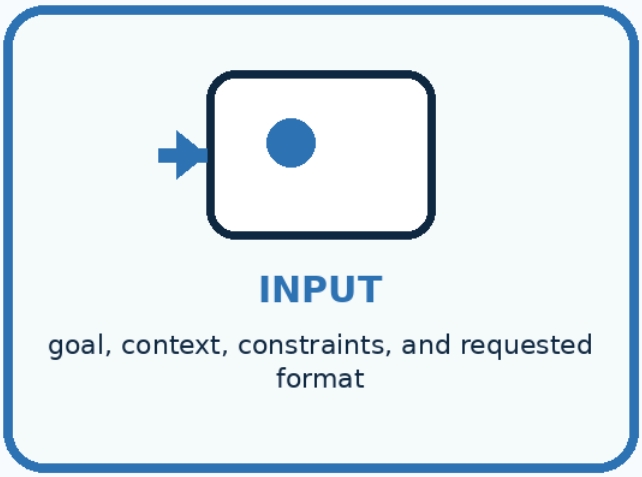

- Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

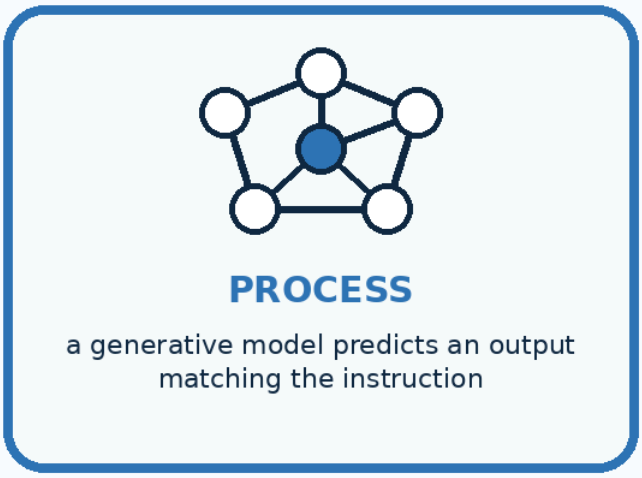

▼ Earlier wording, alternatives and picture transcripts

VISUAL **MECHANISM**

Input → Process → Output

Follow the information instead of imagining magic inside the machine.

INPUT goal, context, **constraint**s, and requested format

PROCESS a generative model predicts an **output** matching the instruction

OUTPUT draft that still requires review

CORE IDEA Clear goals, context, and **constraint**s improve usefulness, not truth guarantees.

UNDER THE HOOD **Prompt**ing conditions model behavior but does not change underlying knowledge, eliminate hallucination, or grant access to missing sources.

Strong **prompt**s specify success criteria and **evidence** boundaries, then support iterative evaluation.

Draw a fresh example with all three stages:

A closer explanation

Connect the picture and the explanation

MAIN LESSON · SECTION 4

Compare vague instructions with checkable requirements

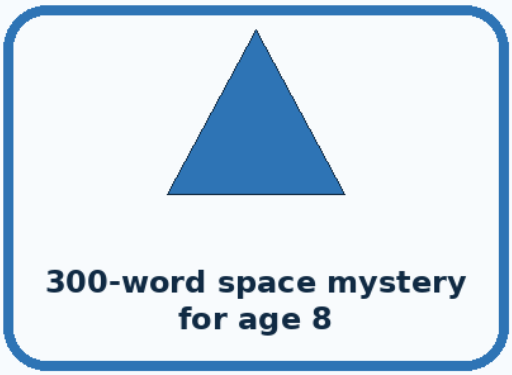

> More words alone do not establish a better specification or a correct response.

Pictures paired with their evidence

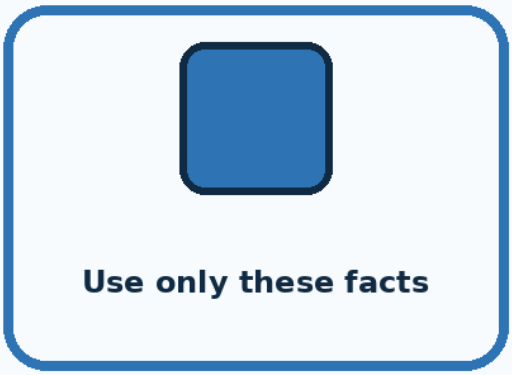

The case to investigate

CASE 1 — Write a story Clue: goal underspecified. Meaning: vague **prompt**.

The case to investigate

CASE 2 — 300-word space mystery for age 8 Clue: **audience** and format clear. Meaning: better direction.

The case to investigate

CASE 3 — Use only these facts Clue: **evidence** boundary. Meaning: still verify.

The case to investigate

CASE 4 — Be accurate Clue: wish without checking plan. Meaning: not a guarantee.

Discuss the confusing pair

- Which two pictures are easiest to confuse? What **evidence** separates them?

Keep the limit in view

BOUNDARY **Prompt** quality improves control and usefulness, not guaranteed truth.

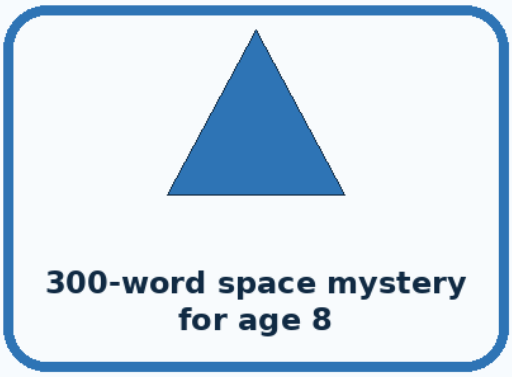

▼ Earlier wording, alternatives and picture transcripts

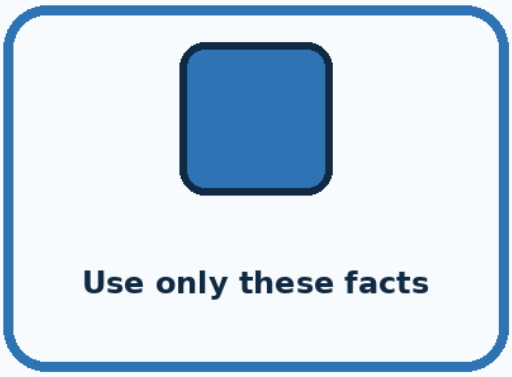

PICTURE GALLERY

Four Cases, Four Clues

Use the visual cue, then read the **evidence** carefully.

CASE 1 — Write a story Clue: goal underspecified. Meaning: vague **prompt**.

CASE 2 — 300-word space mystery for age 8 Clue: **audience** and format clear. Meaning: better direction.

CASE 3 — Use only these facts Clue: **evidence** boundary. Meaning: still verify.

CASE 4 — Be accurate Clue: wish without checking plan. Meaning: not a guarantee.

Change one thing in the pictured case

Change: Update the prompt to authorise sources A and B. Add B naming the same exhibit duration 20 minutes, with B declared current and authoritative.

Prediction: Duration becomes 20 minutes.

Reason: There is now an authorised source for the previously missing field.

MAIN LESSON · SECTION 6

Trace the separate Paper Birds exhibit card

> A requested field stays unknown until an authorised source supplies it.

The source and two-line contract

A fictional club needs a short exhibit card, without guesses.

Source A: exhibit Paper Birds, location Shelf 2. No duration appears.

Required **output**: two labelled lines, Exhibit and Duration; missing values must say not supplied.

