

Operational Labels

Project: Transparent Book Recommender

1. Your mission

Your learning target

I can apply a category definition using explicit evidence and boundary rules.

I can distinguish a known failure from information that is missing or unreadable.

I can use disagreement to improve a labelling guide without mistaking agreement for truth.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Rows Columns and Data Types. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Loops and Stopping. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Decompose a Goal. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the evidence shows was wrong.

Week 8: Operational Labels

A label is reliable only when different people can apply its definition consistently.

THINKER MISSION

Write and test definitions for 'easy book' and 'hard book.'

Thinker name and date:

Write or draw your reasoning and evidence.

Readiness for the connected explanation

A transcript leaves out an unclear word. Why should a later system not simply treat that missing word as a known value?

This week's end goal

By the end, I can resolve label disagreement by checking an operational definition at equality.

2. Notice the evidence

PICTURE STORY

Notice → Predict → Explain

Begin with visible evidence. Do not explain more than the picture and information support.

MYSTERY

The learners must use operational labels to solve a problem. What information do they have? What decision or calculation do they make? What would count as evidence that it worked?

Three observations (what you can point to):

Write or draw your reasoning and evidence.

My prediction and the clue supporting it:

Write or draw your reasoning and evidence.

A closer explanation

Two students are sorting fictional event cards for a classroom calendar. Their first instruction is Put the good cards together. Mina calls a colourful card good. Theo calls a plain card good because its room is easy to read. They disagree even though both followed a reasonable interpretation of the word good.

A category is useful for a task when people can tell what evidence makes an example belong to it. An operational definition states the observations or checks to perform. For this paper exercise, we will check two printed fields: an event day and a room code. The task is to check the record against a classroom policy, not to judge the quality of the event or the person who wrote it.

Labels depend on the definition in use. A model fitted to labels can learn the distinctions those labels encode, including mistakes and inconsistencies. Before asking a model to copy a label, ask whether people have a clear, useful guide for assigning it.

3. See how it works

VISUAL MECHANISM

Input → Process → Output

Trace the information. At each stage, ask what changed and how you could test it.

↓

PROCESS

A label is reliable only when different people can apply its definition consistently.

OUT

OUTPUT

Write and test definitions for 'easy book' and 'hard book.'

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

Our fictional calendar accepts a whole-number day from 1 through 30, including both endpoints, and exactly one room code, A or B. The month is already fixed for this exercise. A blank or unreadable field counts as unknown. The categories are revise, review and ready. Use the checks in the order shown.

Three ordered checks for a calendar card

Check in this order · Evidence · Recorded label

Check in this order: First check known values

Evidence: Any known field fails its criterion

Recorded label: Revise even if another field is unknown

Check in this order: Then check missing information

Evidence: No known failure but a field is blank or unreadable

Recorded label: Review because evidence is incomplete

Check in this order: Otherwise all checks have passed

Evidence: Day is 1 through 30 and room is A or B

Recorded label: Ready under this record policy

Stop at the first matching row. The order resolves a card with both a known failure and an unknown field. Ready describes the printed record under this policy; it does not confirm that the event exists or has permission to run.

Known failure and unknown are different. Day 31 is known and outside the accepted range, so the card needs revision. An unreadable day might be valid or invalid; without another known failure, it needs review. Never silently turn a blank into zero just to make a comparison possible.

Connect the picture and the explanation

Point to the input, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

4. Compare the cases

CASE GALLERY

A system is not understood until it survives more than one comfortable example.

NORMAL CASE: predict and name evidence. BOUNDARY CASE: predict and name evidence.

MISSING

Needed information absent

TRANSFER

Fresh situation or user

MISSING INFORMATION: predict and name evidence. TRANSFER CASE: predict and name evidence.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change: Change the documented policy to fewer than 80 instead.

Prediction: A's original labels now match; B must change its equality behavior.

Reason: The authoritative definition changed, not the physical books.

