

Dataset Cards

Project: Responsible Plant Classifier

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Leakage

Without opening the old lesson, explain one key idea from Leakage. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Label Quality

Without opening the old lesson, explain one key idea from Label Quality. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Classification or Regression?

Without opening the old lesson, explain one key idea from Classification or Regression?. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Interpret the audit counts for Dataset inspection and cards. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Dataset inspection and cards. Proposed explanation: “A complete card certifies data quality”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Changed independent case

Write key dataset-card entries for 20 photos: five plants, four views each, one phone, one indoor setting. Growth labels have not been supplied.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. Your learning target

Write five dataset-card fields for a leaf dataset and explain why '1000 images' alone is insufficient.

6. Solve the given case

A dataset card lists fields but omits source and intended use.

Add information needed to assess suitability.

Show your trace, calculation or evidence

Write or draw your reasoning and evidence.

7. Check a changed case

A dataset card lists 500 images but omits collection conditions and intended use. Add two essential entries and explain their value.

My independent answer and reason

Write or draw your reasoning and evidence.

Week 9 Test and reflect

8. Design a revealing test

Create a changed input, boundary case or missing-information case. Write the expected answer or safe response before testing.

Test record · My evidence

Test record: Changed input or condition

My evidence: _____

Test record: Expected answer or fallback

My evidence: _____

Test record: Observed result

My evidence: _____

Test record: Why the result occurred

My evidence: _____

9. Project checkpoint

Publish the Plant Classifier dataset card before model experiments begin; update it when data changes.

The project change and evidence I will keep

Write or draw your reasoning and evidence.

10. Self check

I can explain the mechanism. I can show evidence. I can handle a changed case. I can name a limit. Mark each as not yet, with help or independently, and attach supporting work.

Teacher review _____ Next step _____

11. Transfer practice from the original programme

Write five dataset-card fields for a leaf dataset and explain why '1000 images' alone is insufficient.

My independently reasoned answer

Record support used: none, hint or teacher explanation.

12. W1 Define the row and source

For Robot practice v1, state what one row is intended to represent, the source, the unit and the meaning of None.

My reasoning and evidence

13. W2 Interpret the audit counts

Explain each number in 5 4 2 1. How many extra ID occurrences are there, and how many rows belong to a repeated-ID group?

My reasoning and evidence

14. W3 Reject an unsupported correction

A learner changes None to 0 and -2 to 2, then reports a clean dataset. Explain why this is not a justified repair and what record should be kept.

My reasoning and evidence

15. W4 Inspect and document independently

A new fictional indoor trip export has (P,4), (Q,None), (Q,None), (R,-1), (S,6), (T,0), with durations in minutes and the same schema. Count raw rows, distinct IDs, missing durations, negative durations and extra ID occurrences. Identify overlap. Draft a short dataset card stating source, row meaning, unit, findings, unchanged version and one excluded use.

My reasoning and evidence

16. W5 State an evidence gap

Someone duplicates each row ten times and claims the export now covers more kinds of trips. Explain what changed and what did not.

My reasoning and evidence

17. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

18. Pictorial case practice: Dataset Cards

Build a dataset card that reveals what the photo count hides.

Teacher-created dataset: 18 photos of 6 fictional plants, 3 views each, one tablet, indoor fluorescent light. Label rule is visible spot/no visible spot/review.

All inputs and outcomes in this worked example are invented classroom data; no real model run is claimed.

Dataset Cards

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Describe source

Record teacher-created fictional source, one tablet and indoor fluorescent lighting.

2. Describe units

18 photo rows come from only 6 plant identities.

3. Record limits

Split by plant; state that outdoor use and disease diagnosis have not been evaluated.

CHANGE ONE THING

The dataset adds 6 outdoor photos of the same plants.

Explain the changed result using the matching lesson.

What two counts should the revised card show? Point to the relevant step in the picture, then write the changed result and the rule or evidence that supports it.

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: For your Responsible Plant Classifier, save the input, procedure, observed result and limitation of this check. Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding.
