AI ACADEMY · LEVEL 1 · GRADE 6 · WEEK 28 · TEACHER GUIDE

Humans Set Boundaries

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Helpful Classroom Sorter

THE CONNECTED WEEK

Teach permission as a concrete, usable boundary.

Model the exhibition and P2 cases, provide review evidence and reserve Jo's library task for independent transfer.

Keep one habit: Look for the deciding approval detail and a reviewer who can act on evidence.

MAIN LESSON · SECTION 1

Prepare this connected week

> Use one main plan and keep practice separate from the independent first attempt.

Learning goal and precision

Primary target: Distinguish a system's **capability**, the correctness of its **output** and **permission** to take an action

Use the explicit rules of these fictional classroom and library scenarios. Keep **capability**, factual support and **authority** distinct.

Learners should proceed within an existing clear **permission** and pause only when the proposed action is outside it or a necessary condition is unresolved. All publication and replacement actions are represented on paper.

By the end, I can match **permission** to a specific action, object and version.

What to prepare

- Use the supplied scenario, student illustrations and blank paper. For numeric work, offer counters or a calculator after learners show the setup. Fictional records are supplied; personal data and paid accounts are unnecessary.
- Paper cards labelled A, B, L2 and L3
- Destination cards for class board, public website, internal list and public catalogue
- The two fictional approval statements printed from the lesson and W4

Main teaching plan

Session · Sequence and minutes · Resources

> **Session:** Session 1 · Understand · 45 min
>
> **Sequence and minutes:** 0–7: recall and prerequisite; 7–15: inspect the concrete case and predict; 15–30: teacher models the worked trace; 30–40: learners explain a step using the text and visual; 40–45: check the core idea.
>
> **Resources:** Use Your mission, Notice the evidence, See how it works, Compare the cases, Words that unlock the idea and Follow a worked example; record the brief recall in the workbook.

> **Session:** Session 2 · Practise · 45 min
>
> **Sequence and minutes:** 0–5: retrieve the procedure; 5–15: W2 completion practice; 15–23: explain and check with a partner; 23–30: each learner answers the misconception check; 30–40: targeted reteaching or a harder variation; 40–45: prepare the investigation.

> **Resources:** Use Find and repair a mistake, Practise together, Run the investigation and Build your understanding; use the matching workbook W2 and misconception check.

> **Session:** Session 3 · Investigate and transfer · 45 min
>
> **Sequence and minutes:** 0–5: retrieve the decision rule; 5–20: investigate or trace; 20–30: start the independent case; 30–38: connect the project; 38–43: act on feedback; 43–45: plan the return check.
>
> **Resources:** Use Run the investigation, Connect your project, Show what you know, Study a complete case and Try a new case independently. Allow extra time for the full task set. Use a coding lab only when this week actually provides one; Your lesson route is the planning section.

This is a starting allocation of 135 minutes, not a validated duration. Preserve all named topics. Schedule extra time for connected examples, the full investigation, independent cases and project building.

Repeated copies of a case share one recorded attempt; they are not new **evidence**.

Opening retrieval and readiness

Without opening the old lesson, explain one key idea from Verify Important **Output**s. Give an example and a mistake that the idea helps you avoid.

Look for: Separate an answer into claims and connect each claim to relevant **evidence**

Reference example, not the only acceptable wording: A directly stated fact is four rolls, 2 m per roll or twelve 50 cm pieces.

A derived quantity is 8 m starting length, 6 m used or 2 m remaining, supported by the relevant calculation from R. R contains no enjoyment **evidence**, so citing it does not support everyone enjoying the activity.

Without opening the old lesson, explain one key idea from Generate, Retrieve, or Calculate?. Give an example and a mistake that the idea helps you avoid.

Look for: Distinguish retrieving a record, calculating from **input**s and generating wording

Reference example, not the only acceptable wording: Room: retrieval, checked against the right source N2 and event. Remaining places: calculation, checked as 6 × 4 − 3 = 21 with correct **input**s.

Title: generation, checked for the requested style and unsupported factual details. An application can combine them; the labels describe operations rather than exclusive types of application.

Without opening the old lesson, explain one key idea from Missing and Unbalanced Examples. Give an example and a mistake that the idea helps you avoid.

Look for: Name the target collection, selection list and cases actually assessed

Reference example, not the only acceptable wording: The target is all 24 specified cards across four conditions. The sample is the 6 bright-circle cards. Dim circles, bright squares and dim squares are absent.

A frame containing only bright-circle IDs excludes every other condition, regardless of how randomly IDs are drawn from it.

No. The checks establish factual support, not who may publish the announcement, where, or which version has been approved.

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

Teach the learning cycle

Retrieval answer guidance

Verify Important Outputs

Generate, Retrieve, or Calculate?

Missing and Unbalanced Examples

Use the student module and workbook section with this exact week title. The worked case, independent question and answers below form one aligned lesson sequence.

What the learner must demonstrate

A classroom assistant may draft a reminder but cannot send messages. It displays a completed draft and waits. A student writes 'looks good' without a destination. Has a clear send authorisation been given?

Specify what is needed.
</details>

Concept to explain

People decide goals, **permission**s, review points, and **consequence**s.

Term	Meaning
boundary	limit on what a system may do
permission	authorized access or action
review gate	point requiring human approval
consequence	result experienced after a decision

Prepare the class

This compact option is not the full-week schedule. Use the main teaching cycle and allow extra sessions for the investigation, independent work and project.

Allow 80 minutes: recall 8; explanation 12; worked demonstration 15; guided practice 20; independent assessment 15; project and reflection 10. Extend the lab into a second session when needed.

Preparation for the connected explanation

Readiness answer

End goal for the pictorial case

This added worked case illustrates the week’s main idea. Retain all original and connected topics; schedule its practice within the teaching cycle.

MAIN LESSON · SECTION 2

Teach usable permissions and meaningful human control

> Model action matching, changed facts and review requests before independent transfer.

Separate capability, correctness and permission

A tool might be able to publish a message even when its user is only allowed to prepare a draft. A message might also contain correct facts but still be intended for a private group.

Ask three separate questions: can the system do this, is the proposed result correct, and is this particular action allowed? **Evidence** for one question does not automatically answer the others.

Use this fictional paper exercise. A class is preparing an announcement about a model bridge exhibition.

Version A says “Model bridge exhibition, Thursday, Room 6.” The teacher has checked those facts and is responsible for the class noticeboard.

The teacher tells the class editor: “You may put exactly version A on our classroom noticeboard today, once. Do not post it online.” The editor has not yet posted it.

In the story, the editor’s tool has buttons for Save draft, Class noticeboard and Public website. Having a button shows a possible **capability**. It does not change the teacher’s stated **permission**.

In this lesson, represent actions with paper cards; do not send messages or change a real noticeboard or website.

Read the approval without enlarging it

An **approval record** should identify the decision maker, the person or system allowed to act, the action, its audience or destination, and any version, time or quantity limit. These details make a **permission** usable.

“Looks good” could mean the wording is clear; without context it may not mean “publish this publicly”. If the intended action is unclear, clarify that action with the person responsible.