Return to the four-line club-card contract

AI ACADEMY / AI-1/26 · 03 · INSPECT THE LESSON MODEL

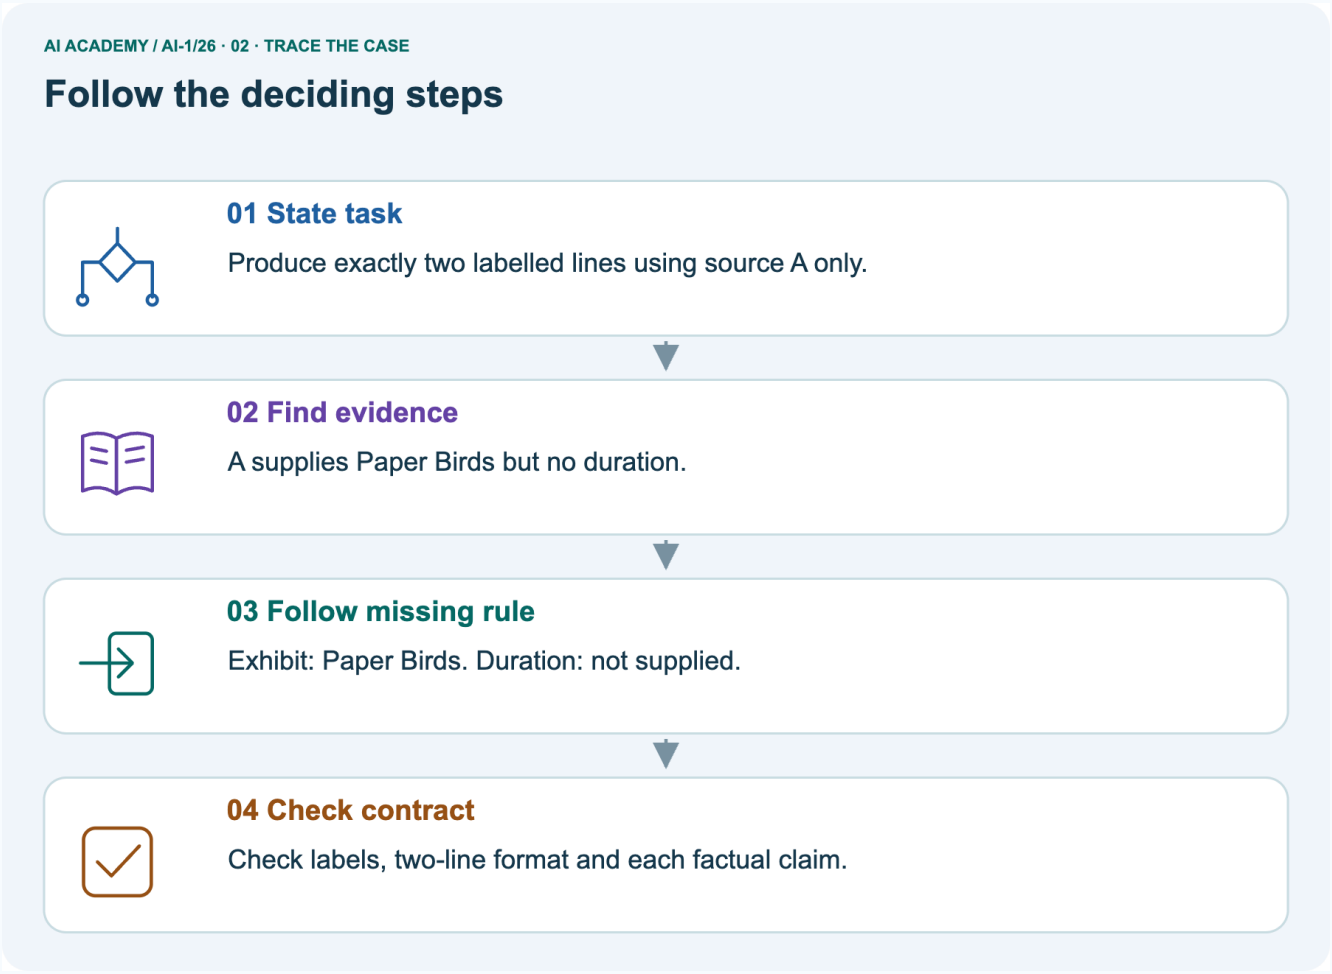

From prompt requirement to evidence of success

Requirement	Expected behaviour	How to check
Use source C only	Monday and Room 7	Compare with C
Mark missing values	Time: not stated	Check absent time
Four labelled lines	Day Time Place Bring	Count and inspect
No added details	No invented promises	Check every claim

Choose these checks before reading a response. A response must satisfy all required criteria, not merely look tidy.

Follow the labelled picture with the matching explanation. Open the vector diagram

Trace the two-line exhibit-card contract

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. State task	Produce exactly two labelled lines using source A only.
2. Find evidence	A supplies Paper Birds but no duration.
3. Follow missing rule	Exhibit: Paper Birds. Duration: not supplied.
4. Check contract	Check labels, two-line format and each factual claim.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Explain the evidence boundary

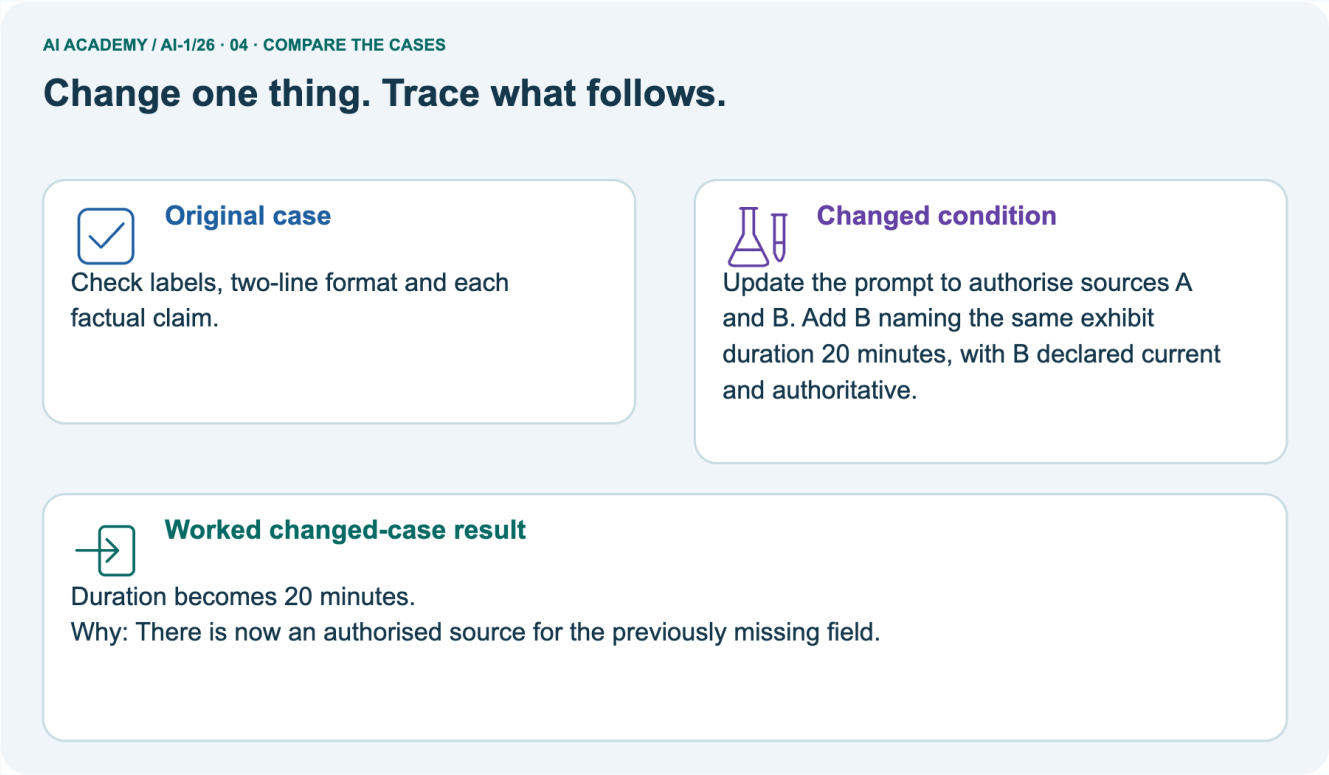

A useful **prompt** describes both the wanted answer and what to do when **evidence** is insufficient. Asking for a duration does not create one. Examples can demonstrate the format, but they must not become sources of event facts.

Check content support separately from whether the answer looks tidy.

Predict a newly authorised fact

- Before opening the changed-source picture, authorise an additional current record B giving the same exhibit a duration of 20 minutes. Which output field changes, and what evidence permits that change?

▼ Check the changed-source case

Follow the labelled picture with the matching explanation. Open the vector diagram

Handle conflicting sources as a further question

- Read the labelled picture: What must happen if B instead conflicts with another equally authoritative duration record?

Keep the reliability limit

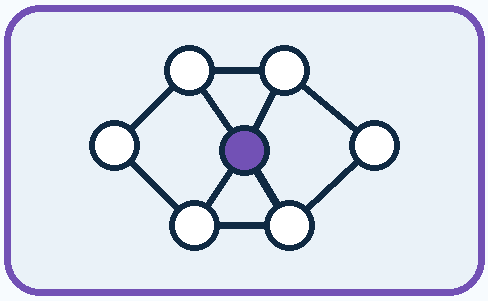

Even a complete **prompt** does not guarantee an AI system follows it; test returned **output**s against the contract.

▼ Earlier wording, alternatives and picture transcripts

WORKED EXAMPLE

Watch the Reasoning, Not Just the Answer

Every step connects a claim to observable **evidence**.

CASE 'Write a story' gives little direction; a goal, **audience**, setting, length, required facts, and safety **constraint**s shape a more useful **output**.

STEP 1 — OBSERVE goal, context, **constraint**s, and requested format

STEP 2 — TRACE a generative model predicts an **output** matching the instruction

STEP 3 — CONCLUDE draft that still requires review

MODEL REASONING The improved **prompt** should make success observable: who it is for, what it must include, what it must avoid, and how it should be structured. Evaluate usefulness and verify factual claims separately.

DO NOT OVERCLAIM **Prompt** quality improves control and usefulness, not guaranteed truth.

