AI ACADEMY · LEVEL 2 · GRADE 7 · WEEK 29 · TEACHER GUIDE

Evidence and Sources

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Transparent Book Recommender

THE CONNECTED WEEK

Teach source support as an explicit evidence audit.

Model separate records, supply complete fictional passages and collect the independent count task before feedback.

Keep one habit: Ask which exact claim and passage each rate counts, then check edition identity and missing evidence.

MAIN LESSON · SECTION 1

Prepare this connected week

> Use one main plan and keep practice separate from the independent first attempt.

Learning goal and precision

Primary target: Explain the **mechanism** and terminology of **claim** support and citation evaluation

Two 45-minute sessions. Citation evaluation checks **source** existence, exact passage support and coverage of answer **claim**s. A real citation can still be irrelevant.

Use the supplied constructed scenarios to make the **mechanism** inspectable. Collect W4 before sharing solutions.

Students should name intermediate **evidence** and limitations; classroom pacing and learning effectiveness remain unvalidated.

By the end, I can separate citation presence, **link validity** and support for an exact **claim**.

What to prepare

- Use the supplied scenario, student illustrations and blank paper. For numeric work, offer counters or a calculator after learners show the setup. Fictional records are supplied; personal data and paid accounts are unnecessary.

- Case exposure check: this **source** example appears in ai-2/29, ai-3/16. Reuse a familiar case for recall or modelling; verify that the case used to assess transfer has not already received feedback.

- Lesson and workbook; paper and pencil

- Calculator and optional local Python 3 for arithmetic; no live API or private data

- Prepare the fresh retry separately and withhold its solution until after collection

Main teaching plan

Session · Sequence and minutes · Resources

> **Session:** Session 1 · Understand · 45 min
>
> **Sequence and minutes:** 0–7: recall and prerequisite; 7–15: inspect the concrete case and predict; 15–30: teacher models the worked trace; 30–40: learners explain a step using the text and visual; 40–45: check the core idea.
>
> **Resources:** Use Your mission, Notice the evidence, See how it works, Compare the cases, Words that unlock the idea and Follow a worked example; record the brief recall in the workbook.

> **Session:** Session 2 · Practise · 45 min
>
> **Sequence and minutes:** 0–5: retrieve the procedure; 5–15: W2 completion practice; 15–23: explain and check with a partner; 23–30: each learner answers the misconception check; 30–40: targeted reteaching or a harder variation; 40–45: prepare the investigation.
>
> **Resources:** Use Find and repair a mistake, Practise together, Run the investigation and Build your understanding; use the matching workbook W2 and misconception check.

> **Session:** Session 3 · Investigate and transfer · 45 min
>
> **Sequence and minutes:** 0–5: retrieve the decision rule; 5–20: investigate or trace; 20–30: start the independent case; 30–38: connect the project; 38–43: act on feedback; 43–45: plan the return check.
>
> **Resources:** Use Run the investigation, Connect your project, Show what you know, Study a complete case and Try a new case independently. Allow extra time for the full task set. Use a coding lab only when this week actually provides one; Your lesson route is the planning section.

This is a starting allocation of 135 minutes, not a validated duration. Preserve all named topics. Schedule extra time for connected examples, the full investigation, **independent** cases and project building.

Repeated copies of a case share one recorded attempt; they are not new **evidence**.

Opening retrieval and readiness

Without opening the old lesson, explain one key idea from Prompt Experiments. Give an example and a mistake that the idea helps you avoid.

Look for: Explain the **mechanism** and terminology of controlled prompt experiments

Reference example, not the only acceptable wording: Teacher explanation: A prompt experiment compares complete specifications using the same task cases.

Define success before inspecting **output**s; change one intended instruction and preserve other settings. Evaluate both prompts on paired cases with fixed model/version, **source** records, **output** contract and scoring rubric.

Use development results for selection, then reserve new final cases. Score each case rather than counting attractive sentences.

Without opening the old lesson, explain one key idea from Image and Voice Pipelines. Give an example and a mistake that the idea helps you avoid.

Look for: Explain the **mechanism** and terminology of speech pipelines and multimodal **evidence**

Reference example, not the only acceptable wording: Teacher explanation: A multimodal pipeline may transcribe speech, inspect an image and generate a response.

Errors at one stage can propagate even when later stages run correctly. Track **source** modality, segment/time references, transcription, interpretation and final **claim**s separately.

Compare conflicting **evidence** without assuming one modality always wins. Ask for clarification when the task needs unresolved information.

Without opening the old lesson, explain one key idea from Recommendation Scores. Give an example and a mistake that the idea helps you avoid.

Look for: Compute a weighted score

Reference example, not the only acceptable wording: Score 8.

A result depends on the **input**s, procedure and conditions that produced it. Preserve data roles and distinguish observed outcomes from **prediction**s or unmeasured conditions.

If the prior concept cannot be explained, use a short retrieval activity before this chapter.

▼ **Earlier wording, alternatives and picture transcripts**

Teach the learning cycle

Retrieval answer guidance

Prompt Experiments

Image and Voice Pipelines

Recommendation Scores

Use the student module and workbook section with this exact week title. The worked case, **independent** question and answers below form one aligned lesson sequence.

What the learner must demonstrate

Two catalogue records list 96 and 112 pages for a title. A helper averages them and reports 104. Explain the mistake and a better verification **process**.

Concept to explain

Claims require **source**s matched to the question and checked **independent**ly.

Term	Meaning
claim	A statement that can be examined using evidence and reasoning.
source	The record, person or material from which information is obtained.
independent	Produced or assessed without the specific influence being excluded; state whether this means uncoached work or separate test data.
corroborate	Support a claim with additional relevant evidence, ideally independent of the first source.

Prepare the class

This compact option is not the full-week schedule. Use the main teaching cycle and allow extra sessions for the investigation, independent work and project.

Allow 80 minutes: recall 8; explanation 12; worked demonstration 15; guided practice 20; **independent** assessment 15; project and reflection 10. Extend the lab into a second session when needed.

Preparation for the connected explanation

Readiness answer

End goal for the pictorial case

This added worked case illustrates the week's main idea. Retain all original and connected topics; schedule its practice within the teaching cycle.

Model claim-by-claim evidence checks

> Keep four-claim, three-claim and six-claim records distinct.

Define support and the counting units

Citation evaluation checks **source** existence, exact passage support and coverage of answer **claim**s. A real citation can still be irrelevant.

For this classroom rubric count a **claim** as supported only when its cited passage entails it. Separately count correct citation links. Use the number of factual **claim**s as the support denominator.

Trace the four-claim audit

Four-claim classroom audit	Supplied outcome
C1	Citation exists; passage supports claim
C2	Citation exists; passage supports claim
C3	Citation exists; passage does not support claim
C4	No citation; not supported by a cited passage

An answer has four factual **claim**s. Three have citations, but only two are supported by their cited passages. All links exist.

Claim support is 2/4=50%; citation presence is 3/4=75%; link existence among three citations is 3/3. These measure different failures.

