Copyright and Provenance

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Verified Study Buddy

Before you start

Week 15: source identity and trust are distinct from permission.

Plan time to read, investigate and explain. Keep predictions separate from observations.

Your mission

> Start with the target: Explain the mechanism and terminology of copyright and permitted sources. Try the recall before opening notes.

Your learning target

I can explain the **mechanism** and terminology of **copyright** and permitted sources.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Privacy by Design. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Evaluation Sets. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Block to Python Bridge. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Week 29: **Copyright** and **Provenance**

Responsible creation distinguishes source material, transformation, **attribution**, and generated content.

CREATOR MISSION

Create a **provenance** record for a mixed-media **output**.

Creator name and date:

Write or draw your reasoning and evidence.

Readiness for the connected explanation

Recall Conversation state and retention. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

This week’s end goal

By the end, I can explain **copyright** and **provenance** using a traced example and a stated limitation.

STUDENT LESSON · 2 OF 18

Notice the evidence

> Investigate the supplied Copyright and Provenance case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Notice → Predict → Explain

Begin with visible **evidence**. Do not explain more than the picture and information support.

Start with this puzzle

MYSTERY

The learners must use **copyright** and **provenance** to solve a problem. What information do they have? What decision or calculation do they make? What would count as **evidence** that it worked?

Three **observation**s (what you can point to):

> **Write or draw your reasoning and evidence.**

My **prediction** and the clue supporting it:

> **Write or draw your reasoning and evidence.**

A closer explanation

Permission to access a work and permission to redistribute or modify it are separate. Use a classroom **licence** ledger instead of assuming all online material is reusable.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

STUDENT LESSON · 3 OF 18

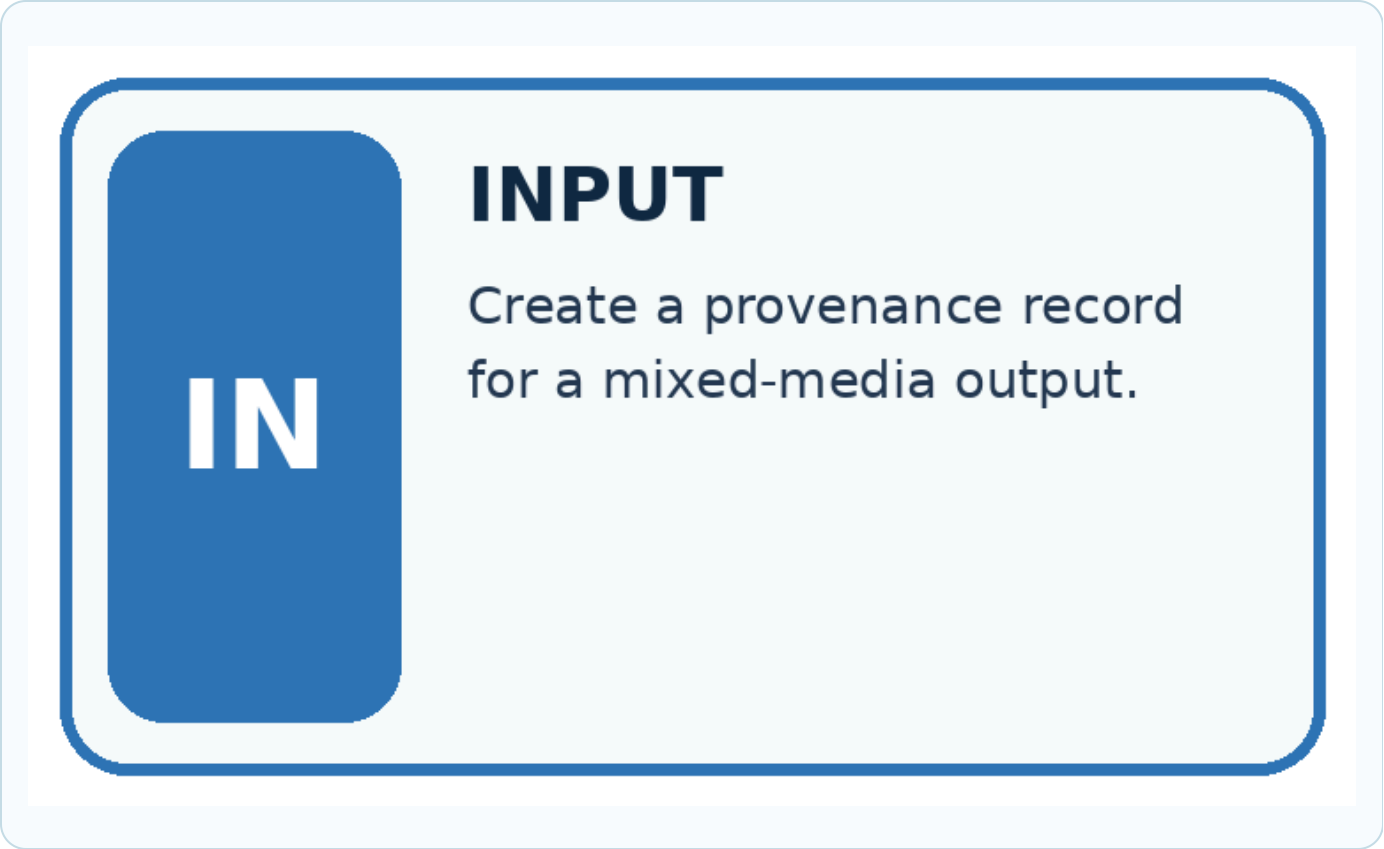

See how it works

> Follow the mechanism for Copyright and Provenance. Connect each labelled input, deciding step and result.

