AI ACADEMY · LEVEL 1 · GRADE 6 · WEEK 28 · STUDENT LESSON

Humans Set Boundaries

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Helpful Classroom Sorter

Before you start

Week 24: access to information should fit the task.

Plan time to read, investigate and explain. Keep predictions separate from observations.

STUDENT LESSON · 1 OF 18

Your mission

> Start with the target: Distinguish a system's capability, the correctness of its output and permission to take an action. Try the recall before opening notes.

Your learning target

I can distinguish a system's **capability**, the correctness of its **output** and **permission** to take an action.

I can match an action to the person, version, audience and limits covered by an approval.

I can explain when to proceed within an existing **permission** and when a changed action needs review.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

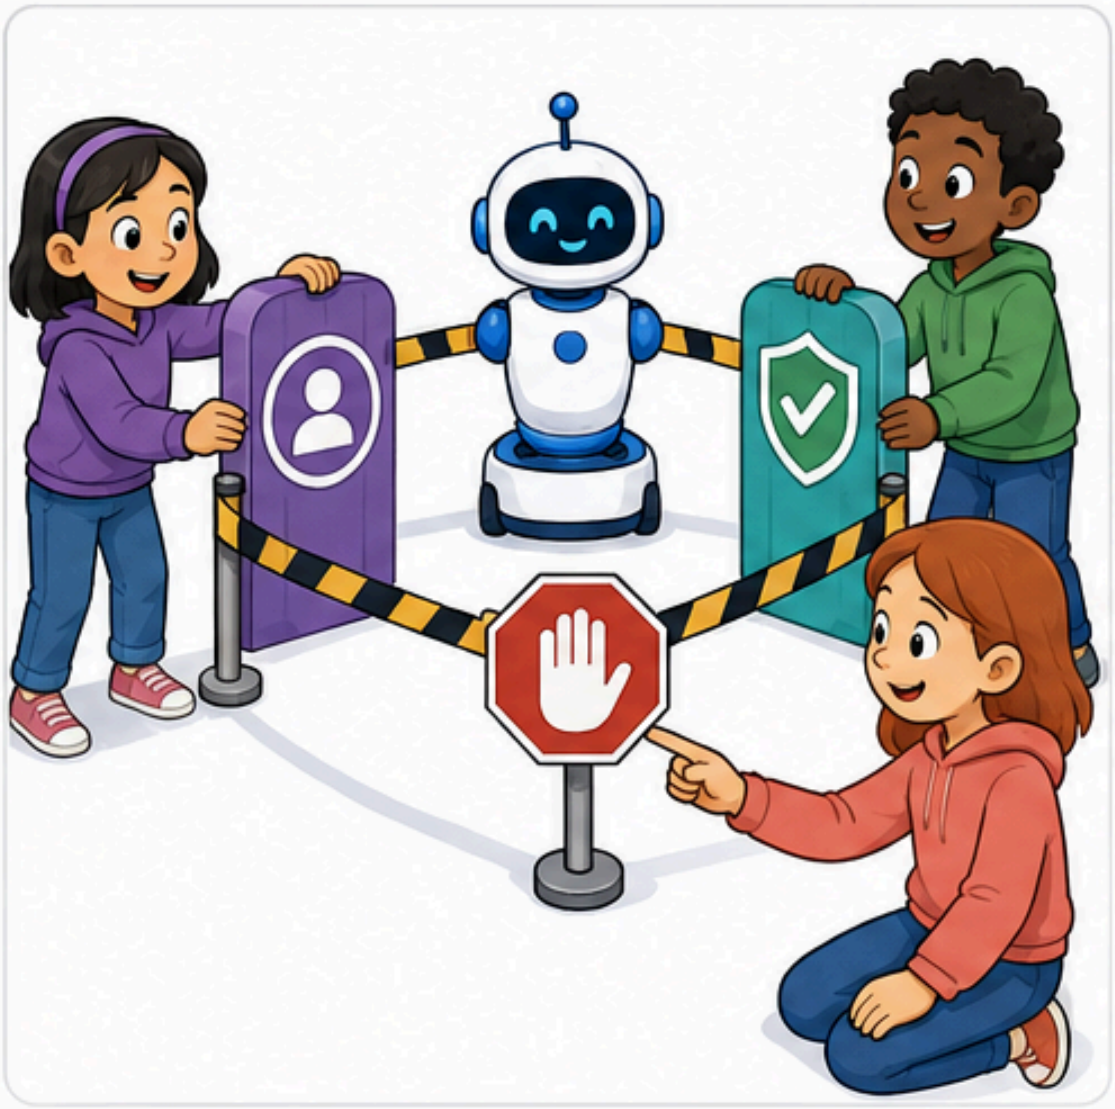

Without opening the old lesson, explain one key idea from Verify Important **Output**s. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Generate, Retrieve, or Calculate?. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Missing and Unbalanced Examples. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

People decide goals, **permission**s, review points, and **consequence**s.

Your target

LEARNING TARGET A classroom assistant may draft a reminder but cannot send messages. It displays a completed draft and waits. A student writes 'looks good' without a destination. Has a clear send authorisation been given?

Specify what is needed.

Learner name:

Readiness for the connected explanation

You check every factual claim on a club announcement against the correct source. Does that alone establish **permission** to publish it? Explain.

This week’s end goal

By the end, I can match **permission** to a specific action, object and version.

STUDENT LESSON · 2 OF 18

Notice the evidence

> Investigate the supplied Humans Set Boundaries case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Look Closely Before You Explain

Pictures give clues; **evidence** tells us what the clues mean.

Start with this puzzle

MYSTERY A classroom helper may suggest a bin, but people decide what data it may use, when an adult reviews, and what happens after a mistake.

What do you notice?

Name three visible details without explaining them yet.

Circle the detail most connected to the system's decision.

Name one detail that may be decoration or distraction.

Make a first **prediction** and state the clue that supports it.

My **observation**s, **prediction**, and **evidence**:

> **Thinking habit**
>
> GOOD THINKING A **prediction** can change when stronger **evidence** appears.

A closer explanation

A tool might be able to publish a message even when its user is only allowed to prepare a draft. A message might also contain correct facts but still be intended for a private group.

Ask three separate questions: can the system do this, is the proposed result correct, and is this particular action allowed? **Evidence** for one question does not automatically answer the others.

Use this fictional paper exercise. A class is preparing an announcement about a model bridge exhibition.

Version A says “Model bridge exhibition, Thursday, Room 6.” The teacher has checked those facts and is responsible for the class noticeboard.

The teacher tells the class editor: “You may put exactly version A on our classroom noticeboard today, once. Do not post it online.” The editor has not yet posted it.

In the story, the editor’s tool has buttons for Save draft, Class noticeboard and Public website. Having a button shows a possible **capability**. It does not change the teacher’s stated **permission**.

In this lesson, represent actions with paper cards; do not send messages or change a real noticeboard or website.