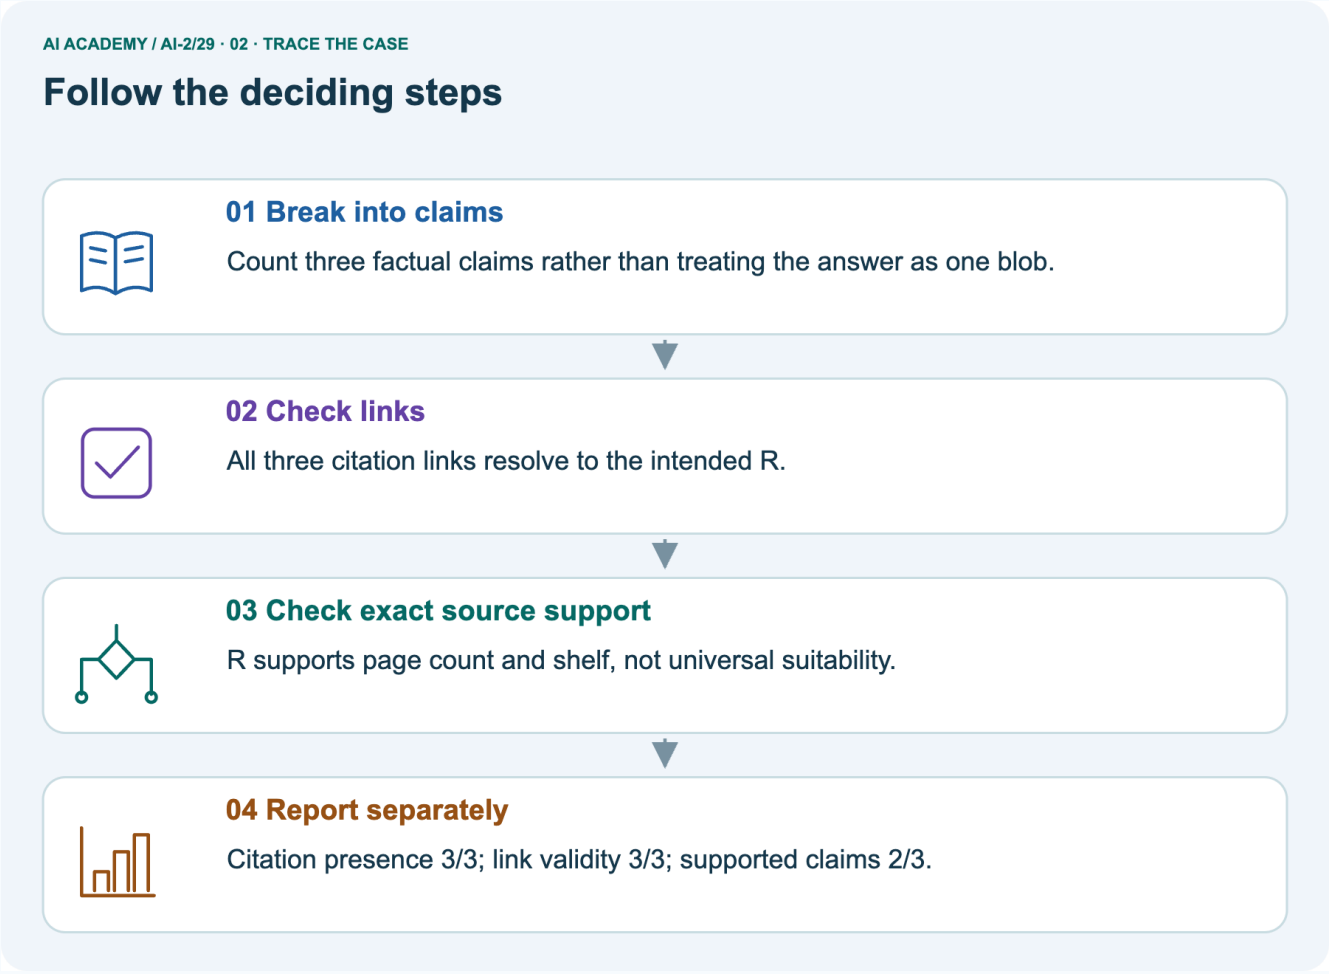

Read the separate Ocean Maps facts

A fictional catalogue answer contains three factual statements and cites existing records.

Record R: book Ocean Maps has 80 pages and is available on shelf 2.

Claims: 80 pages [R]; shelf 2 [R]; suitable for every child [R]. All three citations resolve to R.

Trace the three-claim support boundary

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Break into claims	Count three factual claims rather than treating the answer as one blob.
2. Check links	All three citation links resolve to the intended R.
3. Check exact source support	R supports page count and shelf, not universal suitability.
4. Report separately	Citation presence 3/3; link validity 3/3; supported claims 2/3.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

An existing citation is not automatically **evidence** for every nearby sentence. Read the cited passage and compare its exact scope with the **claim**. The universal suitability statement extends beyond what R says.

Remove or qualify unsupported content; adding more copies of the same link does not create the missing **evidence**.

Predict a statement about the record's scope

Change: Change the third **claim** to "the record does not assess suitability".

Prediction: That statement accurately describes the supplied record's limits.

Reason: R gives pages and shelf only; it contains no suitability assessment.

Explain source limitations

Source support is relative to supplied records; those records can themselves be incomplete, outdated or incorrect.

Cover the result. Ask learners to name the **input**s and predict the next step. Uncover one step, connect the icon to the actual procedure, and explain its **evidence**. Then change the supplied condition and compare.

The picture is a representation; it does not document execution of a real AI model.

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

Explain the mechanism

Input → **Process** → **Output**

Trace the information. At each stage, ask what changed and how you could test it.

Which stage could fail even when the other two are correct? Explain:

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

1. **Claim**: a book won an award in 2024.

2. Find the award organization’s record and the publisher’s page.

3. Check exact title, year, edition, and whether **source**s are **independent**.

4. If **evidence** conflicts or is absent, mark ‘not verified’ rather than guess.

Recalculate, retrace, or restate the reasoning in your own representation:

CHECK Did the **evidence** answer the exact question? Did the total, path, or **source** record stay consistent?

Concrete teaching case

An answer says 80 pages, but the catalogue for that edition says 120.

What **evidence** guides correction?

Exact explanation to model

Check the exact edition and authoritative catalogue record. Record the supporting **source**.
</details>

Explain the added worked example

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Key terms

Term	Meaning
Entailment	Whether the cited passage supports the specific claim
Citation coverage	Which claims include source references
Link validity	Whether a source reference resolves to the intended record

Model the reasoning aloud

Use the complete worked example below before asking learners to complete W2. Reveal a small part, invite a **prediction**, then explain the deciding step.

These teacher notes contain solutions; do not reveal the **independent** case answer during modelling.

