Privacy by Choosing Less

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Helpful Classroom Sorter

Before you start

Week 19: preferences can be represented by selected book traits.

Plan time to read, investigate and explain. Keep predictions separate from observations.

Your mission

> Start with the target: Justify which information a stated task needs and remove unnecessary fields. Try the recall before opening notes.

Your learning target

I can justify which information a stated task needs and remove unnecessary fields.

I can distinguish reducing **personal data** from hiding a name.

I can design a simple access, **retention** and deletion plan for a classroom activity.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

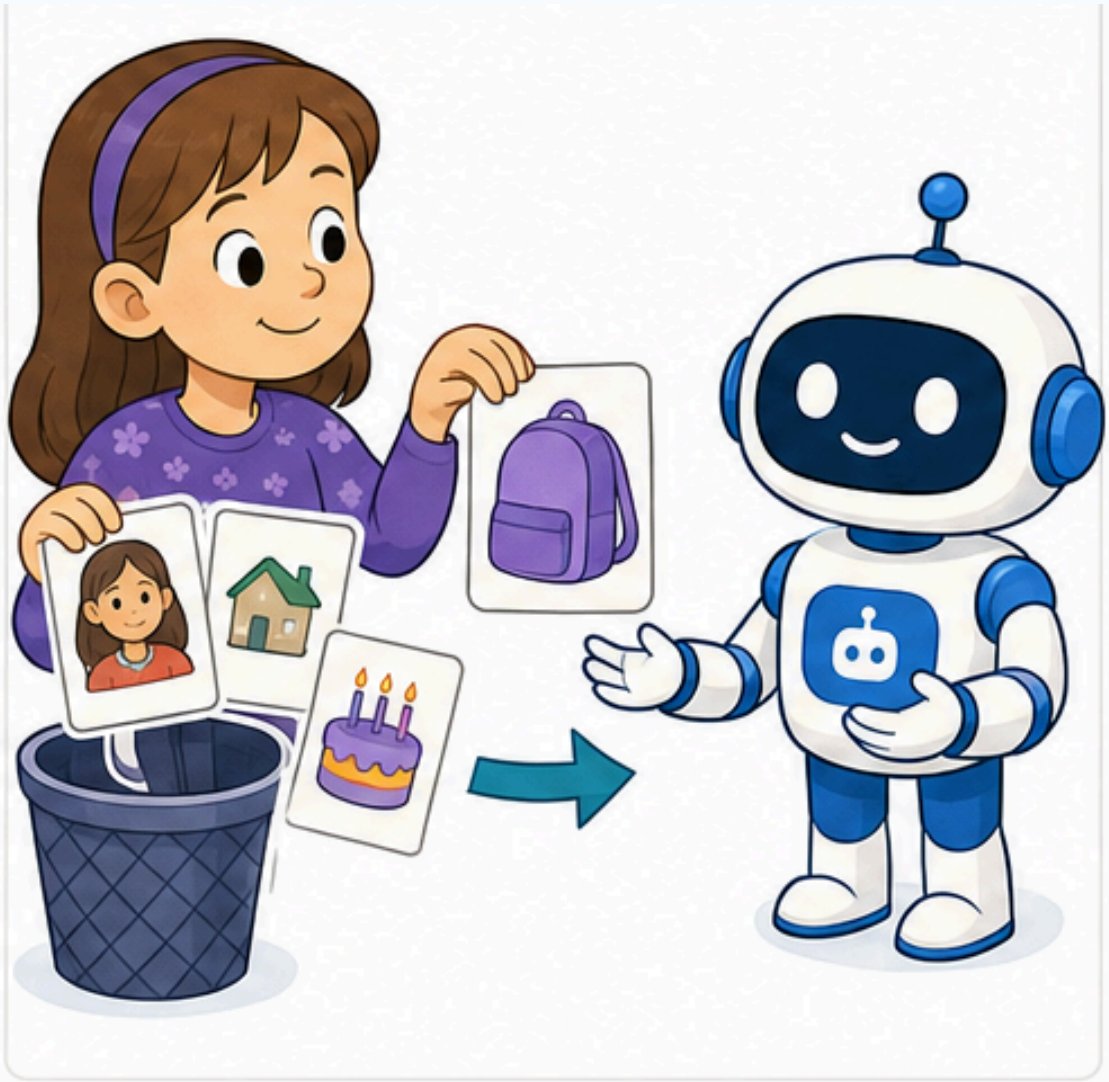

Without opening the old lesson, explain one key idea from Fair for Whom?. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Good Data, Bad Data. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Confidence Is Not Correctness. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

A useful system should collect only information it truly needs.

Your target

LEARNING TARGET A book recommender requests genre, maximum pages, home address and a selfie. Keep only fields needed for genre and length matching. Explain one consequence of storing extra fields.

Learner name:

Readiness for the connected explanation

A report needs the number of correct answers out of 20 fictional test cards. Does that calculation require a student's name or home address? Explain.

This week's end goal

By the end, I can collect only information necessary for a stated task and explain coded-record limits.

STUDENT LESSON · 2 OF 18

Notice the evidence

> Investigate the supplied Privacy by Choosing Less case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Look Closely Before You Explain

Pictures give clues; **evidence** tells us what the clues mean.

Start with this puzzle

MYSTERY A lunch helper needs food preferences and allergy information for its task, not a face photo, home address, or family income.

What do you notice?

Name three visible details without explaining them yet.

Circle the detail most connected to the system's decision.

Name one detail that may be decoration or distraction.

Make a first **prediction** and state the clue that supports it.

My **observation**s, **prediction**, and **evidence**:

Thinking habit

GOOD THINKING A **prediction** can change when stronger **evidence** appears.

A closer explanation

Privacy includes having appropriate boundaries around information about people. A useful first question is: what exact job are we trying to do? A second is: what is the least information that can do that job?

Collecting extra details just because a form has room for them creates **more information** to protect.

Our fictional class wants to choose one of three workshop topics for Friday: drawing, music or coding. It needs a total for each topic, not a list of who chose what.

Each fictional pupil gets one paper slip and marks one topic. No real class survey is needed for this lesson. The teacher counts the choices and uses the largest total; a tie goes to a class discussion.

A proposed form asks for name, full date of birth, home address, photograph and topic choice. For the stated counting task only the topic choice is needed. Remove the other fields before collection.

Do not fill them in and promise to ignore them later. If the **purpose** changes to individual attendance, design and justify that separate task with the teacher rather than silently reusing the survey.

