

Rules or Learned Patterns?

Project: Helpful Classroom Sorter

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Sensors Are Messengers

Without opening the old lesson, explain one key idea from Sensors Are Messengers. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

AI or Not?

Without opening the old lesson, explain one key idea from AI or Not?. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Complete the supported comparison for Rules and learned patterns. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Rules and learned patterns. Proposed explanation: “A learned rule cannot be written simply”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Fit a new paper classifier

A fictional sorting task has lengths 2, 5, 7, 9 cm with labels short, short, long, long. Candidate rules predict long when length is at least 5 or at least 7. List predictions and errors for both, choose one, and predict a new length of 6 before any label is revealed. State one limit of your conclusion.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. Your learning target

Sorter A follows 'red left, blue right'. Sorter B was trained using labelled red and blue cards. Both send a purple card left. Does their shared output show that they used the same process? What evidence is missing?

6. Solve the given case

Sorter A follows a written red-card-left rule. Sorter B is fitted using labelled leaves.

How were their decision processes obtained? Where should A send blue cards?

Show your trace, calculation or evidence

Write or draw your reasoning and evidence.

7. Check a changed case

System A uses the written rule green means go. System B learns fruit labels from example photographs. Who supplies A's rule? What changes when B is trained on different examples?

My independent answer and reason

Write or draw your reasoning and evidence.

Week 4 Test and reflect

8. Design a revealing test

Create a changed input, boundary case or missing-information case. Write the expected answer or safe response before testing.

Test record · My evidence

Test record: Changed input or condition

My evidence: _____

Test record: Expected answer or fallback

My evidence: _____

Test record: Observed result

My evidence: _____

Test record: Why the result occurred

My evidence: _____

9. Project checkpoint

Draw a fixed-rule version and a learned-pattern version of the Classroom Sorter; state what evidence would justify the learned version.

The project change and evidence I will keep

Write or draw your reasoning and evidence.

10. Self check

I can explain the mechanism. I can show evidence. I can handle a changed case. I can name a limit. Mark each as not yet, with help or independently, and attach supporting work.

Teacher review _____ Next step _____

11. Transfer practice from the original programme

Sorter A follows 'red left, blue right'. Sorter B was trained using labelled red and blue cards. Both send a purple card left. Does their shared output show that they used the same process? What evidence is missing?

My independently reasoned answer

Record support used: none, hint or teacher explanation.

12. W1 Execute before fitting

Use wide when width is at least 5 cm. Predict the label for widths 4, 5 and 6. Then state what changes if the rule uses greater than 5 instead.

My reasoning and evidence

13. W2 Complete the supported comparison

Widths 1, 3, 5, 7 have labels narrow, narrow, wide, wide. For candidates 3 and 5, list all predictions using wide when width is at least the candidate. Count disagreements and select the lower-error candidate.

My reasoning and evidence

14. W3 Make a tie visible

For the worked widths 2, 4, 6, 8 with labels narrow, narrow, wide, wide, compare thresholds 5 and 6. Give a width where they predict differently. Explain why the four fitting examples cannot decide that case.

My reasoning and evidence

15. W4 Fit a new paper classifier

A fictional sorting task has lengths 2, 5, 7, 9 cm with labels short, short, long, long. Candidate rules predict long when length is at least 5 or at least 7. List predictions and errors for both, choose one, and predict a new length of 6 before any label is revealed. State one limit of your conclusion.

My reasoning and evidence

16. W5 Keep the check honest

A learner sees that their final-check card was predicted incorrectly, changes the threshold to match it and reports the same card as an unseen test. Explain the problem and propose a valid next check.

My reasoning and evidence

17. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

18. Pictorial case practice: Rules or Learned Patterns?

A fictional paper sorter learns a size boundary for toy pebbles.

Training diameters are 1,3,5,7 cm with labels small,small,large,large.

Compare large-at-least-3 with large-at-least-5; choose fewer errors.

AI ACADEMY / AI-1/4

Training errors by candidate boundary

disagreements

Bar length shows the supplied value; the marked baseline is zero.

Rules or Learned Patterns?

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Training examples

Diameters 1,3,5,7 have reference labels S,S,L,L.

2. Candidate 3

Predictions S,L,L,L: one disagreement at 3.

3. Candidate 5

Predictions S,S,L,L: zero disagreements.

4. New pebble

Selected boundary 5 predicts small for a new diameter 4.

CHANGE ONE THING

Give a new pebble diameter 5 instead of 4.

Explain the changed result using the matching lesson.

Show which stage used labels and which stage used only the new measurement.

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: Document whether the sorter’s rules were teacher-written or chosen from examples, retaining candidate errors.

19. Project portfolio milestone

Project: Helpful Classroom Sorter

Current milestone: Frame the need. Name the user, the problem, allowed inputs and a safe simple starting method.

Document whether the sorter’s rules were teacher-written or chosen from examples, retaining candidate errors.

Evidence to keep · My record

Evidence to keep: This week’s input and deciding step

My record: _____

Evidence to keep: Prediction and actual result (or labelled paper trace)

My record: _____

Evidence to keep: One change since the previous checkpoint and why

My record: _____

Evidence to keep: One error or limit and the next test

My record: _____

Explain what this week adds to your project. Reuse last week’s record rather than starting again.