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

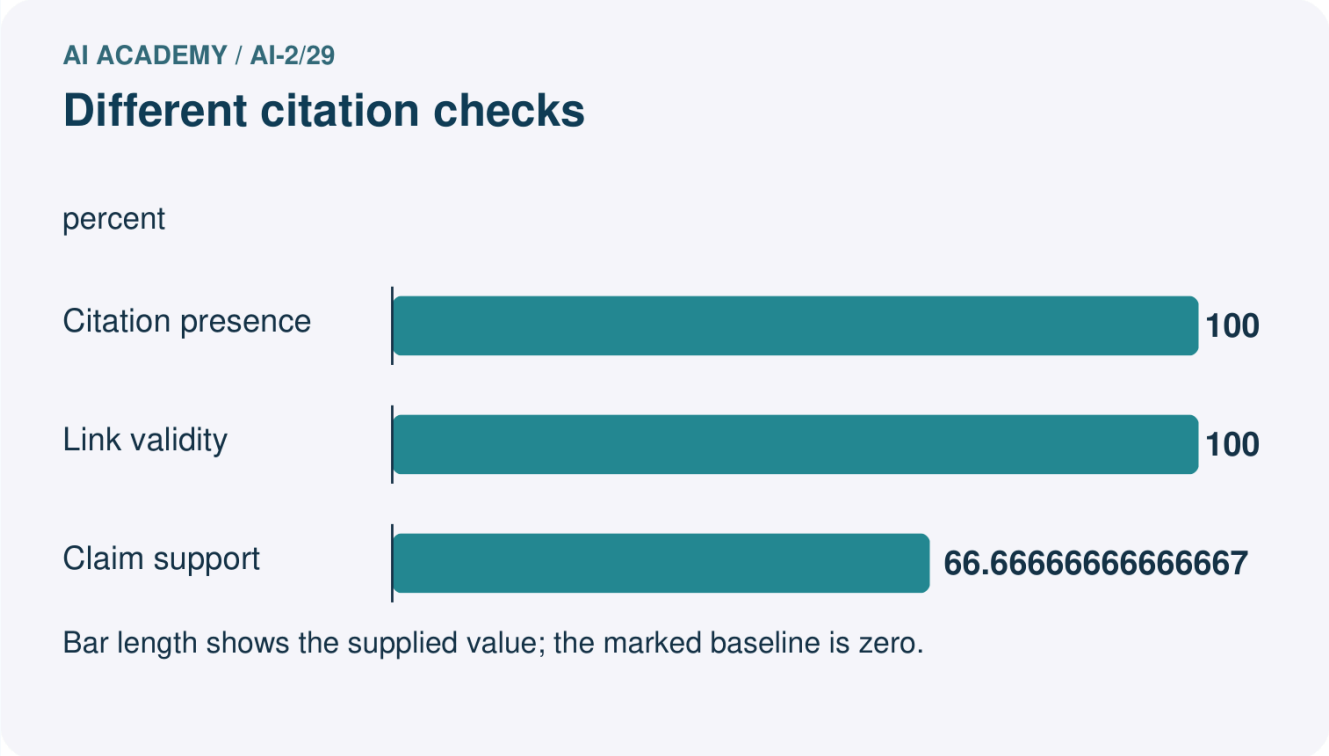

Thinking move	Teacher prompt
Plan	What is given? What is the question? Which procedure fits these facts?

Thinking move	Teacher prompt
Do	Point to each input and intermediate step in the worked trace. Name the rule that allows the next step.
Check	Does the output answer the question? Which assumption or limitation prevents a larger claim?

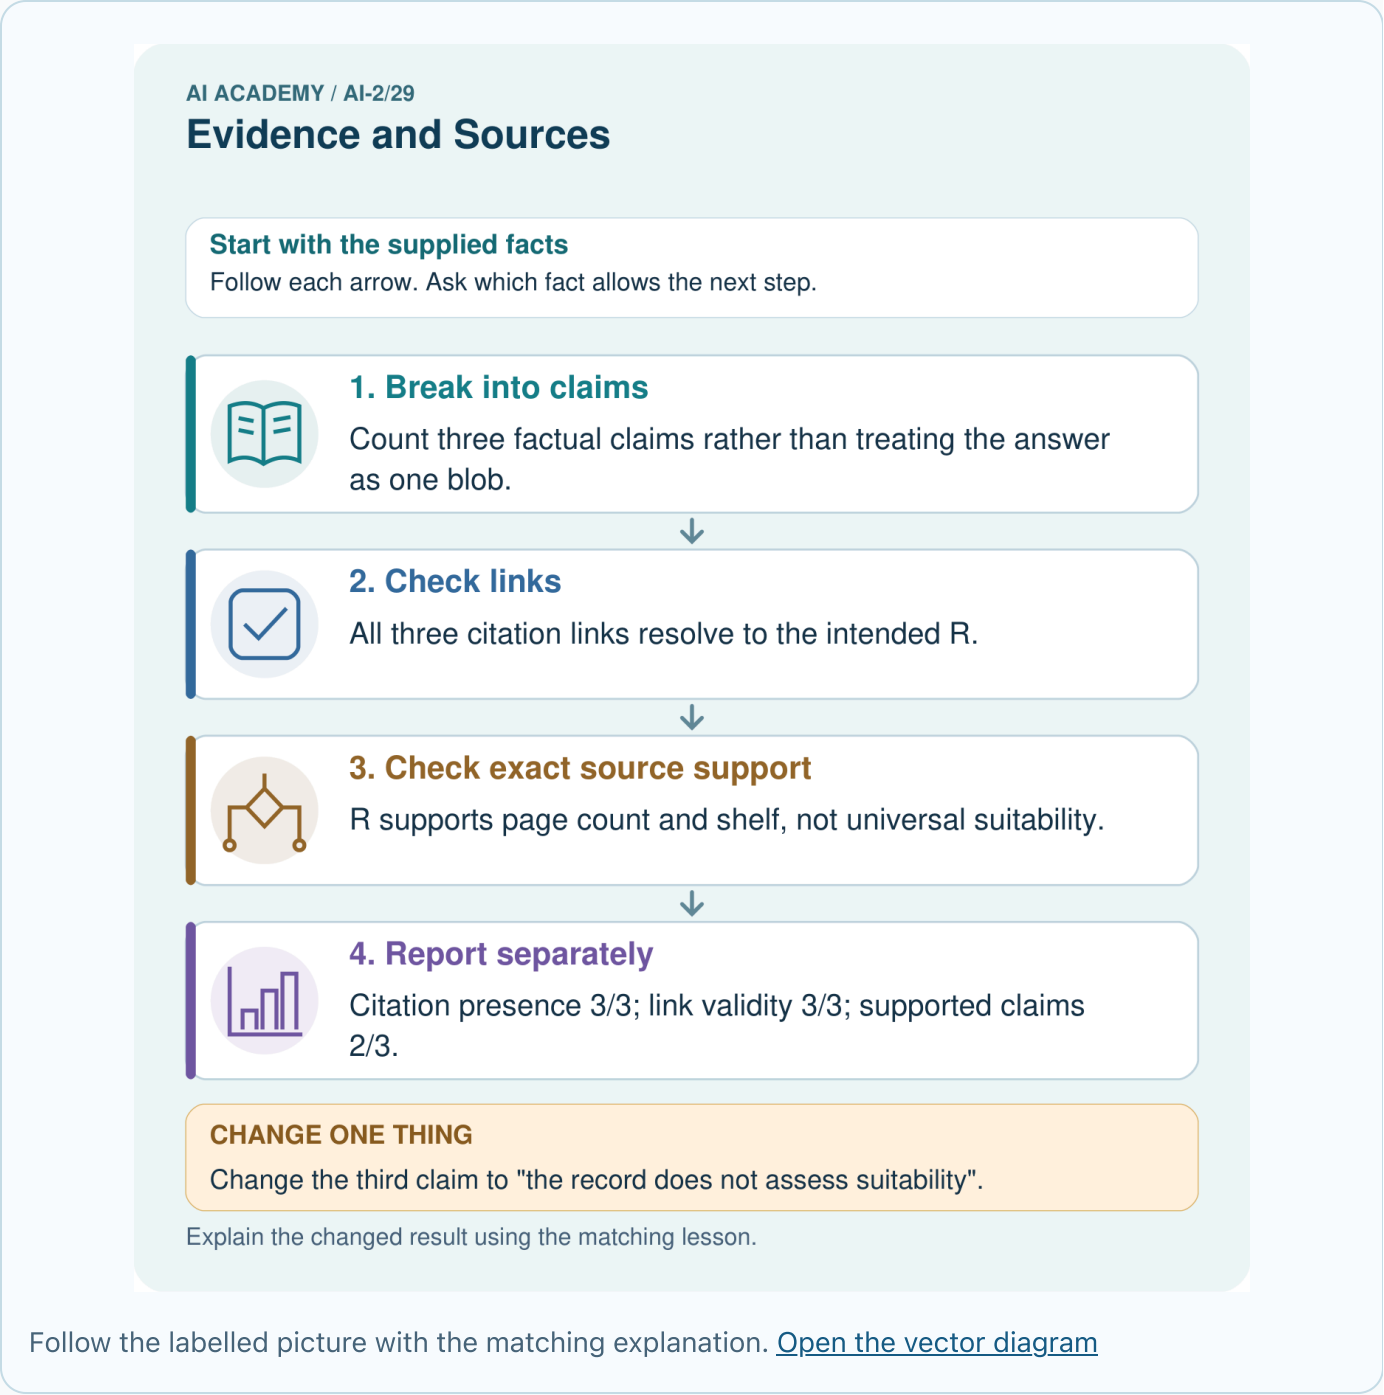

Use the diagram and verbal explanation together. Ask learners to match a sentence to a specific visual step; do not assign learners fixed visual or auditory learning styles.

A pictorial worked case: Evidence and Sources

The facts we will use

Follow the labelled picture with the matching explanation. Open the vector diagram

Why this result follows

What this example does not establish

Change one thing in the pictured case

Ask while showing the picture

MAIN LESSON · SECTION 3

Guide the reasoning, then remove help

> Collect a response from each learner before discussing the worked key.