STUDENT LESSON · 3 OF 18

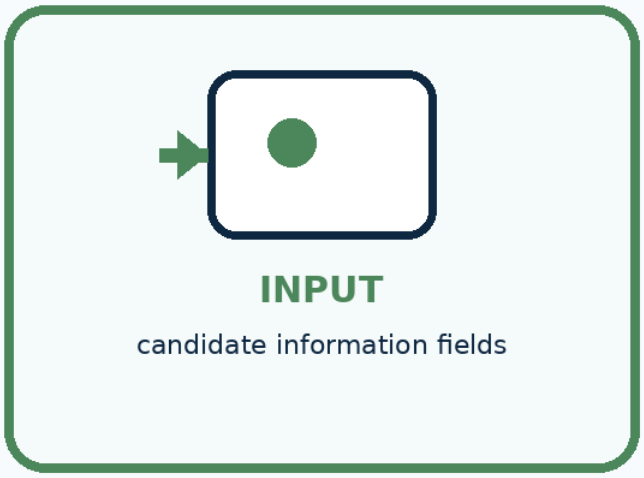

See how it works

> Follow the mechanism for Privacy by Choosing Less. Connect each labelled input, deciding step and result.

VISUAL MECHANISM

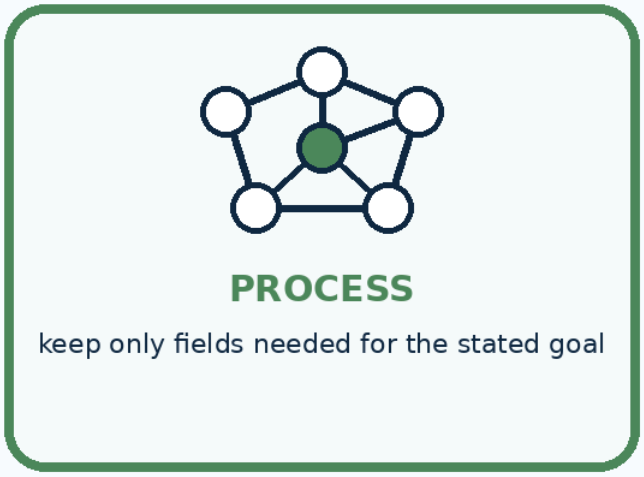

Input → Process → Output

Follow the information instead of imagining magic inside the machine.

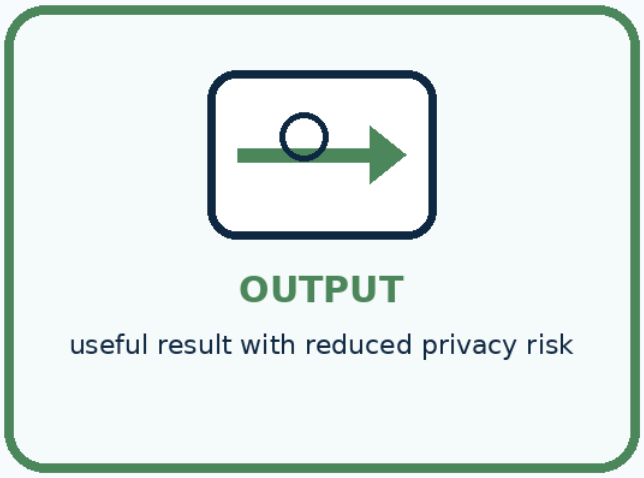

INPUT

candidate information fields

PROCESS

keep only fields needed for the stated goal

INPUT candidate information fields

PROCESS keep only fields needed for the stated goal

OUTPUT useful result with reduced **privacy** risk

Key idea

CORE IDEA A useful system should collect only information it truly needs.

How the mechanism works

UNDER THE HOOD **Data minimization** limits collection, access, **retention**, and reuse to what is necessary for a defined **purpose**.

Less data reduces breach exposure and misuse, but essential high-stakes information still needs secure, consent-aware handling.

Draw a fresh example with all three stages:

A closer explanation

A small information plan for a fictional vote

STAGE	NEEDED ACTION	PRIVACY CHECK
Collect	One topic per slip	No name or address
Count	Teacher totals choices	Keep slips restricted
Share	Three topic totals	No individual choices
Delete	After totals checked	Follow agreed plan

Purpose: choose a workshop topic. Collect the minimum, limit access, share the required result and agree how long the source slips are kept.

Suppose the fictional counts are drawing 8, music 7 and coding 5. These totals support the choice of drawing. There is no need to publish each slip or a photograph of a child holding it.

The teacher checks the total of 20 against the number of slips and then follows the agreed school **process** for disposing of the slips after verification.

A **retention** plan needs a clear trigger and a responsible person: for example, the teacher disposes of the fictional vote slips after the totals are checked and the activity closes.

Real classroom records must follow the school's approved **process**. Deleting one visible copy does not prove that every backup, screenshot or previously shared copy is gone.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

> Compare the supplied cases for Privacy by Choosing Less. Identify the detail that changes the conclusion.

PICTURE GALLERY

Four Cases, Four Clues

Use the visual cue, then read the **evidence** carefully.

The case to investigate

CASE 1 — Allergy Clue: needed for safe lunch filter. Meaning: relevant sensitive data.

The case to investigate

CASE 2 — Favorite foods Clue: useful for preference. Meaning: optional relevant data.

The case to investigate

CASE 3 — Home address Clue: not needed. Meaning: remove.

The case to investigate

CASE 4 — Face photo Clue: not needed for menu choice. Meaning: remove.

Keep this boundary clear

BOUNDARY Useful does not mean permitted forever or for every new **purpose**.

Which two pictures are easiest to confuse? What **evidence** separates them?

Change one thing in the pictured case

Change one thing

Change: The teacher adds an authorised task to return one repaired tool to its borrower.

Predicted result

Prediction: A minimal contact **mechanism** may now be needed for that tool.

Why the result follows

Reason: The **purpose** changed; reassess necessity rather than restoring every old field.

STUDENT LESSON · 5 OF 18

Words that unlock the idea

> Use the vocabulary of Privacy by Choosing Less to explain a concrete decision, rather than only memorising definitions.

VOCABULARY

Words You Can See and Use

The badge is a memory cue; the definition does the real thinking work.

Word	Meaning	My example
privacy	control and protection of information about people	
data minimization	collecting only what the purpose requires	

Word	Meaning	My example
purpose	specific reason information is used	
retention	how long information is kept	

Misconception detective

> **Find the unsupported claim**
>
> CLAIM TO REPAIR Collect data now in case it becomes useful later.

Use one vocabulary word and one piece of **evidence** to repair it:

> WORD POWER A strong definition helps you decide something in a new case.

Words used in the closer explanation

Word	Meaning
Personal data	Information about an identifiable person, including combinations that can identify someone
Data minimisation	Using only the information needed for a stated purpose
Access control	A rule and mechanism deciding who can see or use information

---

STUDENT LESSON · 6 OF 18

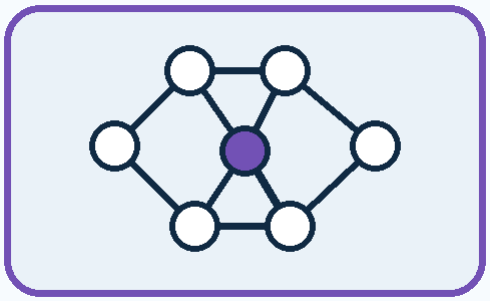

Follow a worked example

> Follow the worked trace for Privacy by Choosing Less, predict a step, then compare with its explanation.

