Verify Numbers and Dates

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Verified Study Buddy

Before you start

AI-2 Week 12: convert a ratio using its actual denominator.

Plan time to read, investigate and explain. Keep predictions separate from observations.

Your mission

> Start with the target: Explain the mechanism and terminology of claim support and citation evaluation. Try the recall before opening notes.

Your learning target

I can explain the **mechanism** and terminology of claim support and citation evaluation.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Source Quality. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Multimodal **Evidence**. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Image Generation Models. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Week 16: Verify Numbers and Dates

Precise values require direct **evidence** and recalculation.

CREATOR MISSION

Cross-check dates and recompute a percentage claim.

Creator name and date:

> **Write or draw your reasoning and evidence.**

Readiness for the connected explanation

Recall Building a grounded answer. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

This week's end goal

By the end, I can verify numbers and dates without inventing the intended correction.

STUDENT LESSON · 2 OF 18

Notice the evidence

> Investigate the supplied Verify Numbers and Dates case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Notice → Predict → Explain

Begin with visible **evidence**. Do not explain more than the picture and information support.

Start with this puzzle

MYSTERY

The learners must use verify numbers and dates to solve a problem. What information do they have? What decision or calculation do they make? What would count as **evidence** that it worked?

Three **observation**s (what you can point to):

> **Write or draw your reasoning and evidence.**

My **prediction** and the clue supporting it:

> **Write or draw your reasoning and evidence.**

A closer explanation

Citation evaluation checks source existence, exact passage support and coverage of answer claims. A real citation can still be irrelevant.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

STUDENT LESSON · 3 OF 18

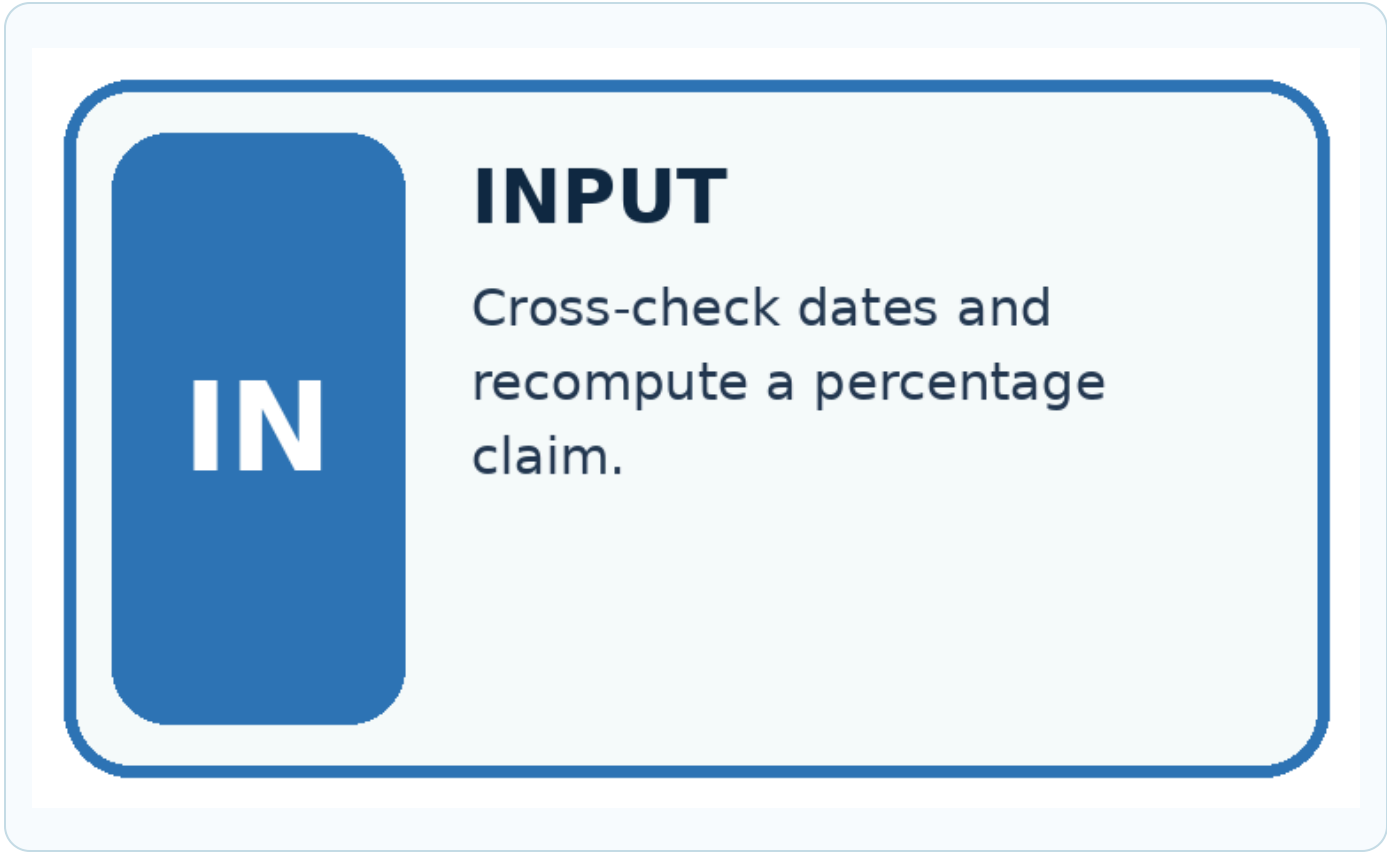

See how it works

> Follow the mechanism for Verify Numbers and Dates. Connect each labelled input, deciding step and result.