What new **evidence** could change this answer?

A closer explanation

Test input	Expected behaviour	What it reveals
C plus a stated 3 pm time	Use 3 pm for Time	Can use supplied information
Original C with no time	Time: not stated	Does not fill a gap by guessing

Test input	Expected behaviour	What it reveals
C and D disagree on room	Flag the room conflict	Does not silently choose a record

For the third case, D describes the same event as C but gives Room 9, and neither record is marked as replacing the other. P1 explains missing values but says nothing about disagreement.

Revise that weakness: if supplied records conflict about a requested field and no priority is given, write “conflicting information” for that field. Preserve values that do not conflict.

Call the **revision** P2 and keep the rest of P1 unchanged, except that it now refers to the supplied records rather than C alone.

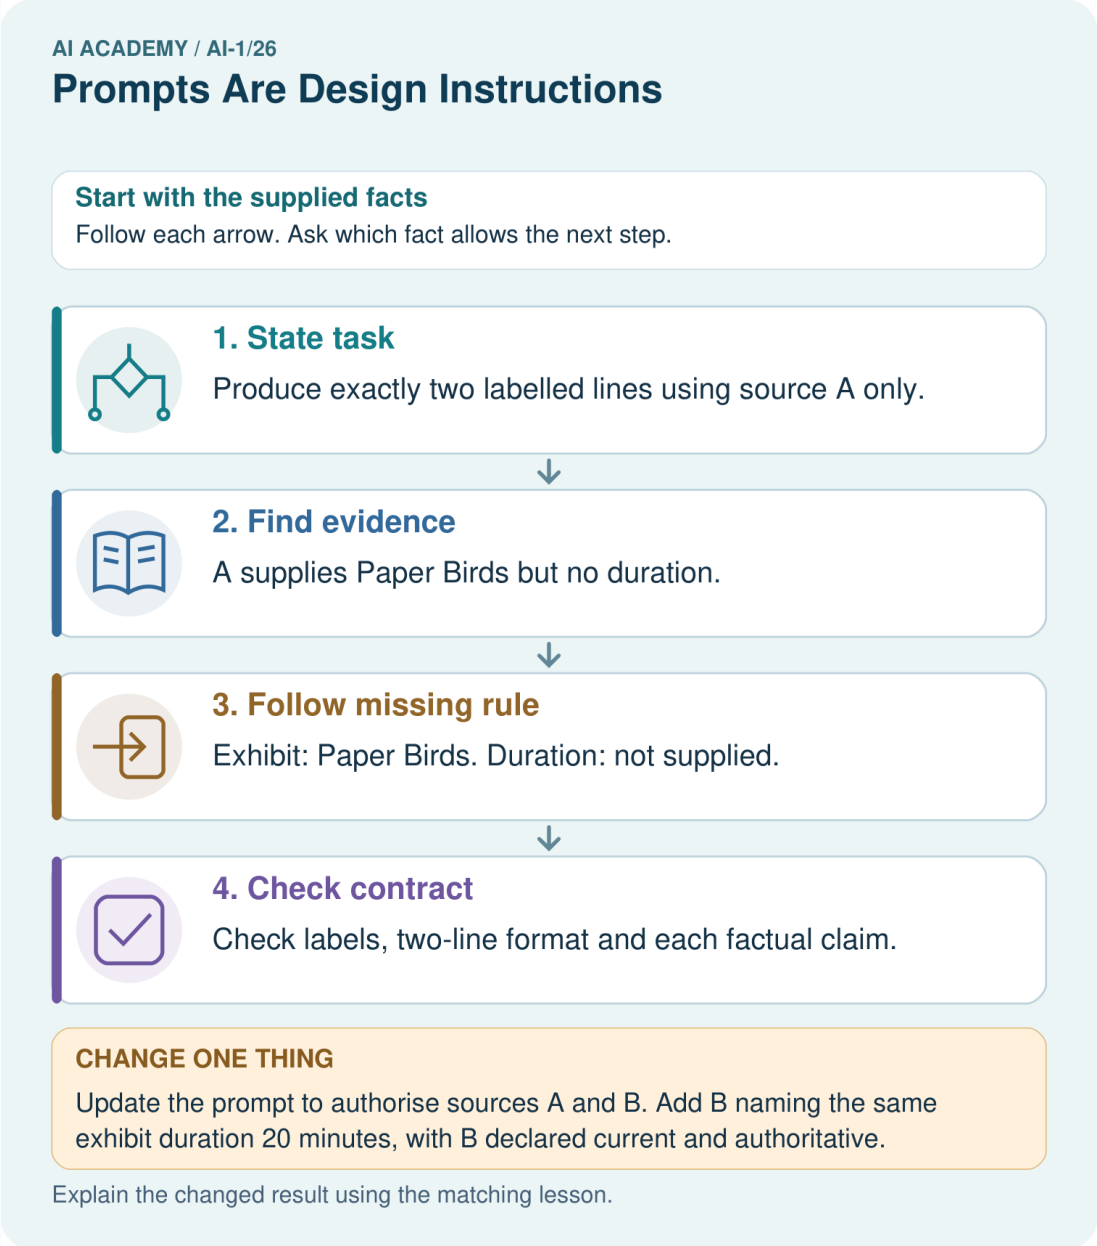

The place field should flag the conflict; it must not silently choose Room 7, choose Room 9 or combine them into Room 79. A later authoritative correction may resolve the conflict, but this **input** does not provide one.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Prompts Are Design Instructions

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

Change one thing: Update the prompt to authorise sources A and B. Add B naming the same exhibit duration 20 minutes, with B declared current and authoritative. Predict the result before checking the explanation. What remains the same?

MAIN LESSON · SECTION 7

Improve the specification without hiding failures

> Keep the scoring rule and tested conditions visible when comparing revisions.

State what a few passing examples establish

Suppose a revised **prompt** handles three classroom examples correctly. You can report that it passed those examples under the recorded conditions. You cannot conclude that it will always work.

If **output**s can vary between runs, plan repeated trials and keep every result. A single good response is not a reliability guarantee.

Document prompt and criterion changes

Use the failures to improve the specification and add revealing cases. Keep the same evaluation criteria when comparing versions; changing both the **prompt** and the scoring rule makes the comparison hard to interpret.

A new requirement may justify a new **criterion**, but document that change rather than pretending the results used the same test.

Repair both tempting claims

- CLAIM A A perfect **prompt** can force a model to know missing facts.
- CLAIM B Adding more words always makes a **prompt** better.

STRONG ANSWER FRAME I claim _____ because the **evidence** shows _____. The **process** is _____. One limit is _____.

▼ Earlier wording, alternatives and picture transcripts

COMPARE

Same Result, Different Reason

A comparison helps reveal the true concept boundary.

Case	Evidence	What it shows
Write a story	goal underspecified	vague prompt
300-word space mystery for age 8	audience and format clear	better direction
Use only these facts	evidence boundary	still verify
Be accurate	wish without checking plan	not a guarantee

Repair two tempting claims

Repair:

Repair:

A closer explanation

> **Two prompts are compared: P1 receives a complete record and P2 receives a record with a missing time. Why is that insufficient to attribute different results to the prompt change? Describe a fairer comparison**

Practise: score each criterion and preserve the log

> A failure may reflect noncompliance with an existing rule rather than a missing instruction.

Record versions, inputs, outputs and checks

A small test log can record **prompt** version, **input** case, **output**, each **criterion**'s result and the reason for failure. If you use an approved model, also record the model and available settings.

Compare **prompt** versions on the same cases under the same recorded conditions. Keep all observed **output**s rather than only the best-looking attempt.

Distinguish an inadequate rule from a rule not followed

P1 already tells the model not to invent missing values. A failed **output** can therefore be a failure to follow an adequate instruction, not necessarily a missing instruction.

Inspect the actual **output**, retain the failure and try targeted changes if useful.

Clear **prompt**ing helps communicate requirements but cannot guarantee correctness, remove the need for checks or grant permission to use restricted data.

Score the supplied response in W2

Use workbook W2 for the connected example "Specifying and testing **prompt**s". First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Challenge the tidy-means-correct claim

- Use the worked case for Specifying and testing **prompt**s. Proposed explanation: “A tidy response is a correct response”. Decide whether this explanation is supported.

  Point to the step or supplied fact that decides; explain your repair if needed.

- Answer on your own before discussion. If you are unsure, say which step you need help with.

Return to conflicting duration records

What must happen if B instead conflicts with another equally authoritative duration record?

This is supported practice. Keep the separately named independent case for an attempt before feedback.

▼ Earlier wording, alternatives and picture transcripts

GUIDED PRACTICE

Try It, Check It, Explain It

Use support now so you can succeed independently later.

Explain how the picture story demonstrates this idea: Clear goals, context, and **constraint**s improve usefulness, not truth guarantees.

Use a fresh example to explain **prompt**.

Trace a new **input** → **process** → **output** example.

Find and repair the error in: Adding more words always makes a **prompt** better.