WORKED EXAMPLE

Watch the Reasoning, Not Just the Answer

Every step connects a claim to observable **evidence**.

The case to investigate

CASE A lunch helper needs food preferences and allergy information for its task, not a face photo, home address, or family income.

Step 1

STEP 1 — OBSERVE candidate information fields

Step 2

STEP 2 — TRACE keep only fields needed for the stated goal

Step 3

STEP 3 — CONCLUDE useful result with reduced **privacy** risk

Model answer

MODEL REASONING Keep only information required for safety and stated preferences, allow a person to provide or update it, restrict access, and delete it when the **purpose** ends.

Explain why each removed field adds risk without benefit.

A claim to avoid

DO NOT OVERCLAIM Useful does not mean permitted forever or for every new **purpose**.

What new **evidence** could change this answer?

A closer explanation

Proposed change	What it changes	What still needs thought
Replace a name with P07	Hides the name on this sheet	A separate key can reconnect the code
Remove names but keep photos	Removes one identifying field	Faces may still identify people
Share topic totals only	Removes individual rows	Small or unusual groups may still reveal a choice

Worked explanation · Privacy by Choosing Less

A code is not a promise of anonymity. If a teacher keeps a key connecting P07 to a pupil, the coded record can still be linked to that pupil.

Even without a key, a combination such as an exact birthday, a team and a photograph may identify someone. Ask whether a reader could connect the information to a person, not just whether the name column is blank.

Worked explanation · Privacy by Choosing Less

Totals also need context. A report saying that the only member of a tiny club chose music reveals that member’s choice.

Our whole-class topic totals reveal less detail than individual rows, but we should not describe every possible total as automatically anonymous. Share only what the audience needs for the **purpose**.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Privacy by Choosing Less

A fictional teacher wants to count broken craft tools by type, without contacting borrowers.

The facts we will use

Supplied facts

Needed **output**: totals for scissors, ruler and hole-punch repairs.

Supplied facts

Draft form requests pupil name, birthday, tool type and repair-needed Yes/No. No borrower follow-up is required.

AI ACADEMY / AI-1/24

Privacy by Choosing Less

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. State purpose

Count repairs by tool type, not by person.

2. Choose fields

Retain tool type and repair-needed status.

3. Remove excess

Name and birthday are unnecessary for this stated task.

4. Report totals

Aggregate each tool type's Yes count; record the authorised retention plan.

CHANGE ONE THING

The teacher adds an authorised task to return one repaired tool to its borrower.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. State purpose	Count repairs by tool type, not by person.
2. Choose fields	Retain tool type and repair-needed status.
3. Remove excess	Name and birthday are unnecessary for this stated task.
4. Report totals	Aggregate each tool type’s Yes count; record the authorised retention plan.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

A field is justified by what the task needs to do, not by whether it might become useful someday. Names and birthdays do not help these repair totals.

Replacing names with codes still leaves linked personal records if someone keeps a name-code key; collecting less can remove the need for that link entirely.

What this example does not establish

Keep the stated limit

Removing these fields is not a universal guarantee of anonymity or permission to collect other identifying combinations.

Keep the stated limit

Read the labelled picture: For the original task, does adding an anonymous-looking pupil code improve the repair count?

Keep the stated limit

Change one thing: The teacher adds an authorised task to return one repaired tool to its borrower. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Privacy by Choosing Less claim and explain a repair using the supplied evidence.

COMPARE

Same Result, Different Reason

A comparison helps reveal the true concept boundary.

Case	Evidence	What it shows
Allergy	needed for safe lunch filter	relevant sensitive data
Favorite foods	useful for preference	optional relevant data
Home address	not needed	remove
Face photo	not needed for menu choice	remove

Repair two tempting claims

Challenge claim A

CLAIM A Collect data now in case it becomes useful later.

Repair:

Challenge claim B

CLAIM B Removing names makes all data anonymous and safe.

Repair:

A frame for explaining

STRONG ANSWER FRAME I claim _____ because the **evidence** shows _____. The **process** is _____. One limit is _____.

A closer explanation

Check the claim against the facts

A useful data plan answers five questions: what is the **purpose**; which fields are necessary; who needs access; what result will be shared; and when will the source information be disposed of under the agreed **process**?

It also names who is responsible. “Keep everything safe forever” answers neither the collection question nor the **retention** question.

Check the claim against the facts

If you accidentally share personal information, stop sharing it and tell the teacher or another trusted adult promptly. Do not repost it to ask classmates for help.

An adult can follow the school’s **process** and decide what action is appropriate. Avoid promising that deleting a message has removed every copy.

For the fictional workshop vote, name one field to collect and two to remove. State the audience for the totals and a clear trigger for the teacher to dispose of the slips under the agreed process

---

STUDENT LESSON · 8 OF 18

Practise together

Practise Privacy by Choosing Less with support, then explain the deciding step in your own words.

GUIDED PRACTICE

Try It, Check It, Explain It

Use support now so you can succeed independently later.

Explain how the picture story demonstrates this idea: A useful system should collect only information it truly needs.

Use a fresh example to explain **privacy**.

Trace a new **input** → **process** → **output** example.

Find and repair the error in: Removing names makes all data anonymous and safe.

Invent one edge case and name the safe response.

Check with a partner

PARTNER CHECK Point to the **evidence**. Do not accept an answer that only repeats the vocabulary word.

A closer explanation

An AI tool is another place where information may be sent. Before using it for schoolwork, follow the teacher's approved tool and data rules.

Do not paste real names, contact details, photos, passwords or private messages into an unapproved service. For this lesson, use the provided fictional counts or work entirely on paper.

An AI tool is not needed to add 8 + 7 + 5.

> **A classmate proposes uploading the named vote spreadsheet to an AI tool to make a chart. The required chart shows only three topic totals. Propose a smaller input, explain what must be checked before tool use, and name a way to complete the task without uploading data**
>
>
>
>
>

A student may need the lesson and their own work; a teacher may need restricted teaching records. Access should match these jobs. A hidden link or a hard-to-guess filename is not a substitute for an access check.

When information is shared more widely, it may be copied beyond the original audience. Decide the audience before sharing.

Practise with less help: Challenge a claim of anonymity

Use workbook W2 for the connected example "**Privacy** and **data minimisation**". First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for **Privacy** and **data minimisation**. Proposed explanation: "More data always improves a task". Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

> For the original task, does adding an anonymous-looking pupil code improve the repair count?