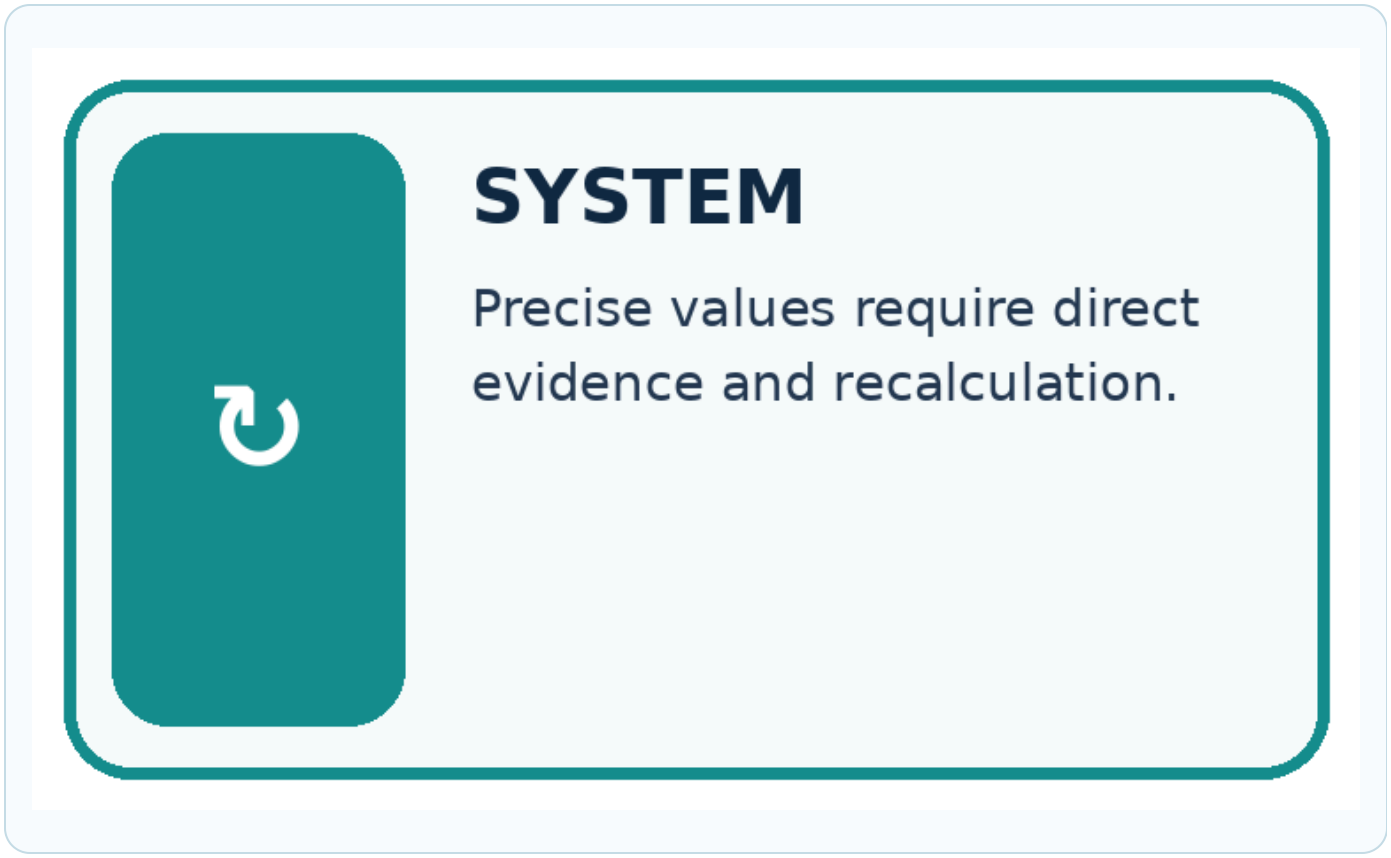

VISUAL MECHANISM

Input → Process → Output

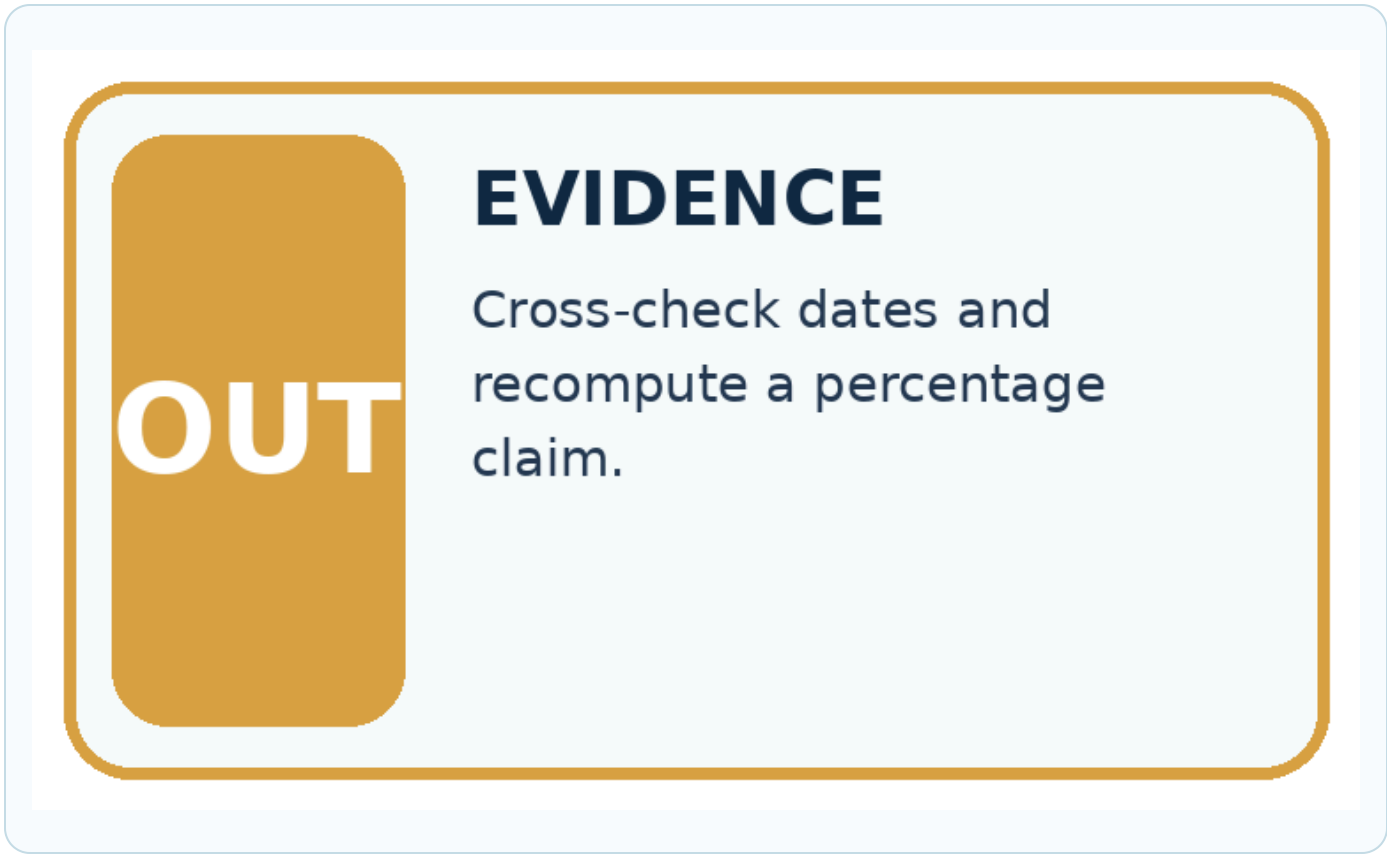

Trace the information. At each stage, ask what changed and how you could test it.

↓

SYSTEM
Precise values require direct evidence and recalculation.

↓

OUT
EVIDENCE
Cross-check dates and recompute a percentage claim.

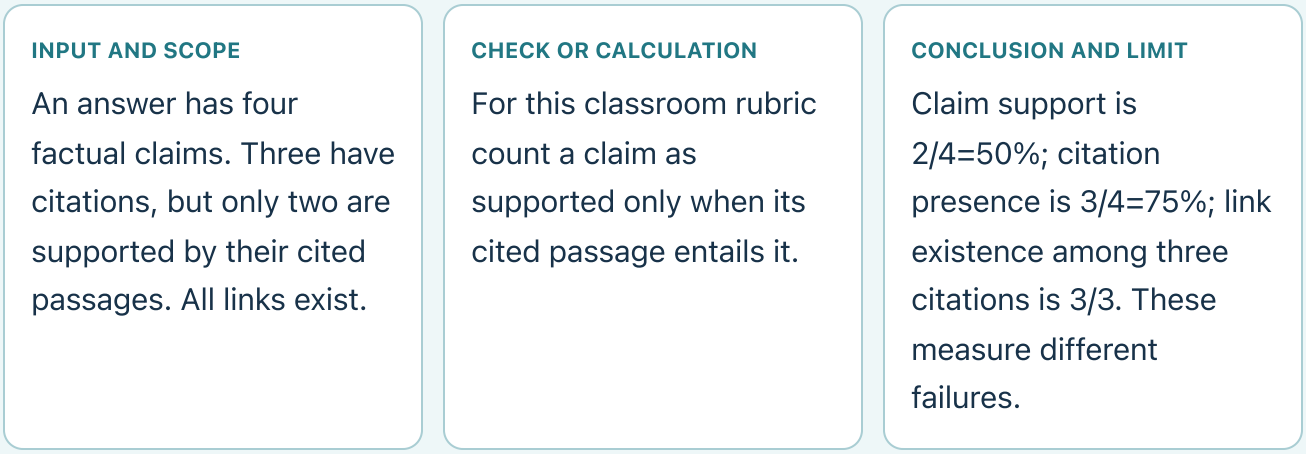

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

For this classroom rubric count a claim as supported only when its cited passage entails it. Separately count correct citation links. Use the number of factual claims as the support denominator.

Claim support and citation evaluation — evidence trace

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its **unit**s, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