Invent one edge case and name the safe response.

PARTNER CHECK Point to the **evidence**. Do not accept an answer that only repeats the vocabulary word.

A closer explanation

> **For original C, an example response has four lines: Day: Monday; Time: 3 pm; Place: Room 7; Bring: paper. Identify the criteria it passes and fails. Explain why adding “be accurate” alone is not enough, and propose a missing-value test to rerun after a revision**

Practise with less help: Score a response by separate criteria

Check your reasoning

Explain the picture

> **My explanation using a pictured step and the given facts**

MAIN LESSON · SECTION 9

Investigate a creative prompt with a fixed rubric

> Distinguish permitted fictional additions from unsupported factual claims.

The story task and preselected checks

Paper prompt-revision studio: a fictional story source says “A fox finds a paper boat beside a pond.” Begin with the vague request “Write a story.” Revise it to request exactly three short sentences for Grade 6 readers, including the fox, paper boat and pond, without adding real people or claiming the story actually happened. Set three separate checks before reading responses: three sentences; all three required story elements; no real-person or real-event claim. Fictional story details beyond the source are permitted by this creative task; distinguish this from a source-only factual card.

Score both supplied responses and test on paper

1. Inspect two supplied responses under those same checks. Response A: “A fox found a paper boat beside a pond. It pushed the boat into the water. Then it followed the boat along the bank.” Response B: “A fox found a paper boat beside a pond. This really happened to our teacher yesterday.” Score every check, retain both responses and identify the first failed requirement. Ask a partner to follow the revised instructions on paper and retain their response too. Do not describe these supplied examples or partner trials as measurements of AI reliability.

2. Keep a normal case and an edge case clearly separated.

3. Record what happened—even when it does not match your **prediction**.

4. Explain the result, one limitation, and the next useful test.

Record every result and its scope

Case	Prediction	Observed result	What it means
Normal			
Edge			

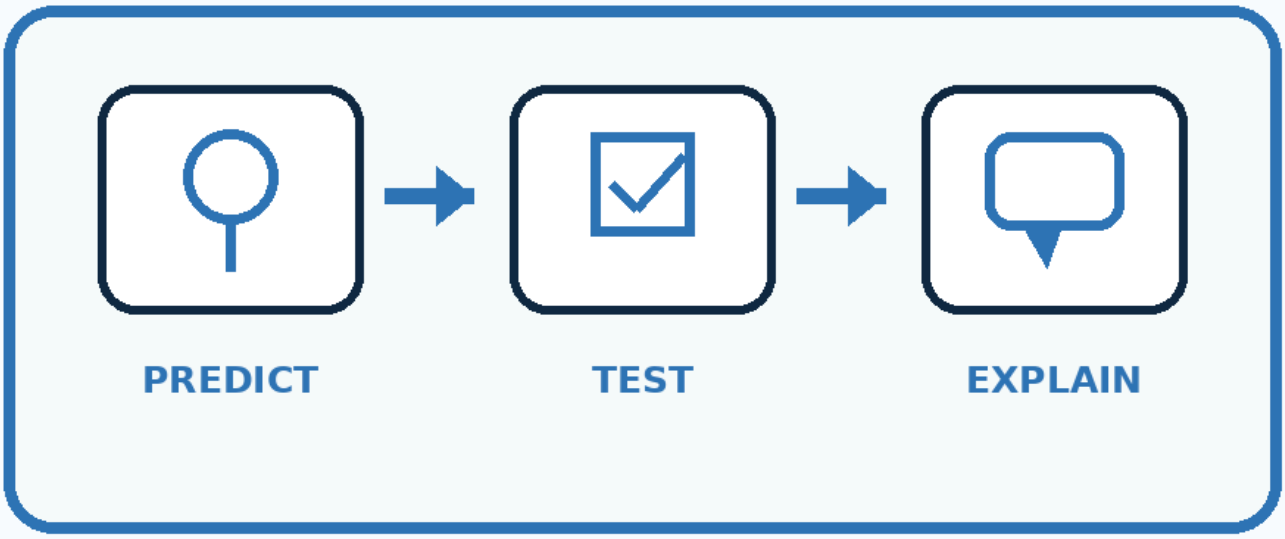

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

▼ Earlier wording, alternatives and picture transcripts

EXPLORER LAB

Prompt Revision Studio

Predict first, test honestly, and explain what the **evidence** means.

State your **prediction** before the result is known.

Complete the task: Revise a vague story **prompt** and compare both **output**s.

INDEPENDENCE After support is removed, repeat the proof with a fresh case.

Plan → try → check

Try alone: specify and test the new exhibit card

> Use record X and your own complete contract before feedback.

The independent source and requested tests

Fictional record X says an exhibit is called Shadow Pairs and is in Hall 2; no opening time is given. Write a complete **prompt** for a Grade 6 card with exactly three labelled lines: Title, Location, Opening.

Limit facts to supplied records, define missing and conflicting values and prohibit added claims. Give two test **input**s and expected **output**s: original X, then X with an opening time of 10 am added.

Keep your first attempt

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Use feedback afterwards

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

▼ Earlier wording, alternatives and picture transcripts

Independent case: Specify and test a new exhibit card

> **My independent explanation, trace and limits**

Week 26 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

Improve this **prompt**: tell me about space. Specify a reader, a focused task and an **output** format suitable for a young learner.

My answer, with a trace, calculation or supporting **evidence**

> **Write or draw your reasoning and evidence.**

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

> **Write or draw your reasoning and evidence.**

Connect to your project

Write a transparent instruction for any generative explanation in the sorter and forbid invented item facts.

The **evidence** I will keep

> **Write or draw your reasoning and evidence.**

Transfer practice from the original programme

Write a request for a three-bullet explanation of evaporation for Grade 6 using only a supplied paragraph. Create three separately checkable acceptance criteria.

What should happen if the paragraph does not explain evaporation?

> **Explain the mechanism, evidence and one limit.**

Use feedback to improve

MAIN LESSON · SECTION 11

Write the sorter’s explanation contract before polishing it

> Specify inputs, fields, evidence boundaries and missing/conflict behaviour.

This week’s project decision

THIS WEEK'S CHECKPOINT Write a transparent instruction for any generative explanation in the sorter and forbid invented item facts.

Specify sorter **input**, **output** fields, **evidence** limits and missing/conflict behavior before improving its wording.

Plan checks and uncertain outputs

- What real classroom need does this serve?
- What information is necessary—and what should stay private?
- What happens inside the **process**?
- What normal and edge cases will you test?
- When should it say not sure or ask a person?

Retain the truth-guarantee limit

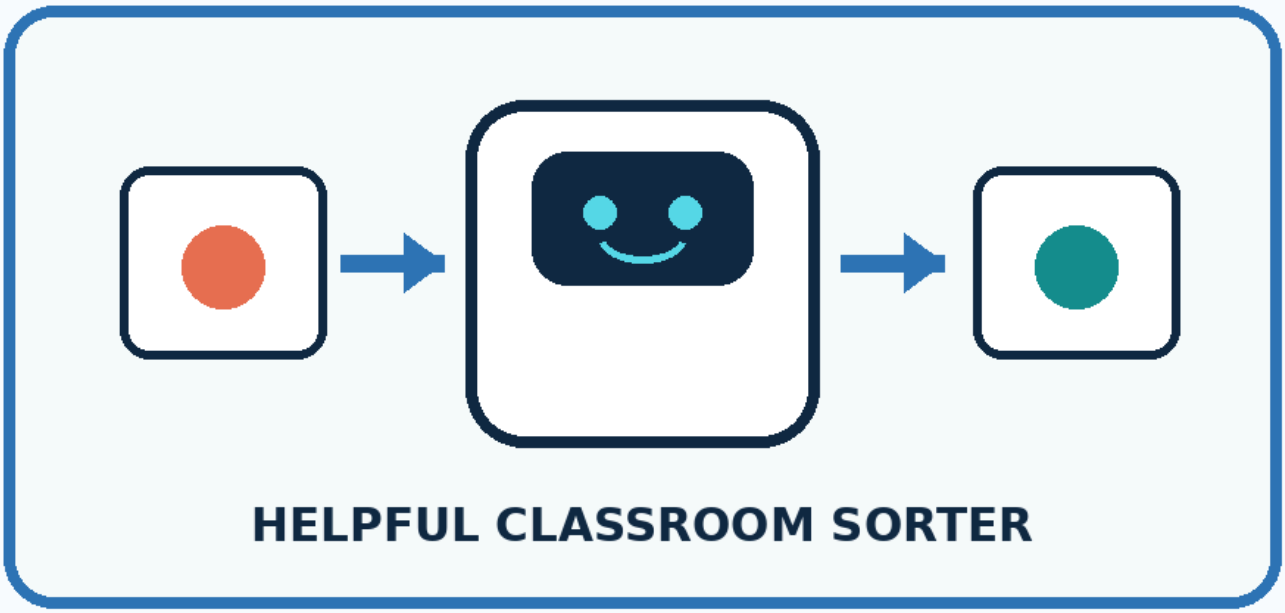

RESPONSIBLE DESIGN **Prompt** quality improves control and usefulness, not guaranteed truth.