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

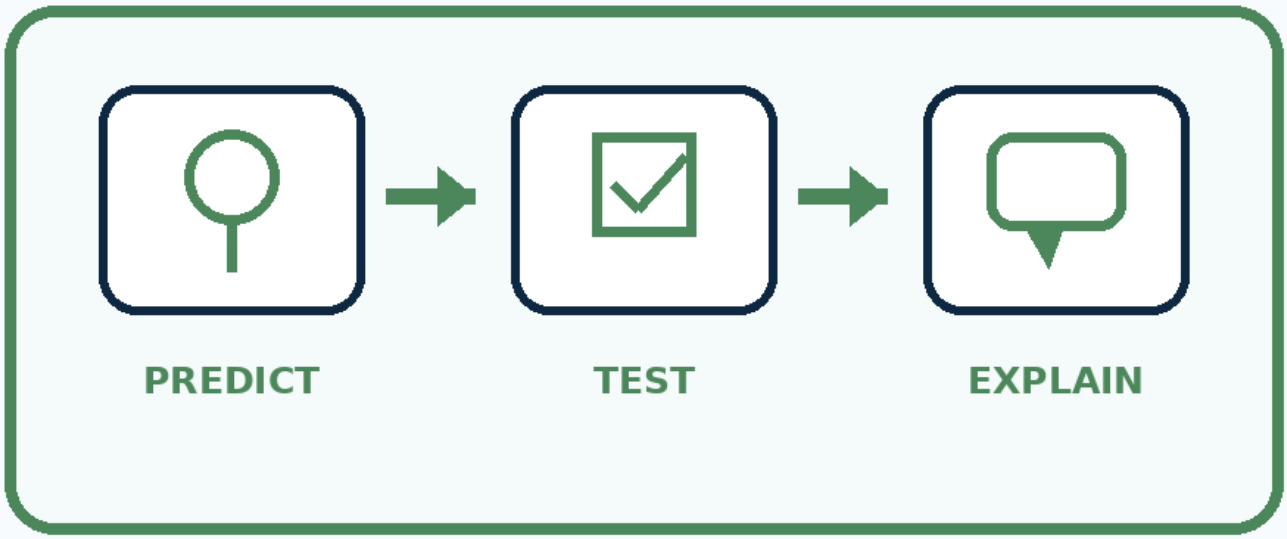

Run the investigation

> Investigate Privacy by Choosing Less. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EXPLORER LAB

Too-Much-Data Redesign

Predict first, test honestly, and explain what the **evidence** means.

1. Predict

State your **prediction** before the result is known.

2. Investigate

Complete the task: Redesign a lunch helper that asks for too much **personal data**.

3. Compare cases

Keep a normal case and an edge case clearly separated.

4. Record honestly

Record what happened—even when it does not match your **prediction**.

5. Explain and plan the next test

Explain the result, one limitation, and the next useful test.

Case	Prediction	Observed result	What it means
Normal			
Edge			

Use a fresh case after support

INDEPENDENCE After support is removed, repeat the proof with a fresh case.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

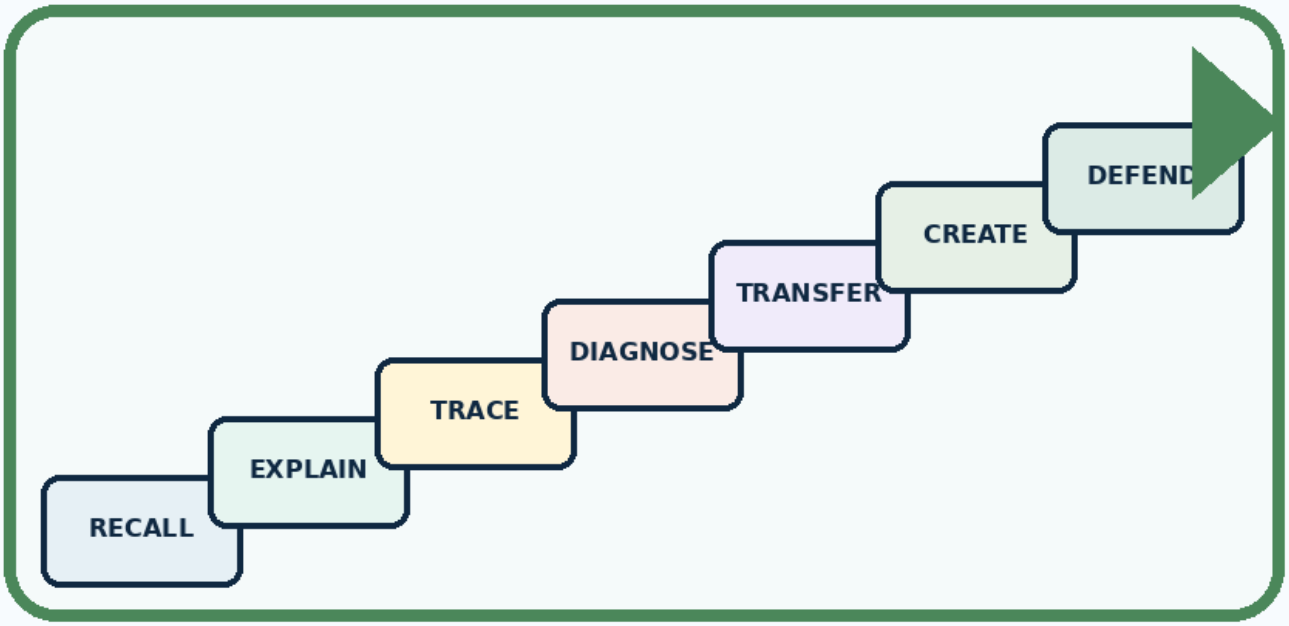

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Privacy by Choosing Less. Explain why each step is justified.

PRACTICE LADDER

Climb from Recall to Defense

Each step asks for a stronger kind of understanding.

RECALL Define **privacy**.

EXPLAIN A useful system should collect only information it truly needs.

TRACE Show the **input**, **process**, and **output**.

DIAGNOSE Repair: Collect data now in case it becomes useful later.

TRANSFER Apply the idea to a new home or classroom case.

CREATE Design one revealing test.

DEFEND Give a claim, **evidence**, **mechanism**, limit, and safe action.

When to retry

RETRY RULE A coached answer becomes mastery only after you solve a different case independently.

