

Humans Set Boundaries

Project: Helpful Classroom Sorter

1. Humans Set Boundaries

Teach the learning cycle

Primary target: Distinguish a system's capability, the correctness of its output and permission to take an action

Session · Sequence and minutes · Resources

Session: Session 1 · Understand · 45 min

Sequence and minutes: 0–7: recall and prerequisite; 7–15: inspect the concrete case and predict; 15–30: teacher models the worked trace; 30–40: learners explain a step using the text and visual; 40–45: check the core idea.

Resources: Sections 1–6; record the brief recall in the workbook.

Session: Session 2 · Practise · 45 min

Sequence and minutes: 0–5: retrieve the procedure; 5–15: W2 completion practice; 15–23: explain and check with a partner; 23–30: each learner answers the misconception check; 30–40: targeted reteaching or a harder variation; 40–45: prepare the investigation.

Resources: Sections 7–10; use the matching workbook W2 and misconception check.

Session: Session 3 · Investigate and transfer · 45 min

Sequence and minutes: 0–5: retrieve the decision rule; 5–20: investigate or trace; 20–30: start the independent case; 30–38: connect the project; 38–43: act on feedback; 43–45: plan the return check.

Resources: Sections 9 and 11–14. Give extra time to finish the full task set; use Section 15 when the week includes a coding lab.

This is a starting allocation of 135 minutes, not a validated duration. Preserve all named topics. Schedule extra time for connected examples, the full investigation, independent cases and project building.

Repeated copies of a case share one recorded attempt; they are not new evidence.

Retrieval answer guidance

Verify Important Outputs

Without opening the old lesson, explain one key idea from Verify Important Outputs. Give an example and a mistake that the idea helps you avoid.

Look for: Separate an answer into claims and connect each claim to relevant evidence

Reference example, not the only acceptable wording: A directly stated fact is four rolls, 2 m per roll or twelve 50 cm pieces. A derived quantity is 8 m starting length, 6 m used or 2 m remaining, supported by the relevant calculation from R. R contains no enjoyment evidence, so citing it does not support everyone enjoying the activity.

Generate, Retrieve, or Calculate?

Without opening the old lesson, explain one key idea from Generate, Retrieve, or Calculate?. Give an example and a mistake that the idea helps you avoid.

Look for: Distinguish retrieving a record, calculating from inputs and generating wording

Reference example, not the only acceptable wording: Room: retrieval, checked against the right source N2 and event. Remaining places: calculation, checked as $6 \times 4 - 3 = 21$ with correct inputs. Title: generation, checked for the requested style and unsupported factual details. An application can combine them; the labels describe operations rather than exclusive types of application.

Missing and Unbalanced Examples

Without opening the old lesson, explain one key idea from Missing and Unbalanced Examples. Give an example and a mistake that the idea helps you avoid.

Look for: Name the target collection, selection list and cases actually assessed

Reference example, not the only acceptable wording: The target is all 24 specified cards across four conditions. The sample is the 6 bright-circle cards. Dim circles, bright squares and dim squares are absent. A frame containing only bright-circle IDs excludes every other condition, regardless of how randomly IDs are drawn from it.

Use the student module and workbook section with this exact week title. The worked case, independent question and answers below form one aligned lesson sequence.

What the learner must demonstrate

A classroom assistant may draft a reminder but cannot send messages. It displays a completed draft and waits. A student writes 'looks good' without a destination. Has a clear send authorisation been given? Specify what is needed.

Concept to explain

People decide goals, permissions, review points, and consequences.

Term · Meaning

Term: boundary

Meaning: limit on what a system may do

Term: permission

Meaning: authorized access or action

Term: review gate

Meaning: point requiring human approval

Term: consequence

Meaning: result experienced after a decision

Prepare the class

Use the supplied scenario, student illustrations and blank paper. For numeric work, offer counters or a calculator after learners show the setup. Fictional records are supplied; personal data and paid accounts are unnecessary.

Allow 80 minutes: recall 8; explanation 12; worked demonstration 15; guided practice 20; independent assessment 15; project and reflection 10. Extend the lab into a second session when needed.

Preparation for the connected explanation

Use the explicit rules of these fictional classroom and library scenarios. Keep capability, factual support and authority distinct. Learners should proceed within an existing clear permission and pause only when the proposed action is outside it or a necessary condition is unresolved. All publication and replacement actions are represented on paper.

