

Design the Decision Process

Project: Helpful Classroom Sorter

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Choose Inputs and Outputs

Without opening the old lesson, explain one key idea from Choose Inputs and Outputs. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Humans Set Boundaries

Without opening the old lesson, explain one key idea from Humans Set Boundaries. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Generate, Retrieve, or Calculate?

Without opening the old lesson, explain one key idea from Generate, Retrieve, or Calculate?. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Track the current candidate for Designing a complete decision process. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Designing a complete decision process. Proposed explanation: “One failed row proves no match”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Design a complete room decision process

A new paper catalogue lists C1 first, capacity 4, quiet Yes; C2 second, capacity 8, quiet No. Valid requests give a whole group size from 1 to 10 and Quiet required Yes or No. A room fits if capacity is at least group size and the quiet condition is met; choose the first fit. Write a complete process with validation, search, state change and stopping rules. Trace 6 people No and explain the outcome for a blank quiet field. No booking takes place.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. Your learning target

Rule: if paper then P, otherwise M. Inputs are paper, metal, glass and unknown. Repair the rule for paper and metal trays without inventing a glass tray. Trace all four inputs.

6. Solve the given case

A rule sends paper to P and everything else to M. Inputs include paper, metal and glass.

Trace glass and repair the rule.

Show your trace, calculation or evidence

Write or draw your reasoning and evidence.

7. Check a changed case

Write a decision process: a clear pencil goes to the pencil tray, a clear book to the shelf, and an unknown object to review. Trace a lunch box.

My independent answer and reason

Write or draw your reasoning and evidence.

Week 31 Test and reflect

8. Design a revealing test

Create a changed input, boundary case or missing-information case. Write the expected answer or safe response before testing.

Test record · My evidence

Test record: Changed input or condition

My evidence: _____

Test record: Expected answer or fallback

My evidence: _____

Test record: Observed result

My evidence: _____

Test record: Why the result occurred

My evidence: _____

9. Project checkpoint

Complete the sorter v1 decision flow and annotate every branch with the evidence it uses.

The project change and evidence I will keep

Write or draw your reasoning and evidence.

10. Self check

I can explain the mechanism. I can show evidence. I can handle a changed case. I can name a limit. Mark each as not yet, with help or independently, and attach supporting work.

Teacher review _____ Next step _____

11. Transfer practice from the original programme

Rule: if paper then P, otherwise M. Inputs are paper, metal, glass and unknown. Repair the rule for paper and metal trays without inventing a glass tray. Trace all four inputs.

My independently reasoned answer

Record support used: none, hint or teacher explanation.

12. W1 Describe all possible kinds of ending

Name the three kinds of final output in the activity process and the condition that leads to each. Explain why a candidate failing its time check is not automatically a final no-match result.

My reasoning and evidence

13. W2 Track the current candidate

Trace 9 minutes with Quiet required No. Record the current candidate, time result, quiet condition and next step until the process stops. Explain why the request values should not change as the candidate advances.

My reasoning and evidence

14. W3 Repair an incorrect branch

A design says “If the activity is quiet OR its time fits, suggest it.” For 5 minutes with Quiet required Yes it selects B1. Identify the failed requirement and replace the condition with a correct one. Give the correct result for this request.

My reasoning and evidence

15. W4 Design a complete room decision process

A new paper catalogue lists C1 first, capacity 4, quiet Yes; C2 second, capacity 8, quiet No. Valid requests give a whole group size from 1 to 10 and Quiet required Yes or No. A room fits if capacity is at least group size and the quiet condition is met; choose the first fit. Write a complete process with validation, search, state change and stopping rules. Trace 6 people No and explain the outcome for a blank quiet field. No booking takes place.

My reasoning and evidence

16. W5 Preserve the first compatible option

For the activity catalogue, 15 minutes with Quiet required No allows several activities. Explain why returning the last compatible row breaks the agreed rule even though it fits. Describe a stopping rule that preserves the first match, and one way to check that a loop cannot repeat forever.

My reasoning and evidence

17. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

18. Pictorial case practice: Design the Decision Process

A fictional worksheet routes craft kits by required glue and number of scissors.

K1: glue No, scissors 2. K2: glue Yes, scissors 2. K3: glue Yes, scissors 4.

Request: glue required Yes, scissors needed 2. Return first kit meeting both requirements.

Design the Decision Process

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Validate fields

Require Yes/No glue input and whole scissors count 0-4.

2. Evaluate K1

Scissors fit, but required glue is absent: continue.

3. Evaluate K2

Glue is present and 2 scissors meet the request: accept.

4. Stop

Return K2 without replacing it with later K3.

CHANGE ONE THING

Increase scissors needed to 3.

Explain the changed result using the matching lesson.

Where does the first original rejection occur, and why is K3 not originally selected?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: Draw the sorter's decision branches, loop-back arrows, final outputs and invalid-input path so every valid case can terminate.