Prompt before revealing

Completion task: An answer has four factual **claim**s. Three have citations, but only two are supported by their cited passages. All links exist. Show the intermediate steps and give the conclusion with its scope.

Expected reasoning and fading help

Teacher check: Teacher explanation: **Claim** support is 2/4=50%; citation presence is 3/4=75%; link existence among three citations is 3/3. These measure different failures.

Start by identifying the given **input**s together. Leave the intermediate steps blank. If needed, model one step, then withdraw that help on the next step. Move to a full trace only when the partial trace is understood.

For partners, alternate explainer and checker; collect a response from every learner before discussion.

Check the misconception before discussion

Use the worked case for **Claim** support and citation evaluation. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Expected correction: Citation counts do not establish truth beyond the supplied **source**s or the correctness of uncited **claim**s.

Collect explanations, not only yes/no votes. If a misunderstanding is common, re-model the relevant step for the class.

If it affects a few learners, give a short targeted group explanation while others solve a more demanding variation.

Use the pictorial check

Why is the original answer not fully supported despite having citations on every **claim**?

One of the three **claim**s is not entailed by its cited **source**; **citation coverage** and **link validity** do not measure **claim** support.

Changed-case reasoning: That statement accurately describes the supplied record's limits. R gives pages and shelf only; it contains no suitability assessment.

Collect each learner's explanation before discussion. Use the first missing connection between **input**, deciding step and result to choose support. This question is worked-case practice, not fresh mastery **evidence**.

Keep each learner explaining

- Ask: Which facts are given, and which would we have to assume? Learners mark relevant details before discussing answers.
- Say: Predict first. Show the rule, information path or calculation that would produce the result. A correct guess is not yet an explanation.
- In pairs, one learner solves while the other checks **evidence**; exchange roles. Remove the worked answer before **independent** assessment.

▼ **Earlier wording, alternatives and picture transcripts**

Demonstrate and guide practice

Board sequence

Write the given facts: An answer says 80 pages, but the catalogue for that edition says 120.

Write the question to explain: What **evidence** guides correction?

Reveal after **prediction**s: Check the exact edition and authoritative catalogue record. Record the supporting **source**.

Use the earlier changed question as optional later practice. Reserve Audit a new **claim**-and-citation record **independent**ly for the first **independent** attempt before hints or feedback.

Classroom dialogue

Reveal reasoning one step at a time. Explain why a tempting alternative fails. Write units and denominators for arithmetic, trace conditions for decisions, and identify supporting **source**s for **claim**s.

Model these guided questions

Guided: **Claim** support is 2/4=50%; citation presence is 3/4=75%; link existence among three citations is 3/3. These measure different failures.

Qualification: Citation counts do not establish truth beyond the supplied **source**s or the correctness of uncited **claim**s.

Exit: accept a concrete variation with its predicted outcome and a stated condition that would challenge the **mechanism**; reject a **claim** resting on unmeasured **evidence**.

Case-specific teaching sequence

Stage	Teacher action
Session 1: 0–7 minutes	Retrieve the prerequisite; identify the input, procedure and evidence source.
7–18 minutes	Explain See how it works and Words that unlock the idea. Complete W1 with a mechanism-based explanation.
18–32 minutes	Trace the declared procedure and worked case. Complete W2, recording intermediate steps.
32–45 minutes	Discuss the diagram with the worked input; use W3 to distinguish measured claims and limitations.
Session 2: 0–8 minutes	Retrieve the worked reasoning and collect the guided response before discussing it.
8–20 minutes	Compare a proposed boundary variant with the original case; identify what remains fixed.
20–35 minutes	Collect W4 independently. Require the procedure trace and the bounded conclusion.

Stage	Teacher action
35–45 minutes	Use W5 and exit responses for feedback. Administer the fresh retry after feedback and preserve both attempts.

Reduce help deliberately

Individual reasoning check

Pictorial practice question

Reasoned teacher answer

MAIN LESSON · SECTION 4

Run the supplied investigation

> Keep expected results, observed paper traces and remaining limits distinguishable.

Supplied materials and answer guidance

Six-claim lab: citations5/6; resolvedIDs4/5; cited-supportedclaims2/6 (80pages viaR and opening09:00 viaT). Shelf5 conflicts withR forOM-1; universal suitability lacks support;Z unresolved; uncitedOM-2 claim has support inS but no cited support under the declared rubric. Corrections require the exact edition. Separate W2 rates2/4,3/4,3/3; picturedcase2/3,3/3,3/3. Independent scope implies3/4 links resolve, while supportedclaims3/5,citationpresence4/5; do not invent claim passages.

Run and record

1. Predict → Test → Record → Explain
2. Keep expected and actual results separate. Surprises are useful data when recorded honestly.

3. Use the supplied six **claim**s and **source** passages. Audit citation presence, ID resolution, exact cited support and conflicting versus missing **evidence**. Do not infer real-world truth or perform an unspecified live search.

4. What did the hardest test teach you that the normal test did not?

Keep an inspectable record

Record	What to capture
Input or evidence	Exact data, instruction or claim
Expected result	Answer or safe fallback declared before the run
Observed result	Actual result, including errors
Explanation	Rule, calculation or evidence explaining the outcome
Next test	One justified change and a new prediction

Diagnose the first misunderstanding

The worked result establishes every future case: Citation counts do not establish truth beyond the supplied **source**s or the correctness of uncited **claim**s.

A missing **input** may be replaced without recording the change: A replacement changes the **evidence** or contract. Record the change and its justification; do not silently turn unknown into a measured value.

Repeating an assessed case is new **independent evidence**: A replay checks consistency. An example used for feedback or revision cannot later be described as untouched final evaluation.

Choose support from the response

What the response shows	Next teaching action
Missing or misread facts	Read the case aloud, mark supplied versus unknown facts, and let the learner restate it.
Wrong procedure	Return to the deciding step in the worked case. Contrast it with the proposed incorrect explanation.
Arithmetic or implementation error	Trace intermediate values or lines; preserve the first mismatch and retry that step.
Correct result without a reason	Ask for a trace and a changed case before marking independent understanding.
An unsupported wider claim	Ask which supplied evidence supports the claim and which further observation would be needed.

Offer an oral explanation, drawing, enlarged visual or fewer examples when that removes a reading/writing barrier. Keep the same reasoning goal.

Stretch secure learners by changing a boundary or assumption and asking them to defend the effect, not simply by assigning more of the same questions.

▼ Earlier wording, alternatives and picture transcripts

Run the weekly evidence lab

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

Make the lab runnable

Use the supplied investigation for shared practice. Keep predictions and observed paper-trace results separate. Reserve Audit a new claim-and-citation record **independent**ly for the individual first attempt before feedback; do not use the reserved case as a paired lab task.

Diagnose and reteach

For guessing, return to given facts and request a trace. For vocabulary without application, use one example and one non-example. For arithmetic errors, check the setup before the calculation.

Finish with a different uncoached case before recording mastery.

Address these additional misconceptions

Match the support to the first error

MAIN LESSON · SECTION 5

Assess the selected new case

> Keep this key until after the first attempt; accept valid alternatives with defensible reasoning.

Selected independent question and key

Selected case: Five **claim**s; four cited; three supported by cited passages; one cited ID is nonexistent. Compute support and citation presence and explain link limits.

Teacher explanation: Support=3/5=**60%**; citation presence=4/5=**80%**. Link checks reject the nonexistent ID; remaining real links still need **entailment** checks.

Judge explanation, trace and limits

Dimension	Evidence required
Explanation	Names the applicable idea or procedure and ties it to the supplied facts.
Trace and result	Preserves the given inputs and shows the relevant intermediate steps; distinguishes a prediction from an observed execution.
Limits	States the assumptions, missing evidence or conditions under which the result would change.