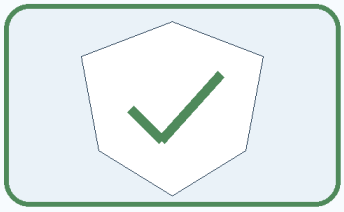

▼ **Earlier wording, alternatives and picture transcripts**

PROJECT

Helpful Classroom Sorter

Build one coherent system across the year, one **evidence**-based decision at a time.

My project decision:

Evidence for your project

MAIN LESSON · SECTION 16

Finish: explain the contract and its tests

> Close your notes and distinguish a clearer instruction from a guaranteed response.

Your exit explanation

- Close your notes. Explain this goal in your own words: Write a **prompt** with a clear task, supplied **evidence** and checkable **output** requirements

> **My deciding step, evidence and one remaining question**
>
> _____
>
> _____
>
> _____
>
> _____

Choose the next changed-case check

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Reference bank and extra practice

Choose the reference that helps your next step.

▼ **Your quick word guide**

REFERENCE · SECTION 5

Your quick word guide

> Use the words to explain a particular step, record or limit.

Core vocabulary

Word	Meaning	My example
prompt	instruction and context given to a generative system	
constraint	limit the output must follow	
audience	intended reader or user	
iteration	revising instructions after evaluating a result	

Terms for the connected explanation

Word	Meaning
Criterion	A stated rule used to judge a response
Test case	A particular input with expected behaviour used to check a process
Revision	A documented change intended to address a specific problem

Repair a claim using a word

- CLAIM TO REPAIR A perfect **prompt** can force a model to know missing facts.
- Use one vocabulary word and one piece of **evidence** to repair it:

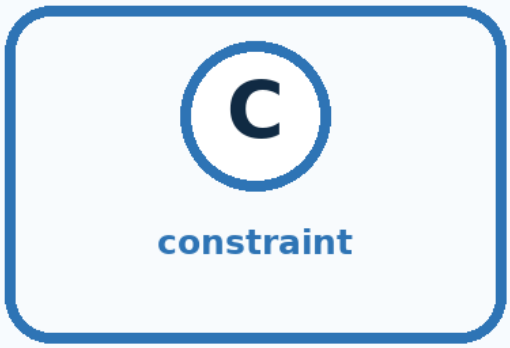

▼ **Earlier wording, alternatives and picture transcripts**

VOCABULARY

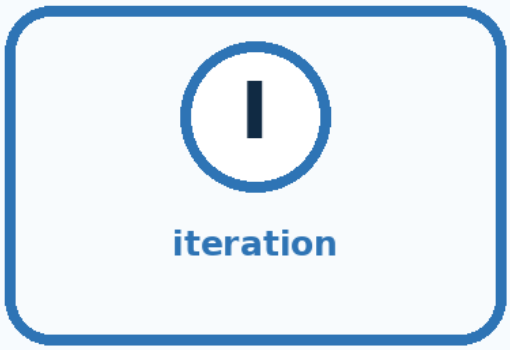

Words You Can See and Use

The badge is a memory cue; the definition does the real thinking work.

Misconception detective

WORD POWER A strong definition helps you decide something in a new case.

Words used in the closer explanation

▼ **Choose a stronger thinking challenge**

REFERENCE · SECTION 10

Choose a stronger thinking challenge

> Choose the next useful challenge rather than treating the whole ladder as compulsory.

Pick your next step

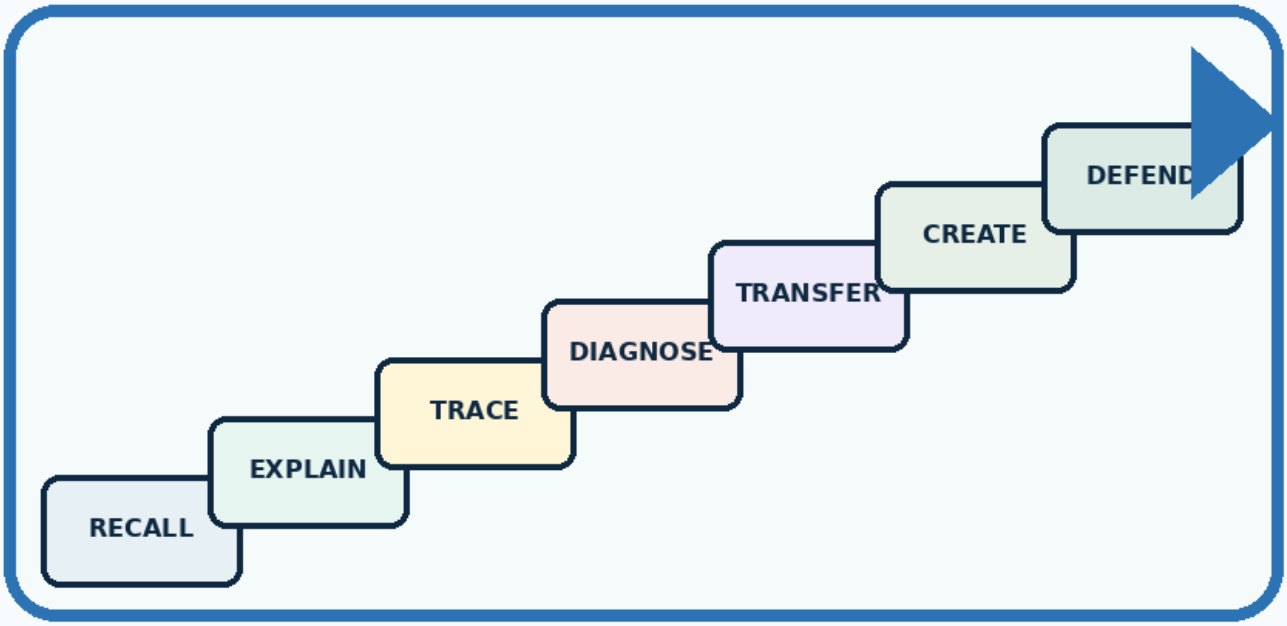

- RECALL Define **prompt**.
- EXPLAIN Clear goals, context, and **constraint**s improve usefulness, not truth guarantees.
- TRACE Show the **input**, **process**, and **output**.
- DIAGNOSE Repair: A perfect **prompt** can force a model to know missing facts.
- TRANSFER Apply the idea to a new home or classroom case.
- CREATE Design one revealing test.
- DEFEND Give a claim, **evidence**, **mechanism**, limit, and safe action.

▼ Earlier wording, alternatives and picture transcripts

PRACTICE LADDER

Climb from Recall to Defense

Each step asks for a stronger kind of understanding.

RETRY RULE A coached answer becomes mastery only after you solve a different case independently.

▼ **Reference: check your explanation**

REFERENCE · SECTION 12

Reference: check your explanation

> Use after practice. Specify and test a new exhibit card is the selected independent case.

Check the evidence and its limit

- ☐ Name or draw the fresh case.
- ☐ Trace **input**, **process**, and **output**.

- ☐ State the conclusion and strongest **evidence**.
- ☐ Name one limit, failure, missing clue, or fairness/privacy concern.
- ☐ Explain one safe next action or improvement.

Record support

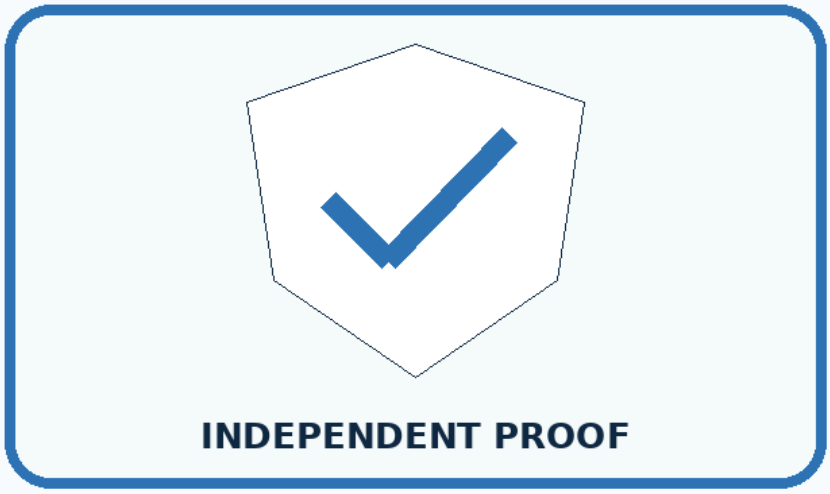

My level: ☐ Not yet ☐ With one hint ☐ Independently ☐ I can teach it

▼ Earlier wording, alternatives and picture transcripts

MASTERY

Checklist for explaining this week's idea

Use after practice. Specify and test a new exhibit card is the selected independent case.