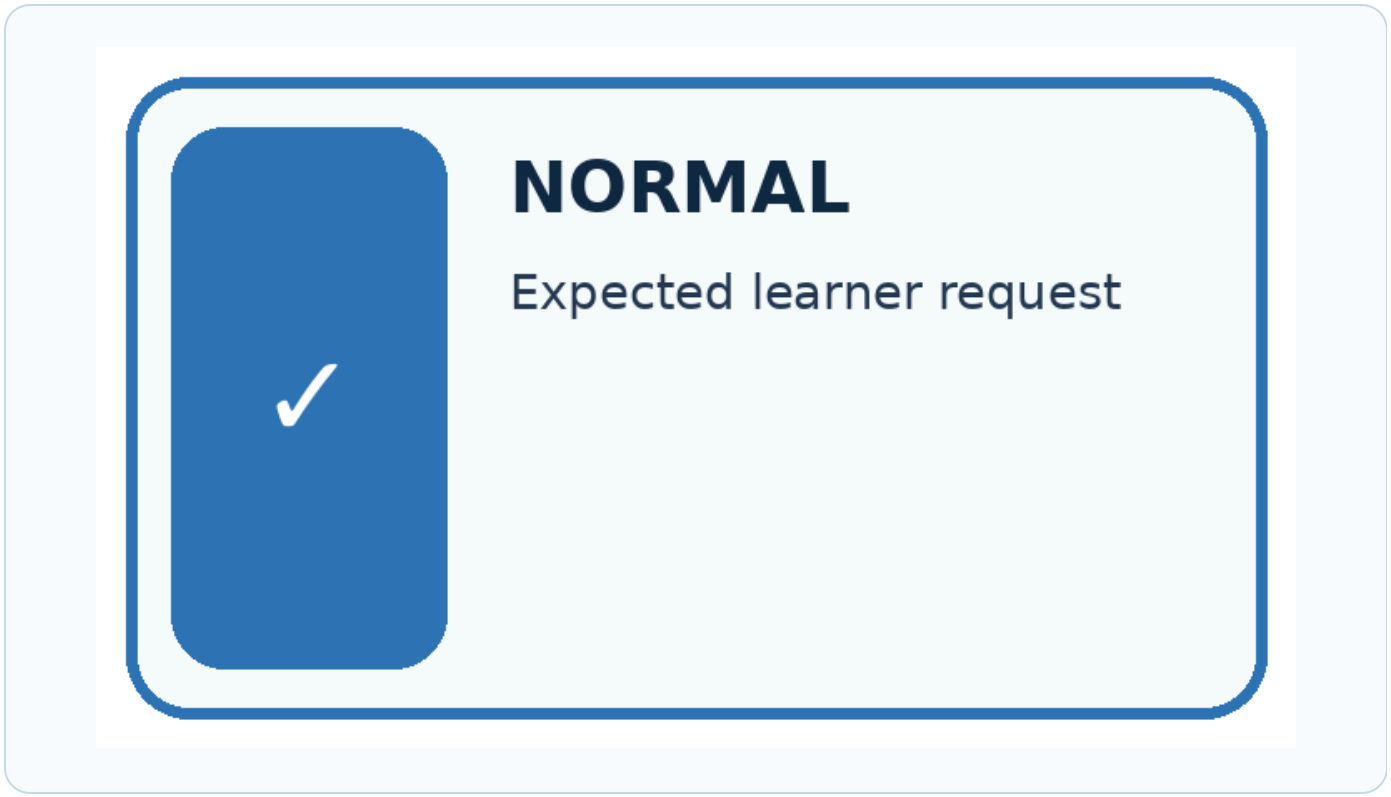

> Compare the supplied cases for Verify Numbers and Dates. Identify the detail that changes the conclusion.

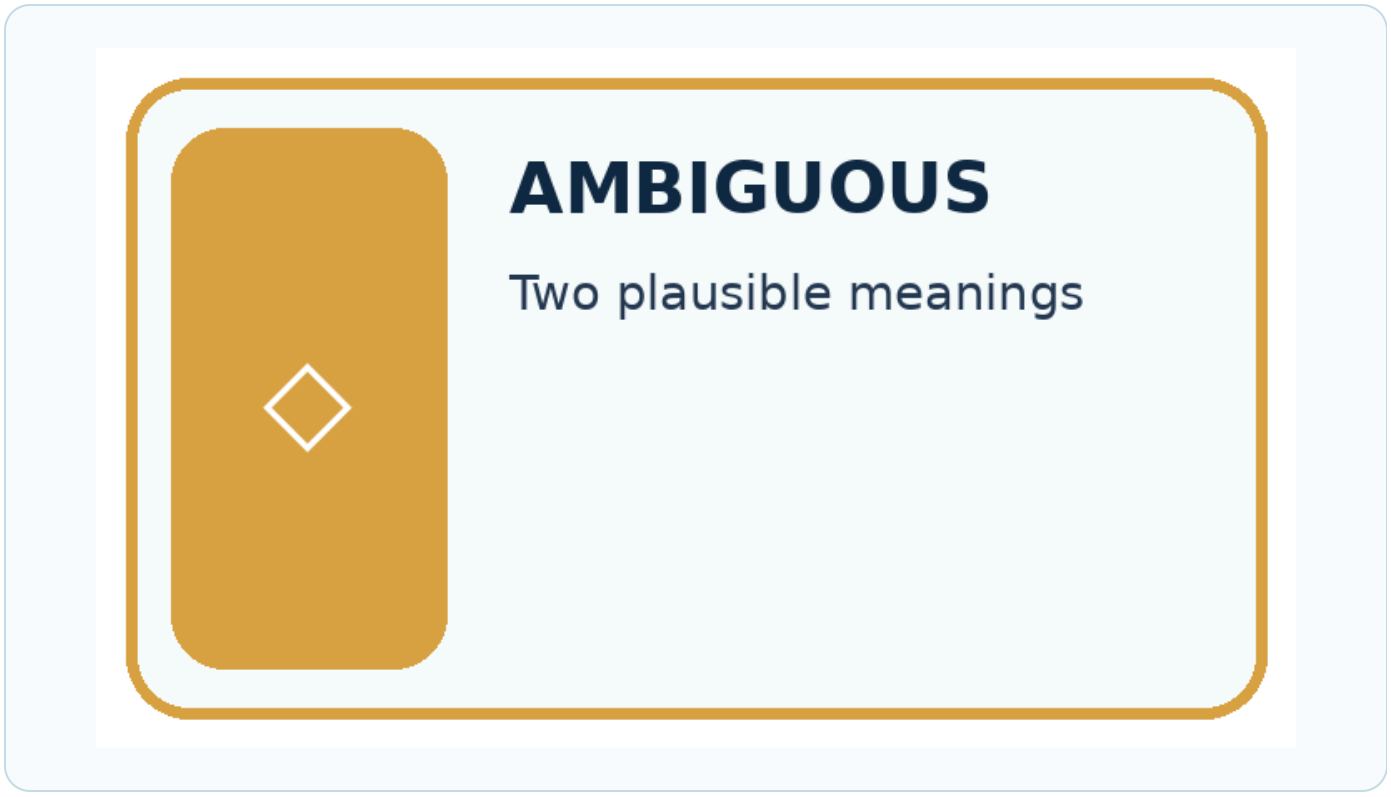

The case to investigate

CASE GALLERY

Four Tests, Four Kinds of **Evidence**

A system is not understood until it survives more than one comfortable example.

NORMAL
Expected learner request

AMBIGUOUS
Two plausible meanings

The normal case

NORMAL CASE: predict and name **evidence**. BOUNDARY CASE: predict and name **evidence**.

Check missing information

MISSING INFORMATION: predict and name **evidence**. TRANSFER CASE: predict and name **evidence**.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change one thing

Change: The count is revised to 14 passes out of 20, but no date record is added.

Predicted result

Prediction: **70%** now matches the count; June 31 remains invalid and unresolved.

Why the result follows

Reason: 14÷20×100=**70%**; changing a count provides no new calendar **evidence**.

STUDENT LESSON · 5 OF 18

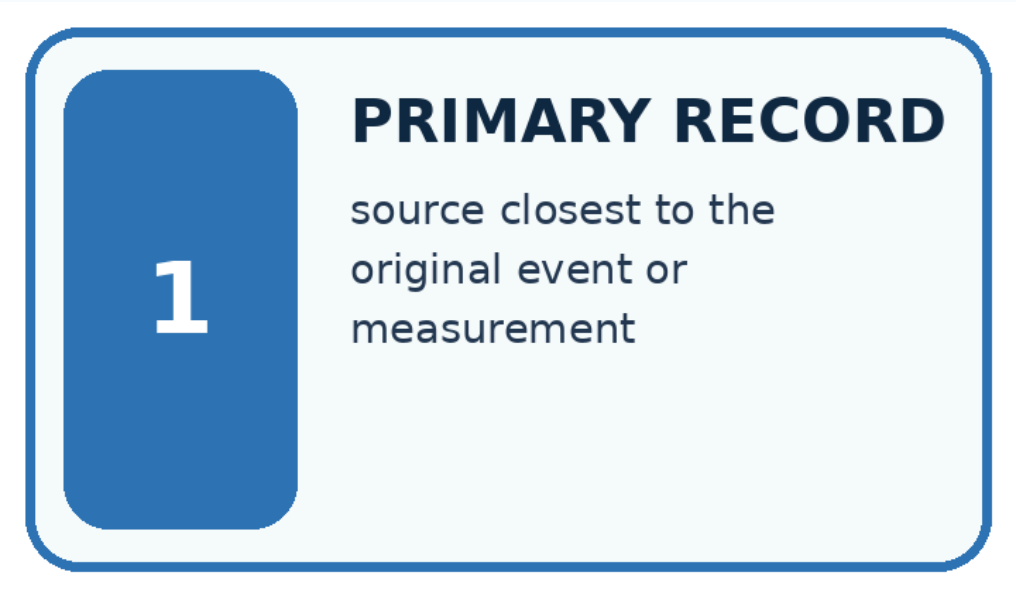

Words that unlock the idea

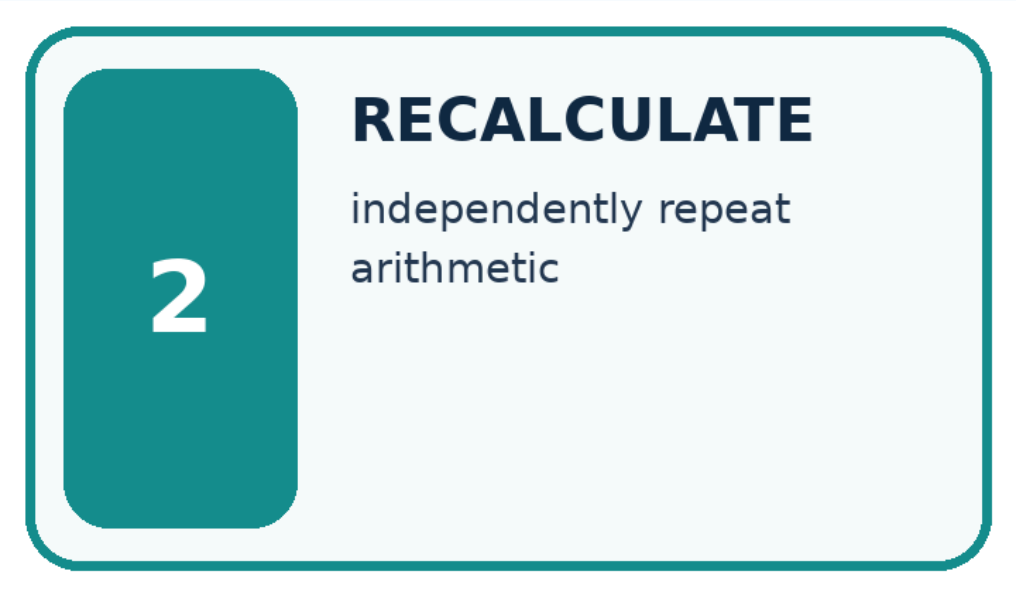

> Use the vocabulary of Verify Numbers and Dates to explain a concrete decision, rather than only memorising definitions.