5. Words that unlock the idea

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

2

OPERATIONAL DEFINITION

a testable rule for applying
a label

3

AGREEMENT

how often labelers match

4

AMBIGUOUS

reasonably interpreted in
more than one way

Word · My own example · Not this / boundary

Word: label

My own example: The recorded target category or value attached to an example.

Not this / boundary: _____

Word: operational definition

My own example: A precise rule explaining how a concept will be observed, measured or labelled in this activity.

Not this / boundary: _____

Word: agreement

My own example: How often two judgments match; matching judgments can still both be wrong.

Not this / boundary: _____

Word: ambiguous

My own example: Having more than one reasonable interpretation given the available information.

Not this / boundary: _____

Words used in the closer explanation

Word · Meaning

Word: Category

Meaning: A group defined by stated membership criteria

Word: Annotator

Meaning: A person who assigns labels to examples

Word: Disagreement

Meaning: A case where annotators assign different labels to the same example

6. Follow a worked example

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete evidence.

Worked evidence for Operational Labels

Step · Evidence and reasoning

Step: 1

Evidence and reasoning: Weak label: 'easy book.'

Step: 2

Evidence and reasoning: Operational rule: easy for this reader if difficulty level ≤ 2 and unfamiliar words per page ≤ 3 .

Step: 3

Evidence and reasoning: Two labelers test the same 8 books.

Step: 4

Evidence and reasoning: Agreement of 7/8 identifies one disagreement to review. Check the source, each annotator's application and the label rule before choosing a repair.

Trace these corrected steps. Keep the stated metric, assumptions and interpretation when you change the case.

1. Weak label: 'easy book.'
2. Operational rule: easy for this reader if difficulty level ≤ 2 and unfamiliar words per page ≤ 3 .
3. Two labelers test the same 8 books.
4. Agreement of 7/8 identifies one disagreement to review. Check the source, each annotator's application and the label rule before choosing a repair.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the evidence answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

Card fields · Relevant evidence · Label and reason

Card fields: Day 12 room A

Relevant evidence: Both values satisfy the criteria

Label and reason: Ready because both checks pass

Card fields: Day 31 room A

Relevant evidence: 31 is outside 1 through 30

Label and reason: Revise because a known value fails

Card fields: Day 12 room unreadable

Relevant evidence: No known failure but the room is unknown

Label and reason: Review until the room is checked

Card fields: Day 31 room unreadable

Relevant evidence: The day already fails although the room is unknown

Label and reason: Revise because the first check has priority

For the last card, first read only what is known: day 31. Compare it with the allowed range and record a failure. The guide therefore selects revise before the missing-room check. Checking the room later could reveal another problem, but it cannot make day 31 satisfy this policy.

A clear explanation cites the particular criterion. Saying It looks wrong is not enough. Write Day 31 exceeds the accepted maximum of 30 instead. That explanation lets another person reproduce the check and challenge it if the recorded value or policy is different.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Operational Labels

Two fictional catalogue reviewers label books compact or extended.

The facts we will use

Agreed policy: compact means at most 80 pages; extended means more than 80.

Reviewer A uses $\text{pages} < 80$; reviewer B uses $\text{pages} \leq 80$. Inspect books of 79, 80, 81 pages.

Operational label boundary

	Pages	A labels	B labels
Book 1	79	compact	compact
Book 2	80	extended	compact
Book 3	81	extended	extended

Read a cell using both its row and column labels.

Operational Labels

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Shared definition

At most 80 includes a book with exactly 80 pages.

2. Reviewer A

79 compact; 80 and 81 extended.

3. Reviewer B

79 and 80 compact; 81 extended.

4. Repair boundary

A must use ≤ 80 ; retain the disagreement and changed policy implementation.

CHANGE ONE THING

Change the documented policy to fewer than 80 instead.

Explain the changed result using the matching lesson.