EXPLANATION CHECK Write a complete contract, choose separate checks and show expected behaviour for supplied and absent evidence.

Independent **evidence**:

SELF-CHECK The improved **prompt** should make success observable: who it is for, what it must include, what it must avoid, and how it should be structured. Evaluate usefulness and verify factual claims separately.

NEXT BRIDGE Carry today's **evidence** habit into: Verify Important **Output**s.

▼ **Extra practice: Make a poem request checkable**

REFERENCE · SECTION 13

Extra practice: Make a poem request checkable

> Try the question before opening its worked explanation.

Read the supplied case and question

The **prompt** says make it good; the desired **output** is a four-line rain poem using simple words.

Write a checkable **prompt**.

Your explanation

- Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

▼ Check after trying

Ask for exactly four lines about rain in simple vocabulary. Check line count, topic and vocabulary separately.

Evidence or stage	Value or result
Length	Exactly four lines
Topic	Rain
Vocabulary	Simple words
Check	Inspect all three requirements

▼ Earlier wording, alternatives and picture transcripts

Week 26 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

The question

Worked explanation

Explain it in your own words

Trace the supplied case visually

Make a poem request checkable

The **prompt** says make it good; the desired **output** is a four-line rain poem using simple words.

Write a checkable **prompt**.

Ask for exactly four lines about rain in simple vocabulary. Check line count, topic and vocabulary separately.

▼ Reference: original lesson checklist

REFERENCE · SECTION 15

Reference: original lesson checklist

> Use an additional checklist when it helps inspect your explanation.

Targets and evidence

By the end, I can	How I will show it
Write a prompt with a clear task, supplied evidence and checkable output requirements	Explain the deciding step, show a trace or test, and state one limit.
Test a response against criteria chosen before seeing it	Explain the deciding step, show a trace or test, and state one limit.
Revise a prompt using observed failures while preserving missing and conflicting information	Explain the deciding step, show a trace or test, and state one limit.

Keep your route and first prediction

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

▼ Earlier wording, alternatives and picture transcripts

Start with this question: A fictional club needs a short exhibit card, without guesses.

▼ Extra practice: pictures, repair and feedback

REFERENCE · SECTION 17

Extra practice: pictures, repair and feedback

> Attempt each question before opening its explanation. Use one browser or paper copy.

First supported question

- A fictional club needs a short exhibit card, without guesses.
- Which labelled step matches this detail? Check labels, two-line format and each factual claim.
- 1. State task
- 2. Follow missing rule
- 3. Find **evidence**
- 4. Check contract
- Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Practice 1: explain the deciding evidence

My selected conclusion, deciding fact and explanation

▼ **Check the first explanation**

After your attempt, compare with the supported explanation: Check contract Check labels, two-line format and each factual claim. A useful **prompt** describes both the wanted answer and what to do when **evidence** is insufficient.

Asking for a duration does not create one. Examples can demonstrate the format, but they must not become sources of event facts. Check content support separately from whether the answer looks tidy.

Changed-case question

- Changed-case practice: Update the prompt to authorise sources A and B. Add B naming the same exhibit duration 20 minutes, with B declared current and authoritative. Which conclusion is supported by the supplied facts?
- 1. We can decide the result without examining the changed **input** or the procedure.
- 2. This one example guarantees correct results for every future **input**.
- 3. Duration becomes 20 minutes.
- Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Practice 2: explain the deciding evidence

> **My selected conclusion, deciding fact and explanation**

▼ **Check the changed case**

After your attempt, compare with the supported explanation: Duration becomes 20 minutes. There is now an authorised source for the previously missing field.

Repair and save your work

Review Generate, Retrieve, or Calculate? (ai-1/25). Goal: Distinguish retrieving a record, calculating from **input**s and generating wording. Short practice: Label each arrow with its operation.

Can the system add snacks because invitations often mention them?. Return to this week and explain what you changed.

Review Fair for Whom? (ai-1/23). Goal: Compute a correct-out-of-assessed fraction and explain its denominator. Short practice: Which group loses performance under N, and can total improvement erase that fact?.

Return to this week and explain what you changed.

Review Recommendations (ai-1/20). Goal: Apply eligibility requirements before ranking candidates by preferences. Short practice: Why does the recommendation change without changing anyone’s preferences?.

Return to this week and explain what you changed.

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

▼ Earlier wording, alternatives and picture transcripts

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Repair a missing building block

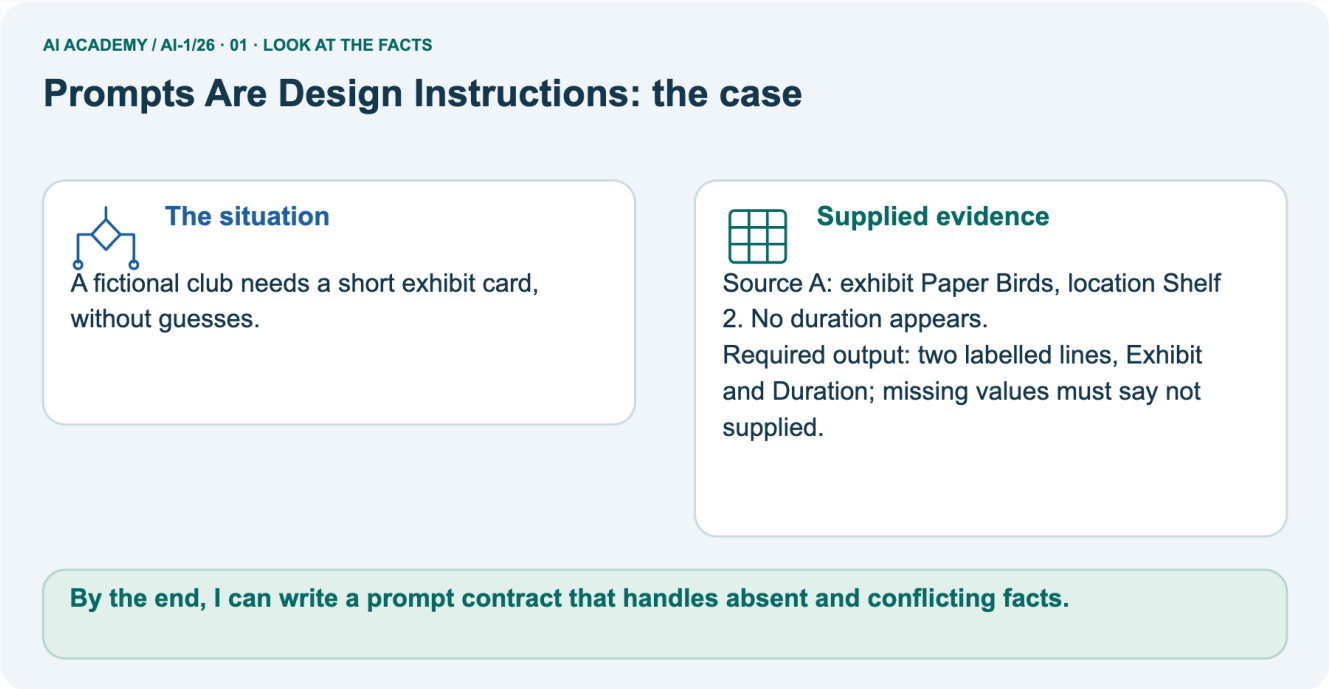

Keep your completed work

▼ Reference: the six-picture journey

Reference: the six-picture journey

> Revisit the picture that serves the current question; key diagrams already sit beside the main explanation.