STUDENT LESSON · 3 OF 18

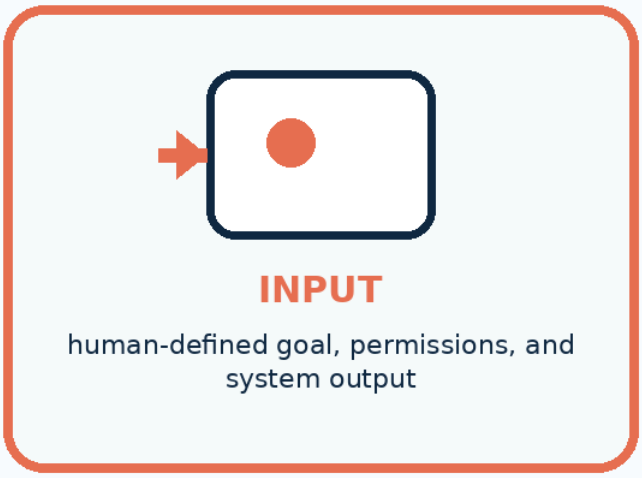

See how it works

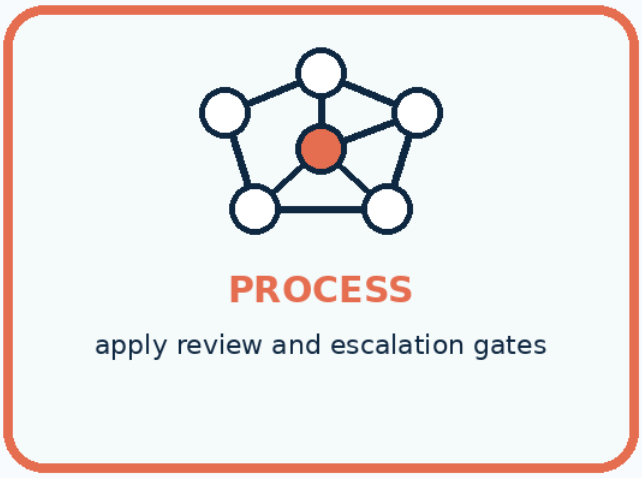

> Follow the mechanism for Humans Set Boundaries. Connect each labelled input, deciding step and result.

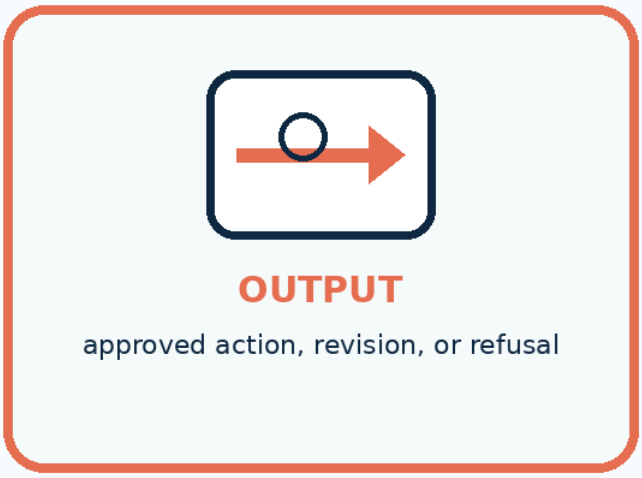

VISUAL MECHANISM

Input → Process → Output

Follow the information instead of imagining magic inside the machine.

INPUT human-defined goal, **permission**s, and system **output**

PROCESS apply review and escalation gates

OUTPUT approved action, revision, or refusal

Key idea

CORE IDEA People decide goals, **permission**s, review points, and **consequence**s.

How the mechanism works

UNDER THE HOOD Governance surrounds the model: people define **scope**, access, thresholds, logging, escalation, and accountability.

Human oversight is meaningful only when reviewers have **authority**, information, time, and a safe way to override.

Draw a fresh example with all three stages:

A closer explanation

Match the proposed action to its permission

PROPOSED ACTION	CHECK AGAINST APPROVAL	DECISION
Version A on class board	Today, once, by editor	Within scope
Version A on public site	Public posting excluded	Outside scope
Changed version B	Only A was approved	Review changed version
Post A a second time	Once has been used	Outside scope

Each decision uses the approval in this story. An unchanged, unused permission can be acted on without requesting it again.

An **approval record** should identify the decision maker, the person or system allowed to act, the action, its audience or destination, and any version, time or quantity limit. These details make a **permission** usable.

“Looks good” could mean the wording is clear; without context it may not mean “publish this publicly”. If the intended action is unclear, clarify that action with the person responsible.

Here, the teacher has already approved the editor’s one posting of A on the class board today. Once the editor verifies that these conditions still hold, repeatedly requesting the same **permission** adds no new information.

But a classmate saying “Post it everywhere” does not expand the teacher’s approval: the classmate has no **authority** over publication in this story.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week’s visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

> Compare the supplied cases for Humans Set Boundaries. Identify the detail that changes the conclusion.

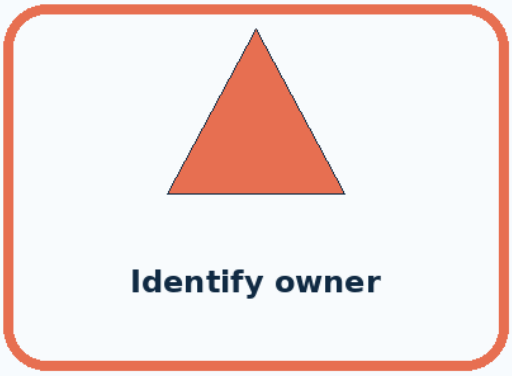

PICTURE GALLERY

Four Cases, Four Clues

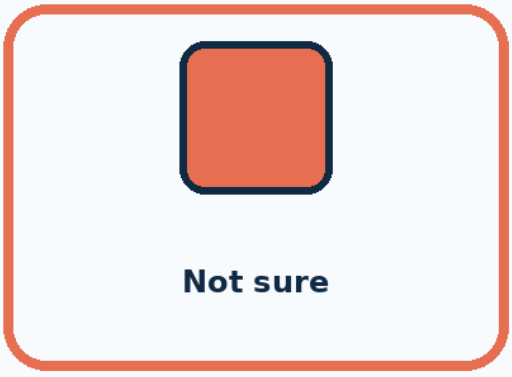

Use the visual cue, then read the **evidence** carefully.

Suggest bin

Identify owner

Not sure

The case to investigate

CASE 1 — Suggest bin Clue: low-stakes **output**. Meaning: student may confirm.

The case to investigate

CASE 2 — Identify owner Clue: personal decision. Meaning: adult **permission** required.

The case to investigate

CASE 3 — Not sure Clue: weak **evidence**. Meaning: **review gate**.

The case to investigate

CASE 4 — Repeated error Clue: pattern of failure. Meaning: pause and redesign.

Keep this boundary clear

BOUNDARY A human in the room is not meaningful oversight if the person cannot understand or change the outcome.

Which two pictures are easiest to confuse? What **evidence** separates them?

Change one thing in the pictured case

Change one thing

Change: P2 has already been published once under this approval.

Predicted result

Prediction: A second publication is not covered.

Why the result follows

Reason: The instruction allowed a single use, not repeated actions.

STUDENT LESSON · 5 OF 18

Words that unlock the idea

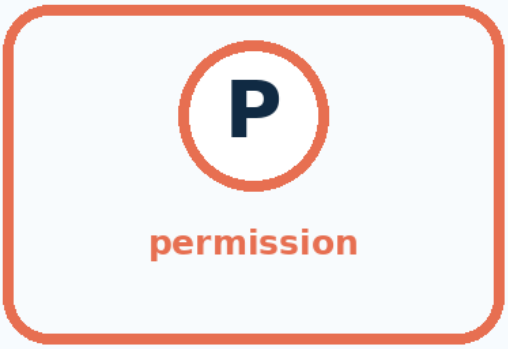

> Use the vocabulary of Humans Set Boundaries to explain a concrete decision, rather than only memorising definitions.

