

Human AI Workflow

Project: Verified Study Buddy

1. Your mission

Your learning target

I can explain the mechanism and terminology of human review and consequential use.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Safety Boundaries. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Copyright and Provenance. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Evaluation Sets. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the evidence shows was wrong.

Week 32: Human + AI Workflow

Allocate tasks according to strengths, accountability, and verification needs.

CREATOR MISSION

Map who drafts, checks, decides, and signs off.

Creator name and date:

Write or draw your reasoning and evidence.

Readiness for the connected explanation

Recall Representation and bias evaluation. Explain why a recorded result needs its input conditions and evidence source before it can support a claim.

This week's end goal

By the end, I can explain human ai workflow using a traced example and a stated limitation.

2. Notice the evidence

PICTURE STORY

Notice → Predict → Explain

Begin with visible evidence. Do not explain more than the picture and information support.

MYSTERY

The learners must use human + ai workflow to solve a problem. What information do they have? What decision or calculation do they make? What would count as evidence that it worked?

Three observations (what you can point to):

Write or draw your reasoning and evidence.

My prediction and the clue supporting it:

Write or draw your reasoning and evidence.

A closer explanation

Human review needs a responsible actor, evidence packet and explicit authority. Adding a person to a workflow does not guarantee effective oversight.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing. These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

3. See how it works

VISUAL MECHANISM

Input → Process → Output

Trace the information. At each stage, ask what changed and how you could test it.

↓

SYSTEM

Allocate tasks according to strengths, accountability, and verification needs.

OUT

EVIDENCE

Map who drafts, checks, decides, and signs off.

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

For this fictional workflow the assistant drafts a room request but only the coordinator can approve and submit it. Review packets include sources, uncertainty, requested action and the exact version. Any material change requires new approval.

Human review and consequential use — evidence trace

Input and scope · Check or calculation · Conclusion and limit

Input and scope: Coordinator approves draft v1 for room B. Assistant changes room to C in v2 and submits using the old approval.

Check or calculation: For this fictional workflow the assistant drafts a room request but only the coordinator can approve and submit it. Review packets include sources, uncertainty, requested action and the exact version. Any material change requires new approval.

Conclusion and limit: The submission violates version-bound approval. Preserve v1 approval, request review of v2 and prevent submission until its exact action is approved.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same inputs. If a required input is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the input, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

4. Compare the cases

CASE GALLERY

Four Tests, Four Kinds of Evidence

A system is not understood until it survives more than one comfortable example.

NORMAL
Expected learner request

AMBIGUOUS
Two plausible meanings

NORMAL CASE: predict and name evidence. BOUNDARY CASE: predict and name evidence.

MISSING SOURCE

Evidence unavailable

ADVERSARIAL

Rules or trust challenged

MISSING INFORMATION: predict and name evidence. TRANSFER CASE: predict and name evidence.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change: H2 is replaced with unchanged H1 for classroom printing.

Prediction: The original approval covers that declared action.

Reason: Both the approved content and its distribution scope now match.

5. Words that unlock the idea

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

2

ACCOUNTABILITY

who owns the consequence

3

VERIFICATION

independent check of
important output

4

SIGN-OFF

authorized final approval

Word · My own example · Not this / boundary

Word: workflow

My own example: An organised sequence of tasks, reviews and handoffs used to complete work.

Not this / boundary: _____

Word: accountability

My own example: Responsibility for explaining decisions, checking outcomes and addressing mistakes.

Not this / boundary: _____

Word: verification

My own example: Checking a claim or result against an appropriate independent source, calculation or observation.

Not this / boundary: _____

Word: sign-off

My own example: Explicit recorded approval that specified work meets the required review conditions.

Not this / boundary: _____

Words used in the closer explanation

Word · Meaning

Word: Review packet

Meaning: Evidence and proposed action supplied to a reviewer

Word: Version-bound approval

Meaning: Permission tied to an exact proposal version

Word: Escalation

Meaning: Routing a decision to an authorised responsible person

6. Follow a worked example

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete evidence.

WEEK 32 • WORKED EVIDENCE

- 1 AI drafts questions from approved notes.
- 2 Learner checks clarity; retrieval evidence supports claims.
- 3 Teacher decides whether material is appropriate.
- 4 Product records who verified and approved without shifting accountability to AI.

1. AI drafts questions from approved notes.
2. Learner checks clarity; retrieval evidence supports claims.
3. Teacher decides whether material is appropriate.

4. Product records who verified and approved without shifting accountability to AI.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the evidence answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

Coordinator approves draft v1 for room B. Assistant changes room to C in v2 and submits using the old approval.

The submission violates version-bound approval. Preserve v1 approval, request review of v2 and prevent submission until its exact action is approved.

Compare the intermediate evidence with the final statement. Explain why each number or decision follows from the stated inputs. The conclusion belongs to this scenario and procedure; changing the inputs, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Human AI Workflow

A human approval belongs to the exact draft and action reviewed.

The facts we will use

A teacher approves study handout H1 for classroom printing. H2 adds a pupil email address and proposes public posting. No H2 approval exists.

All inputs and outcomes in this worked example are invented classroom data; no real model run is claimed.

Human AI Workflow

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Identify approval

The recorded approval covers H1 and classroom printing.

2. Inspect change

H2 changes both content and distribution scope.

3. Require review

Stop public posting and show H2's changed content and intended audience to the reviewer.

CHANGE ONE THING

H2 is replaced with unchanged H1 for classroom printing.

Explain the changed result using the matching lesson.

Read the picture one step at a time

Step · What happens and why

Step: 1. Identify approval

What happens and why: The recorded approval covers H1 and classroom printing.