Here, the teacher has already approved the editor’s one posting of A on the class board today. Once the editor verifies that these conditions still hold, repeatedly requesting the same **permission** adds no new information.

But a classmate saying “Post it everywhere” does not expand the teacher’s approval: the classmate has no **authority** over publication in this story.

Model factual and permission checks separately

Check	Question in the exhibition story	What it does not establish
Factual support	Do Thursday and Room 6 match the source?	Permission to publish anywhere
Scope of approval	Does this action match the teacher's limits?	That every statement is correct
Available capability	Does the tool offer this action?	Authority to use that action

Suppose a current room record changes the exhibition to Room 8. The editor makes version B with Room 8, which is now factually supported. The old approval explicitly covered exactly A.

The editor should hold publication and show B and the changed room record to the teacher. Publishing the now-outdated A just because it was approved would fail the factual check.

A useful review request makes the choice concrete: "The room record now says Room 8. Here is version B with only that change.

May the editor post B on the classroom board today, once?" A request to review a specific change is easier to assess than an unexplained "Is this okay?" The teacher can approve, decline or request another change before anything is posted.

Introduce the distinct P2 poster permission

A fictional teacher approves one checked classroom poster for internal display.

Approval: publish exactly poster P2 on the classroom noticeboard today, once.

Assistant proposes P2 there; P3 there after an edit; P2 on a public website.

Return to exhibition versions A and B

AI ACADEMY / AI-1/28 · 03 · INSPECT THE LESSON MODEL

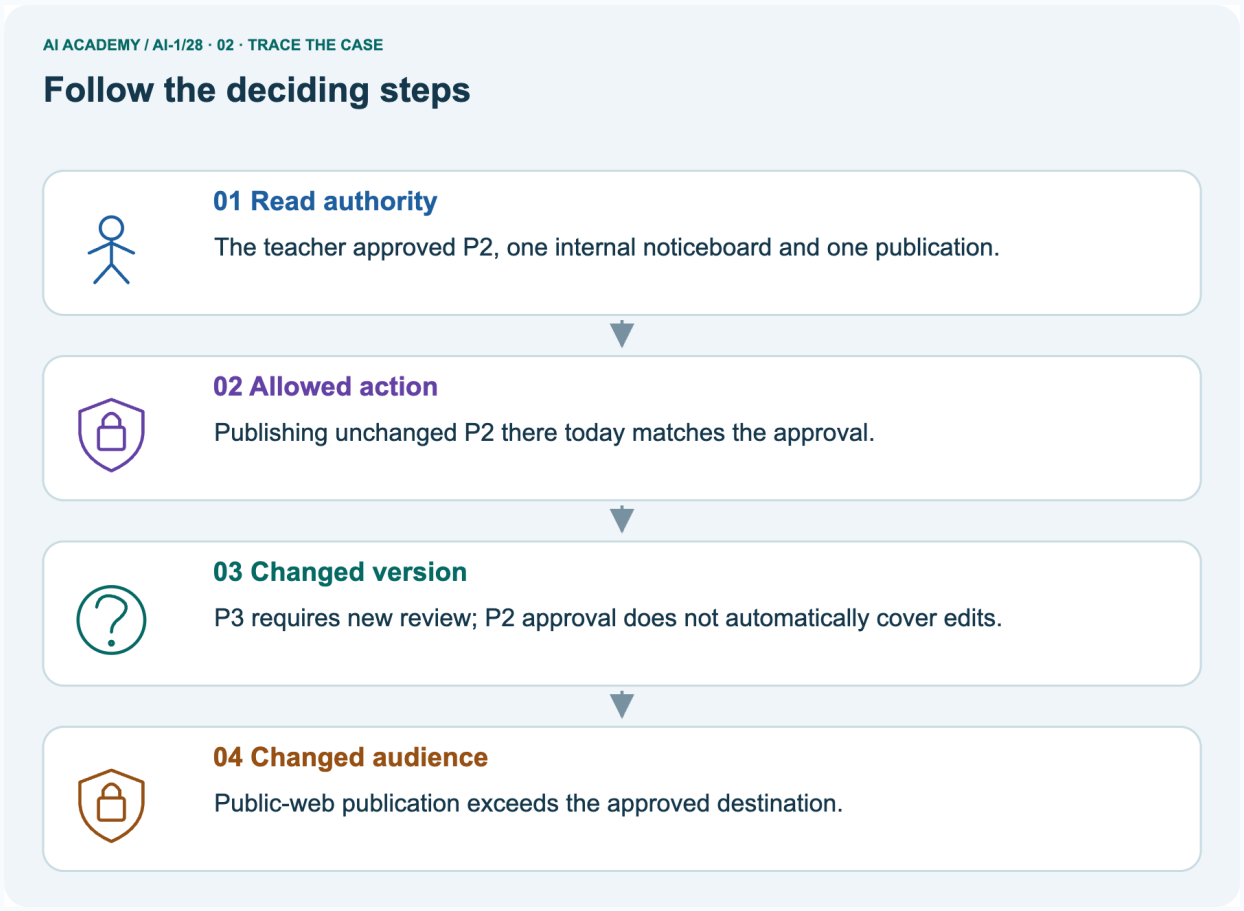

Match the proposed action to its permission

Proposed action	Check against approval	Decision
Version A on class board	Today, once, by editor	Within scope
Version A on public site	Public posting excluded	Outside scope
Changed version B	Only A was approved	Review changed version
Post A a second time	Once has been used	Outside scope

Each decision uses the approval in this story. An unchanged, unused permission can be acted on without requesting it again.

Follow the labelled picture with the matching explanation. Open the vector diagram

Trace the P2 proposals

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Read authority	The teacher approved P2, one internal noticeboard and one publication.
2. Allowed action	Publishing unchanged P2 there today matches the approval.
3. Changed version	P3 requires new review; P2 approval does not automatically cover edits.
4. Changed audience	Public-web publication exceeds the approved destination.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

A general intention to help the class does not grant every action that might help. Check the version, destination and time explicitly. An edit may improve accuracy while still changing the approved artifact.

The assistant should hold the changed poster for review rather than treating its own confidence as **permission**.

Keep correctness separate from authority

Permission does not prove content accuracy; factual checks and action **authority** are separate requirements.

Use up the single posting

Change: P2 has already been published once under this approval.

Prediction: A second publication is not covered.

Reason: The instruction allowed a single use, not repeated actions.

Elicit predictions from the pictures

Use the diagram and verbal explanation together. Ask learners to match a sentence to a specific visual step; do not assign learners fixed visual or auditory learning styles.

Cover the result. Ask learners to name the **input**s and predict the next step. Uncover one step, connect the icon to the actual procedure, and explain its **evidence**. Then change the supplied condition and compare.

The picture is a representation; it does not document execution of a real AI model.

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

Explain the mechanism

Follow the information instead of imagining magic inside the machine.

> **1. Input — information entering**
>
> **INPUT** human-defined goal, **permission**s, and system **output**

> **2. Process — the deciding step**
>
> **PROCESS** apply review and escalation gates

> **3. Output — the result**
>
> **OUTPUT** approved action, revision, or refusal

CORE IDEA People decide goals, **permission**s, review points, and **consequence**s.
</details>

UNDER THE HOOD Governance surrounds the model: people define **scope**, access, thresholds, logging, escalation, and accountability.