Record each dimension as not yet, with support, or **independent**. Accept a valid alternative procedure with a defensible trace.

Do not penalise an honestly recorded model failure if the learner correctly explains its **evidence** and limits.

Give one usable repair action

Name the earliest unsupported step and give one action to repair it. Have the learner make that repair now and explain why. Then assess the relevant skill on a fresh, fully specified case.

Confirm it was not previously practised with feedback; solve and check the new case before assigning it. A follow-up design prompt is a starting brief, not automatically an equivalent test.

W1 Explain the mechanism

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

Teacher explanation: Citation evaluation checks **source** existence, exact passage support and coverage of answer **claim**s. A real citation can still be irrelevant.

For this classroom rubric count a **claim** as supported only when its cited passage entails it. Separately count correct citation links. Use the number of factual **claim**s as the support denominator.

W2 Trace the worked case

An answer has four factual **claim**s. Three have citations, but only two are supported by their cited passages. All links exist. Show the intermediate steps and give the conclusion with its scope.

Teacher explanation: **Claim** support is 2/4=50%; citation presence is 3/4=75%; link existence among three citations is 3/3. These measure different failures.

W3 Audit the limit

A report omits this qualification: Citation counts do not establish truth beyond the supplied **source**s or the correctness of uncited **claim**s.

Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

Teacher explanation: Citation counts do not establish truth beyond the supplied **source**s or the correctness of uncited **claim**s.

State the observed result separately from the unverified or out-of-scope **claim**; preserve the original **evidence** rather than inventing a missing fact.

W5 Design a revealing follow-up

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

Teacher explanation: Accept a concrete variant of the worked **input** or a missing/conflicting/boundary condition, with an expectation derived from the declared procedure.

Require preserved settings, original **output**s and data roles. Citation counts do not establish truth beyond the supplied **source**s or the correctness of uncited **claim**s.

The new case should test this particular **mechanism** rather than merely restate the original result.

▼ Earlier wording, alternatives and picture transcripts

Assess and explain the answers

Worked case answer

Check the exact edition and authoritative catalogue record. Record the supporting **source**.

Additional transfer practice question

An answer cites a page about opening hours to support a **claim** about book prices. Is a citation enough? What must be checked?

Reasoned practice answer

No. Inspect whether the cited passage directly supports the price **claim** and is relevant and current for the task.

What counts as evidence

Criterion	0 points	1 point	2 points
Result	Incorrect or absent	Partly correct	Correct with necessary conditions
Reasoning	No supporting trace	Some steps	Clear mechanism, calculation or source support
Limit	Overclaims certainty	Vague limitation	Relevant uncertainty or missing fact
Transfer	Copies without adapting	Adapts with prompts	Solves a changed case independently

Use 6/8 as a classroom checkpoint, with 2 required for both Result and Reasoning. This is a proposed teaching rule, not a validated certification threshold.

Do not count a coached answer as **independent** mastery; correct unsafe or unsupported **claim**s regardless of total.

Feedback

Ask the learner to find the **evidence** that challenges this **claim**: “Any citation proves any nearby **claim**.” Keep the first attempt and an uncoached retry separate.

Original transfer answer

Identify ISBN or edition and consult its authoritative record or the supplied book. Report the supported page count for that edition; if unresolved, state uncertainty.

Averaging conflicting records invents a value that may match no actual edition.

Explanations for the additional workbook examples

W1 Explain the mechanism

W2 Trace the worked case

W3 Audit the limit

W4 Apply a new case independently

Five **claim**s; four cited; three supported by cited passages; one cited ID is nonexistent. Compute support and citation presence and explain link limits.

Teacher explanation: Support=3/5=**60%**; citation presence=4/5=**80%**. Link checks reject the nonexistent ID; remaining real links still need **entailment** checks.

W5 Design a revealing follow-up

Assess independent transfer

Selected case answer

Feedback that the learner uses

MAIN LESSON · SECTION 6

Connect, adapt and return

> Retain the project evidence and revisit the reasoning on a changed case.

Project evidence to keep

Separate profile-based ranking **evidence** from factual book information and cite the latter.

Keep the decision, **input**, result, explanation and remaining limitation in the project **evidence** record. Retrieve this record next week rather than restarting the project.

Attach **source** IDs to recommender explanation facts and separately audit whether each **source** supports its precise statement.

Support while preserving the reasoning goal

Trace one record or condition at a time with counters and labelled columns. Stretch: introduce a tie, boundary or missing field and declare its handling policy before rerunning.

Provide an **input**/procedure/result/limit frame and a calculator when needed. Ask students to identify the first step before completing the whole trace.

Extension: compare two concrete variants of this **mechanism** while holding unrelated conditions fixed; report both successful and unsuccessful outcomes.

W4: Support=3/5=**60%**; citation presence=4/5=**80%**. Link checks reject the nonexistent ID; remaining real links still need **entailment** checks. Require intermediate reasoning and the stated scope.

Fresh retry: Six **claim**s, five cited, four supported; all five links real. Expected reasoning: Support 4/6=2/3; citation presence 5/6; link existence 5/5 does not verify every **claim**.

If students need support, record it and reassess with another new case rather than awarding independence to a copied answer.

Plan the delayed check

Suggested return points in this level: ai-2/30, ai-2/32, ai-2/35. Use actual classroom dates, adjusting for holidays and gaps. One, three and six teaching weeks are scheduling choices, not a **claim**ed optimal spacing.

At a delayed check, ask for the idea from memory and a changed application. Compare with the earlier **independent** response and record support used.

For a new level, revisit the previous capstone before checking the new prerequisites.

Record	Teacher evidence
Learner code and date	
Concept and case used; prior exposure	
Explanation / trace / limits	
Support and first repair	
Changed case and delayed outcome	

Record	Teacher evidence
Next teaching action	

Use the **evidence** to choose reteaching or the next step. A completed page, confidence rating or attractive project does not by itself demonstrate understanding.

Bridge to next week

Ask for one decision the learner can now justify and one situation requiring more **evidence** or human review. Confidence ratings are separate from correct **independent** performance.

Next: Week 30: Agents and Tools. Retrieve today's **evidence** and identify what carries forward and what is new.

Next is Week30: Agents and Tools. Carry forward exact source identity and **evidence** limits when checking a tool result before a later action.

REFERENCE · SECTION 7

Reference: alternative planning checklist

> Use as a reminder alongside the main route rather than teaching the cycle twice.

Preparation and schedule

Teaching target: Explain the **mechanism** and terminology of **claim** support and citation evaluation

Prepare the labelled worked-case picture, the matching workbook, fictional **input** cards and a place for individual responses. No paid AI account is required for the paper reasoning activities.

Session · Plan · Resources

> **Session:** Session 1 · Understand · 45 min
>
> **Plan:** 0–7: recall and prerequisite; 7–15: inspect the concrete case and predict; 15–30: teacher models the worked trace; 30–40: learners explain a step using the text and visual; 40–45: check the core idea.
>
> **Resources:** Use Your mission, Notice the evidence, See how it works, Compare the cases, Words that unlock the idea and Follow a worked example; record the brief recall in the workbook.

> **Session:** Session 2 · Practise · 45 min

> **Plan:** 0–5: retrieve the procedure; 5–15: W2 completion practice; 15–23: explain and check with a partner; 23–30: each learner answers the misconception check; 30–40: targeted reteaching or a harder variation; 40–45: prepare the investigation.
>
> **Resources:** Use Find and repair a mistake, Practise together, Run the investigation and Build your understanding; use the matching workbook W2 and misconception check.

> **Session:** Session 3 · Investigate and transfer · 45 min
>
> **Plan:** 0–5: retrieve the decision rule; 5–20: investigate or trace; 20–30: start the independent case; 30–38: connect the project; 38–43: act on feedback; 43–45: plan the return check.
>
> **Resources:** Use Run the investigation, Connect your project, Show what you know, Study a complete case and Try a new case independently. Allow extra time for the full task set. Use a coding lab only when this week actually provides one; Your lesson route is the planning section.