STUDENT LESSON · 11 OF 18

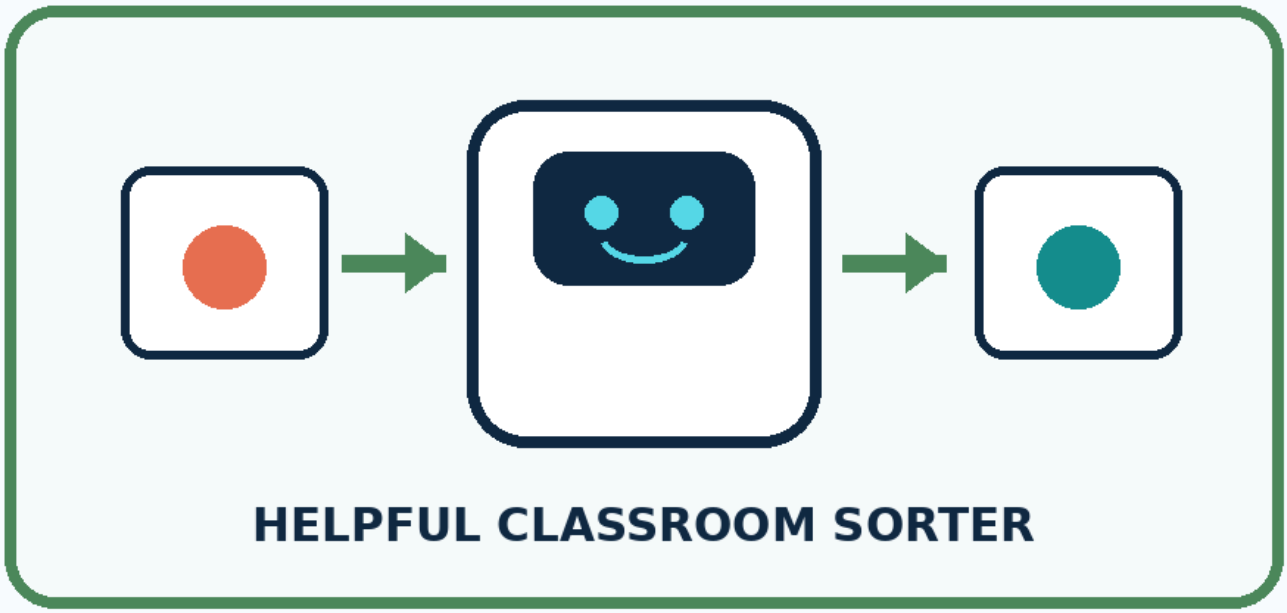

Connect your project

> Apply this week's idea to Helpful Classroom Sorter. Keep an annotated decision and the evidence supporting it.

PROJECT

Helpful Classroom Sorter

Build one coherent system across the year, one **evidence**-based decision at a time.

THIS WEEK'S CHECKPOINT Cross out names, faces, and ownership details unless an explicit need survives review; set a deletion rule for sorter records.

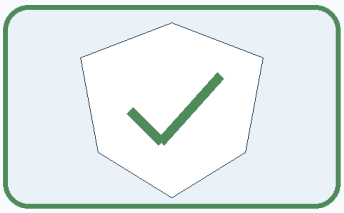

What real classroom need does this serve?

What information is necessary—and what should stay private?

What happens inside the **process**?

What normal and edge cases will you test?

When should it say not sure or ask a person?

Responsible design

RESPONSIBLE DESIGN Useful does not mean permitted forever or for every new **purpose**.

My project decision:

Evidence for your project

Write the sorter's **purpose**, necessary fields, access rules and deletion point before collecting any real classroom information.

STUDENT LESSON · 12 OF 18

Show what you know

> Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

MASTERY

Fresh-Case Independent Proof

Complete this after teaching and guided practice have ended.

What success looks like

REQUIRED PROOF Remove unnecessary fields from a lunch helper and justify each remaining **input**, access rule, and deletion time.

- ☐ Name or draw the fresh case.
- ☐ Trace **input**, **process**, and **output**.
- ☐ State the conclusion and strongest **evidence**.
- ☐ Name one limit, failure, missing clue, or fairness/**privacy** concern.
- ☐ Explain one safe next action or improvement.

Independent **evidence**:

Check your explanation

SELF-CHECK Keep only information required for safety and stated preferences, allow a person to provide or update it, restrict access, and delete it when the **purpose** ends.

Explain why each removed field adds risk without benefit.

My level: ☐ Not yet ☐ With one hint ☐ Independently ☐ I can teach it

Connect to the next lesson

NEXT BRIDGE Carry today's **evidence** habit into: Generate, Retrieve, or Calculate?.

STUDENT LESSON · 13 OF 18

Study a complete case

> Revisit the complete Privacy by Choosing Less case for supported practice. Repeated examples do not become fresh assessments.

Week 24 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

A genre-based book helper asks for genre, home address and a photograph.

The question

> Which fields are necessary?

Worked explanation

Genre is relevant; address and photo are unnecessary for the stated task. Collecting less reduces exposure.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Collect only what the book task needs

Evidence or stage	Value or result
Genre	Useful for genre matching
Home address	Not needed for this task
Photograph	Not needed for this task

A genre-based book helper asks for genre, home address and a photograph.

> Which fields are necessary?

Genre is relevant; address and photo are unnecessary for the stated task. Collecting less reduces exposure.

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Design a different minimal-data task

A fictional library wants only the total number of books needing repair in each category: cover, page or binding. It does not need to contact borrowers.

A draft repair sheet asks for borrower name, home address, book repair category and borrower photograph.

Design a plan: state the **purpose**, required and removed fields, who handles source sheets, what totals are shared with the librarian, and who disposes of sheets at what agreed point. Use no real borrower details.

> **My independent explanation, trace and limits**

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 24 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

> A book helper needs reading topic and approximate difficulty. Someone asks it to collect home address too. Which information can be left out, and why?

My answer, with a trace, calculation or supporting **evidence**

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

Write or draw your reasoning and evidence.

Connect to your project

Cross out names, faces, and ownership details unless an explicit need survives review; set a deletion rule for sorter records.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

A book recommender requests genre, maximum pages, home address and a selfie. Keep only fields needed for genre and length matching. Explain one consequence of storing extra fields.

> **Explain the mechanism, evidence and one limit.**

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Privacy by Choosing Less, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: A fictional teacher wants to count broken craft tools by type, without contacting borrowers.

By the end, I can	How I will show it
Justify which information a stated task needs and remove unnecessary fields	Explain the deciding step, show a trace or test, and state one limit.
Distinguish reducing personal data from hiding a name	Explain the deciding step, show a trace or test, and state one limit.

By the end, I can	How I will show it
Design a simple access, retention and deletion plan for a classroom activity	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Privacy by Choosing Less without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Justify which information a stated task needs and remove unnecessary fields

My deciding step, evidence and one remaining question

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A fictional teacher wants to count broken craft tools by type, without contacting borrowers.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Aggregate each tool type's Yes count; record the authorised **retention** plan.

1. State **purpose**

2. Choose fields

3. Remove excess

4. Report totals

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Report totals Aggregate each tool type’s Yes count; record the authorised **retention** plan.

A field is justified by what the task needs to do, not by whether it might become useful someday. Names and birthdays do not help these repair totals.

Replacing names with codes still leaves linked personal records if someone keeps a name-code key; collecting less can remove the need for that link entirely.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: The teacher adds an authorised task to return one repaired tool to its borrower. Which conclusion is supported by the supplied facts?