Human oversight is meaningful only when reviewers have **authority**, information, time, and a safe way to override.

Draw a fresh example with all three stages:

Every step connects a claim to observable **evidence**.

CASE A classroom helper may suggest a bin, but people decide what data it may use, when an adult reviews, and what happens after a mistake.

STEP 1 — OBSERVE human-defined goal, **permission**s, and system **output**

STEP 2 — TRACE apply review and escalation gates

STEP 3 — CONCLUDE approved action, revision, or refusal

MODEL REASONING Mark where data enters, where the system predicts, where a person reviews, and who may act. Give reviewers the **evidence** and power to correct or stop the **process**.

High-**consequence** cases should not pass automatically.

DO NOT OVERCLAIM A human in the room is not meaningful oversight if the person cannot understand or change the outcome.

What new **evidence** could change this answer?

Concrete teaching case

An assistant may suggest object locations; a teacher must approve moving valuable equipment.

What may happen without approval?

Exact explanation to model

It may suggest a location within its role. Moving equipment requires actual teacher approval.

Explain the added worked example

Key terms

Term	Meaning
Capability	What a person or system is able to do
Authority	Responsibility and power to make a specified decision
Permission	An allowed action within stated limits
Scope	The boundaries of what a permission covers
Approval record	A note of who approved which action and under what conditions

Model the reasoning aloud

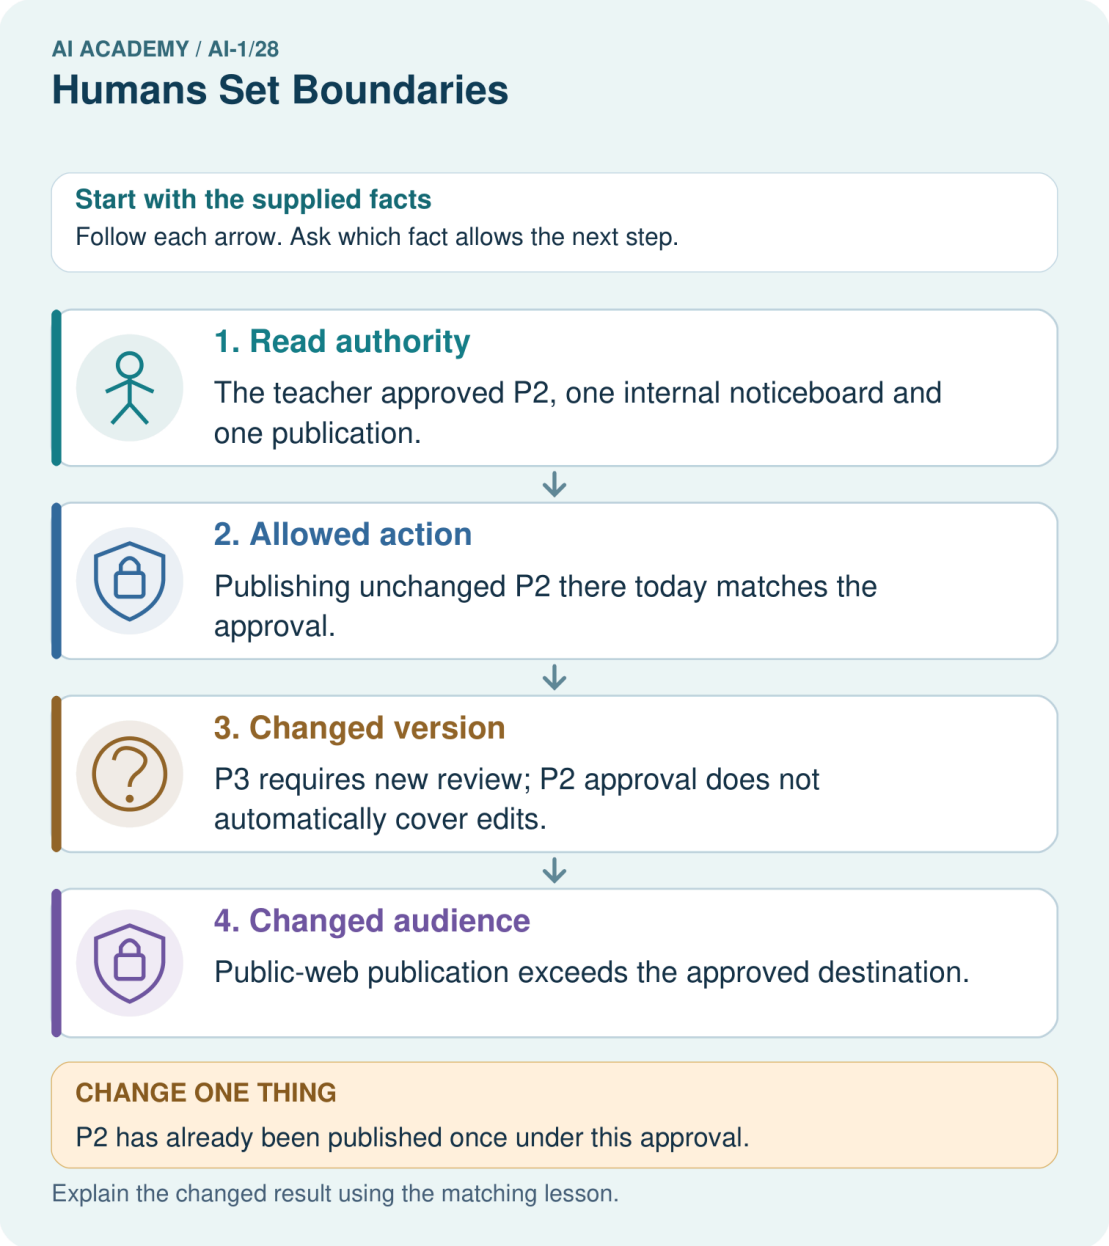

Use the complete worked example below before asking learners to complete W2. Reveal a small part, invite a **prediction**, then explain the deciding step.

These teacher notes contain solutions; do not reveal the independent case answer during modelling.

Thinking move	Teacher prompt
Plan	What is given? What is the question? Which procedure fits these facts?
Do	Point to each input and intermediate step in the worked trace. Name the rule that allows the next step.
Check	Does the output answer the question? Which assumption or limitation prevents a larger claim?

A pictorial worked case: Humans Set Boundaries

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

Change one thing in the pictured case

Ask while showing the picture

MAIN LESSON · SECTION 3

Guide the reasoning, then remove help

> Collect a response from each learner before discussing the worked key.

Prompt before revealing

Completion task: List the decision maker, allowed actor, version, destination, timing and number of postings in the original exhibition approval.

Before any posting and with no changes to the facts or **permission**, explain whether the editor can carry out that exact action without asking again.

Expected reasoning and fading help

Teacher check: Teacher; class editor; exactly A; classroom noticeboard; today; once. Yes, after confirming those conditions still hold and the one posting has not been used.

The explicit unchanged **permission** already covers the action.