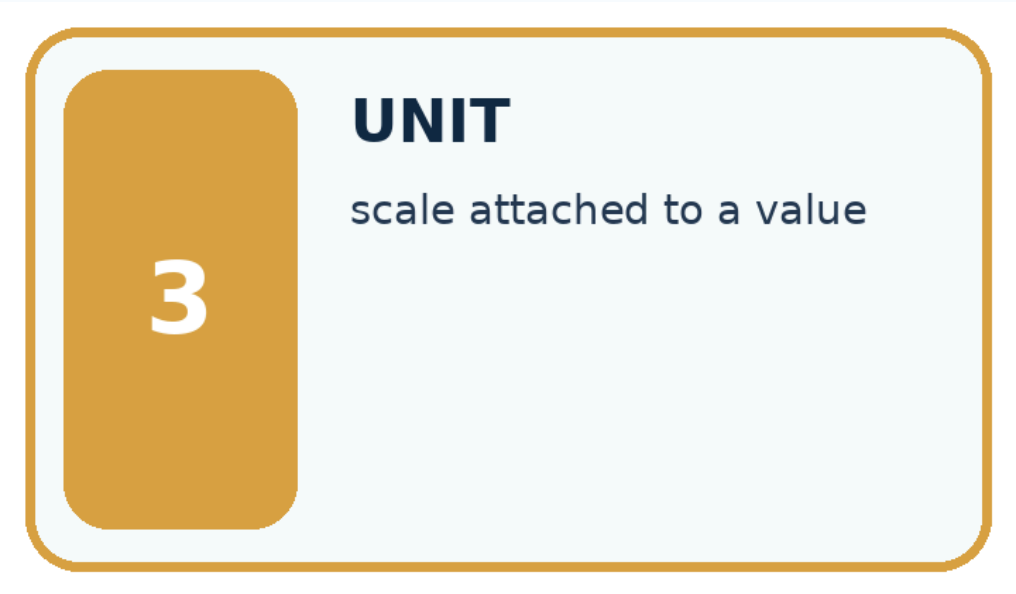

VOCABULARY LAB

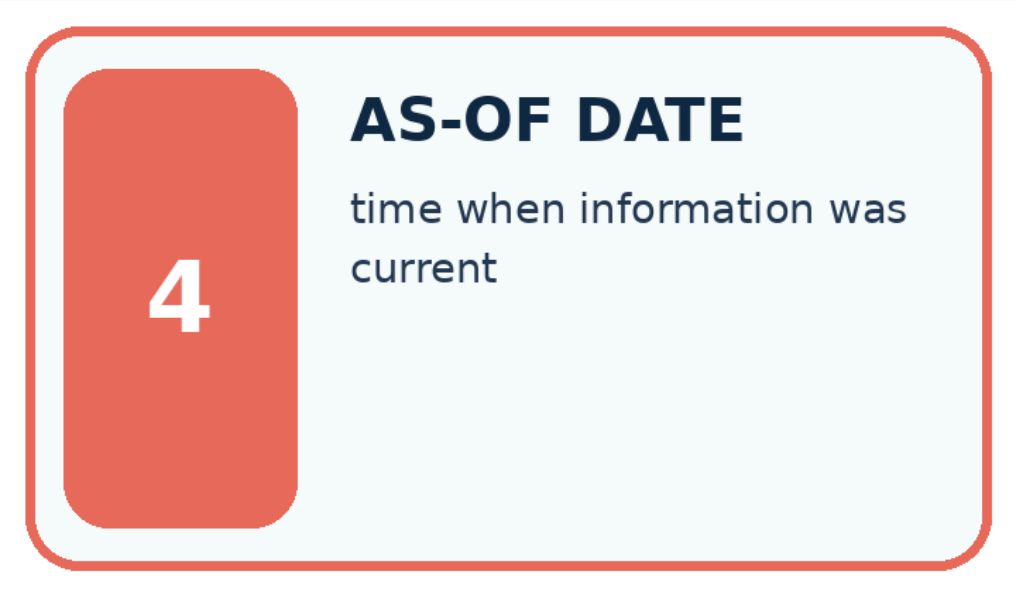

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

1
PRIMARY RECORD
source closest to the original event or measurement

2
RECALCULATE
independently repeat arithmetic

Word	My own example	Not this / boundary
primary record	An original record directly relevant to a claim, rather than a later summary of it.	
recalculate	Compute a quantity again from the original values or corrected inputs.	

Word	My own example	Not this / boundary
unit	An agreed amount used to express a measurement, such as centimetres or seconds.	
as-of date	The date up to which a claim or record is stated to be current.	

Words used in the closer explanation

Word	Meaning
Entailment	Whether the cited passage supports the specific claim
Citation coverage	Which claims include source references
Link validity	Whether a source reference resolves to the intended record

---

STUDENT LESSON · 6 OF 18

Follow a worked example

> Follow the worked trace for Verify Numbers and Dates, predict a step, then compare with its explanation.

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

WEEK 16 • WORKED EVIDENCE

1. Claim: 18 of 24 tests passed, reported as 80%.
2. Recalculate: 18 ÷ 24 = 0.75 = 75%.
3. Check denominator, unit, rounding, and source date.
4. Correct the claim and preserve the calculation trail.

1. Claim: 18 of 24 tests passed, reported as **80%**.

2. **Recalculate**: 18 ÷ 24 = 0.75 = 75%.

3. Check denominator, **unit**, rounding, and source date.

4. Correct the claim and preserve the calculation trail.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the **evidence** answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

An answer has four factual claims. Three have citations, but only two are supported by their cited passages. All links exist.

Claim support is 2/4=50%; citation presence is 3/4=75%; link existence among three citations is 3/3. These measure different failures.

Worked explanation · Verify Numbers and Dates

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Verify Numbers and Dates

A fictional Study Buddy checks a science-club summary against supplied counts and calendar facts.

The facts we will use

Supplied facts

Record: 15 of 20 fictional model trials passed. Draft: “**70%** passed; the meeting is on June 31.”

Supplied facts

June has 30 days. No authoritative record gives the intended meeting date.

AI ACADEMY / AI-3/16

Verify Numbers and Dates

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Check denominator

There are 15 passes out of 20 total trials.

2. Calculate percentage

15 / 20 x 100=75%, not 70%.

3. Validate date

June 31 is invalid because June has 30 days.

4. Resolve missing intent

Ask the event owner for the correct date; do not assume June 30 or July 1.

CHANGE ONE THING

The count is revised to 14 passes out of 20, but no date record is added.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Check denominator	There are 15 passes out of 20 total trials.
2. Calculate percentage	15÷20×100=75%, not 70%.
3. Validate date	June 31 is invalid because June has 30 days.
4. Resolve missing intent	Ask the event owner for the correct date; do not assume June 30 or July 1.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

A percentage requires the correct numerator and denominator. Calendar validation identifies an impossible date, but it cannot discover what date the author intended.

These checks use different **evidence**: arithmetic repairs the percentage from the supplied counts, while the date needs another authoritative source before publication.

What this example does not establish

Keep the stated limit

This check confirms internal arithmetic and date validity, not whether the fictional trial measurements themselves were reliable.

Keep the stated limit

Read the labelled picture: Which part can be corrected immediately from existing **evidence**, and which needs follow-up?

Keep the stated limit

Change one thing: The count is revised to 14 passes out of 20, but no date record is added. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Verify Numbers and Dates claim and explain a repair using the supplied evidence.

Find the first error

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak **evidence**.

!

COMPARE • DIAGNOSE

Weak idea: Specific numbers are reliable because they look precise. Strong move: inspect the claim, source, stage, schema, or test evidence; repair one cause; rerun.