1. A minimal contact **mechanism** may now be needed for that tool.

2. This one example guarantees correct results for every future **input**.

3. We can decide the result without examining the changed **input** or the procedure.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: A minimal contact **mechanism** may now be needed for that tool. The **purpose** changed; reassess necessity rather than restoring every old field.

Repair a missing building block

Review Fair for Whom? (ai-1/23). Goal: Compute a correct-out-of-assessed fraction and explain its denominator. Short practice: Which group loses performance under N, and can total improvement erase that fact?.

Return to this week and explain what you changed.

Review Good Data, Bad Data (ai-1/21). Goal: Check records against a stated format, unit and meaning before using them. Short practice: Which repairs are **evidence**-backed in the original case, and which row must remain unknown?.

Return to this week and explain what you changed.

Review Confidence Is Not Correctness (ai-1/18). Goal: Distinguish a confidence claim from **evidence** that a **prediction** was correct. Short practice: Was the unknown label guaranteed correct because its confidence was **80%**?.

Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

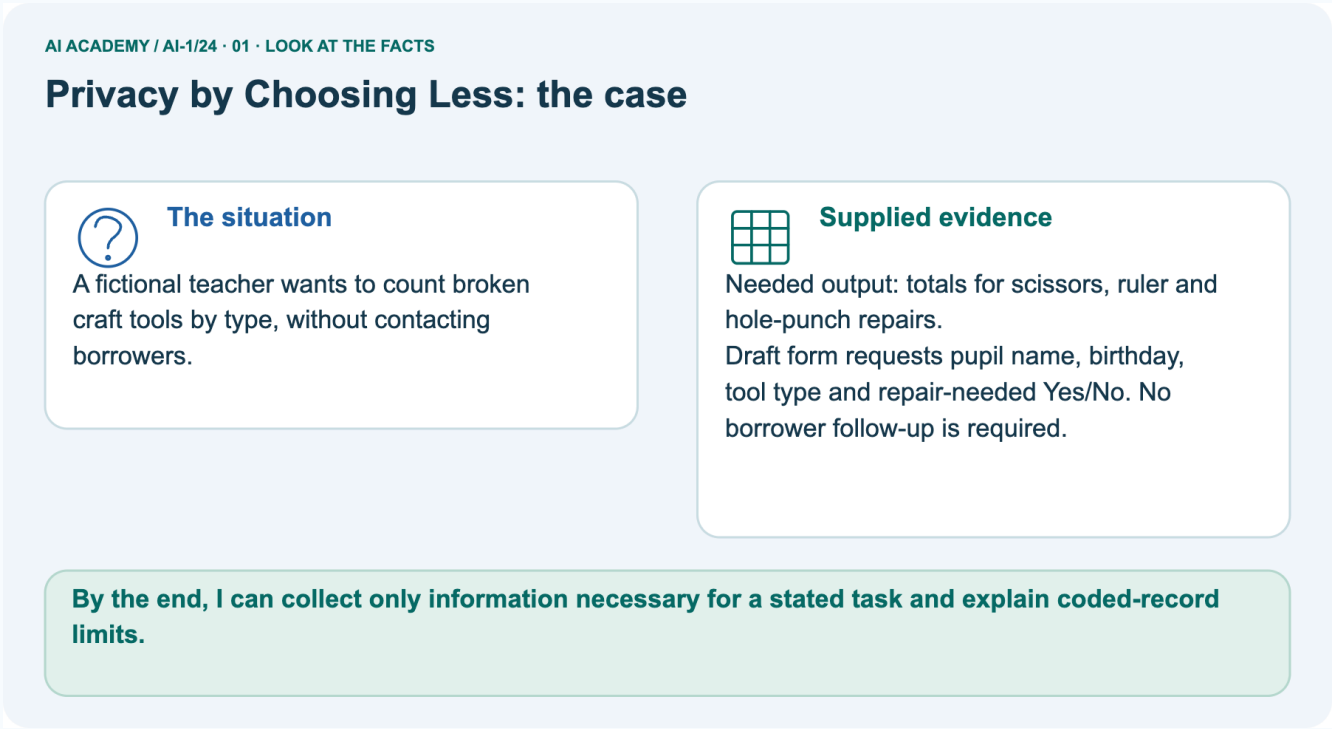

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Privacy by Choosing Less graphic using its labels, deciding evidence and relevant limitation.