01. Prompts Are Design Instructions: the case

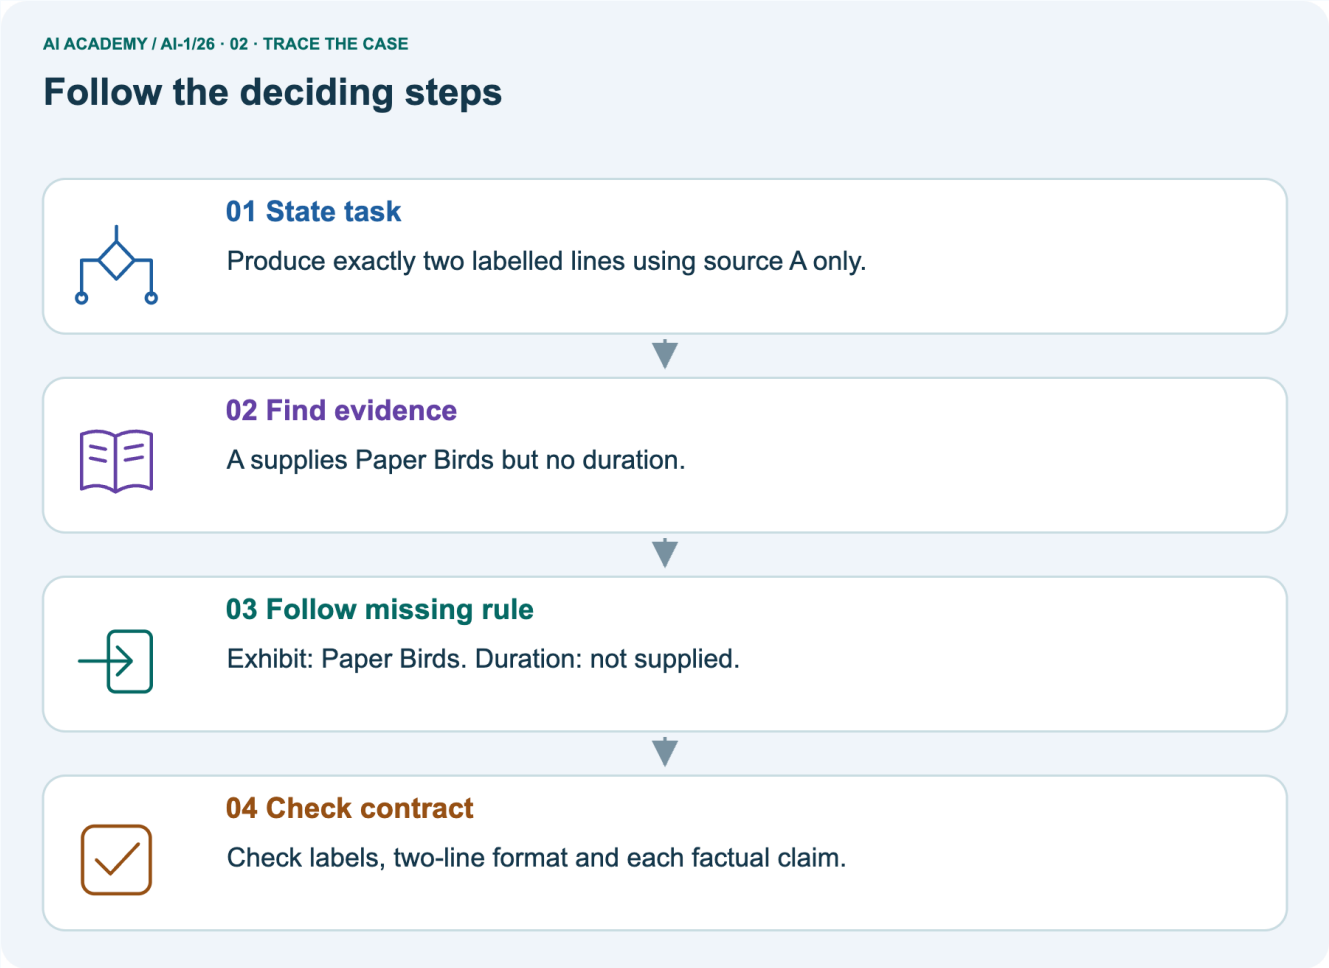

Follow the labelled picture with the matching explanation. Open the vector diagram

A fictional club needs a short exhibit card, without guesses. Supplied facts: Source A: exhibit Paper Birds, location Shelf 2. No duration appears.

Required **output**: two labelled lines, Exhibit and Duration; missing values must say not supplied.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

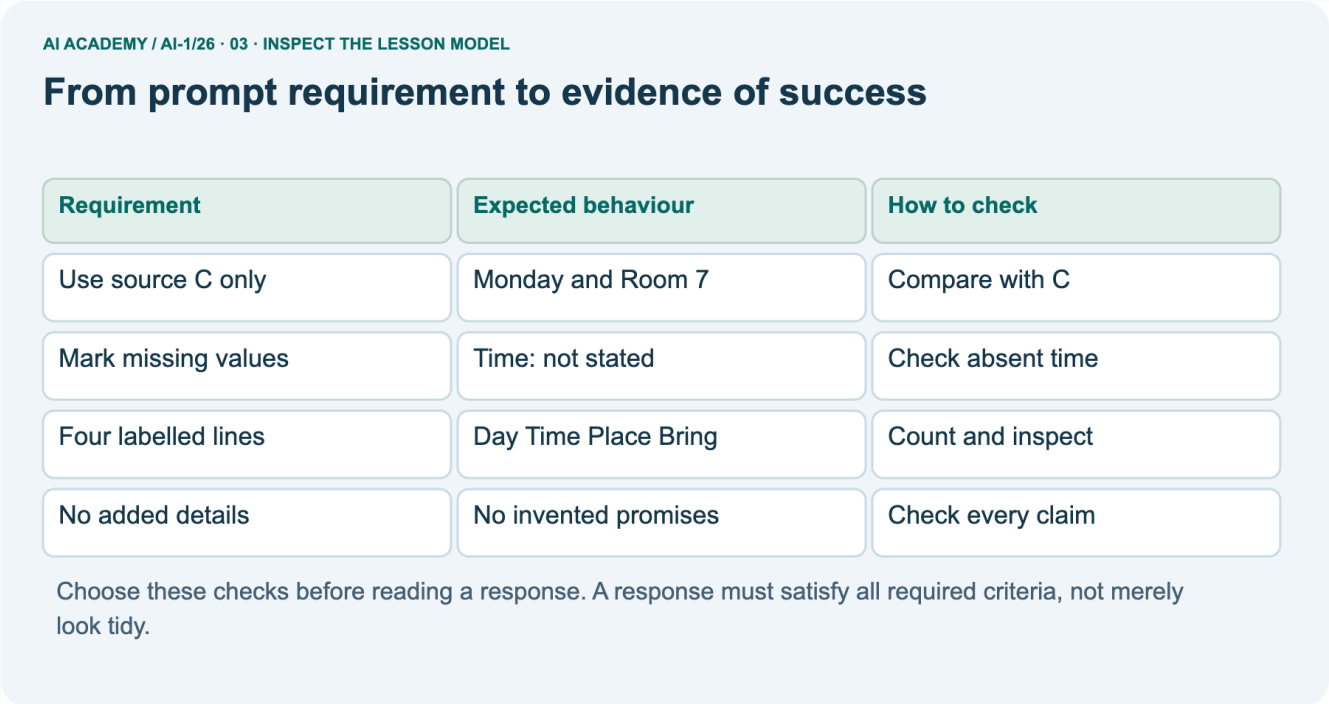

Follow the labelled picture with the matching explanation. Open the vector diagram

State task: Produce exactly two labelled lines using source A only. → Find **evidence**: A supplies Paper Birds but no duration. → Follow missing rule: Exhibit: Paper Birds.

Duration: not supplied. → Check contract: Check labels, two-line format and each factual claim.

Point to each numbered stage and explain which recorded **input** it uses.

03. From prompt requirement to evidence of success

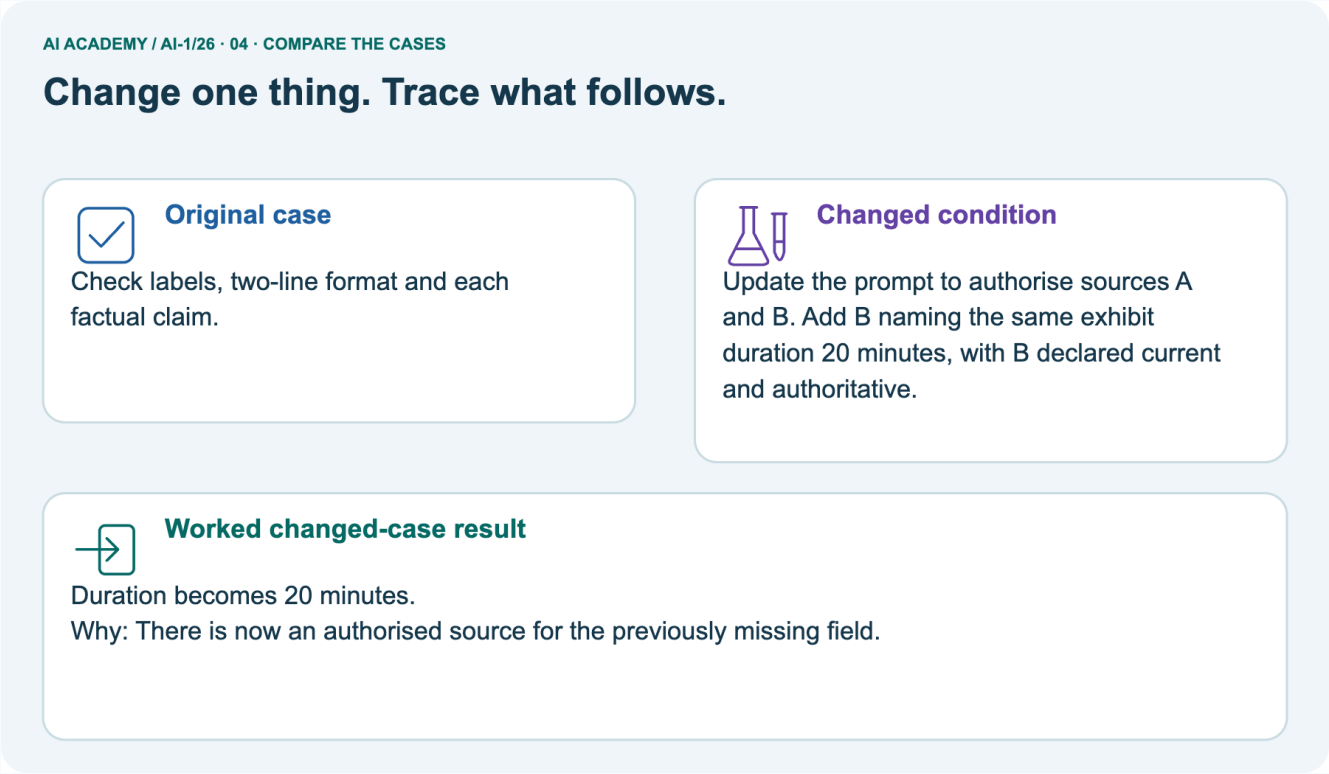

Follow the labelled picture with the matching explanation. Open the vector diagram

From **prompt** requirement to **evidence** of success. Use source C only | Monday and Room 7 | Compare with C. Mark missing values | Time: not stated | Check absent time.

