

Copyright and Provenance

Project: Verified Study Buddy

1. Your mission

Your learning target

I can explain the mechanism and terminology of copyright and permitted sources.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Privacy by Design. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Evaluation Sets. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Block to Python Bridge. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the evidence shows was wrong.

Week 29: Copyright and Provenance

Responsible creation distinguishes source material, transformation, attribution, and generated content.

CREATOR MISSION

Create a provenance record for a mixed-media output.

Creator name and date:

Write or draw your reasoning and evidence.

Readiness for the connected explanation

Recall Conversation state and retention. Explain why a recorded result needs its input conditions and evidence source before it can support a claim.

This week’s end goal

By the end, I can explain copyright and provenance using a traced example and a stated limitation.

2. Notice the evidence

PICTURE STORY

Notice → Predict → Explain

Begin with visible evidence. Do not explain more than the picture and information support.

MYSTERY

The learners must use copyright and provenance to solve a problem. What information do they have? What decision or calculation do they make? What would count as evidence that it worked?

Three observations (what you can point to):

Write or draw your reasoning and evidence.

My prediction and the clue supporting it:

Write or draw your reasoning and evidence.

A closer explanation

Permission to access a work and permission to redistribute or modify it are separate. Use a classroom licence ledger instead of assuming all online material is reusable.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing. These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

3. See how it works

VISUAL MECHANISM

Input → Process → Output

Trace the information. At each stage, ask what changed and how you could test it.

↓

SYSTEM

Responsible creation distinguishes source material, transformation, attribution, and generated content.

OUT

EVIDENCE

Create a provenance record for a mixed-media output.

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

For this fictional policy, licence L permits classroom display with attribution but forbids public redistribution. Licence M permits adaptation and redistribution with attribution. Unknown permission means seek approval or choose a permitted alternative; this exercise is not a legal ruling.

Copyright and permitted sources — evidence trace

Input and scope · Check or calculation · Conclusion and limit

Input and scope: Image A has L; image B has M. The project is a publicly downloadable adapted poster.

Check or calculation: For this fictional policy, licence L permits classroom display with attribution but forbids public redistribution. Licence M permits adaptation and redistribution with attribution. Unknown permission means seek approval or choose a permitted alternative; this exercise is not a legal ruling.

Conclusion and limit: A is not permitted for this use under L. B is permitted under the supplied M terms with attribution. Keep licence version and provenance.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same inputs. If a required input is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the input, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

4. Compare the cases

CASE GALLERY

Four Tests, Four Kinds of Evidence

A system is not understood until it survives more than one comfortable example.

NORMAL
Expected learner request

AMBIGUOUS
Two plausible meanings

NORMAL CASE: predict and name evidence. BOUNDARY CASE: predict and name evidence.

MISSING SOURCE

Evidence unavailable

ADVERSARIAL

Rules or trust challenged

MISSING INFORMATION: predict and name evidence. TRANSFER CASE: predict and name evidence.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change: Use Fern unchanged and include the required attribution.

Prediction: That use satisfies the stated fictional permission conditions.

Reason: Its public redistribution is permitted when there is no alteration and attribution is included.

5. Words that unlock the idea

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

2

PROVENANCE

record of where material
came from

3

ATTRIBUTION

credit given to a source

4

LICENSE

terms permitting particular reuse

Word · My own example · Not this / boundary

Word: copyright

My own example: Legal rights concerning original creative expression; the permitted uses depend on the applicable rules and permissions.

Not this / boundary: _____

Word: provenance

My own example: A record of where information or material came from and how it was changed.

Not this / boundary: _____

Word: attribution

My own example: Identifying the source or creator of material; this alone does not establish permission to use it.

Not this / boundary: _____

Word: license

My own example: Terms granting specified permissions to use material or software.

Not this / boundary: _____

Words used in the closer explanation

Word · Meaning

Word: Licence

Meaning: Terms specifying permitted uses

Word: Permission ledger

Meaning: A record linking each asset to its authorised use

6. Follow a worked example

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete evidence.

WEEK 29 • WORKED EVIDENCE

- 1 Source paragraph is quoted within allowed classroom use and cited.
- 2 Student summary is a transformation but still names the source.
- 3 Generated image is labeled as generated.
- 4 Provenance record stores creator/source, license or permission, transformation, and use.