Start by identifying the given **input**s together. Leave the intermediate steps blank. If needed, model one step, then withdraw that help on the next step. Move to a full trace only when the partial trace is understood.

For partners, alternate explainer and checker; collect a response from every learner before discussion.

Check the misconception before discussion

Use the worked case for Human **authority** and **permission**. Proposed explanation: “A working button grants **permission**”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Expected correction: **Capability** does not establish who may use it or for what purpose.

Collect explanations, not only yes/no votes. If a misunderstanding is common, re-model the relevant step for the class.

If it affects a few learners, give a short targeted group explanation while others solve a more demanding variation.

Use the pictorial check

Which original proposal is authorised? Why do the other two need separate approval?

Only unchanged P2 on the specified noticeboard today, once. P3 changes version; public posting changes audience.

Changed-case reasoning: A second publication is not covered. The instruction allowed a single use, not repeated actions.

Collect each learner's explanation before discussion. Use the first missing connection between **input**, deciding step and result to choose support. This question is worked-case practice, not fresh mastery **evidence**.

Keep each learner explaining

- Ask: Which facts are given, and which would we have to assume? Learners mark relevant details before discussing answers.
- Say: Predict first. Show the rule, information path or calculation that would produce the result. A correct guess is not yet an explanation.
- In pairs, one learner solves while the other checks **evidence**; exchange roles. Remove the worked answer before independent assessment.

▼ **Earlier wording, alternatives and picture transcripts**

Demonstrate and guide practice

Board sequence

Write the given facts: An assistant may suggest object locations; a teacher must approve moving valuable equipment.

Write the question to explain: What may happen without approval?

Reveal after **prediction**s: It may suggest a location within its role. Moving equipment requires actual teacher approval.

Use the earlier changed question as optional later practice. Reserve Transfer the permission check to a new case for the first independent attempt before hints or feedback.

Classroom dialogue

Reveal reasoning one step at a time. Explain why a tempting alternative fails. Write units and denominators for arithmetic, trace conditions for decisions, and identify supporting sources for claims.

Model these guided questions

The editor’s first unchanged A posting on the class board today is allowed. Public posting is excluded. A classmate is not the allowed editor. A second posting exceeds once.

Correct facts do not expand actor, audience or quantity limits. Exit: no identical approval is needed again if B remains checked, the actor and destination match, it is still today and the one replacement remains unused.

Public posting, a different version, actor or extra replacement is not covered.

Case-specific teaching sequence

Stage	Teacher action
Session 1 start 0 to 7 minutes	Retrieve why a factual check does not establish publication permission.
7 to 20 minutes	Read the exhibition scenario and identify capability, correctness and authority. Complete W1.
20 to 33 minutes	Trace the permission diagram and record all six limits in W2.
33 to 45 minutes	Introduce the changed room, complete W3 and write a concrete review request.

Stage	Teacher action
Session 2 start 0 to 8 minutes	Retrieve when an unchanged permission is sufficient.
8 to 23 minutes	Complete the guided decisions using paper action cards and the actual approval record.
23 to 38 minutes	Collect W4 independently; require a decision and the relevant limit for every proposal.
38 to 45 minutes	Complete W5 and the exit check; distinguish a prepared action from a confirmed result.

Reduce help deliberately

Individual reasoning check

Pictorial practice question

Reasoned teacher answer

MAIN LESSON · SECTION 4

Run the supplied investigation

> Keep expected results, observed paper traces and remaining limits distinguishable.

Supplied materials and answer guidance

For the paper helper map, a storage-bin suggestion for S1 is within the fictional role, provided it uses the supplied evidence. Movement and disposal remain outside that permission. S2 is a named notebook, outside the unowned-scrap task; do not identify its owner, discard it or collect the name. Refer the out-of-scope case to the teacher. S3 has unknown material and triggers the stated review gate: show the missing information and ask the teacher. The

reviewer must see the input and suggestion and be able to override or stop. Keep all action cards hypothetical. Reserve Transfer the permission check to a new case for an independent first attempt.

Run and record

1. Complete the task: Add adult-**review gate**s to a classroom helper.
2. Keep a normal case and an edge case clearly separated.
3. Record what happened—even when it does not match your **prediction**.
4. Explain the result, one limitation, and the next useful test.

Keep an inspectable record

Record	What to capture
Input or evidence	Exact data, instruction or claim
Expected result	Answer or safe fallback declared before the run
Observed result	Actual result, including errors
Explanation	Rule, calculation or evidence explaining the outcome
Next test	One justified change and a new prediction

Diagnose the first misunderstanding

A working button grants **permission**: **Capability** does not establish who may use it or for what purpose.

A correct answer can always be published: Check the approved actor, action and audience as well as accuracy.

Always ask again even when nothing changed: Use an explicit, still-valid **permission** within its stated limits.

Choose support from the response

Match the support to the first error

What the response shows	Next teaching action
Missing or misread facts	Read the case aloud, mark supplied versus unknown facts, and let the learner restate it.
Wrong procedure	Return to the deciding step in the worked case. Contrast it with the proposed incorrect explanation.
Arithmetic or implementation error	Trace intermediate values or lines; preserve the first mismatch and retry that step.
Correct result without a reason	Ask for a trace and a changed case before marking independent understanding.
An unsupported wider claim	Ask which supplied evidence supports the claim and which further observation would be needed.

▼ Earlier wording, alternatives and picture transcripts

Run the weekly evidence lab

Predict first, test honestly, and explain what the **evidence** means.

State your **prediction** before the result is known.

INDEPENDENCE After support is removed, repeat the proof with a fresh case.

Make the lab runnable

Use the supplied investigation for shared practice. Keep predictions and observed paper-trace results separate. Reserve Transfer the permission check to a new case for the individual first attempt before feedback; do not use the reserved case as a paired lab task.

Diagnose and reteach

CLAIM TO REPAIR Giving a system a task transfers all responsibility to it.

For guessing, return to given facts and request a trace. For vocabulary without application, use one example and one non-example. For arithmetic errors, check the setup before the calculation.

Finish with a different uncoached case before recording mastery.

Address these additional misconceptions

The draft can announce its own approval: Read the actual decision maker's **approval record**.

Offer an oral explanation, drawing, enlarged visual or fewer examples when that removes a reading/writing barrier. Keep the same reasoning goal.

Stretch secure learners by changing a **boundary** or assumption and asking them to defend the effect, not simply by assigning more of the same questions.

MAIN LESSON · SECTION 5

Assess the selected new case

> Keep this key until after the first attempt; accept valid alternatives with defensible reasoning.

Selected independent question and key

Selected case: In a fictional library, the librarian controls the internal shelf list. The librarian tells assistant Jo: "Replace the internal list with checked version L2 on Friday, once.

Do not change the public catalogue." It is Friday, L2 remains checked, and no replacement has occurred. A tool offers both destinations.

Assess these proposals separately: Jo replaces the internal list with L2; Jo updates the public catalogue with L2; visitor Sam replaces the internal list with L2; Jo replaces the internal list with a changed L3.

Identify the approval detail that settles each case.

Jo using L2 internally on Friday once is within **scope** and needs no duplicate approval. The public catalogue is explicitly excluded. Sam is not the approved actor. L3 is not the approved version.