01. Privacy by Choosing Less: the case

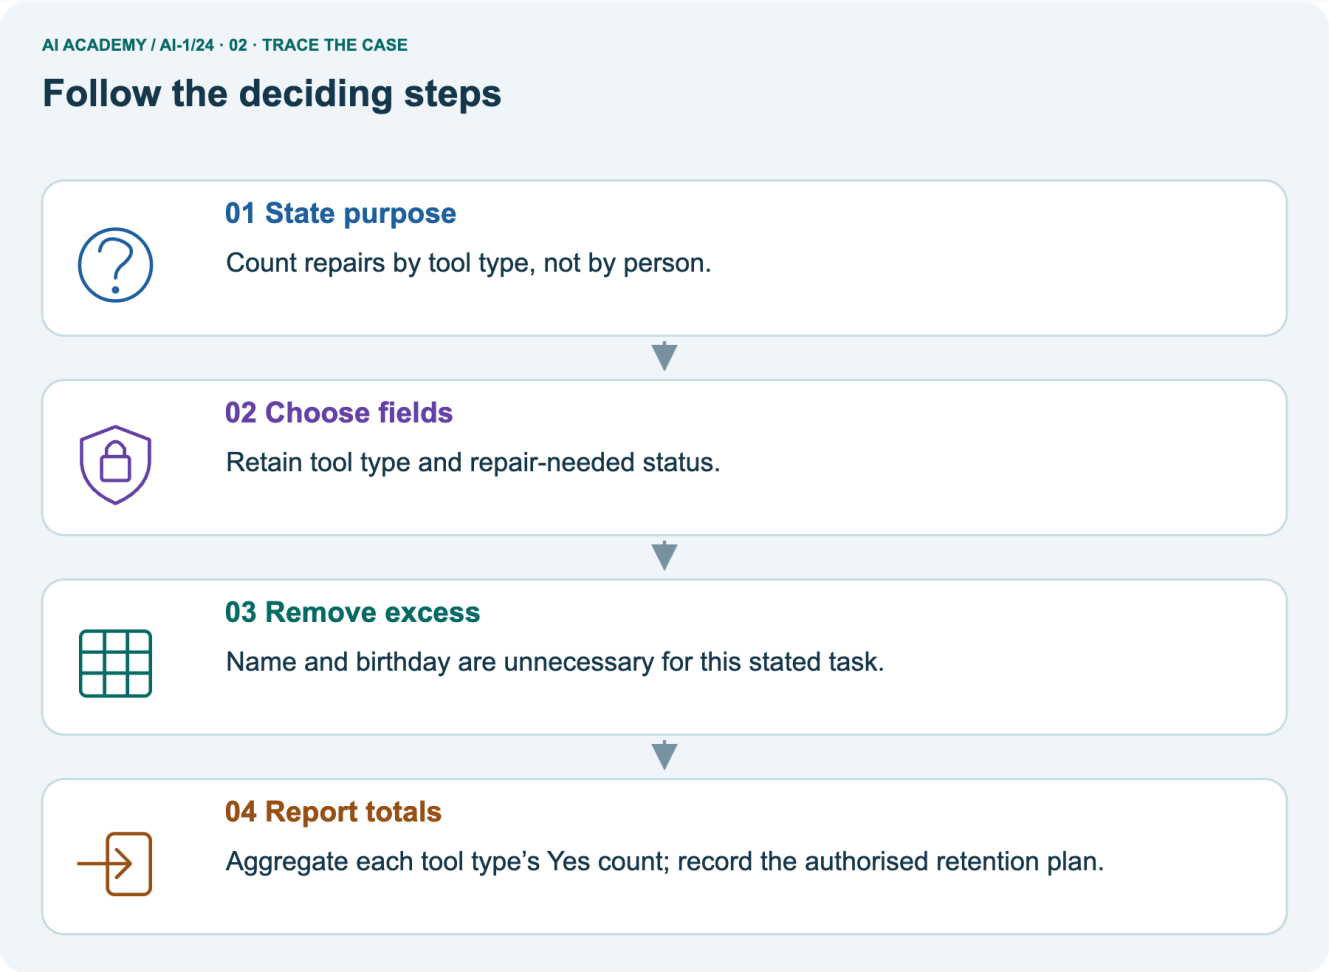

Follow the labelled picture with the matching explanation. Open the vector diagram

A fictional teacher wants to count broken craft tools by type, without contacting borrowers. Supplied facts: Needed **output**: totals for scissors, ruler and hole-punch repairs.

Draft form requests pupil name, birthday, tool type and repair-needed Yes/No. No borrower follow-up is required.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

Follow the labelled picture with the matching explanation. Open the vector diagram

State **purpose**: Count repairs by tool type, not by person. → Choose fields: Retain tool type and repair-needed status. → Remove excess: Name and birthday are unnecessary for this stated task. → Report totals: Aggregate each tool type's Yes count; record the authorised **retention** plan.

Point to each numbered stage and explain which recorded **input** it uses.

03. A small information plan for a fictional vote

AI ACADEMY / AI-1/24 · 03 · INSPECT THE LESSON MODEL

A small information plan for a fictional vote

Stage	Needed action	Privacy check
Collect	One topic per slip	No name or address
Count	Teacher totals choices	Keep slips restricted
Share	Three topic totals	No individual choices
Delete	After totals checked	Follow agreed plan

Purpose: choose a workshop topic. Collect the minimum, limit access, share the required result and agree how long the source slips are kept.

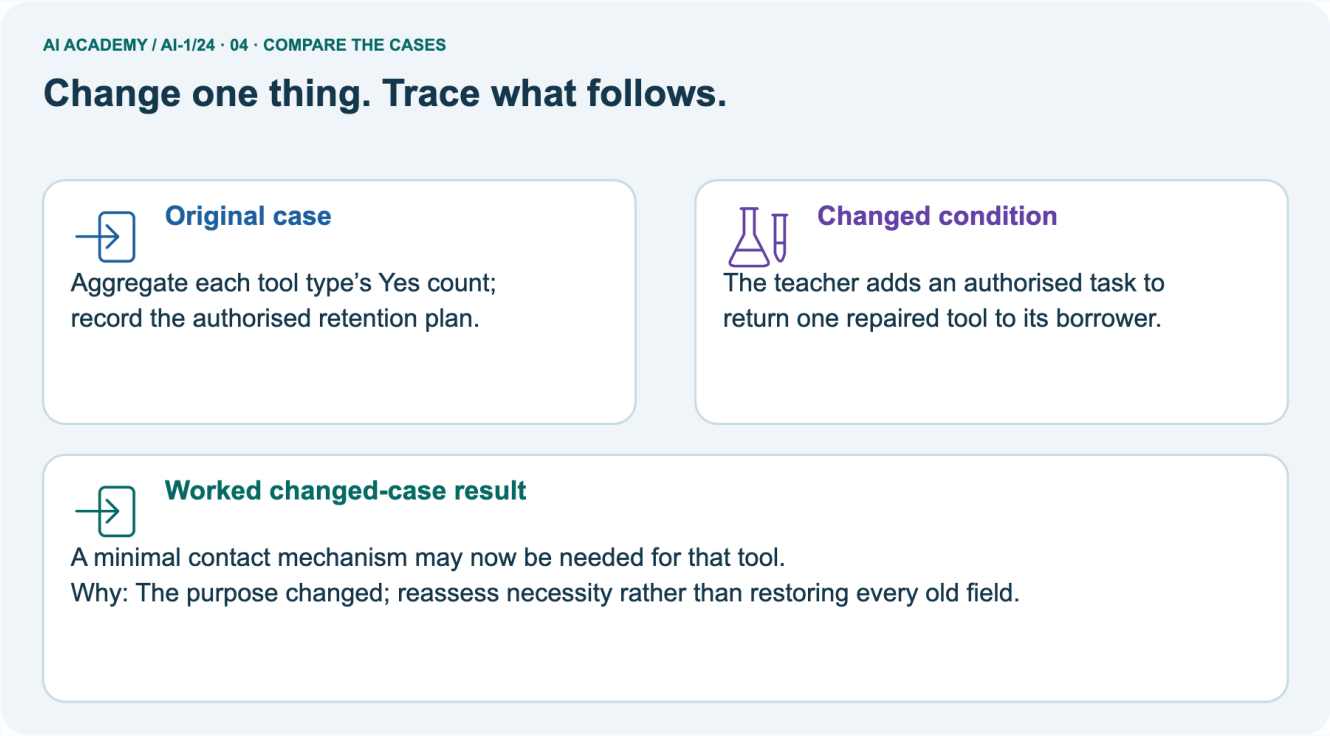

Follow the labelled picture with the matching explanation. Open the vector diagram

A small information plan for a fictional vote. Collect | One topic per slip | No name or address. Count | Teacher totals choices | Keep slips restricted. Share | Three topic totals | No individual choices.

