

Fair for Whom?

Project: Helpful Classroom Sorter

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Missing and Unbalanced Examples

Without opening the old lesson, explain one key idea from Missing and Unbalanced Examples. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Recommendations

Without opening the old lesson, explain one key idea from Recommendations. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Prediction Is Not Fact

Without opening the old lesson, explain one key idea from Prediction Is Not Fact. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Compare totals and conditions for Fractions and performance comparisons. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Fractions and performance comparisons. Proposed explanation: “Only correct cases belong in the denominator”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Compare a new shared sound test

Versions X and Y label the same 20 previously unseen clips: 12 quiet and 8 noisy, with no missing outcomes. X is correct on 10 quiet and 2 noisy clips; Y on 9 quiet and 5 noisy clips. Calculate each combined fraction and percentage, identify the overall leader and compare the leaders within each group. Explain why an overall result cannot guarantee the next clip's outcome.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. Your learning target

System A succeeds on 6 of 8 quiet tests and 3 of 4 noisy tests. Is its noisy success rate lower? Show fractions and percentages. What can these small tests not establish?

6. Solve the given case

A voice system succeeds on 8/10 quiet and 4/10 noisy recordings.

Compare and propose the next investigation.

Show your trace, calculation or evidence

Write or draw your reasoning and evidence.

7. Check a changed case

A helper succeeds on 4 of 4 clear voices and 1 of 4 quiet voices. Who is less well served? What evidence should a repair preserve?

My independent answer and reason

Write or draw your reasoning and evidence.

Week 23 Test and reflect

8. Design a revealing test

Create a changed input, boundary case or missing-information case. Write the expected answer or safe response before testing.

Test record · My evidence

Test record: Changed input or condition

My evidence: _____

Test record: Expected answer or fallback

My evidence: _____

Test record: Observed result

My evidence: _____

Test record: Why the result occurred

My evidence: _____

9. Project checkpoint

Test the sorter across relevant item conditions and users; never infer sensitive identity to create a fairness check.

The project change and evidence I will keep

Write or draw your reasoning and evidence.

10. Self check

I can explain the mechanism. I can show evidence. I can handle a changed case. I can name a limit. Mark each as not yet, with help or independently, and attach supporting work.

Teacher review _____ Next step _____

11. Transfer practice from the original programme

System A succeeds on 6 of 8 quiet tests and 3 of 4 noisy tests. Is its noisy success rate lower? Show fractions and percentages. What can these small tests not establish?

My independently reasoned answer

Record support used: none, hint or teacher explanation.

12. W1 Explain both parts of a performance fraction

For version A in the lesson, write correct and assessed counts, simplify the accuracy fraction and express it as a percentage. Explain what its denominator includes and why $9/9$ would be misleading.

My reasoning and evidence

13. W2 Compare totals and conditions

Compare A and B on the shared 12-card test and on its bright and dim groups. State the leader in each and explain why the overall result does not imply that one version wins in every condition.

My reasoning and evidence

14. W3 Do not hide unassessed outcomes

C has 9 correct and 1 incorrect assessed outcome, with 2 other selected cases unassessed. Write its assessed accuracy and missing count. A reviewer reports $9/12$ as assessed accuracy; another reports 90% on all 12. Explain the problem with each label.

My reasoning and evidence

15. W4 Compare a new shared sound test

Versions X and Y label the same 20 previously unseen clips: 12 quiet and 8 noisy, with no missing outcomes. X is correct on 10 quiet and 2 noisy clips; Y on 9 quiet and 5 noisy clips. Calculate each combined fraction and percentage, identify the overall leader and compare the leaders within each group. Explain why an overall result cannot guarantee the next clip's outcome.

My reasoning and evidence

16. W5 Combine counts rather than group percentages

A separate test has 2 correct out of 2 assessed in group P and 4 correct out of 8 assessed in group Q. Calculate combined accuracy as a fraction and percentage. A chart reports 75% by averaging the group percentages. Explain why that is not the accuracy over all assessed cases.

My reasoning and evidence

17. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

18. Pictorial case practice: Fair for Whom?

A fictional badge reader is evaluated on bright and dim cards with known reference labels.

Version M is correct on 9 of 10 bright cards and 3 of 6 dim cards.

Version N uses the same cards: 8 of 10 bright and 5 of 6 dim correct.

Group rates compared on the same cards

percent correct

Bar length shows the supplied value; the marked baseline is zero.

Fair for Whom?

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Bright group

M: $9/10=90\%$; N: $8/10=80\%$.

2. Dim group

M: $3/6=50\%$; N: $5/6\approx 83.3\%$.

3. Combined counts

M: $(9+3)/16=75\%$; N: $(8+5)/16=81.25\%$.

4. Discuss trade-off

N improves total and dim results but loses one bright success.

CHANGE ONE THING

Give bright and dim groups equal weight as an explicitly different metric.

Explain the changed result using the matching lesson.

Which group loses performance under N, and can total improvement erase that fact?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: Report sorter outcomes by relevant conditions and record whose failures matter when choosing a revision.