These last three actions are not covered; hold them and refer any proposed change to the librarian rather than treating available buttons or correct text as **permission**.

Judge explanation, trace and limits

Dimension	Evidence required
Explanation	Names the applicable idea or procedure and ties it to the supplied facts.
Trace and result	Preserves the given inputs and shows the relevant intermediate steps; distinguishes a prediction from an observed execution.
Limits	States the assumptions, missing evidence or conditions under which the result would change.

Record each dimension as not yet, with support, or independent. Accept a valid alternative procedure with a defensible trace.

Do not penalise an honestly recorded model failure if the learner correctly explains its **evidence** and limits.

Give one usable repair action

Name the earliest unsupported step and give one action to repair it. Have the learner make that repair now and explain why. Then assess the relevant skill on a fresh, fully specified case.

Confirm it was not previously practised with feedback; solve and check the new case before assigning it. A follow-up design prompt is a starting brief, not automatically an equivalent test.

W1 Separate three kinds of evidence

A tool offers a Public website button. The exhibition facts in A have been verified. The teacher's approval covers the classroom board only. State what the button, the fact check and the approval each establish.

Decide whether the editor may publish A publicly.

The button establishes a **capability**. The fact check establishes factual support for A at that time. The approval permits the specified classroom-board action within its limits.

Public posting is outside that **permission** even though the button exists and A is factually checked.

W2 Read an approval without enlarging it

List the decision maker, allowed actor, version, destination, timing and number of postings in the original exhibition approval.

Before any posting and with no changes to the facts or **permission**, explain whether the editor can carry out that exact action without asking again.

Teacher; class editor; exactly A; classroom noticeboard; today; once. Yes, after confirming those conditions still hold and the one posting has not been used. The explicit unchanged **permission** already covers the action.

W3 Prepare a reviewable change

The room changes to Room 8 and the editor creates B. Explain why publishing old A and publishing unapproved B each fail a different check.

Write a specific request for the teacher to review B, keeping the original destination and one-posting limit.

A now fails factual support because the room has changed. B has the supported room but is outside the exact-A approval. Show B and the updated source; ask whether the editor may post B on the classroom board today once.

Do not infer public **permission** or approval from B's correctness.

W5 Avoid an accidental second action

Jo attempts the permitted internal replacement, but the tool's response does not show whether it succeeded. Explain why immediately repeating it is a poor choice under a once-only approval. What should Jo check?

If Jo discovers a public change occurred instead, describe the first recovery steps.

A repeat might perform the limited action a second time. Inspect the internal list or its change record, or have the librarian confirm the outcome, before retrying.

If the public catalogue changed, stop further changes, tell the librarian what happened and follow their directions for correction. Do not claim that reversal proves nobody saw the public change.

▼ Earlier wording, alternatives and picture transcripts

Assess and explain the answers

Worked case answer

It may suggest a location within its role. Moving equipment requires actual teacher approval.

Additional transfer practice question

A sorter marks a child's notebook throw away. Who should decide whether it is discarded? Name a **boundary** the system should enforce.

Reasoned practice answer

A responsible person must review before discarding it. The sorter may suggest a category but should not destroy belongings automatically.

What counts as evidence

Criterion	0 points	1 point	2 points
Result	Incorrect or absent	Partly correct	Correct with necessary conditions
Reasoning	No supporting trace	Some steps	Clear mechanism, calculation or source support
Limit	Overclaims certainty	Vague limitation	Relevant uncertainty or missing fact
Transfer	Copies without adapting	Adapts with prompts	Solves a changed case independently

Use 6/8 as a classroom checkpoint, with 2 required for both Result and Reasoning. This is a proposed teaching rule, not a validated certification threshold.

Do not count a coached answer as independent mastery; correct unsafe or unsupported claims regardless of total.

Feedback

Ask the learner to find the **evidence** that challenges this claim: “Giving a system a task transfers all responsibility to it.” Keep the first attempt and an uncoached retry separate.

Original transfer answer

No clear send authorisation is established, and the assistant's current **permission** excludes sending. A teacher must explicitly authorise the send action, content and destination through an allowed workflow.

Until then the draft remains a draft; a timeout is not **permission**.

Explanations for the additional workbook examples

W1 Separate three kinds of evidence

W2 Read an approval without enlarging it

W3 Prepare a reviewable change

W4 Transfer the permission check to a new case

In a fictional library, the librarian controls the internal shelf list. The librarian tells assistant Jo: “Replace the internal list with checked version L2 on Friday, once.

Do not change the public catalogue." It is Friday, L2 remains checked, and no replacement has occurred. A tool offers both destinations.

Assess these proposals separately: Jo replaces the internal list with L2; Jo updates the public catalogue with L2; visitor Sam replaces the internal list with L2; Jo replaces the internal list with a changed L3.

Identify the approval detail that settles each case.

Jo using L2 internally on Friday once is within **scope** and needs no duplicate approval. The public catalogue is explicitly excluded. Sam is not the approved actor. L3 is not the approved version.

These last three actions are not covered; hold them and refer any proposed change to the librarian rather than treating available buttons or correct text as **permission**.

W5 Avoid an accidental second action

Assess independent transfer

Selected case answer

Feedback that the learner uses

MAIN LESSON · SECTION 6

Connect, adapt and return

> Retain the project evidence and revisit the reasoning on a changed case.

Project evidence to keep

Complete the sorter's human-control map: **permission**s, review triggers, override, correction, and stop conditions.

Keep the decision, **input**, result, explanation and remaining limitation in the project **evidence** record. Retrieve this record next week rather than restarting the project.

Record sorter actions allowed automatically and actions requiring the classroom owner's explicit review.

Support while preserving the reasoning goal

Use physical cards, spoken explanations and a three-stage drawing. Read aloud without giving the answer. Stretch: compare two **mechanism**s with the same visible **output** and explain what **evidence** distinguishes them.

Provide a frame with Who approved, Who acts, What version, Where, When and How many. Keep the **permission** card visible while sorting proposals.

Extension: explain how an approval allowing a defined range of edits differs from an approval for one exact version, and give an edit inside and outside that range.

W4 requires one allowed action and three uncovered actions, justified by destination, actor and version respectively.

After support, give a new approval explicitly allowing Jo to replace either the internal list or the public catalogue with L2 on Friday, once total.

Ask whether a first public replacement is covered and whether a subsequent internal replacement is covered. Expected: first yes, subsequent no because the one total replacement has been used.

Plan the delayed check

Suggested return points in this level: ai-1/29, ai-1/31, ai-1/34. Use actual classroom dates, adjusting for holidays and gaps. One, three and six teaching weeks are scheduling choices, not a claimed optimal spacing.

At a delayed check, ask for the idea from memory and a changed application. Compare with the earlier independent response and record support used.

For a new level, revisit the previous capstone before checking the new prerequisites.

Record	Teacher evidence
Learner code and date	
Concept and case used; prior exposure	
Explanation / trace / limits	
Support and first repair	

Record	Teacher evidence
Changed case and delayed outcome	
Next teaching action	

Use the **evidence** to choose reteaching or the next step. A completed page, confidence rating or attractive project does not by itself demonstrate understanding.