VOCABULARY

Words You Can See and Use

The badge is a memory cue; the definition does the real thinking work.

B
boundary

P
permission

R
review gate

Word	Meaning	My example
boundary	limit on what a system may do	
permission	authorized access or action	
review gate	point requiring human approval	
consequence	result experienced after a decision	

Misconception detective

Find the unsupported claim

CLAIM TO REPAIR Human review makes every system safe.

Use one vocabulary word and one piece of **evidence** to repair it:

WORD POWER A strong definition helps you decide something in a new case.

Words used in the closer explanation

Word	Meaning
Capability	What a person or system is able to do

Word	Meaning
Authority	Responsibility and power to make a specified decision
Scope	The boundaries of what a permission covers
Approval record	A note of who approved which action and under what conditions

STUDENT LESSON · 6 OF 18

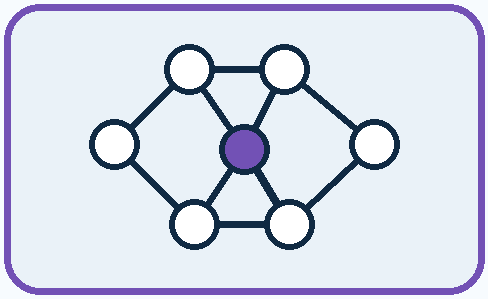

Follow a worked example

> Follow the worked trace for Humans Set Boundaries, predict a step, then compare with its explanation.

WORKED EXAMPLE

Watch the Reasoning, Not Just the Answer

Every step connects a claim to observable **evidence**.

The case to investigate

CASE A classroom helper may suggest a bin, but people decide what data it may use, when an adult reviews, and what happens after a mistake.

Step 1

STEP 1 — OBSERVE human-defined goal, **permission**s, and system **output**

Step 2

STEP 2 — TRACE apply review and escalation gates

Step 3

STEP 3 — CONCLUDE approved action, revision, or refusal

Model answer

MODEL REASONING Mark where data enters, where the system predicts, where a person reviews, and who may act. Give reviewers the **evidence** and power to correct or stop the **process**.

High-**consequence** cases should not pass automatically.

A claim to avoid

DO NOT OVERCLAIM A human in the room is not meaningful oversight if the person cannot understand or change the outcome.

What new **evidence** could change this answer?

A closer explanation

Check	Question in the exhibition story	What it does not establish
Factual support	Do Thursday and Room 6 match the source?	Permission to publish anywhere
Scope of approval	Does this action match the teacher’s limits?	That every statement is correct
Available capability	Does the tool offer this action?	Authority to use that action

Worked explanation · Humans Set Boundaries

Suppose a current room record changes the exhibition to Room 8. The editor makes version B with Room 8, which is now factually supported. The old approval explicitly covered exactly A.

The editor should hold publication and show B and the changed room record to the teacher. Publishing the now-outdated A just because it was approved would fail the factual check.

Worked explanation · Humans Set Boundaries

A useful review request makes the choice concrete: “The room record now says Room 8. Here is version B with only that change.

May the editor post B on the classroom board today, once?” A request to review a specific change is easier to assess than an unexplained “Is this okay?” The teacher can approve, decline or request another change before anything is posted.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Humans Set Boundaries

A fictional teacher approves one checked classroom poster for internal display.

The facts we will use

Supplied facts

Approval: publish exactly poster P2 on the classroom noticeboard today, once.

Supplied facts

Assistant proposes P2 there; P3 there after an edit; P2 on a public website.

AI ACADEMY / AI-1/28

Humans Set Boundaries

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Read authority

The teacher approved P2, one internal noticeboard and one publication.

2. Allowed action

Publishing unchanged P2 there today matches the approval.

3. Changed version

P3 requires new review; P2 approval does not automatically cover edits.

4. Changed audience

Public-web publication exceeds the approved destination.

CHANGE ONE THING

P2 has already been published once under this approval.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Read authority	The teacher approved P2, one internal noticeboard and one publication.
2. Allowed action	Publishing unchanged P2 there today matches the approval.
3. Changed version	P3 requires new review; P2 approval does not automatically cover edits.
4. Changed audience	Public-web publication exceeds the approved destination.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

A general intention to help the class does not grant every action that might help. Check the version, destination and time explicitly. An edit may improve accuracy while still changing the approved artifact.

The assistant should hold the changed poster for review rather than treating its own confidence as **permission**.

What this example does not establish

Keep the stated limit

Permission does not prove content accuracy; factual checks and action **authority** are separate requirements.

Keep the stated limit

Read the labelled picture: Which original proposal is authorised? Why do the other two need separate approval?

Keep the stated limit

Change one thing: P2 has already been published once under this approval. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Humans Set Boundaries claim and explain a repair using the supplied evidence.

COMPARE

Same Result, Different Reason

A comparison helps reveal the true concept **boundary**.

Case	Evidence	What it shows
Suggest bin	low-stakes output	student may confirm
Identify owner	personal decision	adult permission required
Not sure	weak evidence	review gate
Repeated error	pattern of failure	pause and redesign

Repair two tempting claims

Challenge claim A

CLAIM A Human review makes every system safe.

Repair:

Challenge claim B

CLAIM B The model decides the goal and acceptable **consequence**s.

Repair:

A frame for explaining

STRONG ANSWER FRAME I claim _____ because the **evidence** shows _____. The **process** is _____. One limit is _____.

A closer explanation

Check the claim against the facts

After an allowed action, note what was done, by whom, with which version and destination. This helps distinguish a prepared draft from a completed posting and prevents a one-time action from being repeated accidentally.

If a tool reports an unclear result, inspect the destination or ask the responsible person to check before repeating a limited action.

Check the claim against the facts

If the editor discovers that A was posted publicly by mistake, stop further posting and tell the teacher what version and destination were involved. Follow the teacher’s directions to correct or remove it.

A later deletion does not establish that nobody saw or copied it. In our paper exercise, describe the recovery steps without carrying out a real posting.

The teacher now explicitly allows the editor to replace A with checked version B on the classroom noticeboard today, once. Before any replacement, the editor proposes exactly that action. Must the editor request the identical approval again? Explain what to check and what still remains outside the permission

Practise together

> Practise Humans Set Boundaries with support, then explain the deciding step in your own words.

GUIDED PRACTICE

Try It, Check It, Explain It

Use support now so you can succeed independently later.

Explain how the picture story demonstrates this idea: People decide goals, **permission**s, review points, and **consequence**s.

Use a fresh example to explain **boundary**.

Trace a new **input** → **process** → **output** example.

Find and repair the error in: The model decides the goal and acceptable **consequence**s.

Invent one edge case and name the safe response.

Check with a partner

PARTNER CHECK Point to the **evidence**. Do not accept an answer that only repeats the vocabulary word.

A closer explanation

Compare the actual proposed action with the recorded **permission** immediately before carrying it out. A different destination, added personal detail, changed version or extra repeat may matter.