Readiness answer

No. The checks establish factual support, not who may publish the announcement, where, or which version has been approved.

Paper cards labelled A, B, L2 and L3

Destination cards for class board, public website, internal list and public catalogue

The two fictional approval statements printed from the lesson and W4

End goal for the pictorial case

By the end, I can match permission to a specific action, object and version.

This added worked case illustrates the week's main idea. Retain all original and connected topics; schedule its practice within the teaching cycle.

2. Explain the mechanism

Explain the mechanism

Follow the information instead of imagining magic inside the machine.

INPUT human-defined goal, permissions, and system output

PROCESS apply review and escalation gates

OUTPUT approved action, revision, or refusal

CORE IDEA People decide goals, permissions, review points, and consequences.

UNDER THE HOOD Governance surrounds the model: people define scope, access, thresholds, logging, escalation, and accountability. Human oversight is meaningful only when reviewers have authority, information, time, and a safe way to override.

Draw a fresh example with all three stages:

Every step connects a claim to observable evidence.

CASE A classroom helper may suggest a bin, but people decide what data it may use, when an adult reviews, and what happens after a mistake.

STEP 1 — OBSERVE human-defined goal, permissions, and system output

STEP 2 — TRACE apply review and escalation gates

STEP 3 — CONCLUDE approved action, revision, or refusal

MODEL REASONING Mark where data enters, where the system predicts, where a person reviews, and who may act. Give reviewers the evidence and power to correct or stop the process. High-consequence cases should not pass automatically.

DO NOT OVERCLAIM A human in the room is not meaningful oversight if the person cannot understand or change the outcome.

What new evidence could change this answer?

Concrete teaching case

An assistant may suggest object locations; a teacher must approve moving valuable equipment.

What may happen without approval?

Exact explanation to model

It may suggest a location within its role. Moving equipment requires actual teacher approval.

Explain the added worked example

A tool might be able to publish a message even when its user is only allowed to prepare a draft. A message might also contain correct facts but still be intended for a private group. Ask three separate questions: can the system do this, is the proposed result correct, and is this particular action allowed? Evidence for one question does not automatically answer the others.

Use this fictional paper exercise. A class is preparing an announcement about a model bridge exhibition. Version A says “Model bridge exhibition, Thursday, Room 6.” The teacher has checked those facts and is responsible for the class noticeboard. The teacher tells the class editor: “You may put exactly version A on our classroom noticeboard today, once. Do not post it online.” The editor has not yet posted it.

In the story, the editor’s tool has buttons for Save draft, Class noticeboard and Public website. Having a button shows a possible capability. It does not change the teacher’s stated permission. In this lesson, represent actions with paper cards; do not send messages or change a real noticeboard or website.

An approval record should identify the decision maker, the person or system allowed to act, the action, its audience or destination, and any version, time or quantity limit. These details make a permission usable. “Looks good” could mean the wording is clear; without context it may not mean “publish this publicly”. If the intended action is unclear, clarify that action with the person responsible.

Here, the teacher has already approved the editor’s one posting of A on the class board today. Once the editor verifies that these conditions still hold, repeatedly requesting the same permission adds no new information. But a classmate saying “Post it everywhere” does not expand the teacher’s approval: the classmate has no authority over publication in this story.

Key terms

Term · Meaning

Term: Capability

Meaning: What a person or system is able to do

Term: Authority

Meaning: Responsibility and power to make a specified decision

Term: Permission

Meaning: An allowed action within stated limits

Term: Scope

Meaning: The boundaries of what a permission covers

Term: Approval record

Meaning: A note of who approved which action and under what conditions

Model the reasoning aloud

Use the complete worked example below before asking learners to complete W2. Reveal a small part, invite a prediction, then explain the deciding step. These teacher notes contain solutions; do not reveal the independent case answer during modelling.

Factual support · Do Thursday and Room 6 match the source? · Permission to publish anywhere

Factual support: Scope of approval

Do Thursday and Room 6 match the source?: Does this action match the teacher's limits?

Permission to publish anywhere: That every statement is correct

Factual support: Available capability

Do Thursday and Room 6 match the source?: Does the tool offer this action?