Step: 2. Inspect change

What happens and why: H2 changes both content and distribution scope.

Step: 3. Require review

What happens and why: Stop public posting and show H2's changed content and intended audience to the reviewer.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Read the picture in order. Stop public posting and show H2's changed content and intended audience to the reviewer. The arrows show which recorded input or intermediate result each decision uses. Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

What this example does not establish

Human review helps only when the reviewer sees the material changes, evidence and actual consequences.

7. Find and repair a mistake

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak evidence.

COMPARE • DIAGNOSE

Weak idea: Human review means clicking approve without checking evidence.
Strong move: inspect the claim, source, stage, schema, or test evidence; repair one cause; rerun.

Evidence record · Expected · Actual · Likely cause / next test

Evidence record: normal case

Expected: works

Actual: _____

Likely cause / next test: _____

Evidence record: boundary case

Expected: stated rule

Actual: _____

Likely cause / next test: _____

Evidence record: missing input

Expected: safe response

Actual: _____

Likely cause / next test: _____

Evidence record: fresh transfer

Expected: generalizes

Actual: _____

Likely cause / next test: _____

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer. For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

8. Practise together

LOGIC STUDIO

Specify Before You Run

Prompts, schemas, retrieval, tool calls, and code are inspectable parts of one AI product.

SPECIFY THE SYSTEM

Define task, trusted context, constraints, schema, tools, checks, fallback, and stopping rule before trusting output.

SET task, audience, constraints, output_schema LOAD approved_context or retrieval_result CALL model or allowed_tool VALIDATE fields, claims, citations, and safety IF evidence missing: ask, retrieve, or abstain RETURN useful output + source trail + limitations

Trace one input. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

Review effectiveness depends on usable evidence, time and authority; a checkbox is not evidence of informed review.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself. The first may require a correction; the second requires an explicitly revised method and new evidence. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Practise with less help: Trace the worked case

Use workbook W2 for the connected example “Human review and consequential use”. First fill the input and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan · Do · Check

Plan: What is given? Which rule or procedure applies?

Do: Record each intermediate step.

Check: Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Human review and consequential use. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Why can H1’s approval not automatically approve H2? Point to the relevant step in the picture, then write the changed result and the rule or evidence that supports it.

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

9. Run the investigation

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

PREDICT → RUN → VERIFY → EXPLAIN

Allocate tasks on a workflow map, justify each owner, simulate a failed tool or unsupported claim, and verify the stop/escalation path.

Allocate tasks on a workflow map, justify each owner, simulate a failed tool or unsupported claim, and verify the stop/escalation path.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

Test / input: normal

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: boundary

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: missing

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: fresh transfer

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

10. Build your understanding

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce evidence without copying the worked example.

CREATOR MASTERY
1 Define • 2 Trace • 3 Build • 4 Evaluate • 5 Verify • 6 Defend limits

- 1 • NAME: Define the concept without repeating the textbook.
- 2 • TRACE: Show the information, state, branch, calculation, or evidence path.
- 3 • APPLY: Solve a different example independently.
- 4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.
- 5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest evidence of independent understanding:

Write or draw your reasoning and evidence.

11. Connect your project

CUMULATIVE PROJECT

Verified Study Buddy

Every week adds one inspectable piece. The system must show how it reached a result.

VERIFIED STUDY BUDDY

AI drafts; sources ground; validators check; learner chooses; teacher governs classroom use.

THIS WEEK’S CHECKPOINT AI drafts; sources ground; validators check; learner chooses; teacher governs classroom use.

SYSTEM MAP Learner need → prompt/schema → approved sources/retrieval → model/tool → structured answer → verification → human decision

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under human control?

Write or draw your reasoning and evidence.

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse fluent output with verified truth.

Evidence for your project

For your Verified Study Buddy, save the input, procedure, observed result and limitation of this check. Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding.

12. Show what you know

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

INDEPENDENT CREATOR PROOF

Map who drafts, checks, decides, and signs off.

CHALLENGE Map who drafts, checks, decides, and signs off.

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My evidence that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One limitation, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

SELF-CHECK ☐ I explained the mechanism ☐ I used evidence ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

13. Study a complete case

Week 32 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

An AI drafts, verifies and submits a student's assessment without review.

The question

Where should responsibility remain?

Worked explanation

The student reviews, verifies, follows class rules and remains responsible. Submission requires authorisation and must not bypass learning.

Explain it in your own words

Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Keep the learner responsible

Evidence or stage · Value or result

Evidence or stage: Task

Value or result: Student defines permitted help

Evidence or stage: Draft

Value or result: Assistant provides support

Evidence or stage: Review

Value or result: Student verifies and follows class rules

Evidence or stage: Submit

Value or result: Student authorises final work

An AI drafts, verifies and submits a student's assessment without review.

Where should responsibility remain?

The student reviews, verifies, follows class rules and remains responsible. Submission requires authorisation and must not bypass learning.

14. Try a new case independently

Independent case: Apply a new case independently

Teacher approves read-only report R1. System adds email distribution in R2. What permission is missing and what should the reviewer see?

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 32 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

A workflow drafts a class email, checks its claims and then sends it. Where should approval occur, and what should the approver see?

My answer, with a trace, calculation or supporting evidence

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed input and expected result

Write or draw your reasoning and evidence.

Connect to your project

AI drafts; sources ground; validators check; learner chooses; teacher governs classroom use.

The evidence I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice evidence together.

Transfer practice from the original programme

A student asks a helper to submit an unchecked generated essay under their name. Design a workflow that preserves student reasoning and follows classroom rules.

Explain the mechanism, evidence and one limit.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed. A later check uses a changed case, not a copied answer.