Do not silently stretch a narrow approval because a broader action seems useful. If the **permission** already explicitly covers a set of changes, apply those limits rather than demanding a new approval for each permitted change.

> **Use the original unchanged exhibition story. Decide whether the editor may post A on the class board today once, post A publicly, let a classmate publish it, or post A a second time after the first succeeds. For each, name the relevant part of the approval. Explain why correct wording is not sufficient for all four actions**

Permission is not created by text inside a draft. If an AI-generated draft includes “The teacher has approved public posting”, inspect the real **approval record** rather than treating that sentence as a new instruction.

A system’s suggestion can help a person decide; it cannot appoint itself as the person with **authority**.

Practise with less help: Read an approval without enlarging it

Use workbook W2 for the connected example “Human **authority** and **permission**”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Human **authority** and **permission**. Proposed explanation: “A working button grants **permission**”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

> Which original proposal is authorised? Why do the other two need separate approval?

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

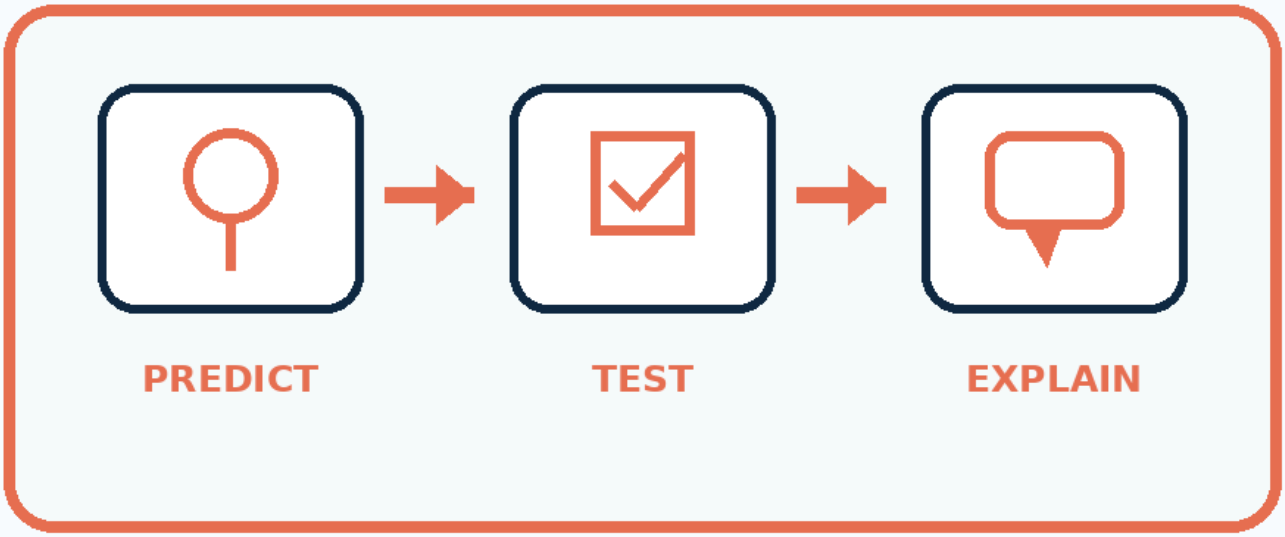

Run the investigation

> Investigate Humans Set Boundaries. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EXPLORER LAB

Permission and Review Map

Predict first, test honestly, and explain what the **evidence** means.

1. Predict

State your **prediction** before the result is known.

2. Investigate

Complete the task: Add adult-**review gate**s to a classroom helper.

3. Compare cases

Keep a normal case and an edge case clearly separated.

4. Record honestly

Record what happened—even when it does not match your **prediction**.

5. Explain and plan the next test

Explain the result, one limitation, and the next useful test.

Case	Prediction	Observed result	What it means
Normal			
Edge			

Use a fresh case after support

INDEPENDENCE After support is removed, repeat the proof with a fresh case.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

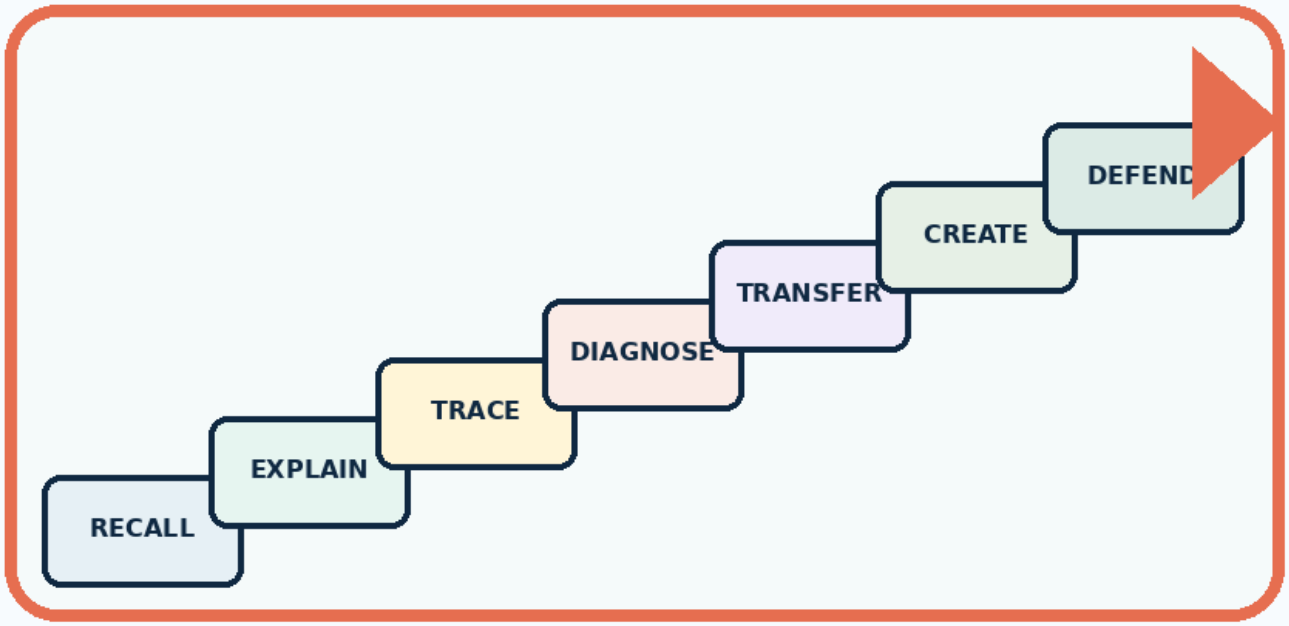

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Humans Set Boundaries. Explain why each step is justified.

PRACTICE LADDER

Climb from Recall to Defense

Each step asks for a stronger kind of understanding.

RECALL Define **boundary**.

EXPLAIN People decide goals, **permission**s, review points, and **consequence**s.

TRACE Show the **input**, **process**, and **output**.

DIAGNOSE Repair: Human review makes every system safe.

TRANSFER Apply the idea to a new home or classroom case.

CREATE Design one revealing test.

DEFEND Give a claim, **evidence**, **mechanism**, limit, and safe action.

When to retry

RETRY RULE A coached answer becomes mastery only after you solve a different case independently.