Evidence record	Expected	Actual	Likely cause / next test
normal case	works		
boundary case	stated rule		
missing input	safe response		
fresh transfer	generalizes		

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

Check the claim against the facts

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

STUDENT LESSON · 8 OF 18

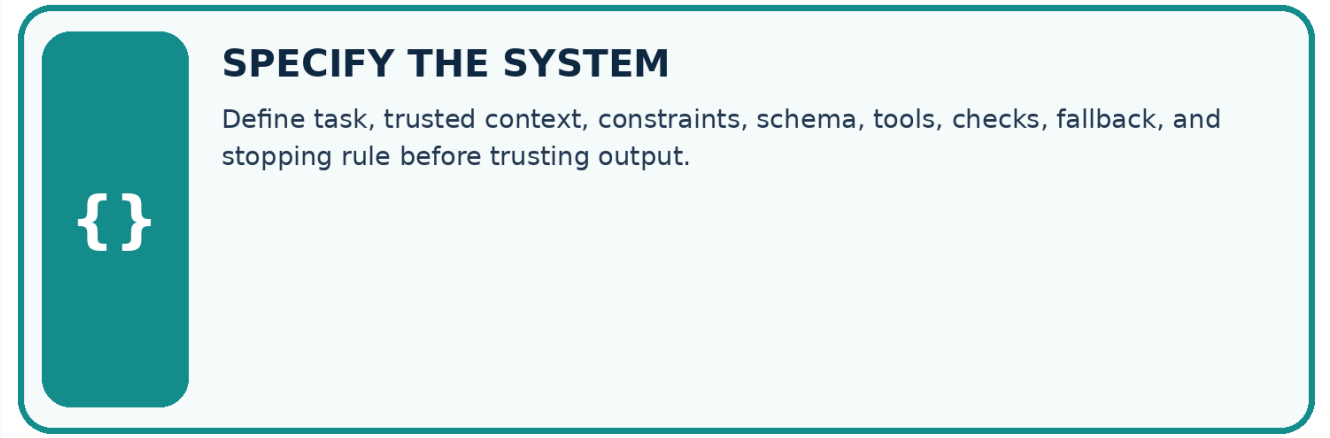

Practise together

> Practise Verify Numbers and Dates with support, then explain the deciding step in your own words.

LOGIC STUDIO

Specify Before You Run

Prompts, schemas, retrieval, tool calls, and code are inspectable parts of one AI product.

SET task, audience, constraints, **output**_schema LOAD approved_context or retrieval_result CALL model or allowed_tool VALIDATE fields, claims, citations, and safety IF **evidence** missing: ask, retrieve, or abstain RETURN useful **output** + source trail + limitations

Trace one **input**. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

Citation counts do not establish truth beyond the supplied sources or the correctness of uncited claims.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Practise with less help: Trace the worked case

Use workbook W2 for the connected example “Claim support and citation evaluation”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Claim support and citation evaluation. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Which part can be corrected immediately from existing **evidence**, and which needs follow-up?

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

Run the investigation

> Investigate Verify Numbers and Dates. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

Audit six claims for source, date, **unit**, denominator, and arithmetic; mark verified, corrected, or unresolved.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

> **Test / input:** normal
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** boundary
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** missing
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** fresh transfer
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

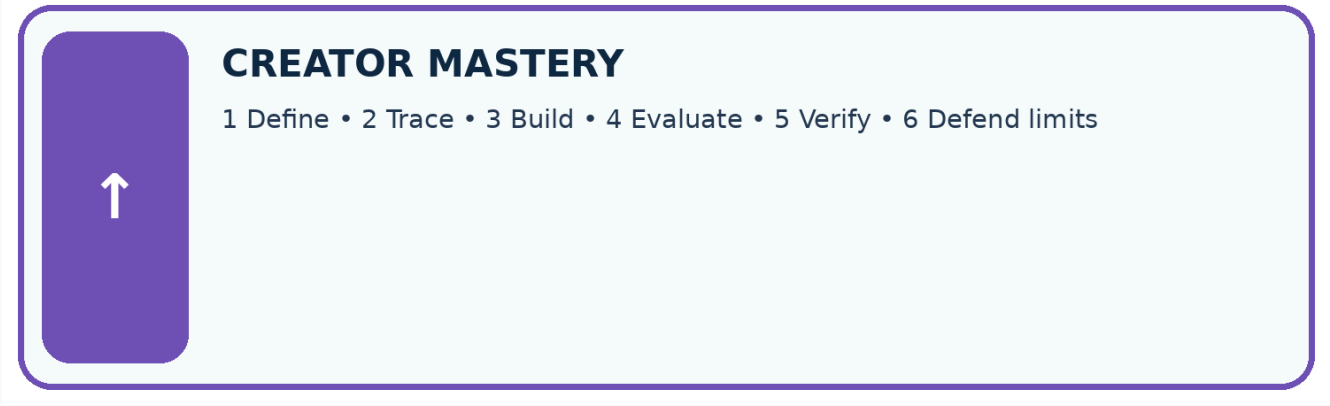

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Verify Numbers and Dates. Explain why each step is justified.

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce **evidence** without copying the worked example.

1 • NAME: Define the concept without repeating the textbook.

2 • TRACE: Show the information, state, branch, calculation, or **evidence** path.

3 • APPLY: Solve a different example independently.

4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest **evidence** of independent understanding:

> **Write or draw your reasoning and evidence.**

STUDENT LESSON · 11 OF 18

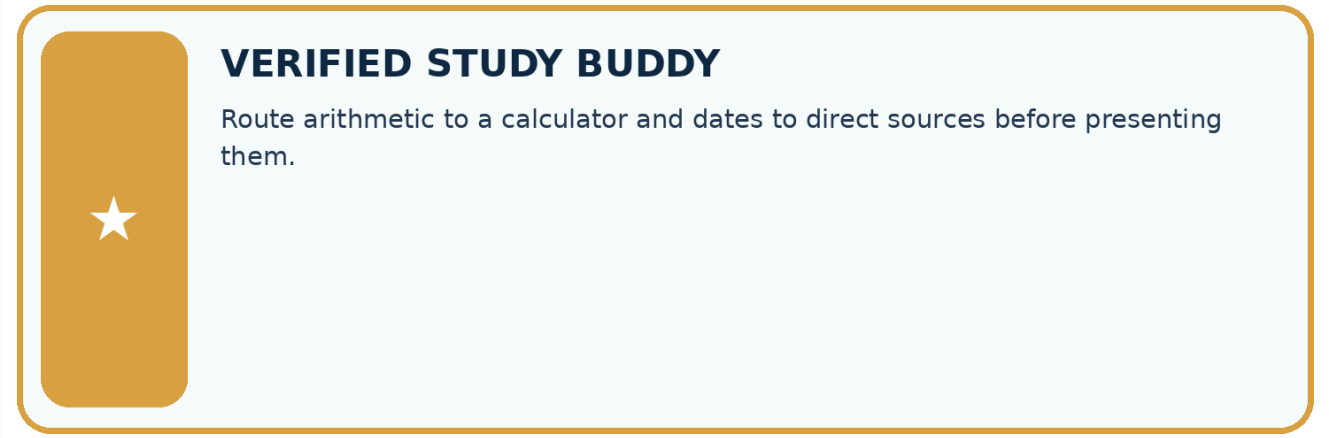

Connect your project

> Apply this week's idea to Verified Study Buddy. Keep an annotated decision and the evidence supporting it.

CUMULATIVE PROJECT

Verified Study Buddy

Every week adds one inspectable piece. The system must show how it reached a result.

THIS WEEK'S CHECKPOINT Route arithmetic to a calculator and dates to direct sources before presenting them.

Trace the system

SYSTEM MAP Learner need → prompt/schema → approved sources/retrieval → model/tool → structured answer → verification → **human decision**

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under **human control**?

Write or draw your reasoning and evidence.

Responsible design

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse fluent **output** with verified truth.

Evidence for your project

Make Study Buddy check quantities, **unit**s, dates and source support separately; record unresolved fields instead of guessing.