Permission to publish anywhere: Authority to use that action

Suppose a current room record changes the exhibition to Room 8. The editor makes version B with Room 8, which is now factually supported. The old approval explicitly covered exactly A. The editor should hold publication and show B and the changed room record to the teacher. Publishing the now-outdated A just because it was approved would fail the factual check.

A useful review request makes the choice concrete: "The room record now says Room 8. Here is version B with only that change. May the editor post B on the classroom board today, once?" A request to review a specific change is easier to assess than an unexplained "Is this okay?" The teacher can approve, decline or request another change before anything is posted.

Thinking move · Teacher prompt

Thinking move: Plan

Teacher prompt: What is given? What is the question? Which procedure fits these facts?

Thinking move: Do

Teacher prompt: Point to each input and intermediate step in the worked trace. Name the rule that allows the next step.

Thinking move: Check

Teacher prompt: Does the output answer the question? Which assumption or limitation prevents a larger claim?

Use the diagram and verbal explanation together. Ask learners to match a sentence to a specific visual step; do not assign learners fixed visual or auditory learning styles.

A pictorial worked case: Humans Set Boundaries

A fictional teacher approves one checked classroom poster for internal display.

The facts we will use

Approval: publish exactly poster P2 on the classroom noticeboard today, once.

Assistant proposes P2 there; P3 there after an edit; P2 on a public website.

Humans Set Boundaries

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Read authority

The teacher approved P2, one internal noticeboard and one publication.

2. Allowed action

Publishing unchanged P2 there today matches the approval.

3. Changed version

P3 requires new review; P2 approval does not automatically cover edits.

4. Changed audience

Public-web publication exceeds the approved destination.

CHANGE ONE THING

P2 has already been published once under this approval.

Explain the changed result using the matching lesson.

Read the picture one step at a time

Step · What happens and why

Step: 1. Read authority

What happens and why: The teacher approved P2, one internal noticeboard and one publication.

Step: 2. Allowed action

What happens and why: Publishing unchanged P2 there today matches the approval.

Step: 3. Changed version

What happens and why: P3 requires new review; P2 approval does not automatically cover edits.

Step: 4. Changed audience

What happens and why: Public-web publication exceeds the approved destination.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

A general intention to help the class does not grant every action that might help. Check the version, destination and time explicitly. An edit may improve accuracy while still changing the approved artifact. The assistant should hold the changed poster for review rather than treating its own confidence as permission.

What this example does not establish

Permission does not prove content accuracy; factual checks and action authority are separate requirements.

Change one thing in the pictured case

Change: P2 has already been published once under this approval.

Prediction: A second publication is not covered.

Reason: The instruction allowed a single use, not repeated actions.

Ask while showing the picture

Cover the result. Ask learners to name the inputs and predict the next step. Uncover one step, connect the icon to the actual procedure, and explain its evidence. Then change the supplied condition and compare. The picture is a representation; it does not document execution of a real AI model.

3. Demonstrate and guide practice

Demonstrate and guide practice

Board sequence

Write the given facts: An assistant may suggest object locations; a teacher must approve moving valuable equipment.

Write the question to explain: What may happen without approval?

Reveal after predictions: It may suggest a location within its role. Moving equipment requires actual

teacher approval.

Keep for an independent attempt: A sorter marks a child's notebook throw away. Who should decide whether it is discarded? Name a boundary the system should enforce.

Classroom dialogue

Ask: Which facts are given, and which would we have to assume? Learners mark relevant details before discussing answers.

Say: Predict first. Show the rule, information path or calculation that would produce the result. A correct guess is not yet an explanation.

Reveal reasoning one step at a time. Explain why a tempting alternative fails. Write units and denominators for arithmetic, trace conditions for decisions, and identify supporting sources for claims.

In pairs, one learner solves while the other checks evidence; exchange roles. Remove the worked answer before independent assessment.

Model these guided questions

The editor's first unchanged A posting on the class board today is allowed. Public posting is excluded. A classmate is not the allowed editor. A second posting exceeds once. Correct facts do not expand actor, audience or quantity limits. Exit: no identical approval is needed again if B remains checked, the actor and destination match, it is still today and the one replacement remains unused. Public posting, a different version, actor or extra replacement is not covered.

Case-specific teaching sequence

Stage · Teacher action

Stage: Session 1 start 0 to 7 minutes

Teacher action: Retrieve why a factual check does not establish publication permission.