Read the picture one step at a time

Step · What happens and why

Step: 1. Shared definition

What happens and why: At most 80 includes a book with exactly 80 pages.

Step: 2. Reviewer A

What happens and why: 79 compact; 80 and 81 extended.

Step: 3. Reviewer B

What happens and why: 79 and 80 compact; 81 extended.

Step: 4. Repair boundary

What happens and why: A must use ≤ 80 ; retain the disagreement and changed policy implementation.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

The reviewers agree on two of three examples, but that fraction does not decide which definition to keep. The documented policy decides the equality case. Repairing A's implementation aligns its labels with the agreed meaning. Rechecking 79 and 81 ensures the boundary fix preserves adjacent decisions.

What this example does not establish

A shared definition improves consistency but does not prove the category captures every learner's needs.

Read the labelled picture: Why can we not resolve the disagreement merely by taking a majority of reviewers?

Change one thing: Change the documented policy to fewer than 80 instead. Predict the result before checking the explanation. What remains the same?

7. Find and repair a mistake

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak evidence.

COMPARE • DIAGNOSE

Weak idea: People who mean well will always create identical labels. Strong move: locate evidence, change one cause, and retest.

Evidence record • Expected • Actual • Likely cause / next test

Evidence record: normal case

Expected: works

Actual: _____

Likely cause / next test: _____

Evidence record: boundary case

Expected: stated rule

Actual: _____

Likely cause / next test: _____

Evidence record: missing input

Expected: safe response

Actual: _____

Likely cause / next test: _____

Evidence record: fresh transfer

Expected: generalizes

Actual: _____

Likely cause / next test: _____

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

If two annotators agree on four of six cards, we know that four assigned labels matched. We do not yet

know whether those labels followed the guide. Both annotators might have made the same mistake. Check their reasoning against the criteria and, where necessary, the source record.

Even perfect agreement under our calendar policy would not prove that the room is really booked. It would only show agreement about whether the printed fields pass the specified checks. The policy itself may need changes for a real calendar. Record the policy version so examples labelled under different instructions are not mixed without review.

Two people label every card ready. Explain why their agreement alone does not establish correct labels or confirm the events

8. Practise together

LOGIC STUDIO

Trace Before You Run

Block code, pseudocode, tables, and diagrams are different ways to expose the same reasoning.

TRACE THE LOGIC

Predict the result. Trace every condition or calculation. Compare expected with actual. Explain the first difference.

SET evidence_record PREDICT expected_result RUN one normal case and one boundary case
COMPARE actual_result with expected_result IF different: locate first cause; change one factor; RETEST
EXPLAIN result, limitation, and next safe step

Trace one input. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

Mina labels day 30, room B as ready; Theo labels it revise because he thought the range stopped before 30. The disagreement points to a boundary interpretation. The guide says including both endpoints, so 30 passes. The appropriate repair is to clarify and practise the inclusive boundary, not to change the label merely because one student is more confident.

Label day 0 with room A and day 18 with a blank room. Cite the exact rule for each and explain why the two cards need different next steps

Ask annotators to label examples independently before comparing. If they copy one another, agreement no longer tells us whether the guide can be applied independently. Keep the original labels and reasons when discussing differences, then record any corrected labels separately.

Practise with less help: Replace a vague instruction

Use workbook W2 for the connected example “Categories and operational labels”. First fill the input and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan · Do · Check

Plan: What is given? Which rule or procedure applies?

Do: Record each intermediate step.

Check: Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Categories and operational labels. Proposed explanation: “A blank is the same as a failing value”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Why can we not resolve the disagreement merely by taking a majority of reviewers?

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

9. Run the investigation

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

PREDICT → TEST → RECORD → EXPLAIN

Pairs label the same cards independently, compare, calculate matches/total, discuss disagreements, and revise only the unclear rule.

Pairs label the same cards independently, compare, calculate matches/total, discuss disagreements, and revise only the unclear rule.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

Test / input: normal

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: boundary

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: missing

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: fresh transfer

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

10. Build your understanding

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce evidence without copying the worked example.