1. Source paragraph is quoted within allowed classroom use and cited.
2. Student summary is a transformation but still names the source.
3. Generated image is labeled as generated.
4. Provenance record stores creator/source, license or permission, transformation, and use.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the evidence answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

Image A has L; image B has M. The project is a publicly downloadable adapted poster.

A is not permitted for this use under L. B is permitted under the supplied M terms with attribution. Keep licence version and provenance.

Compare the intermediate evidence with the final statement. Explain why each number or decision follows from the stated inputs. The conclusion belongs to this scenario and procedure; changing the inputs, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Copyright and Provenance

Read fictional reuse terms before decorating a public study guide.

The facts we will use

Image Fern allows public redistribution with attribution but no alteration. Image Moss allows alteration and public redistribution with attribution. The plan crops an image.

All inputs and outcomes in this worked example are invented classroom data; no real model run is claimed.

Copyright and Provenance

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Read terms

Fern excludes alteration; Moss permits it.

2. Match proposed use

Cropping is an alteration in these declared toy terms.

3. Choose eligible asset

Use Moss with its required attribution; do not crop Fern for this public guide.

CHANGE ONE THING

Use Fern unchanged and include the required attribution.

Explain the changed result using the matching lesson.

Read the picture one step at a time

Step · What happens and why

Step: 1. Read terms

What happens and why: Fern excludes alteration; Moss permits it.

Step: 2. Match proposed use

What happens and why: Cropping is an alteration in these declared toy terms.

Step: 3. Choose eligible asset

What happens and why: Use Moss with its required attribution; do not crop Fern for this public guide.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Read the picture in order. Use Moss with its required attribution; do not crop Fern for this public guide. The arrows show which recorded input or intermediate result each decision uses. Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

What this example does not establish

Real permission decisions require the actual licence and use context. These invented terms teach condition matching, not legal advice.

Read the labelled picture: Does acknowledging Fern make a cropped version permitted? Point to the relevant step in the picture, then write the changed result and the rule or evidence that supports it.

Change one thing: Use Fern unchanged and include the required attribution. Predict the result before checking the explanation. What remains the same?

7. Find and repair a mistake

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak evidence.

COMPARE • DIAGNOSE

Weak idea: Changing a few words removes the need to credit a source. Strong move: inspect the claim, source, stage, schema, or test evidence; repair one cause; rerun.

Evidence record · Expected · Actual · Likely cause / next test

Evidence record: normal case

Expected: works

Actual: _____

Likely cause / next test: _____

Evidence record: boundary case

Expected: stated rule

Actual: _____

Likely cause / next test: _____

Evidence record: missing input

Expected: safe response

Actual: _____

Likely cause / next test: _____

Evidence record: fresh transfer

Expected: generalizes

Actual: _____

Likely cause / next test: _____

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer. For a project,

select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

8. Practise together

LOGIC STUDIO

Specify Before You Run

Prompts, schemas, retrieval, tool calls, and code are inspectable parts of one AI product.

SPECIFY THE SYSTEM

Define task, trusted context, constraints, schema, tools, checks, fallback, and stopping rule before trusting output.

SET task, audience, constraints, output_schema LOAD approved_context or retrieval_result CALL model or allowed_tool VALIDATE fields, claims, citations, and safety IF evidence missing: ask, retrieve, or abstain RETURN useful output + source trail + limitations

Trace one input. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

Real legal outcomes depend on jurisdiction and facts; supplied licence terms define this classroom exercise, not universal copyright law.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself. The first may require a correction; the second requires an explicitly revised method and new evidence. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Practise with less help: Trace the worked case

Use workbook W2 for the connected example “Copyright and permitted sources”. First fill the input and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan · Do · Check

Plan: What is given? Which rule or procedure applies?

Do: Record each intermediate step.

Check: Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Copyright and permitted sources. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Does acknowledging Fern make a cropped version permitted? Point to the relevant step in the picture, then write the changed result and the rule or evidence that supports it.

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

9. Run the investigation

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

PREDICT → RUN → VERIFY → EXPLAIN

Inspect a mixed project, classify original/quoted/transformed/generated parts, check permission, and build a complete provenance record.