Delete | After totals checked | Follow agreed plan

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

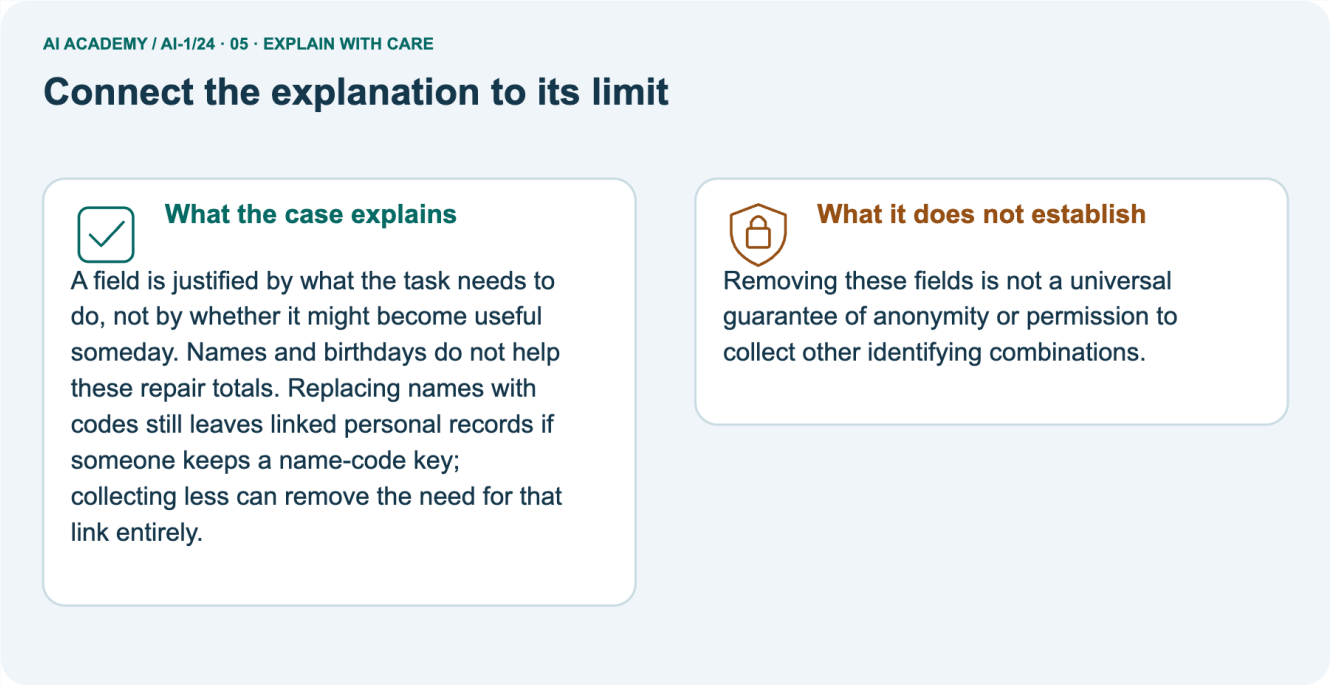

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Aggregate each tool type's Yes count; record the authorised **retention** plan.
Changed condition: The teacher adds an authorised task to return one repaired tool to its borrower.

Expected result: A minimal contact **mechanism** may now be needed for that tool. Reason: The **purpose** changed; reassess necessity rather than restoring every old field.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

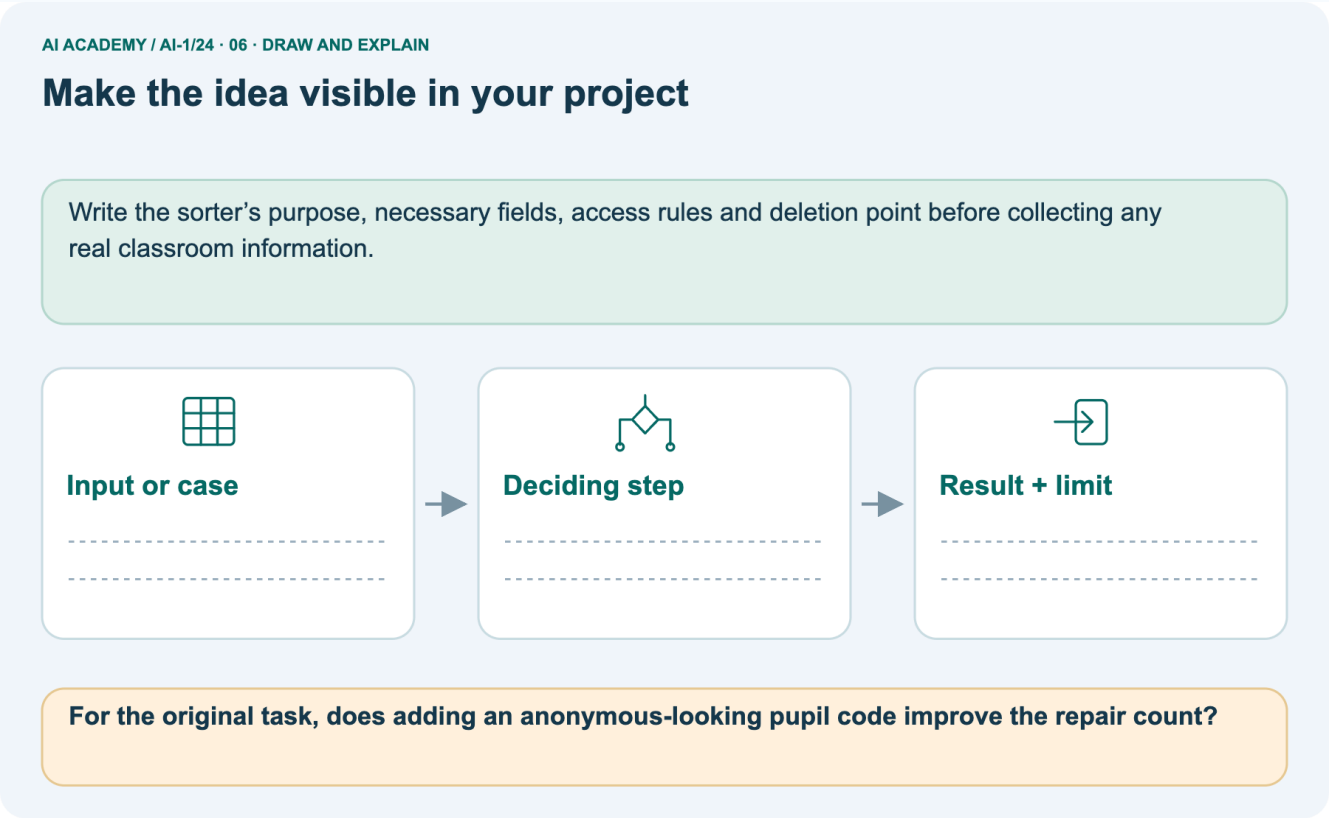

A field is justified by what the task needs to do, not by whether it might become useful someday. Names and birthdays do not help these repair totals.

Replacing names with codes still leaves linked personal records if someone keeps a name-code key; collecting less can remove the need for that link entirely.

Limit: Removing these fields is not a universal guarantee of anonymity or permission to collect other identifying combinations.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Write the sorter's **purpose**, necessary fields, access rules and deletion point before collecting any real classroom information. Draw your **input**, deciding step, result and limit.

Supported question: For the original task, does adding an anonymous-looking pupil code improve the repair count?

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