MASTERY LADDER
1 Name it • 2 Trace it • 3 Apply it • 4 Challenge it • 5 Explain limits

1 • NAME: Define the concept without repeating the textbook.

2 • TRACE: Show the information, state, branch, calculation, or evidence path.

3 • APPLY: Solve a different example independently.

4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest evidence of independent understanding:

Write or draw your reasoning and evidence.

11. Connect your project

CUMULATIVE PROJECT

Transparent Book Recommender

Every week adds one inspectable piece. The system must show how it reached a result.

TRANSPARENT BOOK RECOMMENDER

Define 'good match' before training or evaluating the recommender.

THIS WEEK'S CHECKPOINT Define 'good match' before training or evaluating the recommender.

SYSTEM MAP Reader need → allowed inputs → transparent rule or score → ranked candidates → explanation → test record → human decision

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under human control?

Write or draw your reasoning and evidence.

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse a ranking with a fact about a person.

Evidence for your project

Give Transparent Book Recommender metadata labels explicit definitions and boundary examples for reviewers.

12. Show what you know

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

INDEPENDENT PROOF

Write and test definitions for ‘easy book’ and ‘hard book.’

CHALLENGE Write and test definitions for ‘easy book’ and ‘hard book.’

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My evidence that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One limitation, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

SELF-CHECK ☐ I explained the mechanism ☐ I used evidence ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

13. Study a complete case

Week 8 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

Short means fewer than 100 pages. Two annotators disagree about a 100-page book.

The question

Resolve the label.

Worked explanation

It is not Short under the stated definition. Agree operational boundaries before labelling.

Explain it in your own words

Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Define Short before labelling books

Evidence or stage · Value or result

Evidence or stage: 99 pages

Value or result: Short

Evidence or stage: 100 pages

Value or result: Not Short

Evidence or stage: 101 pages

Value or result: Not Short

Short means fewer than 100 pages. Two annotators disagree about a 100-page book.

Resolve the label.

It is not Short under the stated definition. Agree operational boundaries before labelling.

14. Try a new case independently

Independent case: Changed independent case

Two labellers use book-length rules: fewer than 120 pages and at most 120 pages. Label books with 110,120,121 pages. The agreed policy is at most 120. Repair the disagreement.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 8 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

Use a clear label rule: short means 80 pages or fewer. Two judges label an 80-page book differently. What shared instruction resolves this disagreement?

My answer, with a trace, calculation or supporting evidence

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed input and expected result

Write or draw your reasoning and evidence.

Connect to your project

Define 'good match' before training or evaluating the recommender.

The evidence I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice evidence together.

Transfer practice from the original programme

Two labelers use 'short' to mean $\text{pages} < 100$ and $\text{pages} \leq 100$. They disagree only on 100-page books. Write a shared definition and explain how to repair the existing labels.

Explain the mechanism, evidence and one limit.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed. A later check uses a changed case, not a copied answer.

15. Your lesson route

Start with this question: Two fictional catalogue reviewers label books compact or extended.

By the end, I can · How I will show it

By the end, I can: Apply a category definition using explicit evidence and boundary rules

How I will show it: Explain the deciding step, show a trace or test, and state one limit.

By the end, I can: Distinguish a known failure from information that is missing or unreadable

How I will show it: Explain the deciding step, show a trace or test, and state one limit.

By the end, I can: Use disagreement to improve a labelling guide without mistaking agreement for truth

How I will show it: Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project evidence. Your teacher may spread this lesson across several classes.

Keep your first prediction. Compare it with what the evidence shows and explain any change.

16. Finish and return

Close your notes. Explain this goal in your own words: Apply a category definition using explicit evidence and boundary rules

My deciding step, evidence and one remaining question

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an input or assumption and justify your prediction.

Save your workbook evidence. At the next review, try a different case before opening your old answer.