STUDENT LESSON · 12 OF 18

Show what you know

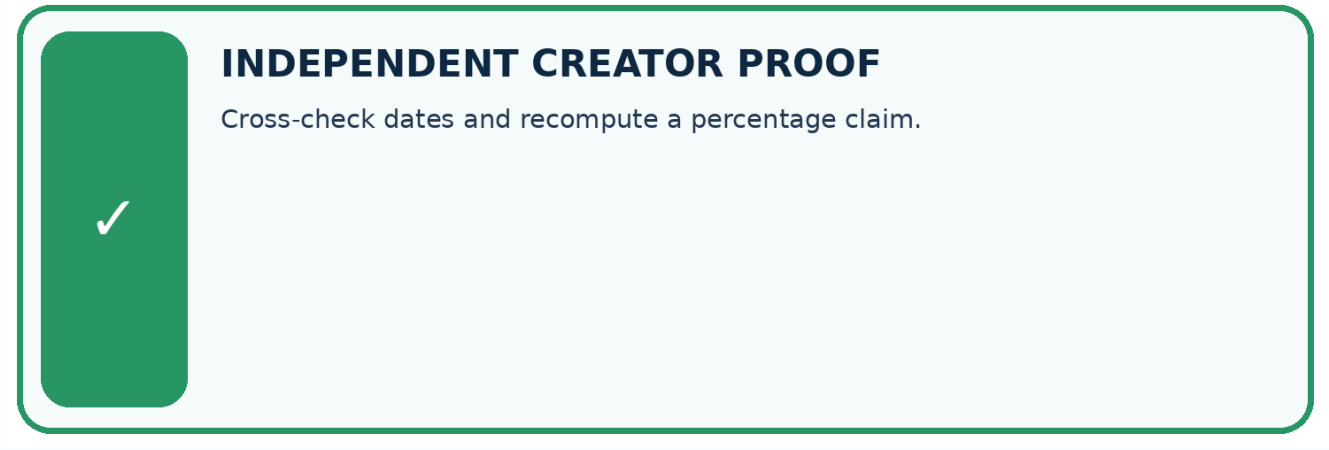

Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Independent evidence

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

Try a more demanding case

CHALLENGE Cross-check dates and recompute a percentage claim.

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My **evidence** that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One limitation, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

Check your explanation

SELF-CHECK ☐ I explained the **mechanism** ☐ I used **evidence** ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

STUDENT LESSON · 13 OF 18

Study a complete case

Revisit the complete Verify Numbers and Dates case for supported practice. Repeated examples do not become fresh assessments.

Week 16 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

An answer says 15/20=**80%** and sets a deadline of February 30.

The question

Verify both.

Worked explanation

15/20=75%. February 30 is invalid in the Gregorian calendar. Check the intended deadline from its authority rather than guessing.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Verify a percentage independently

Evidence or stage	Value or result
Correct portion	15/20
Remaining portion	5/20

An answer says 15/20=**80%** and sets a deadline of February 30.

Verify both.

15/20=75%. February 30 is invalid in the Gregorian calendar. Check the intended deadline from its authority rather than guessing.

STUDENT LESSON · 14 OF 18

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Changed independent case

A draft claims18 of24 learners is**60%**, and gives an April31 deadline. Check both statements without inventing a deadline.

> **My independent explanation, trace and limits**
>
> | |
> |---|
> | |
> | |
> | |
> | |

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 16 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

A report says 12 of 40 responses is 40%. **Recalculate** and state the correction with the denominator.

My answer, with a trace, calculation or supporting **evidence**

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

Write or draw your reasoning and evidence.

Connect to your project

Route arithmetic to a calculator and dates to direct sources before presenting them.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

A report says 21/28=**70%** and gives February 30 as the deadline. Correct what can be computed and identify what must be checked externally.

> **Explain the mechanism, evidence and one limit.**

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Verify Numbers and Dates, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: A fictional Study Buddy checks a science-club summary against supplied counts and calendar facts.

By the end, I can	How I will show it
Explain the mechanism and terminology of claim support and citation evaluation	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Verify Numbers and Dates without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of claim support and citation evaluation

> **My deciding step, evidence and one remaining question**

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A fictional Study Buddy checks a science-club summary against supplied counts and calendar facts.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Ask the event owner for the correct date; do not assume June 30 or July 1.

1. Validate date

2. Check denominator

3. Resolve missing intent

4. Calculate percentage

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage

that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Resolve missing intent Ask the event owner for the correct date; do not assume June 30 or July 1. A percentage requires the correct numerator and denominator.

Calendar validation identifies an impossible date, but it cannot discover what date the author intended.

These checks use different **evidence**: arithmetic repairs the percentage from the supplied counts, while the date needs another authoritative source before publication.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: The count is revised to 14 passes out of 20, but no date record is added. Which conclusion is supported by the supplied facts?

1. We can decide the result without examining the changed **input** or the procedure.

2. **70%** now matches the count; June 31 remains invalid and unresolved.

3. This one example guarantees correct results for every future **input**.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: **70%** now matches the count; June 31 remains invalid and unresolved. 14÷20×100=**70%**; changing a count provides no new calendar **evidence**.

Repair a missing building block

Review Source Quality (ai-3/15). Goal: Explain the **mechanism** and terminology of conflicting and time-sensitive sources. Short practice: Which source fields must be checked before answering day 9?.

Return to this week and explain what you changed.

Review Multimodal **Evidence** (ai-3/13). Goal: Explain the **mechanism** and terminology of speech pipelines and multimodal **evidence**.

Short practice: Why were both “exactly three” and “exactly five” unsupported before opening the box?. Return to this week and explain what you changed.

Review Image Generation Models (ai-3/10). Goal: Explain the **mechanism** and terminology of image generation and provenance.

Short practice: What may these two grids explain, and what can they not establish about a real generator?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

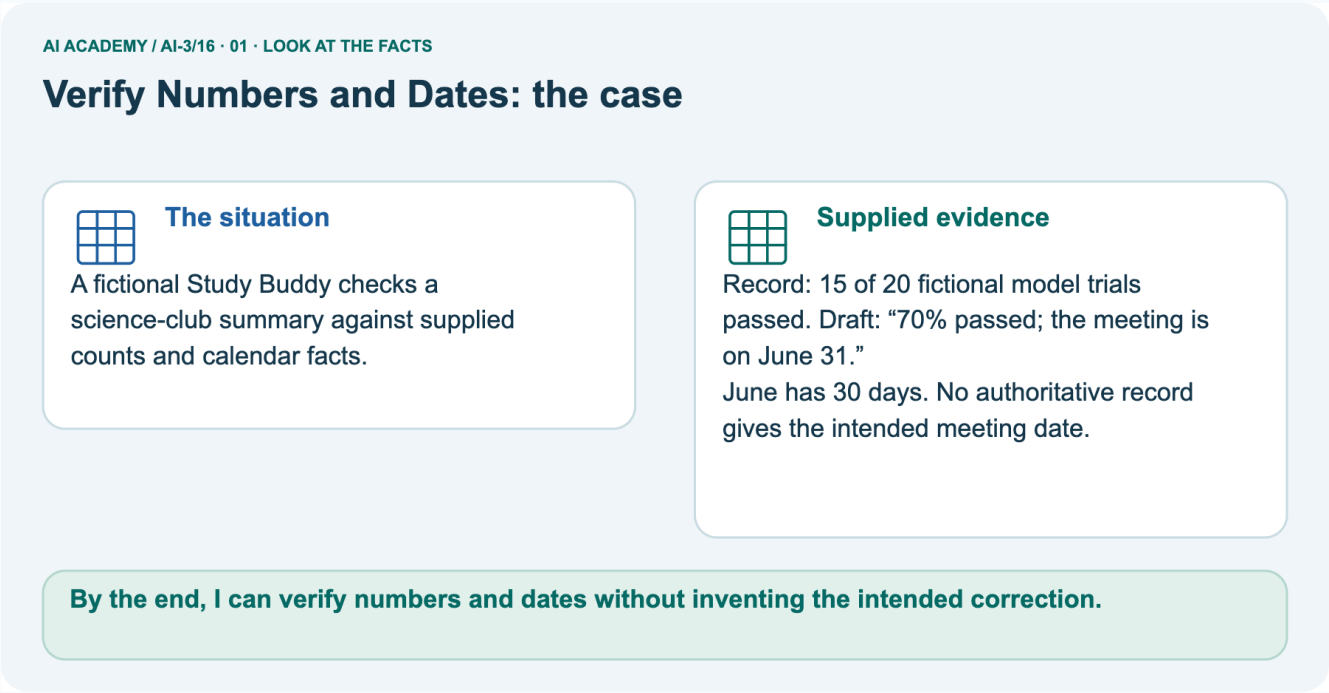

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Verify Numbers and Dates graphic using its labels, deciding evidence and relevant limitation.