Stage: 7 to 20 minutes

Teacher action: Read the exhibition scenario and identify capability, correctness and authority. Complete W1.

Stage: 20 to 33 minutes

Teacher action: Trace the permission diagram and record all six limits in W2.

Stage: 33 to 45 minutes

Teacher action: Introduce the changed room, complete W3 and write a concrete review request.

Stage: Session 2 start 0 to 8 minutes

Teacher action: Retrieve when an unchanged permission is sufficient.

Stage: 8 to 23 minutes

Teacher action: Complete the guided decisions using paper action cards and the actual approval record.

Stage: 23 to 38 minutes

Teacher action: Collect W4 independently; require a decision and the relevant limit for every proposal.

Stage: 38 to 45 minutes

Teacher action: Complete W5 and the exit check; distinguish a prepared action from a confirmed result.

Reduce help deliberately

Completion task: List the decision maker, allowed actor, version, destination, timing and number of postings in the original exhibition approval. Before any posting and with no changes to the facts or permission, explain whether the editor can carry out that exact action without asking again.

Teacher check: Teacher; class editor; exactly A; classroom noticeboard; today; once. Yes, after confirming those conditions still hold and the one posting has not been used. The explicit unchanged permission already covers the action.

Start by identifying the given inputs together. Leave the intermediate steps blank. If needed, model one step, then withdraw that help on the next step. Move to a full trace only when the partial trace is understood. For partners, alternate explainer and checker; collect a response from every learner before discussion.

Individual reasoning check

Use the worked case for Human authority and permission. Proposed explanation: "A working button grants permission". Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

Expected correction: Capability does not establish who may use it or for what purpose.

Collect explanations, not only yes/no votes. If a misunderstanding is common, re-model the relevant step for the class. If it affects a few learners, give a short targeted group explanation while others solve a more demanding variation.

Pictorial practice question

Which original proposal is authorised? Why do the other two need separate approval?

Reasoned teacher answer

Only unchanged P2 on the specified noticeboard today, once. P3 changes version; public posting changes audience.

Changed-case reasoning: A second publication is not covered. The instruction allowed a single use, not repeated actions.

Collect each learner's explanation before discussion. Use the first missing connection between input, deciding step and result to choose support. This question is worked-case practice, not fresh mastery evidence.

4. Run the weekly evidence lab

Run the weekly evidence lab

Predict first, test honestly, and explain what the evidence means.

State your prediction before the result is known.

Complete the task: Add adult-review gates to a classroom helper.

Keep a normal case and an edge case clearly separated.

Record what happened—even when it does not match your prediction.

Explain the result, one limitation, and the next useful test.

INDEPENDENCE After support is removed, repeat the proof with a fresh case.

Make the lab runnable

Use the concrete case as the shared normal case and the independent question as a second case. Each pair creates a boundary or missing-information case and predicts its result before testing. Keep the expected result separate from an observed mistake.

Record · What to capture

Record: Input or evidence

What to capture: Exact data, instruction or claim

Record: Expected result

What to capture: Answer or safe fallback declared before the run

Record: Observed result

What to capture: Actual result, including errors

Record: Explanation

What to capture: Rule, calculation or evidence explaining the outcome

Record: Next test

What to capture: One justified change and a new prediction

Diagnose and reteach

CLAIM TO REPAIR Giving a system a task transfers all responsibility to it.

For guessing, return to given facts and request a trace. For vocabulary without application, use one example and one non-example. For arithmetic errors, check the setup before the calculation. Finish with a different uncoached case before recording mastery.

Address these additional misconceptions

A working button grants permission: Capability does not establish who may use it or for what purpose.

A correct answer can always be published: Check the approved actor, action and audience as well as accuracy.

Always ask again even when nothing changed: Use an explicit, still-valid permission within its stated limits.

The draft can announce its own approval: Read the actual decision maker's approval record.

Match the support to the first error

What the response shows · Next teaching action

What the response shows: Missing or misread facts

Next teaching action: Read the case aloud, mark supplied versus unknown facts, and let the learner restate it.

What the response shows: Wrong procedure

Next teaching action: Return to the deciding step in the worked case. Contrast it with the proposed

incorrect explanation.

What the response shows: Arithmetic or implementation error

Next teaching action: Trace intermediate values or lines; preserve the first mismatch and retry that step.

What the response shows: Correct result without a reason

Next teaching action: Ask for a trace and a changed case before marking independent understanding.