Inspect a mixed project, classify original/quoted/transformed/generated parts, check permission, and build a complete provenance record.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

Test / input: normal

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: boundary

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: missing

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: fresh transfer

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

10. Build your understanding

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce evidence without copying the worked example.

CREATOR MASTERY

1 Define • 2 Trace • 3 Build • 4 Evaluate • 5 Verify • 6 Defend limits

- 1 • NAME: Define the concept without repeating the textbook.
- 2 • TRACE: Show the information, state, branch, calculation, or evidence path.
- 3 • APPLY: Solve a different example independently.
- 4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.
- 5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest evidence of independent understanding:

Write or draw your reasoning and evidence.

11. Connect your project

CUMULATIVE PROJECT

Verified Study Buddy

Every week adds one inspectable piece. The system must show how it reached a result.

VERIFIED STUDY BUDDY

Attach citations and provenance metadata to every Study Buddy learning asset.

THIS WEEK’S CHECKPOINT Attach citations and provenance metadata to every Study Buddy learning asset.

SYSTEM MAP Learner need → prompt/schema → approved sources/retrieval → model/tool → structured answer → verification → human decision

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under human control?

Write or draw your reasoning and evidence.

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse fluent output with verified truth.

Evidence for your project

For your Verified Study Buddy, save the input, procedure, observed result and limitation of this check. Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding.

12. Show what you know

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

INDEPENDENT CREATOR PROOF

Create a provenance record for a mixed-media output.

CHALLENGE Create a provenance record for a mixed-media output.

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My evidence that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One limitation, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

SELF-CHECK ☐ I explained the mechanism ☐ I used evidence ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

13. Study a complete case

Week 29 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

A slide reuses an online photograph and textbook paragraph.

The question

What provenance and reuse checks are needed?

Worked explanation

Record creator, source, licence or permission, attribution requirements and modifications. Attribution alone is not permission; classroom context is not a universal exemption.

Explain it in your own words

Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Provenance makes reuse conditions visible

Evidence or stage · Value or result

Evidence or stage: Origin

Value or result: Creator and source

Evidence or stage: Permission

Value or result: Licence or explicit permission

Evidence or stage: Conditions

Value or result: Attribution and other limits

Evidence or stage: Modifications

Value or result: Record what changed

A slide reuses an online photograph and textbook paragraph.

What provenance and reuse checks are needed?

Record creator, source, licence or permission, attribution requirements and modifications. Attribution alone is not permission; classroom context is not a universal exemption.

14. Try a new case independently

Independent case: Apply a new case independently

Text C permits internal reading only; D permits public quotation up to 30 words with attribution. Proposed

public handout reproduces 40 words. Apply the fictional terms.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 29 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

You find an attractive illustration online with no license information. What should you record and check before reusing it in a public project?

My answer, with a trace, calculation or supporting evidence

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed input and expected result

Write or draw your reasoning and evidence.

Connect to your project

Attach citations and provenance metadata to every Study Buddy learning asset.

The evidence I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice evidence together.

Transfer practice from the original programme

A project uses an image found through search. Its author is known but its licence is missing. Is naming the author enough to establish reuse permission? Describe a provenance record and next action.

Explain the mechanism, evidence and one limit.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed. A later check uses a changed case, not a copied answer.

15. Your lesson route

Start with this question: Read fictional reuse terms before decorating a public study guide.

By the end, I can · How I will show it

By the end, I can: Explain the mechanism and terminology of copyright and permitted sources

How I will show it: Explain the deciding step, show a trace or test, and state one limit.

By the end, I can: Apply the stated procedure to a new case with a traceable result

How I will show it: Explain the deciding step, show a trace or test, and state one limit.

By the end, I can: Identify an assumption or limitation and design a revealing follow-up

How I will show it: Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project evidence. Your teacher may spread this lesson across several classes.

Keep your first prediction. Compare it with what the evidence shows and explain any change.

16. Finish and return

Close your notes. Explain this goal in your own words: Explain the mechanism and terminology of copyright and permitted sources

My deciding step, evidence and one remaining question

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an input or

assumption and justify your prediction.

Save your workbook evidence. At the next review, try a different case before opening your old answer.