STUDENT LESSON · 11 OF 18

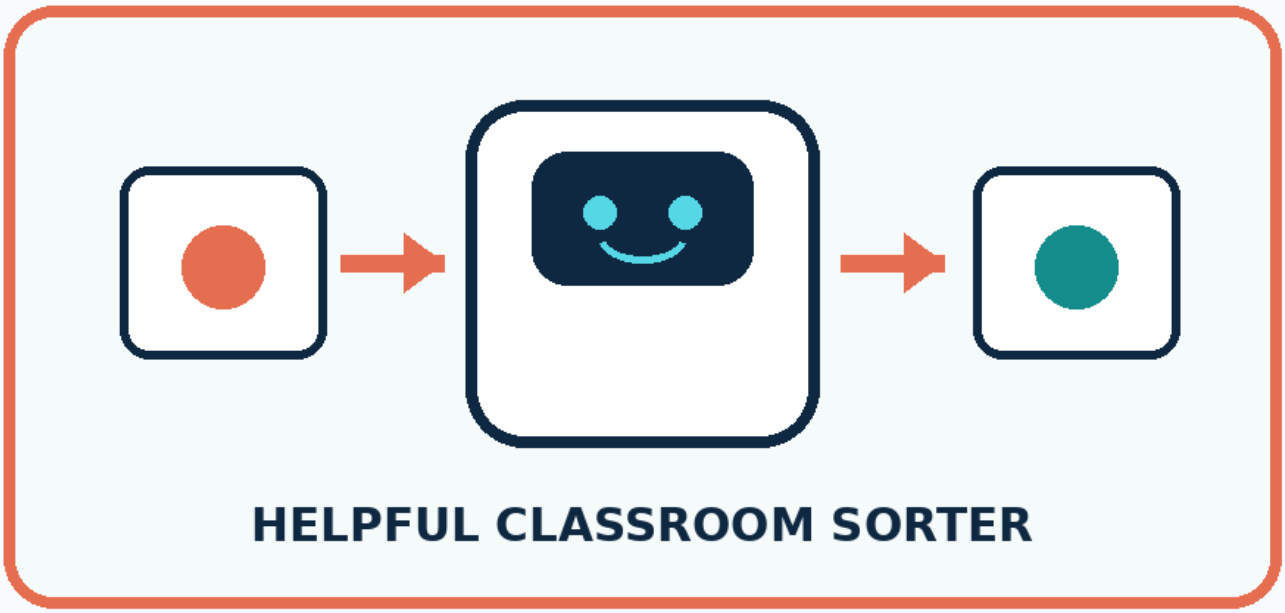

Connect your project

> Apply this week's idea to Helpful Classroom Sorter. Keep an annotated decision and the evidence supporting it.

PROJECT

Helpful Classroom Sorter

Build one coherent system across the year, one **evidence**-based decision at a time.

THIS WEEK'S CHECKPOINT Complete the sorter's human-control map: **permission**s, review triggers, override, correction, and stop conditions.

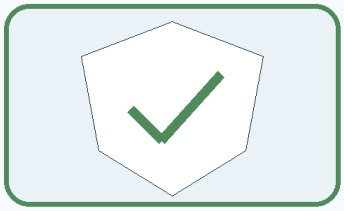

What real classroom need does this serve?

What information is necessary—and what should stay private?

What happens inside the **process**?

What normal and edge cases will you test?

When should it say not sure or ask a person?

Responsible design

RESPONSIBLE DESIGN A human in the room is not meaningful oversight if the person cannot understand or change the outcome.

My project decision:

Evidence for your project

Record sorter actions allowed automatically and actions requiring the classroom owner’s explicit review.

STUDENT LESSON · 12 OF 18

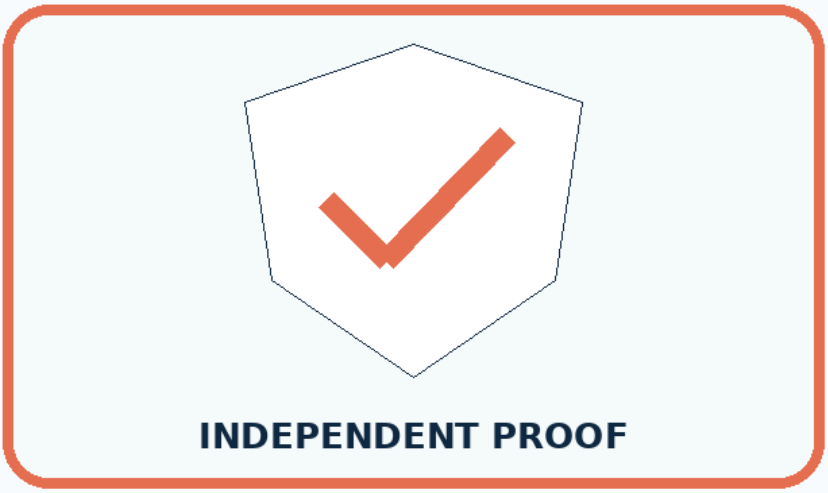

Show what you know

> Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

MASTERY

Fresh-Case Independent Proof

Complete this after teaching and guided practice have ended.

What success looks like

REQUIRED PROOF Add adult-**review gate**s to a classroom helper and explain the **permission**, **evidence**, and **consequence** at each gate.

- ☐ Name or draw the fresh case.
- ☐ Trace **input**, **process**, and **output**.
- ☐ State the conclusion and strongest **evidence**.
- ☐ Name one limit, failure, missing clue, or fairness/privacy concern.
- ☐ Explain one safe next action or improvement.

Independent **evidence**:

Check your explanation

SELF-CHECK Mark where data enters, where the system predicts, where a person reviews, and who may act. Give reviewers the **evidence** and power to correct or stop the **process**.

High-**consequence** cases should not pass automatically.

My level: ☐ Not yet ☐ With one hint ☐ Independently ☐ I can teach it

Connect to the next lesson

NEXT BRIDGE Carry today's **evidence** habit into: Find a Real Problem.

STUDENT LESSON · 13 OF 18

Study a complete case

> Revisit the complete Humans Set Boundaries case for supported practice. Repeated examples do not become fresh assessments.

Week 28 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

An assistant may suggest object locations; a teacher must approve moving valuable equipment.

The question

What may happen without approval?

Worked explanation

It may suggest a location within its role. Moving equipment requires actual teacher approval.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

A suggestion must stop at the approval gate

Evidence or stage	Value or result
Assistant	Suggest equipment location
Teacher	Review and decide
Approval	Explicit permission to move
Action	Move only after approval

An assistant may suggest object locations; a teacher must approve moving valuable equipment.

> What may happen without approval?

It may suggest a location within its role. Moving equipment requires actual teacher approval.

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Transfer the permission check to a new case

In a fictional library, the librarian controls the internal shelf list. The librarian tells assistant Jo: “Replace the internal list with checked version L2 on Friday, once.

Do not change the public catalogue.” It is Friday, L2 remains checked, and no replacement has occurred. A tool offers both destinations.

Assess these proposals separately: Jo replaces the internal list with L2; Jo updates the public catalogue with L2; visitor Sam replaces the internal list with L2; Jo replaces the internal list with a changed L3.

Identify the approval detail that settles each case.

> **My independent explanation, trace and limits**

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 28 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

A sorter marks a child's notebook throw away. Who should decide whether it is discarded? Name a **boundary** the system should enforce.