Practice and assessment reminders

Before class, solve the supported practice: An answer has four factual **claim**s. Three have citations, but only two are supported by their cited passages. All links exist.

Show the intermediate steps and give the conclusion with its scope.

Reasoned practice answer: Teacher explanation: **Claim** support is 2/4=50%; citation presence is 3/4=75%; link existence among three citations is 3/3. These measure different failures.

Check every learner before discussion: Use the worked case for **Claim** support and citation evaluation. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Misconception repair: Citation counts do not establish truth beyond the supplied **source**s or the correctness of uncited **claim**s.

Support: read the exact case aloud, enlarge the labelled picture, supply **input** cards and model only the first deciding step. Accept a spoken explanation or drawing; retain the reasoning goal.

Extension: Change the third **claim** to “the record does not assess suitability”. Require a **prediction** and a reason before comparing. Expected result: That statement accurately describes the supplied record’s limits.

Reason: R gives pages and shelf only; it contains no suitability assessment.

Independent assessment: withhold the reserved answer until the learner has attempted the new case. Record support separately from correctness.

Criterion	Not yet	With support	Independent
Explanation	Names an answer without a deciding fact	Uses a hint to link fact and decision	Explains the deciding fact in own words
Trace or test	Cannot connect input and result	Completes steps with prompts	Traces or tests a changed case accurately
Limits and revision	Claims more than evidence supports	Names a limit after a prompt	States a defensible limit and useful next test

Project checkpoint: Prepare the demonstration. Gather reproducible instructions, **evidence**, access checks and remaining limitations.

Use the weekly teacher answer for topic-specific reasoning. A saved progress tick is an activity record; judge mastery from the learner's explanation and **evidence**.

▼ **Reference: feedback and records**

REFERENCE · SECTION 8

Reference: feedback and records

> Use digital tools where they help retain an explanation and its evidence.

Keep practice and independent evidence separate

Use the two formative questions as supported practice, not as **independent** mastery scores. Discuss the deciding **evidence** rather than accepting a guessed selection.

The feedback comes from the reviewed public worked case. Do not reveal the separately reserved **independent** teacher answer until the learner has attempted that case.

Repair and portfolio records

Use the earlier worked-explanation links to address a specific missing building block, then return to the current question. Adapt this suggestion after observing the learner; it is not an automatic diagnosis.

Collect the completed-work portfolio as **evidence**. Record support separately from correctness, and assess explanation, trace/test and limitations. Progress ticks and quiz selections alone do not establish mastery.

<details>
<summary>Earlier wording, alternatives and picture transcripts</summary>

This week has no code block. Use this routine when a later lesson includes an executable lab.

Ask students to predict before running code. Preserve errors and actual **output**s; collect a changed test and an explanation. The branch-boundary and indexing lessons deliberately include failure cases.

REFERENCE · SECTION 9

Reference: teach with the six pictures

> Choose the picture for the teaching move and connect it to the explanation.

01. Evidence and Sources: the case

Follow the labelled picture with the matching explanation. Open the vector diagram

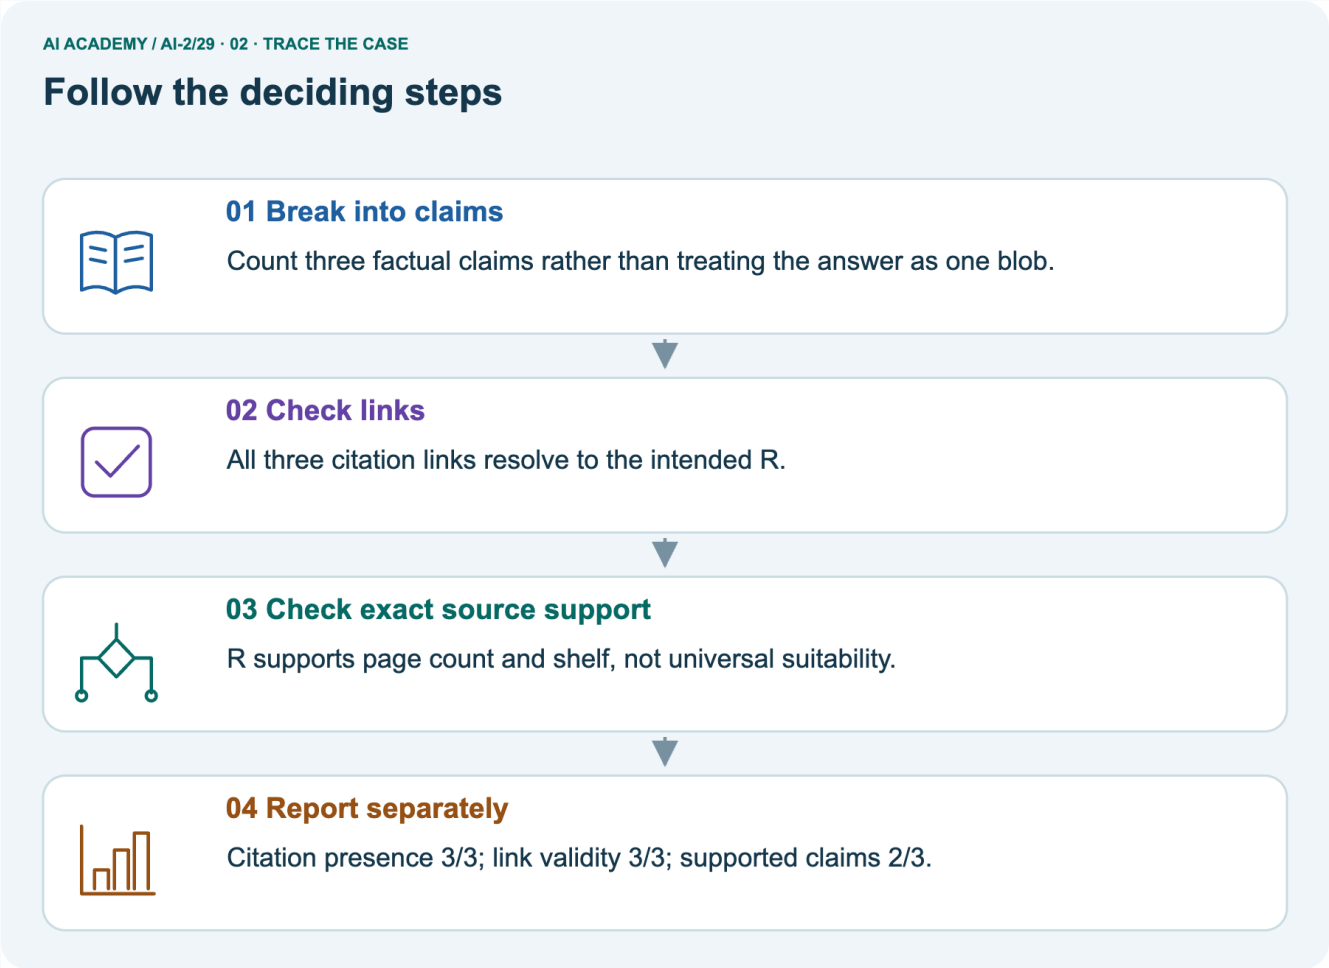

A fictional catalogue answer contains three factual statements and cites existing records.
Supplied facts: Record R: book Ocean Maps has 80 pages and is available on shelf 2.

Claims: 80 pages [R]; shelf 2 [R]; suitable for every child [R]. All three citations resolve to R.

Point to the given fact that matters most. Explain why it matters.

