

Incident investigation

Project: Grounded Learning Service

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Monitoring quality drift

Without opening the old lesson, explain one key idea from Monitoring quality drift. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Deployment environments

Without opening the old lesson, explain one key idea from Deployment environments. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Data retention and deletion

Without opening the old lesson, explain one key idea from Data retention and deletion. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Trace the worked case for Incident investigation. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Incident investigation. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Apply a new case independently

10:00 permissions config changes; 10:03 restricted read; model version unchanged. Name a plausible cause and one test.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. W1 Explain the mechanism

Explain the weekly mechanism in your own words. Use the worked scenario to name its input, decision rule and output.

My reasoning and evidence

6. W2 Trace the worked case

At 09:00 corpus updates; 09:05 stale cache response; 09:06 cache disabled. Team says model weights changed, but weight version is unchanged. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

7. W3 Audit the limit

A report omits this qualification: A plausible narrative needs controlled or record-based confirmation and must preserve unknowns. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

8. W4 Apply a new case independently

10:00 permissions config changes; 10:03 restricted read; model version unchanged. Name a plausible cause and one test.

My reasoning and evidence

9. W5 Design a revealing follow-up

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison. Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

10. Project checkpoint and reflection

Add a labelled incident investigation evidence sheet to Grounded Learning Service. Show how you can explain the mechanism and terminology of incident investigation. Use the supplied fictional case and keep its inputs, intermediate steps, calculation or prediction, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

My project change, supporting evidence and remaining limit

11. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

12. Pictorial case practice: Incident investigation

An incident timeline. After a schedule update, a service gives an old classroom location.

14:00 version 6 publishes room D; 14:05 answer uses version 5 room C; 14:06 user reports mismatch.

Incident investigation

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Order events

The new source predates the request and report.

2. Locate stale evidence

The answer trace identifies version 5 rather than current version 6.

3. Test explanation

Reproduce version selection with controlled fixtures before naming the exact bug.

CHANGE ONE THING

Trace instead shows version 6 retrieved and room C drafted.

Explain the changed result using the matching lesson.

Order the three incident records and locate the old evidence version. How does the investigation change if the trace instead retrieves version 6 but drafts room C?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or evidence that makes the deciding step valid, so another team can review it.