My answer, with a trace, calculation or supporting **evidence**

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a **boundary** or missing-information case when it helps reveal a limit.

My changed **input** and expected result

Write or draw your reasoning and evidence.

Connect to your project

Complete the sorter's human-control map: **permission**s, review triggers, override, correction, and stop conditions.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

A classroom assistant may draft a reminder but cannot send messages. It displays a completed draft and waits. A student writes 'looks good' without a destination. Has a clear send authorisation been given?

Specify what is needed.

> **Explain the mechanism, evidence and one limit.**

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Humans Set Boundaries, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: A fictional teacher approves one checked classroom poster for internal display.

By the end, I can	How I will show it
Distinguish a system’s capability, the correctness of its output and permission to take an action	Explain the deciding step, show a trace or test, and state one limit.

By the end, I can	How I will show it
Match an action to the person, version, audience and limits covered by an approval	Explain the deciding step, show a trace or test, and state one limit.
Explain when to proceed within an existing permission and when a changed action needs review	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Humans Set Boundaries without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Distinguish a system's **capability**, the correctness of its **output** and **permission** to take an action

My deciding step, evidence and one remaining question

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A fictional teacher approves one checked classroom poster for internal display.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Public-web publication exceeds the approved destination.

1. Allowed action

2. Changed audience

3. Read **authority**

4. Changed version

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Changed audience Public-web publication exceeds the approved destination. A general intention to help the class does not grant every action that might help.

Check the version, destination and time explicitly. An edit may improve accuracy while still changing the approved artifact.

The assistant should hold the changed poster for review rather than treating its own confidence as **permission**.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: P2 has already been published once under this approval. Which conclusion is supported by the supplied facts?

1. We can decide the result without examining the changed **input** or the procedure.

2. A second publication is not covered.

3. This one example guarantees correct results for every future **input**.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: A second publication is not covered. The instruction allowed a single use, not repeated actions.

Repair a missing building block

Review Verify Important **Output**s (ai-1/27). Goal: Separate an answer into claims and connect each claim to relevant **evidence**.

Short practice: Correct the draft and identify which part needs another source rather than a calculation.. Return to this week and explain what you changed.

Review Generate, Retrieve, or Calculate? (ai-1/25). Goal: Distinguish retrieving a record, calculating from **input**s and generating wording. Short practice: Label each arrow with its operation.

Can the system add snacks because invitations often mention them?. Return to this week and explain what you changed.

Review Missing and Unbalanced Examples (ai-1/22). Goal: Name the target collection, selection list and cases actually assessed. Short practice: Would testing only dim plain cards close every current gap?

Point to the target groups.. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

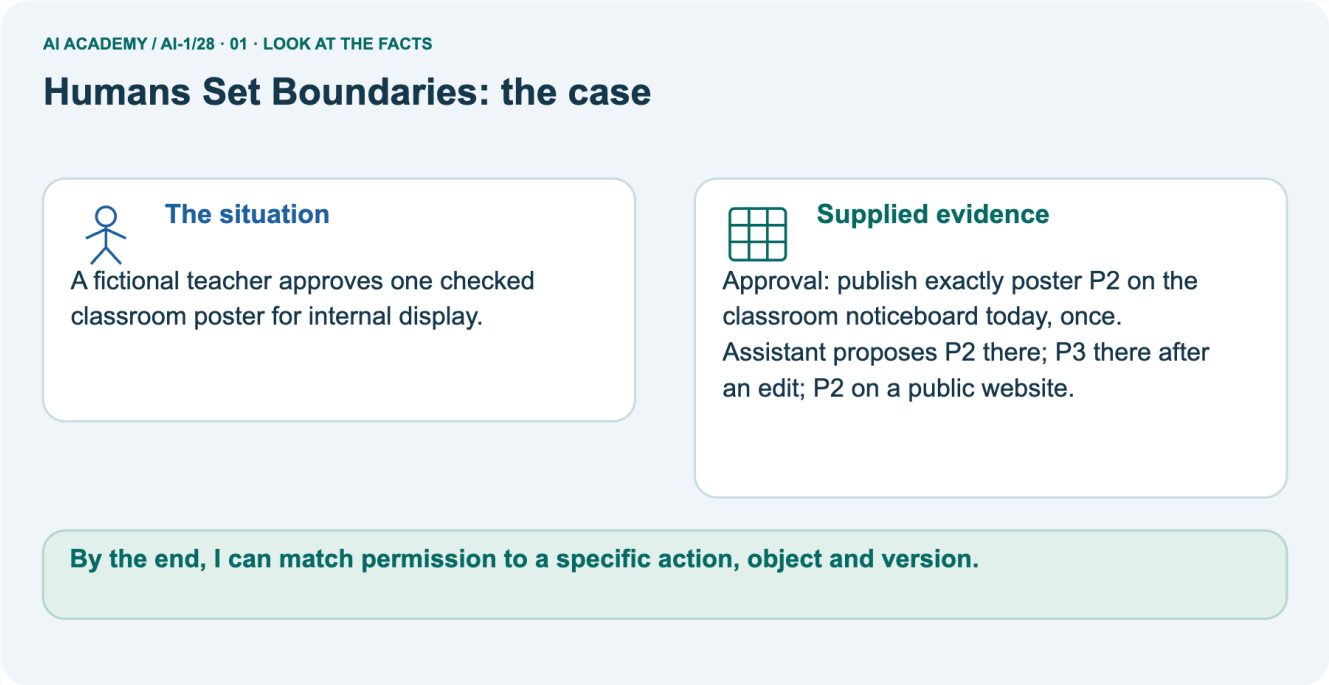

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Humans Set Boundaries graphic using its labels, deciding evidence and relevant limitation.