Teacher prompt: Point to the given fact that matters most. Explain why it matters. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

02. Follow the deciding steps

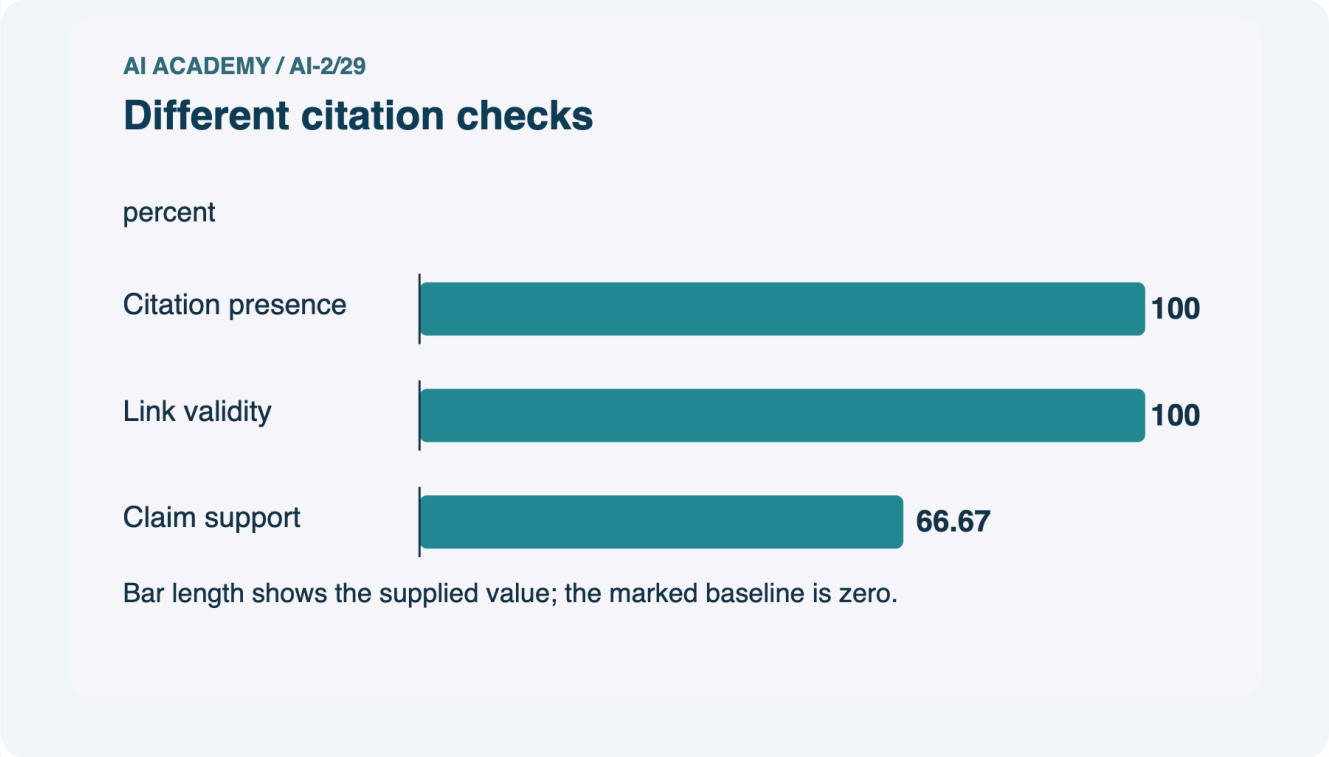

Follow the labelled picture with the matching explanation. Open the vector diagram

Break into **claim**s: Count three factual **claim**s rather than treating the answer as one blob. → Check links: All three citation links resolve to the intended R. → Check exact **source** support: R supports page count and shelf, not universal suitability. → Report separately: Citation presence 3/3; **link validity** 3/3; supported **claim**s 2/3.

Point to each numbered stage and explain which recorded **input** it uses.

Teacher prompt: Point to each numbered stage and explain which recorded **input** it uses. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

03. Different citation checks

Follow the labelled picture with the matching explanation. Open the vector diagram

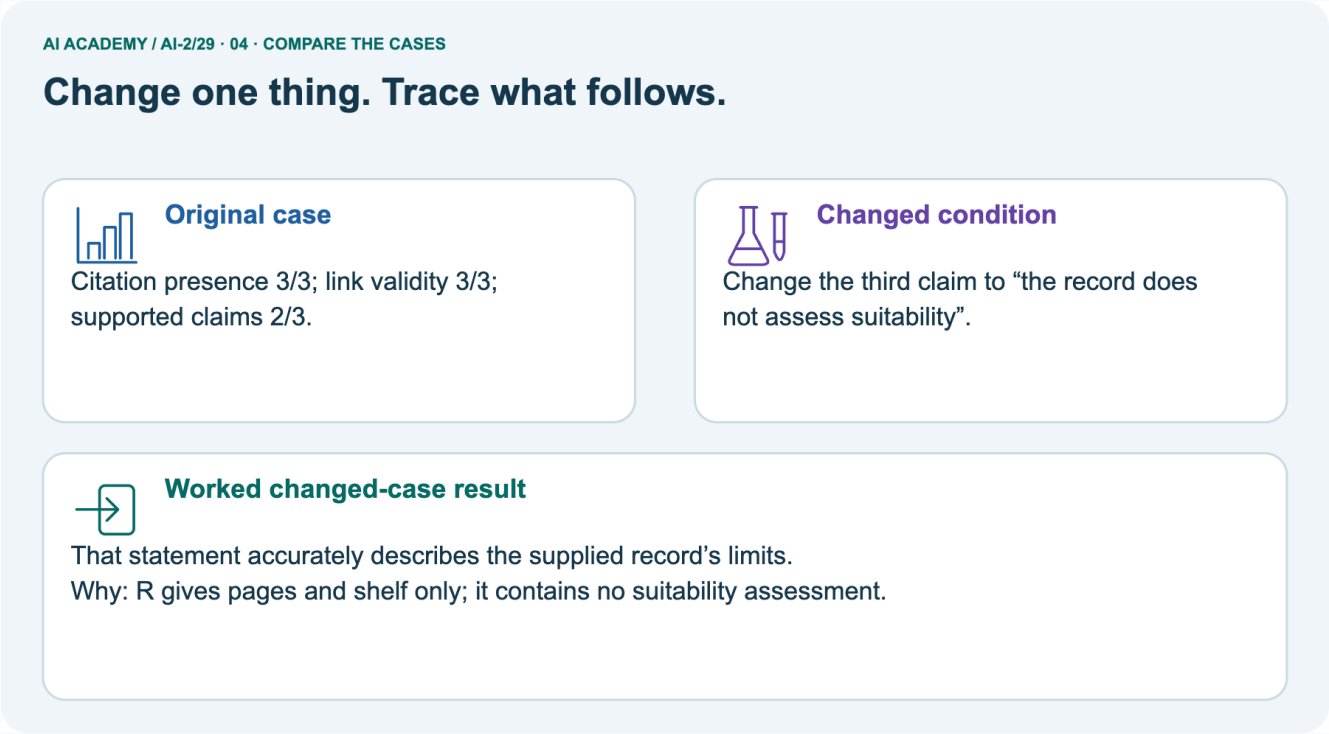

Different citation checks. Units: percent. Citation presence: 100. **Link validity**: 100. **Claim** support: 66.66666666666667.

Read the labels and values. Explain the relationship the model shows.

Teacher prompt: Read the labels and values. Explain the relationship the model shows. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

Check row/column meanings, units and denominators before discussing a difference. Supplied toy values are not real class or model results.

04. Change one thing. Trace what follows.

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Citation presence 3/3; **link validity** 3/3; supported **claim**s 2/3. Changed condition: Change the third **claim** to “the record does not assess suitability”.