01. Verify Numbers and Dates: the case

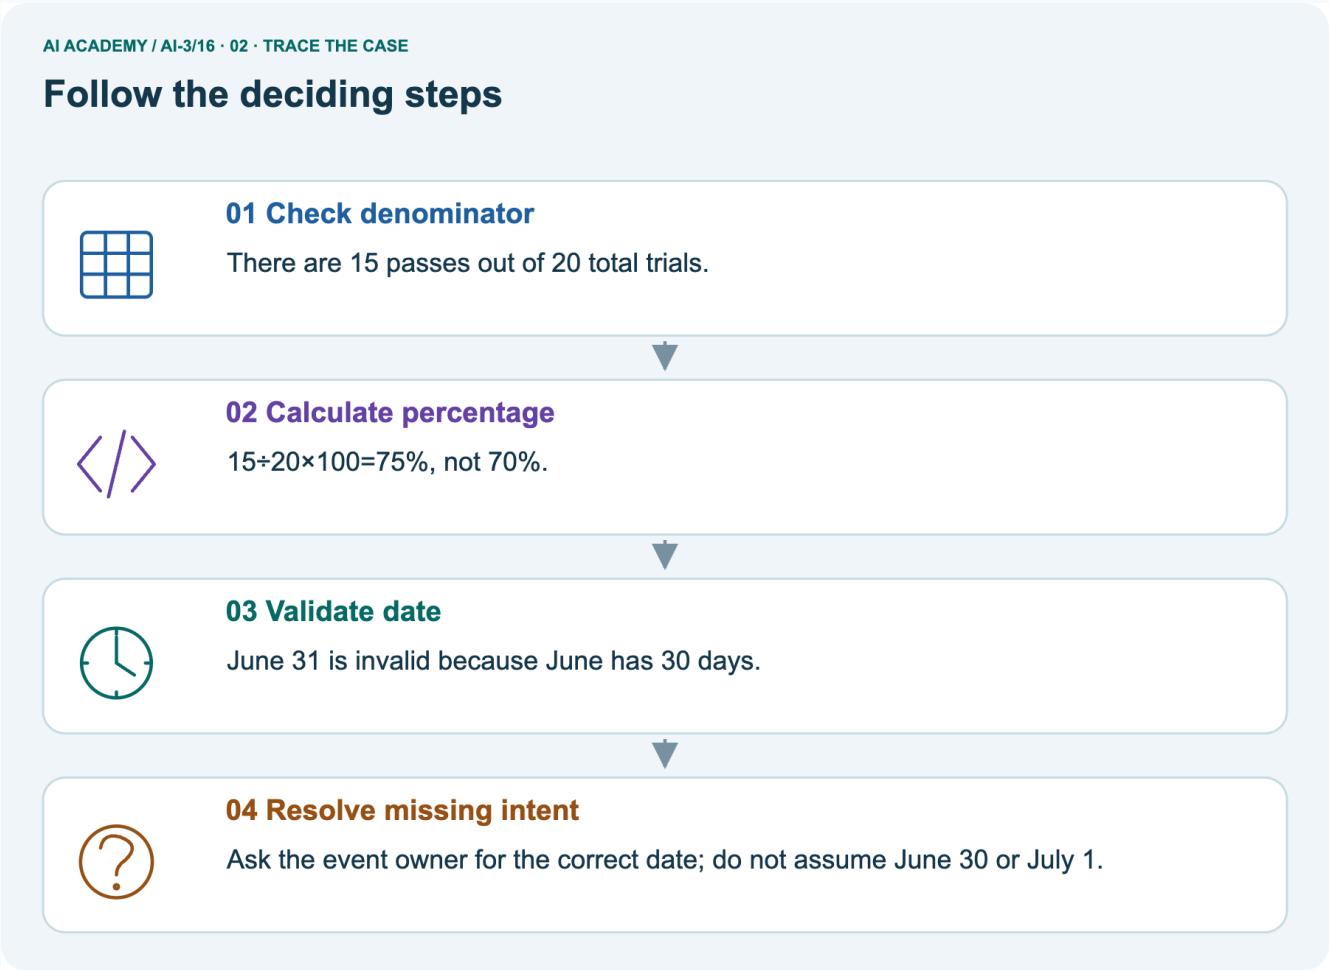

Follow the labelled picture with the matching explanation. Open the vector diagram

A fictional Study Buddy checks a science-club summary against supplied counts and calendar facts. Supplied facts: Record: 15 of 20 fictional model trials passed.

Draft: “**70%** passed; the meeting is on June 31.” June has 30 days. No authoritative record gives the intended meeting date.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

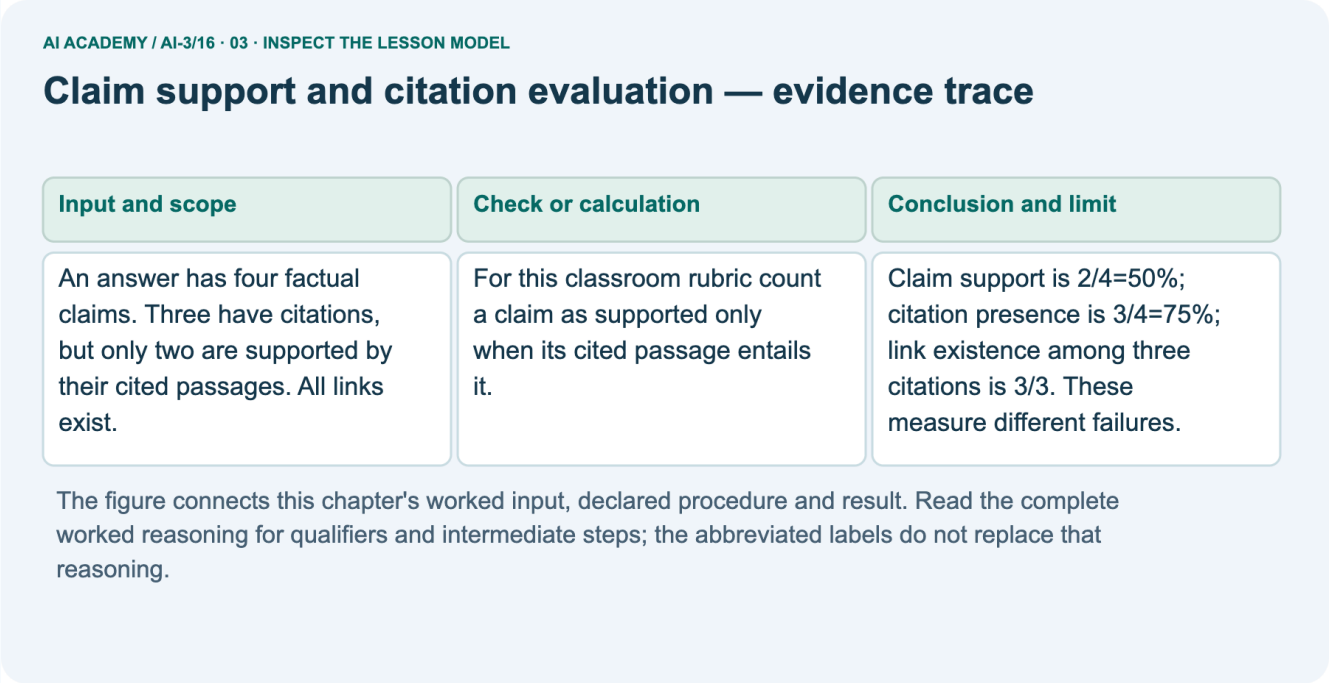

Follow the labelled picture with the matching explanation. Open the vector diagram

Check denominator: There are 15 passes out of 20 total trials. → Calculate percentage: 15÷20×100=75%, not **70%**. → Validate date: June 31 is invalid because June has 30 days. → Resolve missing intent: Ask the event owner for the correct date; do not assume June 30 or July 1.

Point to each numbered stage and explain which recorded **input** it uses.

03. Claim support and citation evaluation — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

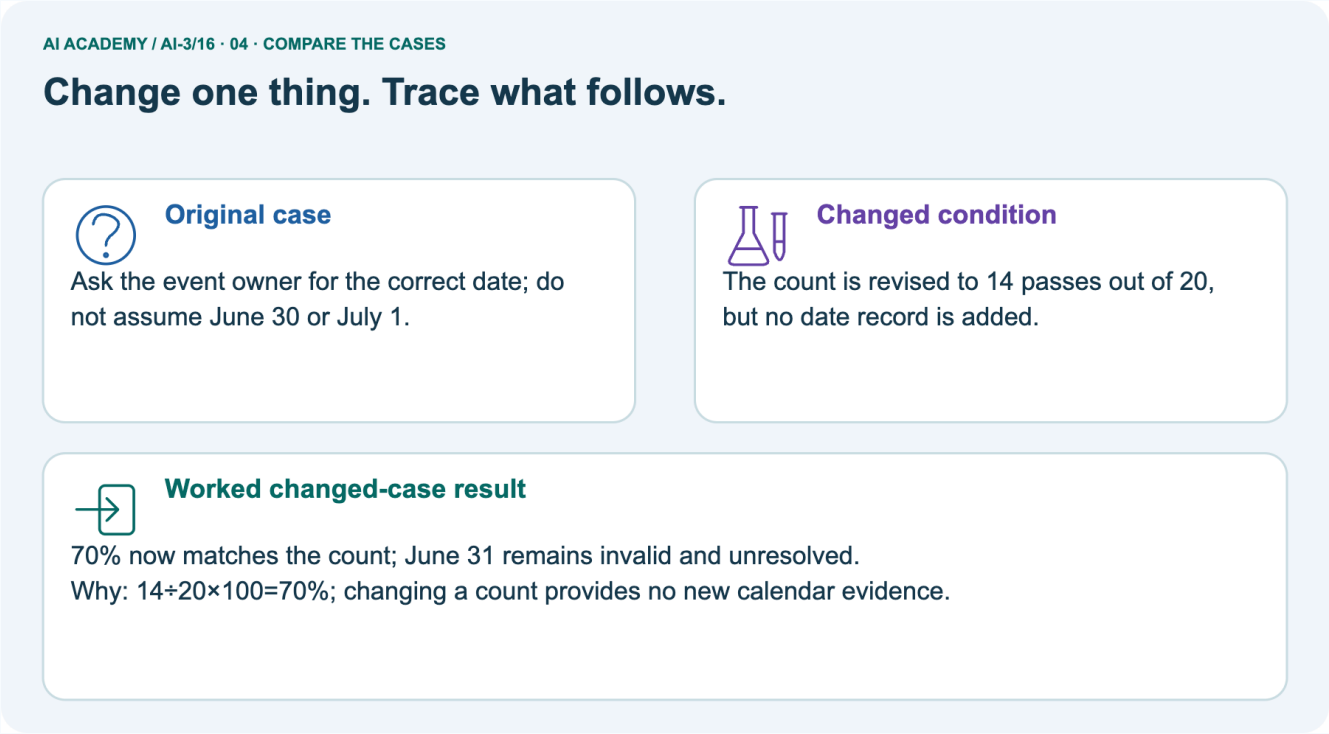

Claim support and citation evaluation — **evidence** trace. An answer has four factual claims. Three have citations, but only two are supported by their cited passages.