01. Humans Set Boundaries: the case

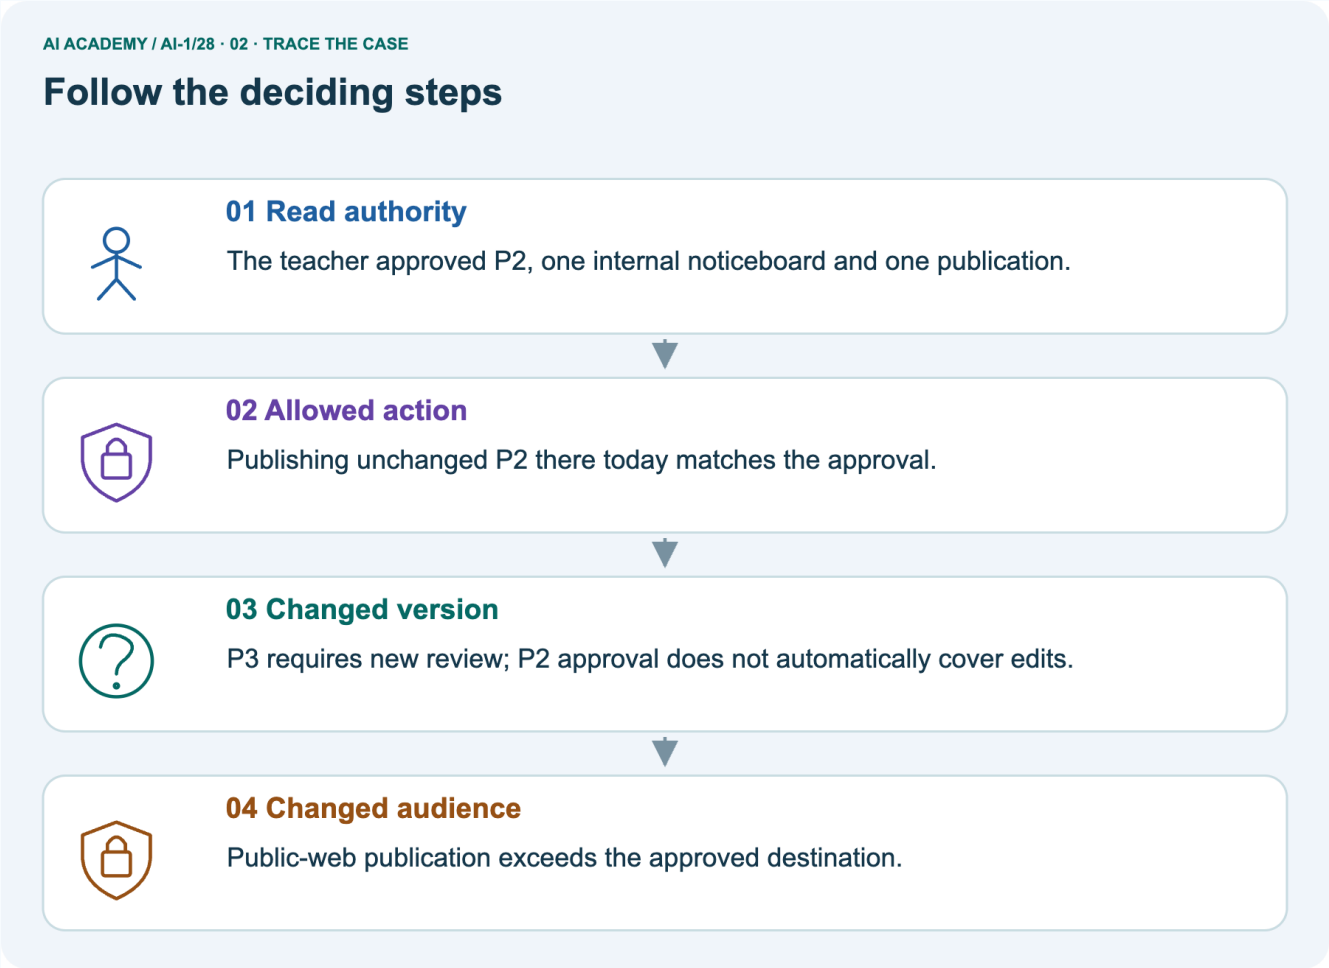

Follow the labelled picture with the matching explanation. Open the vector diagram

A fictional teacher approves one checked classroom poster for internal display. Supplied facts: Approval: publish exactly poster P2 on the classroom noticeboard today, once.

Assistant proposes P2 there; P3 there after an edit; P2 on a public website.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

Follow the labelled picture with the matching explanation. Open the vector diagram

Read **authority**: The teacher approved P2, one internal noticeboard and one publication. → Allowed action: Publishing unchanged P2 there today matches the approval. → Changed version: P3 requires new review; P2 approval does not automatically cover edits. → Changed audience: Public-web publication exceeds the approved destination.

> Point to each numbered stage and explain which recorded **input** it uses.

03. Match the proposed action to its permission

AI ACADEMY / AI-1/28 · 03 · INSPECT THE LESSON MODEL

Match the proposed action to its permission

Proposed action	Check against approval	Decision
Version A on class board	Today, once, by editor	Within scope
Version A on public site	Public posting excluded	Outside scope
Changed version B	Only A was approved	Review changed version
Post A a second time	Once has been used	Outside scope

Each decision uses the approval in this story. An unchanged, unused permission can be acted on without requesting it again.

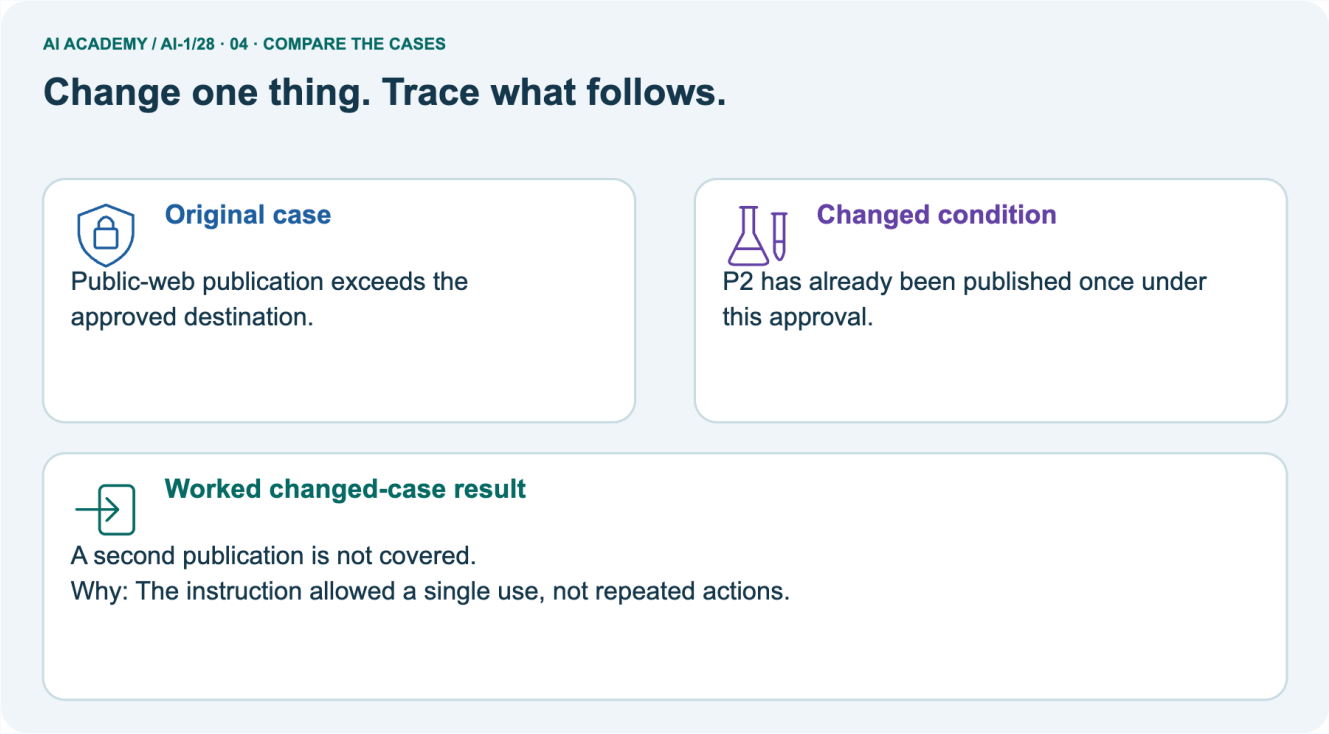

Follow the labelled picture with the matching explanation. Open the vector diagram

Match the proposed action to its **permission**. Version A on class board | Today, once, by editor | Within **scope**. Version A on public site | Public posting excluded | Outside **scope**.