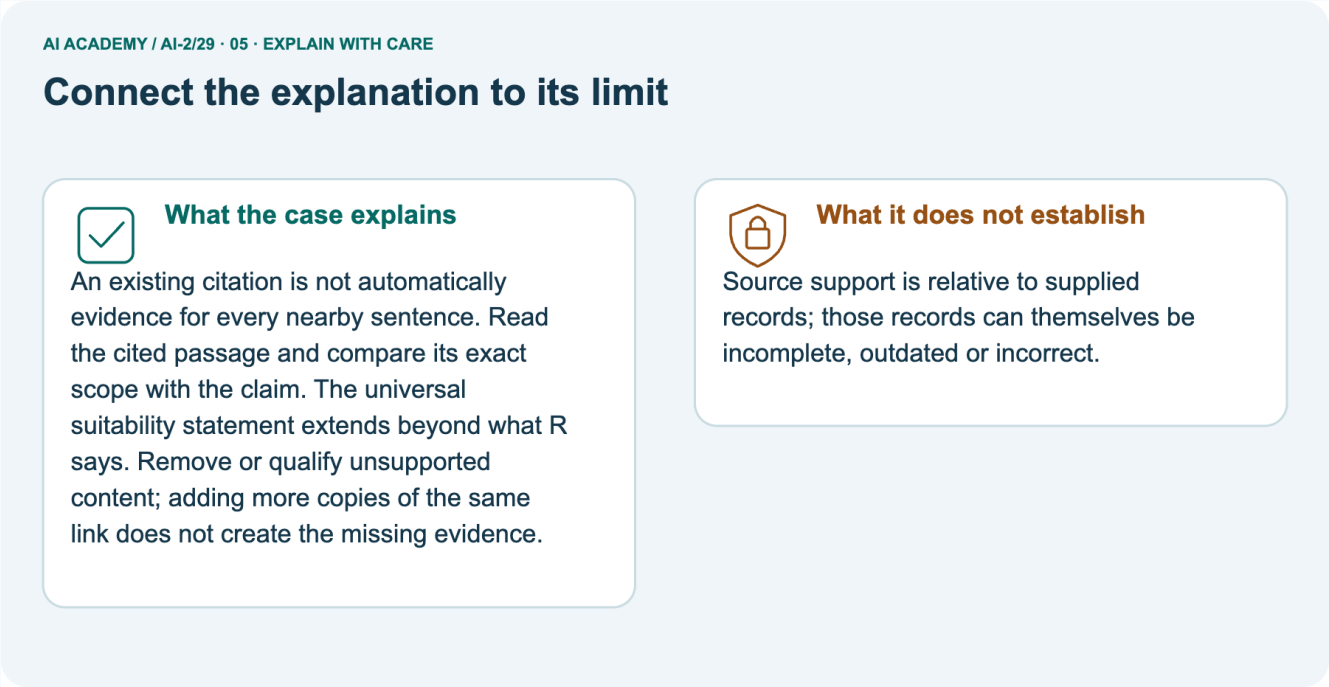

Expected result: That statement accurately describes the supplied record’s limits. Reason: R gives pages and shelf only; it contains no suitability assessment.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

Teacher prompt: Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude. Ask learners to describe one label or arrow in ordinary words.

Use the adjacent transcript if the image is difficult to see. Changed-case reasoning: R gives pages and shelf only; it contains no suitability assessment.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

An existing citation is not automatically **evidence** for every nearby sentence. Read the cited passage and compare its exact scope with the **claim**. The universal suitability statement extends beyond what R says.

Remove or qualify unsupported content; adding more copies of the same link does not create the missing **evidence**.

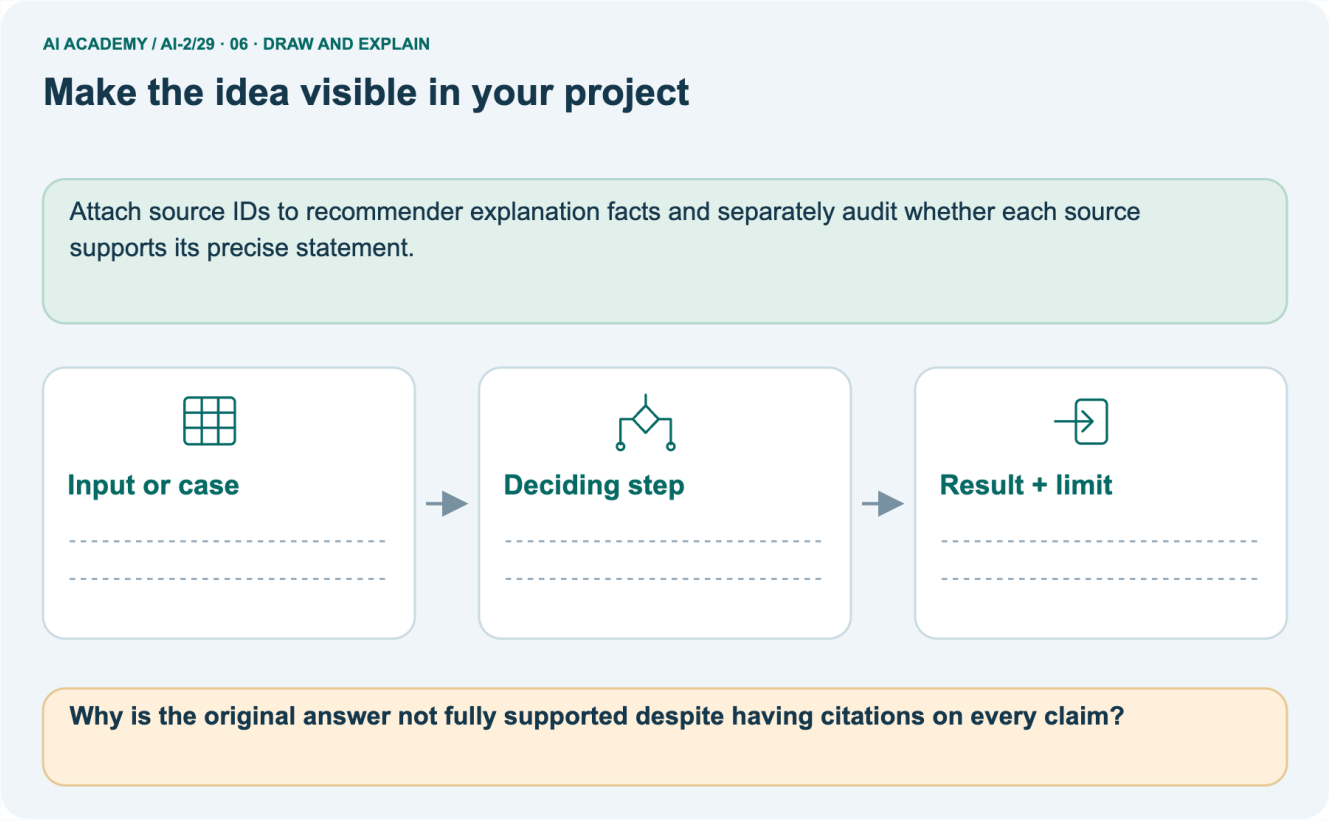

Limit: **Source** support is relative to supplied records; those records can themselves be incomplete, outdated or incorrect.

Explain the case, then point to a limit on the **claim**.

Teacher prompt: Explain the case, then point to a limit on the **claim**. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

Keep the stated scope: **Source** support is relative to supplied records; those records can themselves be incomplete, outdated or incorrect.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Attach **source** IDs to recommender explanation facts and separately audit whether each **source** supports its precise statement. Draw your **input**, deciding step, result and limit.

Supported question: Why is the original answer not fully supported despite having citations on every **claim**?

Draw your project trace and justify the deciding step using **evidence**.

Teacher prompt: Draw your project trace and justify the deciding step using **evidence**. Ask learners to describe one label or arrow in ordinary words. Use the adjacent transcript if the image is difficult to see.

Supported practice key: One of the three **claim**s is not entailed by its cited **source**; **citation coverage** and **link validity** do not measure **claim** support.

▼ Earlier wording, alternatives and picture transcripts

Use one picture at a time. Hide a worked result before asking for a **prediction**, then reveal it for feedback. These are supported teaching cases; retain the separate **independent** assessment for a fresh first attempt.

01. Evidence and Sources: the case

02. Follow the deciding steps

03. Different citation checks

04. Change one thing. Trace what follows.

05. Connect the explanation to its limit

06. Make the idea visible in your project

▼ Optional interactive practice and completed work

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
