

Confidence Is Not Correctness

Project: Helpful Classroom Sorter

1. Recall and choose your starting point

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Prediction Is Not Fact

Without opening the old lesson, explain one key idea from Prediction Is Not Fact. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Save New Examples for Testing

Without opening the old lesson, explain one key idea from Save New Examples for Testing. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Debug the Cause

Without opening the old lesson, explain one key idea from Debug the Cause. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

2. Practise with fading help

Use W2: Judge cases using outcomes for Confidence and correctness. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs · Procedure I chose · Middle steps · Result and check

Given inputs: _____

Procedure I chose: _____

Middle steps: _____

Result and check: _____

The step I completed without help, and the hint I needed

3. Individual reasoning check

Use the worked case for Confidence and correctness. Proposed explanation: “An 80 point score always means an 80 percent probability”. Decide whether this explanation is supported. Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

4. Independent transfer case

Independent case: Audit a different probability claim

A fictional leaf sorter claims a 75 percent probability of correctness for each of eight chosen labels. Later evidence establishes six correct labels, one incorrect label and one missing outcome. A report says six out of eight proves perfect calibration and guarantees the next label. Repair the report, state the assessed and unassessed counts, and describe a better follow-up check.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

5. Your learning target

A helper says 'definitely correct' on four answers; only two match the answer key. A cautious helper gives the same four answers. Which is more accurate? What additional evidence would you need to compare confidence quality?

6. Solve the given case

A helper confidently labels a blurred dog photo as cat; the clear original shows a dog.

What does this show?

Show your trace, calculation or evidence

Write or draw your reasoning and evidence.

7. Check a changed case

A sorter is very confident that a leaf is a coin, but a person checks and sees a leaf. Which determines correctness: confidence or the checked object? Why?

My independent answer and reason

Write or draw your reasoning and evidence.

Week 18 Test and reflect

8. Design a revealing test

Create a changed input, boundary case or missing-information case. Write the expected answer or safe response before testing.

Test record · My evidence

Test record: Changed input or condition

My evidence: _____

Test record: Expected answer or fallback

My evidence: _____

Test record: Observed result

My evidence: _____

Test record: Why the result occurred

My evidence: _____

9. Project checkpoint

Record both the sorter's confidence wording and the human-confirmed outcome; keep them in separate columns.

The project change and evidence I will keep

Write or draw your reasoning and evidence.

10. Self check

I can explain the mechanism. I can show evidence. I can handle a changed case. I can name a limit. Mark each as not yet, with help or independently, and attach supporting work.

Teacher review _____ Next step _____

11. Transfer practice from the original programme

A helper says 'definitely correct' on four answers; only two match the answer key. A cautious helper gives the same four answers. Which is more accurate? What additional evidence would you need to compare confidence quality?

My independently reasoned answer

Record support used: none, hint or teacher explanation.

12. W1 Read the score definition

A card sorter gives a match score of 80 out of 100 points. Its documentation says the score counts weighted feature matches and is not a probability. A learner calls this an 80 percent chance of correctness. Explain the error and write an accurate description.

My reasoning and evidence

13. W2 Judge cases using outcomes

Use cases A, B and C from the lesson table. State which is correct, incorrect and unassessed. Explain why ordering them by confidence cannot replace checking their outcomes.

My reasoning and evidence

14. W3 Interpret a small group carefully

Ten predictions each claim an 80 percent probability that their chosen category is correct. Five later prove correct and five incorrect. State the claimed probability and observed fraction separately. Does this prove every future prediction will be wrong, or that each next prediction has exactly a 50 percent chance? Explain.

My reasoning and evidence

15. W4 Audit a different probability claim

A fictional leaf sorter claims a 75 percent probability of correctness for each of eight chosen labels. Later evidence establishes six correct labels, one incorrect label and one missing outcome. A report says six out of eight proves perfect calibration and guarantees the next label. Repair the report, state the assessed and unassessed counts, and describe a better follow-up check.

My reasoning and evidence

16. W5 Keep repetition separate from evidence

A learner copies the same 90 percent prediction into ten rows and calls this ten independent tests. No new outcomes were obtained. Explain why the evidence has not grown and propose a useful check.

My reasoning and evidence

17. Feedback, return check and learning record

Evidence · My record

Evidence: Worked alone / hint / model

My record: _____

Evidence: First step I repaired and why

My record: _____

Evidence: New case checked later; date and result

My record: _____

Evidence: What I can now explain without notes

My record: _____

Evidence: One remaining question

My record: _____

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

18. Pictorial case practice: Confidence Is Not Correctness

A fictional card classifier reports a claimed 80% chance that each chosen label is correct.

Ten predictions all have score 80%.

Later checks find 7 correct, 2 incorrect and 1 outcome unavailable. The selected cards were not a representative survey.

Known outcomes and missing evidence

predictions

Bar length shows the supplied value; the marked baseline is zero.

Confidence Is Not Correctness

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Keep scores

Ten chosen labels each carry 80%; this is a claim about uncertainty.

2. Checked outcomes

Seven correct plus two wrong gives nine known outcomes.

3. Report coverage

Observed agreement is 7/9 among checked cards; outcome coverage is 9/10.

4. Retain unknown

The missing result could change the all-ten correct count to 7 or 8.

CHANGE ONE THING

The missing outcome is checked and found incorrect.

Explain the changed result using the matching lesson.

Was the unknown label guaranteed correct because its confidence was 80%?

My picture-based explanation and changed-case prediction

Support used: alone / hint / worked example. This record is practice evidence.

Project connection: Keep sorter scores, reference outcomes and missingness separately; use review policies instead of treating high scores as facts.

19. Project portfolio milestone

Project: Helpful Classroom Sorter

Current milestone: Test changed cases. Keep normal, boundary and failure cases; compare expected and observed results.

Keep sorter scores, reference outcomes and missingness separately; use review policies instead of treating high scores as facts.

Evidence to keep · My record

Evidence to keep: This week’s input and deciding step

My record: _____

Evidence to keep: Prediction and actual result (or labelled paper trace)

My record: _____

Evidence to keep: One change since the previous checkpoint and why

My record: _____

Evidence to keep: One error or limit and the next test

My record: _____

Explain what this week adds to your project. Reuse last week’s record rather than starting again.