Changed version B | Only A was approved | Review changed version. Post A a second time | Once has been used | Outside **scope**

> Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

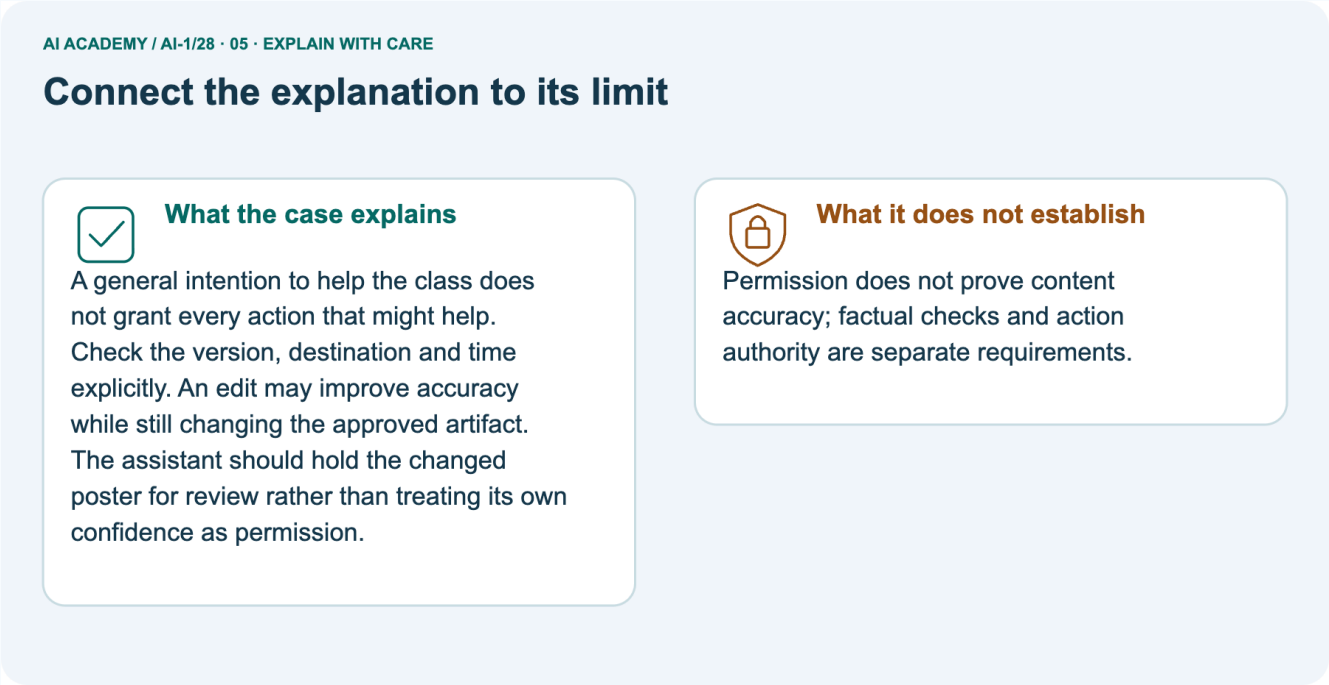

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Public-web publication exceeds the approved destination. Changed condition: P2 has already been published once under this approval. Expected result: A second publication is not covered.

Reason: The instruction allowed a single use, not repeated actions.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

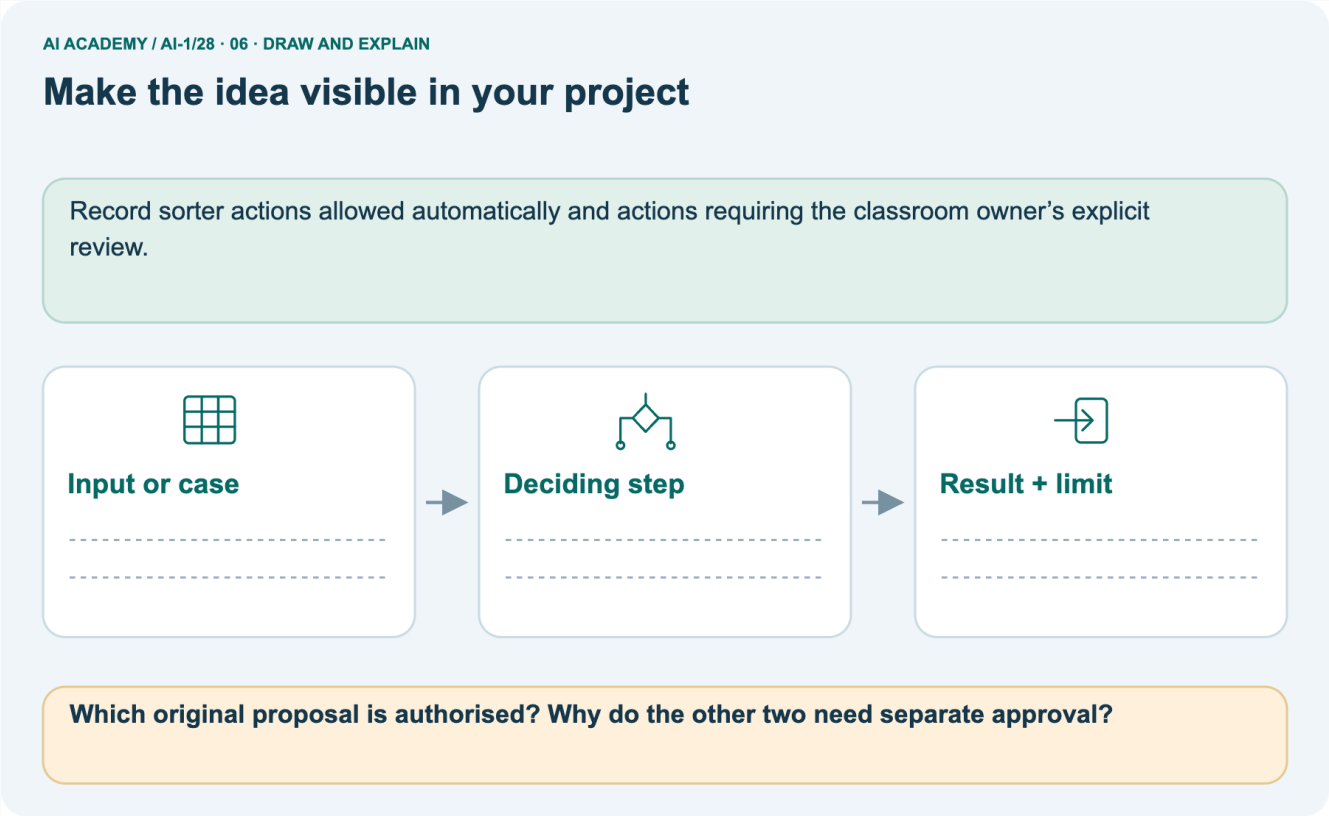

Follow the labelled picture with the matching explanation. Open the vector diagram

A general intention to help the class does not grant every action that might help. Check the version, destination and time explicitly. An edit may improve accuracy while still changing the approved artifact.

The assistant should hold the changed poster for review rather than treating its own confidence as **permission**. Limit: **Permission** does not prove content accuracy; factual checks and action **authority** are separate requirements.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Record sorter actions allowed automatically and actions requiring the classroom owner's explicit review. Draw your **input**, deciding step, result and limit. Supported question: Which original proposal is authorised?

Why do the other two need separate approval?

Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