All links exist. | For this classroom rubric count a claim as supported only when its cited passage entails it. | Claim support is 2/4=50%; citation presence is 3/4=75%; link existence among three citations is 3/3.

These measure different failures.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

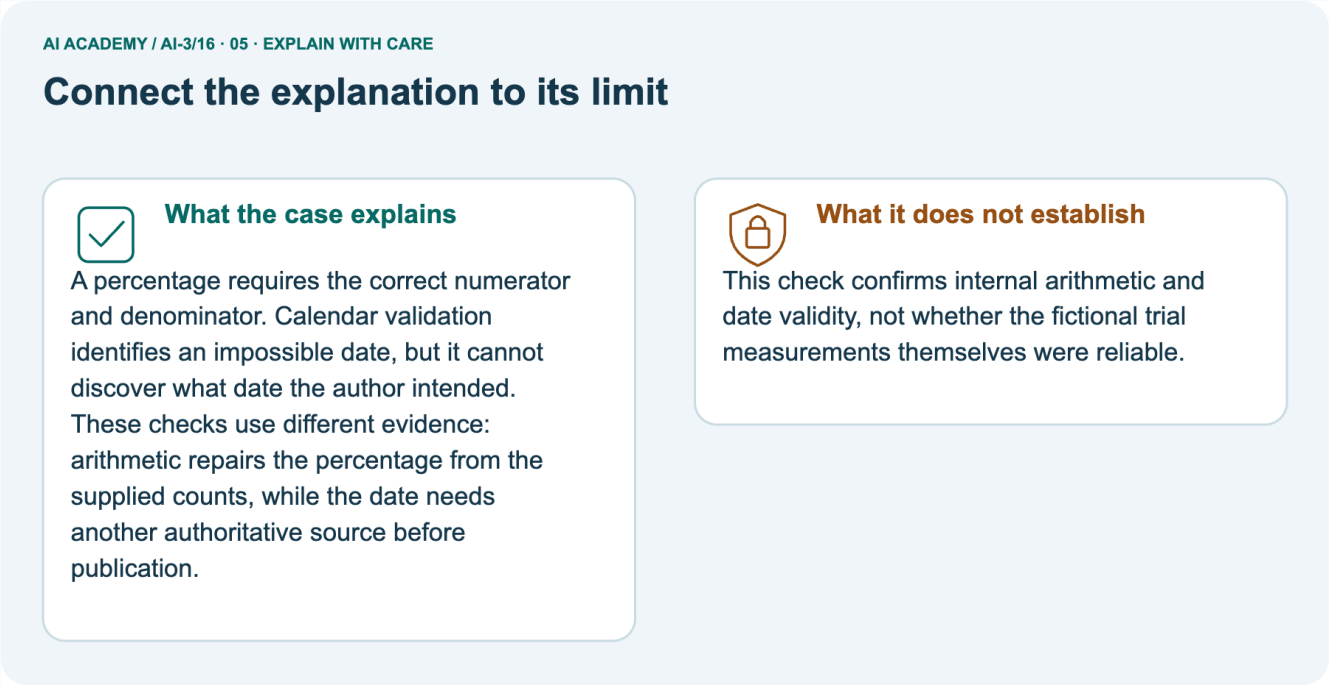

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Ask the event owner for the correct date; do not assume June 30 or July 1. Changed condition: The count is revised to 14 passes out of 20, but no date record is added.

Expected result: **70%** now matches the count; June 31 remains invalid and unresolved. Reason: 14÷20×100=**70%**; changing a count provides no new calendar **evidence**.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

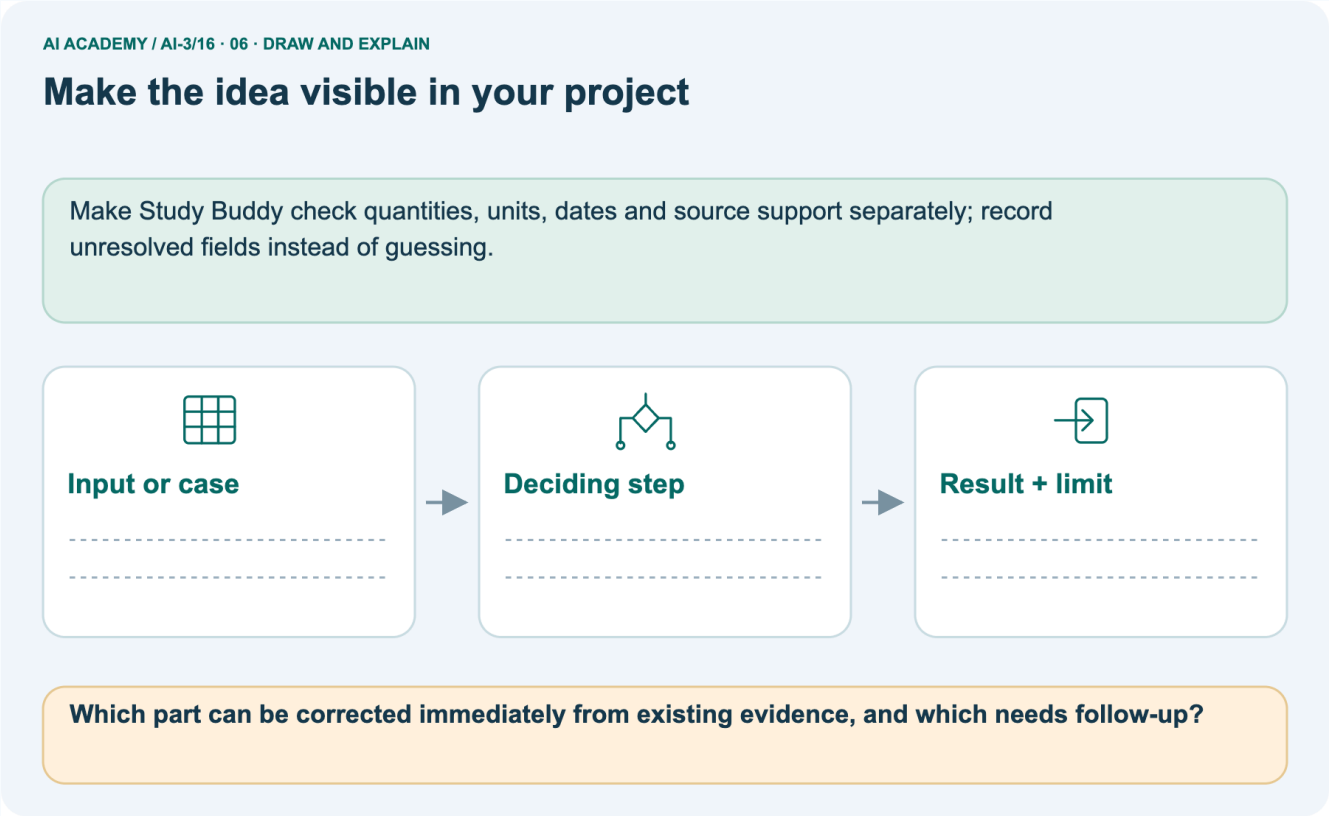

A percentage requires the correct numerator and denominator. Calendar validation identifies an impossible date, but it cannot discover what date the author intended.

These checks use different **evidence**: arithmetic repairs the percentage from the supplied counts, while the date needs another authoritative source before publication.

Limit: This check confirms internal arithmetic and date validity, not whether the fictional trial measurements themselves were reliable.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Make Study Buddy check quantities, **unit**s, dates and source support separately; record unresolved fields instead of guessing. Draw your **input**, deciding step, result and limit.

Supported question: Which part can be corrected immediately from existing **evidence**, and which needs follow-up?

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