Bridge to next week

Ask for one decision the learner can now justify and one situation requiring more **evidence** or human review. Confidence ratings are separate from correct independent performance.

Next: Week 29: Find a Real Problem. Retrieve today's **evidence** and identify what carries forward and what is new.

Week 29 uses these boundaries when choosing a problem worth solving for a small project.

> **Plan:** 0–5: retrieve the procedure; 5–15: W2 completion practice; 15–23: explain and check with a partner; 23–30: each learner answers the misconception check; 30–40: targeted reteaching or a harder variation; 40–45: prepare the investigation.
>
> **Resources:** Use Find and repair a mistake, Practise together, Run the investigation and Build your understanding; use the matching workbook W2 and misconception check.

> **Session:** Session 3 · Investigate and transfer · 45 min
>
> **Plan:** 0–5: retrieve the decision rule; 5–20: investigate or trace; 20–30: start the independent case; 30–38: connect the project; 38–43: act on feedback; 43–45: plan the return check.
>
> **Resources:** Use Run the investigation, Connect your project, Show what you know, Study a complete case and Try a new case independently. Allow extra time for the full task set. Use a coding lab only when this week actually provides one; Your lesson route is the planning section.

Practice and assessment reminders

Before class, solve the supported practice: List the decision maker, allowed actor, version, destination, timing and number of postings in the original exhibition approval.

Before any posting and with no changes to the facts or **permission**, explain whether the editor can carry out that exact action without asking again.

Reasoned practice answer: Teacher; class editor; exactly A; classroom noticeboard; today; once. Yes, after confirming those conditions still hold and the one posting has not been used.

The explicit unchanged **permission** already covers the action.

Check every learner before discussion: Use the worked case for Human **authority** and **permission**. Proposed explanation: “A working button grants **permission**”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Misconception repair: **Capability** does not establish who may use it or for what purpose.

Support: read the exact case aloud, enlarge the labelled picture, supply **input** cards and model only the first deciding step. Accept a spoken explanation or drawing; retain the reasoning goal.

Extension: P2 has already been published once under this approval. Require a **prediction** and a reason before comparing. Expected result: A second publication is not covered.

Reason: The instruction allowed a single use, not repeated actions.

Independent assessment: withhold the reserved answer until the learner has attempted the new case. Record support separately from correctness.

Criterion	Not yet	With support	Independent
Explanation	Names an answer without a deciding fact	Uses a hint to link fact and decision	Explains the deciding fact in own words
Trace or test	Cannot connect input and result	Completes steps with prompts	Traces or tests a changed case accurately
Limits and revision	Claims more than evidence supports	Names a limit after a prompt	States a defensible limit and useful next test

Project checkpoint: Prepare the demonstration. Gather reproducible instructions, **evidence**, access checks and remaining limitations.

Use the weekly teacher answer for topic-specific reasoning. A saved progress tick is an activity record; judge mastery from the learner's explanation and **evidence**.

REFERENCE · SECTION 8

Reference: feedback and records

> Use digital tools where they help retain an explanation and its evidence.

Keep practice and independent evidence separate

Use the two formative questions as supported practice, not as independent mastery scores. Discuss the deciding **evidence** rather than accepting a guessed selection.

The feedback comes from the reviewed public worked case. Do not reveal the separately reserved independent teacher answer until the learner has attempted that case.

Repair and portfolio records

Use the earlier worked-explanation links to address a specific missing building block, then return to the current question. Adapt this suggestion after observing the learner; it is not an automatic diagnosis.

Collect the completed-work portfolio as **evidence**. Record support separately from correctness, and assess explanation, trace/test and limitations. Progress ticks and quiz selections alone do not establish mastery.

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

This week has no code block. Use this routine when a later lesson includes an executable lab.

Ask students to predict before running code. Preserve errors and actual **output**s; collect a changed test and an explanation. The branch-**boundary** and indexing lessons deliberately include failure cases.

REFERENCE · SECTION 9

Reference: teach with the six pictures

> Choose the picture for the teaching move and connect it to the explanation.

01. Humans Set Boundaries: the case

Follow the labelled picture with the matching explanation. Open the vector diagram