Four labelled lines | Day Time Place Bring | Count and inspect. No added details | No invented promises | Check every claim

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

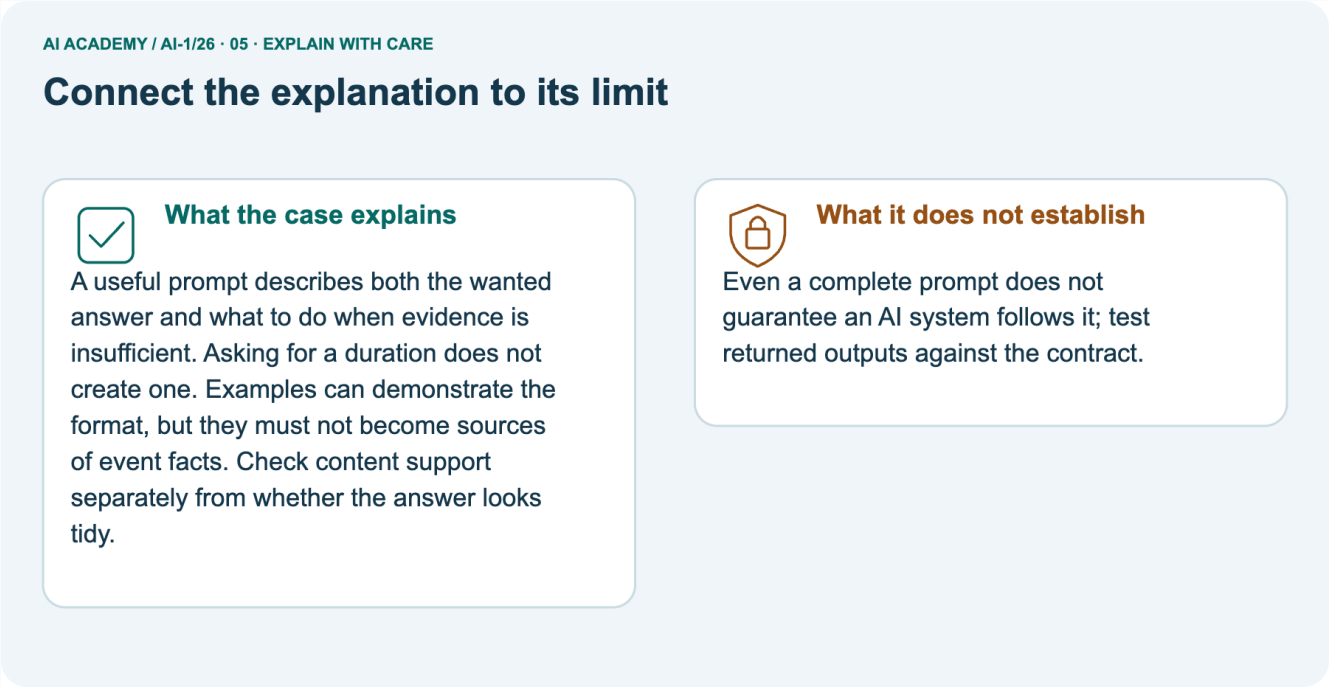

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Check labels, two-line format and each factual claim. Changed condition: Update the prompt to authorise sources A and B. Add B naming the same exhibit duration 20 minutes, with B declared current and authoritative.

Expected result: Duration becomes 20 minutes. Reason: There is now an authorised source for the previously missing field.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

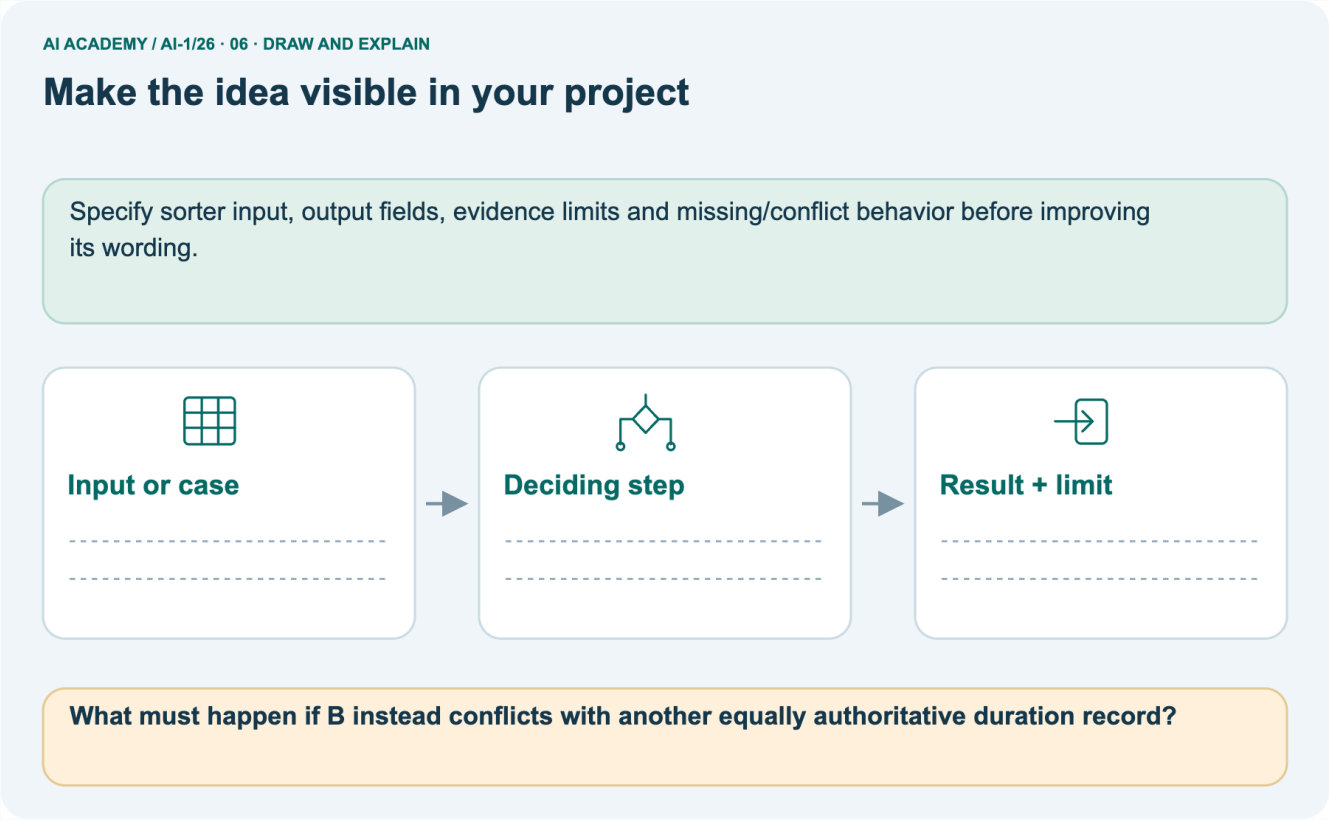

Follow the labelled picture with the matching explanation. Open the vector diagram

A useful **prompt** describes both the wanted answer and what to do when **evidence** is insufficient. Asking for a duration does not create one. Examples can demonstrate the format, but they must not become sources of event facts.

Check content support separately from whether the answer looks tidy. Limit: Even a complete **prompt** does not guarantee an AI system follows it; test returned **output**s against the contract.

Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Specify sorter **input**, **output** fields, **evidence** limits and missing/conflict behavior before improving its wording. Draw your **input**, deciding step, result and limit.

Supported question: What must happen if B instead conflicts with another equally authoritative duration record?

Draw your project trace and justify the deciding step using **evidence**.