What the response shows: An unsupported wider claim

Next teaching action: Ask which supplied evidence supports the claim and which further observation would be needed.

Offer an oral explanation, drawing, enlarged visual or fewer examples when that removes a reading/writing barrier. Keep the same reasoning goal. Stretch secure learners by changing a boundary or assumption and asking them to defend the effect, not simply by assigning more of the same questions.

5. Assess and explain the answers

Assess and explain the answers

Worked case answer

It may suggest a location within its role. Moving equipment requires actual teacher approval.

Independent question

A sorter marks a child's notebook throw away. Who should decide whether it is discarded? Name a boundary the system should enforce.

Expected independent answer

A responsible person must review before discarding it. The sorter may suggest a category but should not destroy belongings automatically.

What counts as evidence

Criterion · 0 points · 1 point · 2 points

Criterion: Result

0 points: Incorrect or absent

1 point: Partly correct

2 points: Correct with necessary conditions

Criterion: Reasoning

0 points: No supporting trace

1 point: Some steps

2 points: Clear mechanism, calculation or source support

Criterion: Limit

0 points: Overclaims certainty

1 point: Vague limitation

2 points: Relevant uncertainty or missing fact

Criterion: Transfer

0 points: Copies without adapting

1 point: Adapts with prompts

2 points: Solves a changed case independently

Use 6/8 as a classroom checkpoint, with 2 required for both Result and Reasoning. This is a proposed teaching rule, not a validated certification threshold. Do not count a coached answer as independent mastery; correct unsafe or unsupported claims regardless of total.

Feedback

Ask the learner to find the evidence that challenges this claim: “Giving a system a task transfers all responsibility to it.” Keep the first attempt and an uncoached retry separate.

Original transfer answer

No clear send authorisation is established, and the assistant's current permission excludes sending. A teacher must explicitly authorise the send action, content and destination through an allowed workflow. Until then the draft remains a draft; a timeout is not permission.

Explanations for the additional workbook examples

W1 Separate three kinds of evidence

A tool offers a Public website button. The exhibition facts in A have been verified. The teacher's approval covers the classroom board only. State what the button, the fact check and the approval each establish. Decide whether the editor may publish A publicly.

The button establishes a capability. The fact check establishes factual support for A at that time. The approval permits the specified classroom-board action within its limits. Public posting is outside that permission even though the button exists and A is factually checked.

W2 Read an approval without enlarging it

List the decision maker, allowed actor, version, destination, timing and number of postings in the original exhibition approval. Before any posting and with no changes to the facts or permission, explain whether the editor can carry out that exact action without asking again.

Teacher; class editor; exactly A; classroom noticeboard; today; once. Yes, after confirming those conditions still hold and the one posting has not been used. The explicit unchanged permission already covers the action.

W3 Prepare a reviewable change

The room changes to Room 8 and the editor creates B. Explain why publishing old A and publishing unapproved B each fail a different check. Write a specific request for the teacher to review B, keeping the original destination and one-posting limit.

A now fails factual support because the room has changed. B has the supported room but is outside the exact-A approval. Show B and the updated source; ask whether the editor may post B on the classroom board today once. Do not infer public permission or approval from B's correctness.

W4 Transfer the permission check to a new case

In a fictional library, the librarian controls the internal shelf list. The librarian tells assistant Jo: "Replace the internal list with checked version L2 on Friday, once. Do not change the public catalogue." It is Friday, L2 remains checked, and no replacement has occurred. A tool offers both destinations. Assess these proposals separately: Jo replaces the internal list with L2; Jo updates the public catalogue with L2; visitor Sam replaces the internal list with L2; Jo replaces the internal list with a changed L3. Identify the approval detail that settles each case.

Jo using L2 internally on Friday once is within scope and needs no duplicate approval. The public catalogue is explicitly excluded. Sam is not the approved actor. L3 is not the approved version. These last three actions are not covered; hold them and refer any proposed change to the librarian rather than treating available buttons or correct text as permission.

W5 Avoid an accidental second action

Jo attempts the permitted internal replacement, but the tool's response does not show whether it succeeded. Explain why immediately repeating it is a poor choice under a once-only approval. What

should Jo check? If Jo discovers a public change occurred instead, describe the first recovery steps.