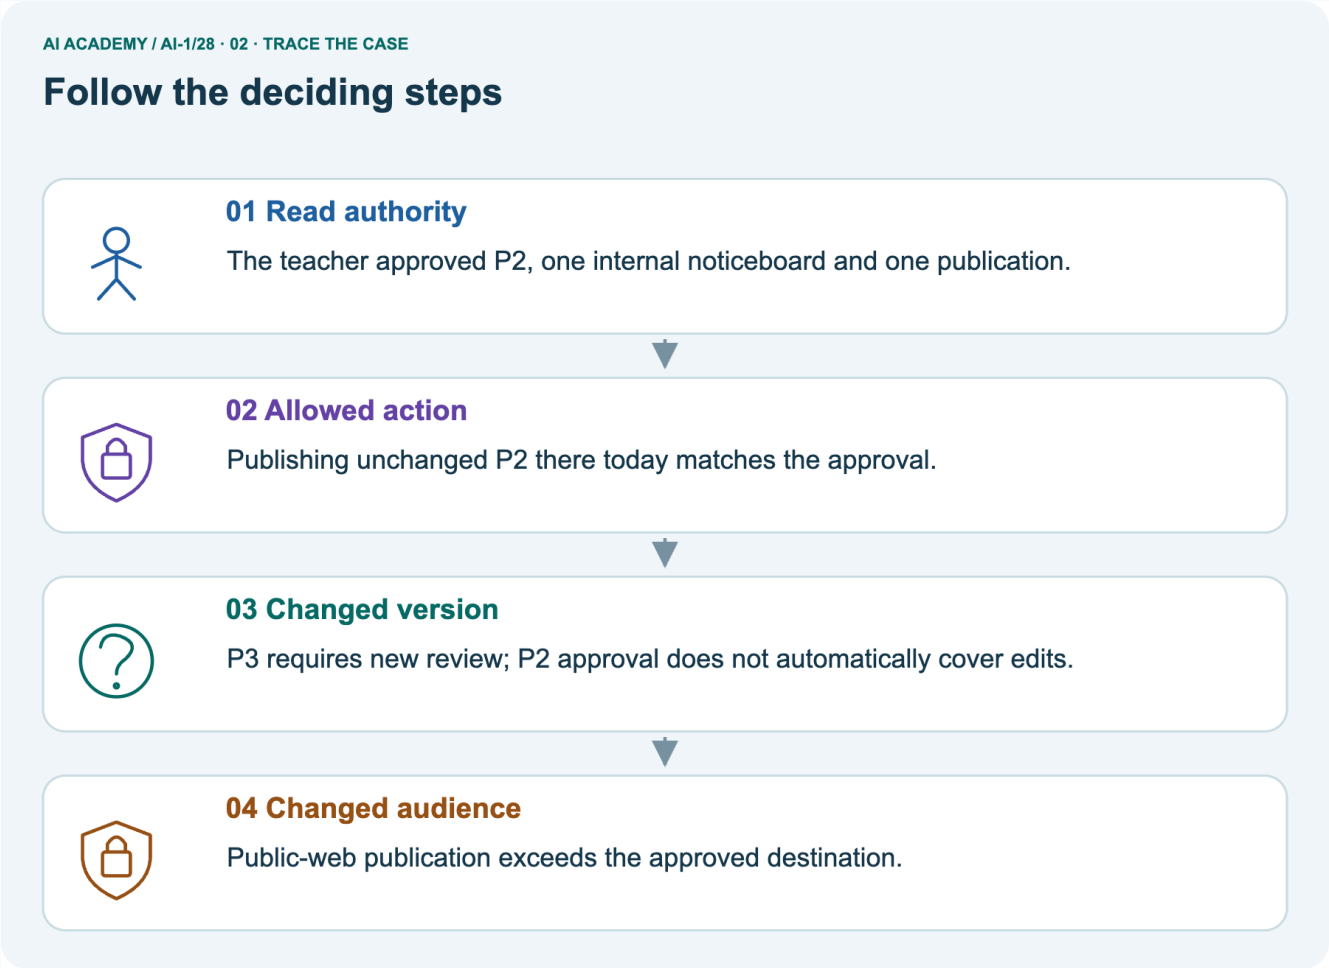

A fictional teacher approves one checked classroom poster for internal display. Supplied facts: Approval: publish exactly poster P2 on the classroom noticeboard today, once.

Assistant proposes P2 there; P3 there after an edit; P2 on a public website.

Point to the given fact that matters most. Explain why it matters.

Teacher prompt: Point to the given fact that matters most. Explain why it matters. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

02. Follow the deciding steps

Follow the labelled picture with the matching explanation. Open the vector diagram

Read **authority**: The teacher approved P2, one internal noticeboard and one publication. → Allowed action: Publishing unchanged P2 there today matches the approval. → Changed version: P3 requires new review; P2 approval does not automatically cover edits. → Changed audience: Public-web publication exceeds the approved destination.

Point to each numbered stage and explain which recorded **input** it uses.

Teacher prompt: Point to each numbered stage and explain which recorded **input** it uses. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

03. Match the proposed action to its permission

Follow the labelled picture with the matching explanation. Open the vector diagram

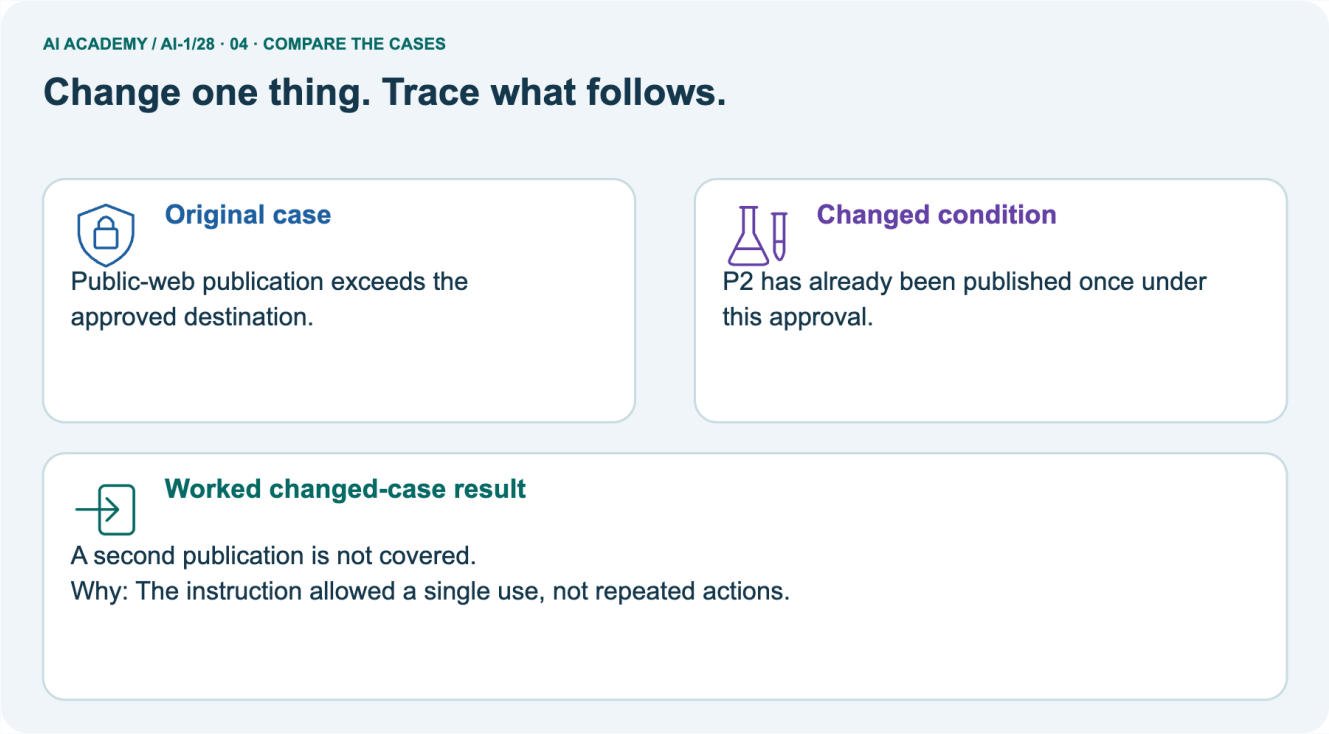

Match the proposed action to its **permission**. Version A on class board | Today, once, by editor | Within **scope**. Version A on public site | Public posting excluded | Outside **scope**.

Changed version B | Only A was approved | Review changed version. Post A a second time | Once has been used | Outside **scope**

Read the labels and values. Explain the relationship the model shows.

Teacher prompt: Read the labels and values. Explain the relationship the model shows. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

04. Change one thing. Trace what follows.

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Public-web publication exceeds the approved destination. Changed condition: P2 has already been published once under this approval. Expected result: A second publication is not covered.