A repeat might perform the limited action a second time. Inspect the internal list or its change record, or have the librarian confirm the outcome, before retrying. If the public catalogue changed, stop further changes, tell the librarian what happened and follow their directions for correction. Do not claim that reversal proves nobody saw the public change.

Assess independent transfer

Selected case: In a fictional library, the librarian controls the internal shelf list. The librarian tells assistant Jo: “Replace the internal list with checked version L2 on Friday, once. Do not change the public catalogue.” It is Friday, L2 remains checked, and no replacement has occurred. A tool offers both destinations. Assess these proposals separately: Jo replaces the internal list with L2; Jo updates the public catalogue with L2; visitor Sam replaces the internal list with L2; Jo replaces the internal list with a changed L3. Identify the approval detail that settles each case.

Selected case answer

Jo using L2 internally on Friday once is within scope and needs no duplicate approval. The public catalogue is explicitly excluded. Sam is not the approved actor. L3 is not the approved version. These last three actions are not covered; hold them and refer any proposed change to the librarian rather than treating available buttons or correct text as permission.

Dimension · Evidence required

Dimension: Explanation

Evidence required: Names the applicable idea or procedure and ties it to the supplied facts.

Dimension: Trace and result

Evidence required: Preserves the given inputs and shows the relevant intermediate steps; distinguishes a prediction from an observed execution.

Dimension: Limits

Evidence required: States the assumptions, missing evidence or conditions under which the result would change.

Record each dimension as not yet, with support, or independent. Accept a valid alternative procedure with a defensible trace. Do not penalise an honestly recorded model failure if the learner correctly explains its evidence and limits.

Feedback that the learner uses

Name the earliest unsupported step and give one action to repair it. Have the learner make that repair now and explain why. Then assess the relevant skill on a fresh, fully specified case. Confirm it was not previously practised with feedback; solve and check the new case before assigning it. A follow-up design prompt is a starting brief, not automatically an equivalent test.

6. Connect and extend learning

Connect and extend learning

Helpful Classroom Sorter

Complete the sorter's human-control map: permissions, review triggers, override, correction, and stop conditions.

Keep the decision, input, result, explanation and remaining limitation in the project evidence record. Retrieve this record next week rather than restarting the project.

Support and stretch

Use physical cards, spoken explanations and a three-stage drawing. Read aloud without giving the answer. Stretch: compare two mechanisms with the same visible output and explain what evidence distinguishes them.

Exit reflection

Ask for one decision the learner can now justify and one situation requiring more evidence or human review. Confidence ratings are separate from correct independent performance.

Bridge to the next week

Next: Week 29: Find a Real Problem. Retrieve today's evidence and identify what carries forward and what is new.

Support and fresh reassessment

Provide a frame with Who approved, Who acts, What version, Where, When and How many. Keep the permission card visible while sorting proposals. Extension: explain how an approval allowing a defined range of edits differs from an approval for one exact version, and give an edit inside and outside that range.

W4 requires one allowed action and three uncovered actions, justified by destination, actor and version respectively. After support, give a new approval explicitly allowing Jo to replace either the internal list or the public catalogue with L2 on Friday, once total. Ask whether a first public replacement is covered and whether a subsequent internal replacement is covered. Expected: first yes, subsequent no because the one total replacement has been used.

Week 29 uses these boundaries when choosing a problem worth solving for a small project.

Plan the delayed return

Suggested return points in this level: ai-1/29, ai-1/31, ai-1/34. Use actual classroom dates, adjusting for holidays and gaps. One, three and six teaching weeks are scheduling choices, not a claimed optimal spacing.

At a delayed check, ask for the idea from memory and a changed application. Compare with the earlier independent response and record support used. For a new level, revisit the previous capstone before checking the new prerequisites.

Record · Teacher evidence

Record: Learner code and date

Teacher evidence: _____

Record: Concept and case used; prior exposure

Teacher evidence: _____

Record: Explanation / trace / limits

Teacher evidence: _____

Record: Support and first repair

Teacher evidence: _____

Record: Changed case and delayed outcome

Teacher evidence: _____

Record: Next teaching action

Teacher evidence: _____

Use the evidence to choose reteaching or the next step. A completed page, confidence rating or attractive project does not by itself demonstrate understanding.

Project evidence from this case

Record sorter actions allowed automatically and actions requiring the classroom owner's explicit review.