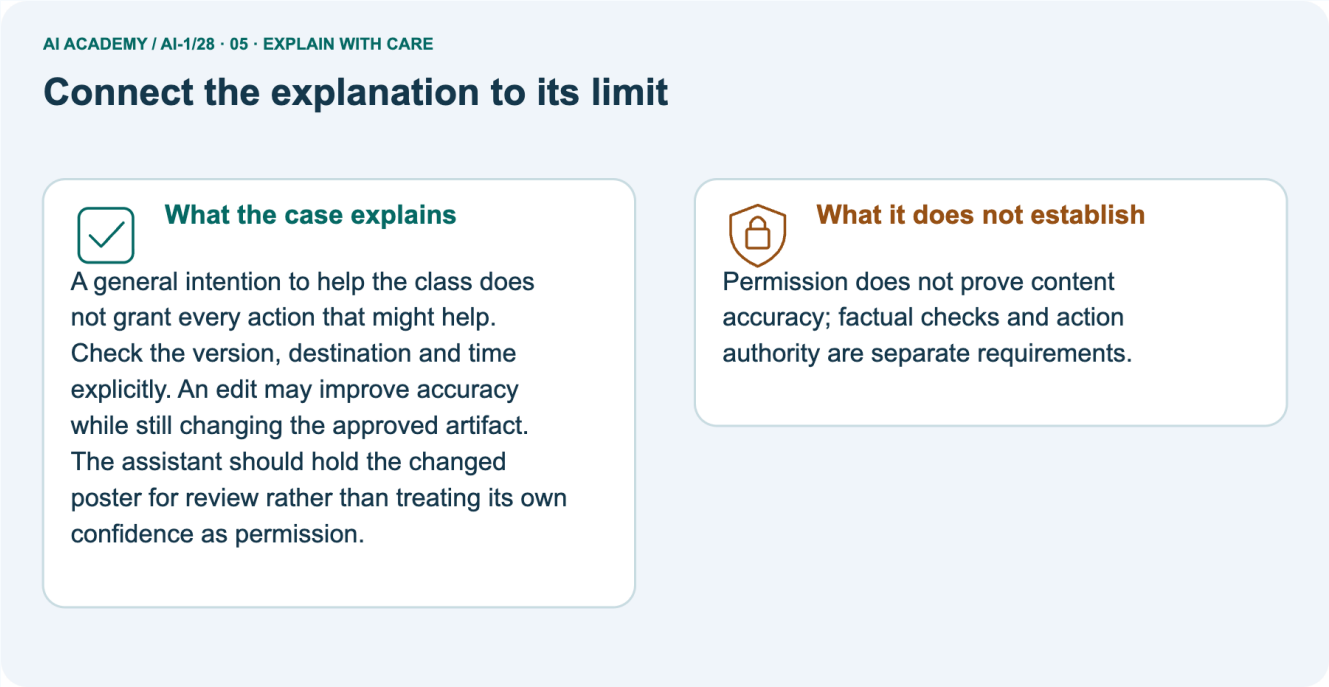

Reason: The instruction allowed a single use, not repeated actions.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

Teacher prompt: Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude. Ask learners to describe one label or arrow in ordinary words.

Use the adjacent transcript if the image is difficult to see. Changed-case reasoning: The instruction allowed a single use, not repeated actions.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

A general intention to help the class does not grant every action that might help. Check the version, destination and time explicitly. An edit may improve accuracy while still changing the approved artifact.

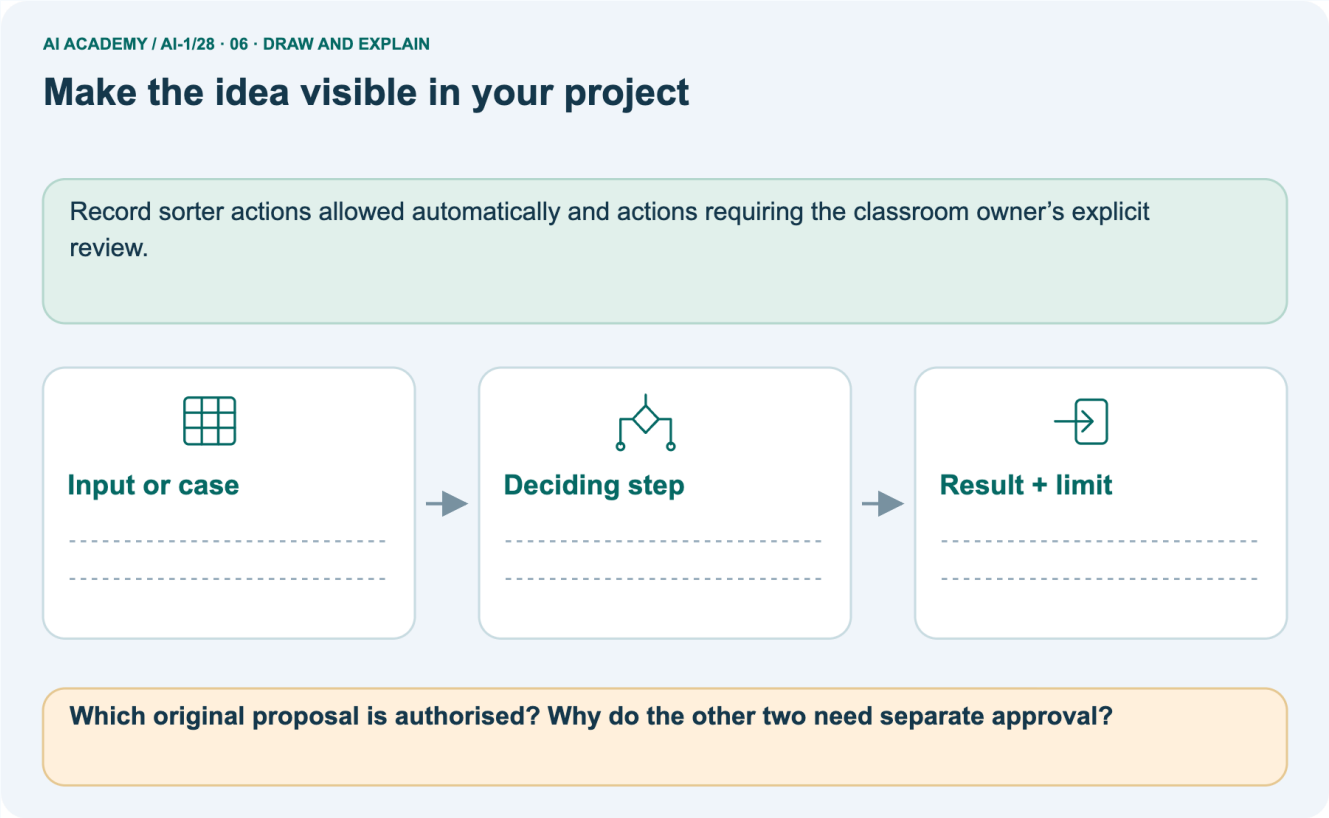

The assistant should hold the changed poster for review rather than treating its own confidence as **permission**. Limit: **Permission** does not prove content accuracy; factual checks and action **authority** are separate requirements.

Explain the case, then point to a limit on the claim.

Teacher prompt: Explain the case, then point to a limit on the claim. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

Keep the stated **scope**: **Permission** does not prove content accuracy; factual checks and action **authority** are separate requirements.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Record sorter actions allowed automatically and actions requiring the classroom owner's explicit review. Draw your **input**, deciding step, result and limit. Supported question: Which original proposal is authorised?

Why do the other two need separate approval?

Draw your project trace and justify the deciding step using **evidence**.

Teacher prompt: Draw your project trace and justify the deciding step using **evidence**. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

Supported practice key: Only unchanged P2 on the specified noticeboard today, once. P3 changes version; public posting changes audience.

▼ Earlier wording, alternatives and picture transcripts

Use one picture at a time. Hide a worked result before asking for a **prediction**, then reveal it for feedback. These are supported teaching cases; retain the separate independent assessment for a fresh first attempt.

01. Humans Set Boundaries: the case

02. Follow the deciding steps

03. Match the proposed action to its permission

04. Change one thing. Trace what follows.

05. Connect the explanation to its limit

06. Make the idea visible in your project

▼ Optional interactive practice and completed work

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