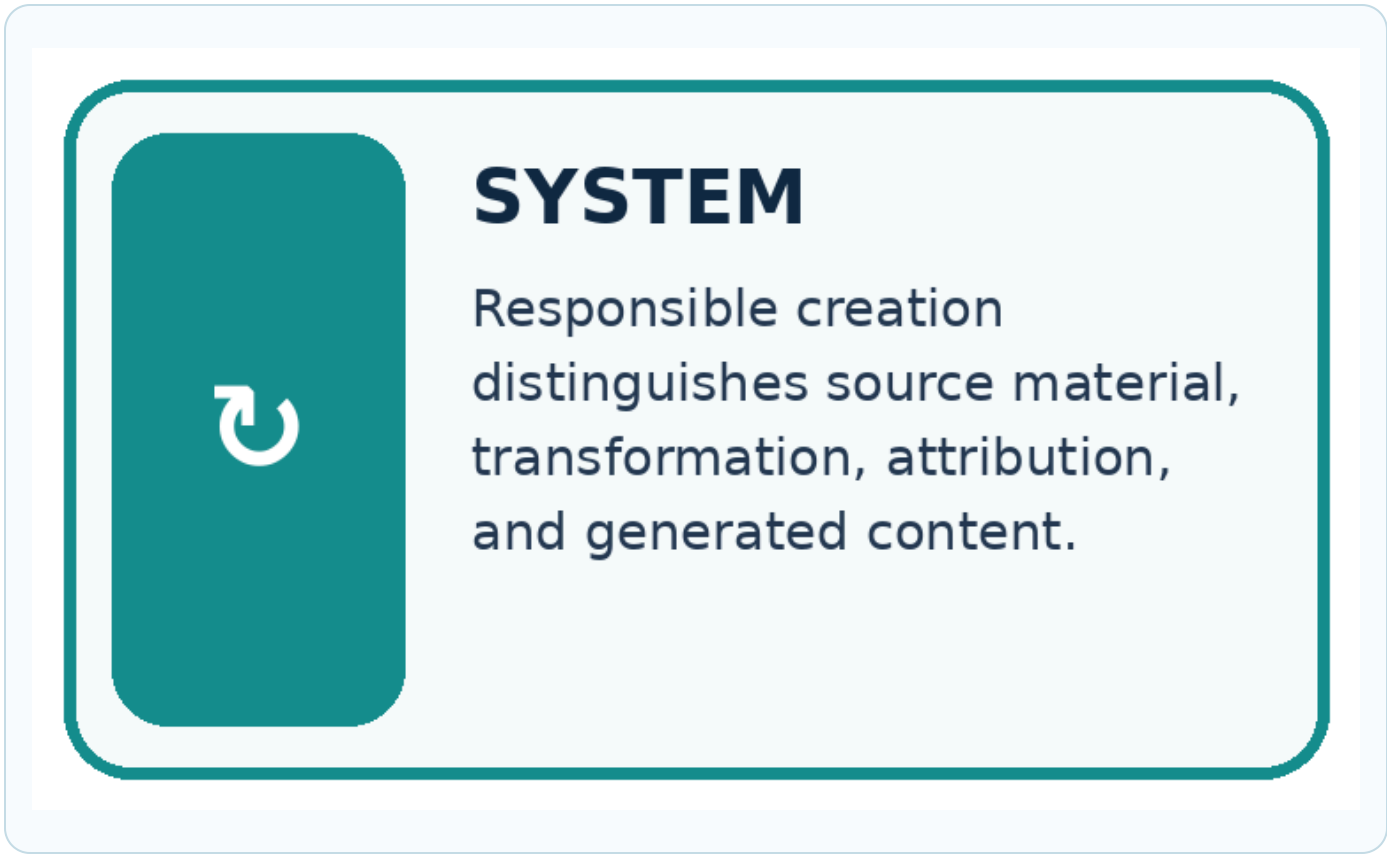

VISUAL MECHANISM

Input → Process → Output

Trace the information. At each stage, ask what changed and how you could test it.

↓

SYSTEM
Responsible creation distinguishes source material, transformation, attribution, and generated content.

↓

OUT
EVIDENCE
Create a provenance record for a mixed-media output.

Which stage could fail even when the other two are correct? Explain:

> **Write or draw your reasoning and evidence.**

A closer explanation

For this fictional policy, **licence** L permits classroom display with **attribution** but forbids public redistribution. **Licence** M permits adaptation and redistribution with **attribution**.

Unknown permission means seek approval or choose a permitted alternative; this exercise is not a legal ruling.

Copyright and permitted sources — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Image A has L; image B has M. The project is a publicly downloadable adapted poster.	For this fictional policy, licence L permits classroom display with attribution but forbids public redistribution. Licence M permits adaptation and redistribution with attribution. Unknown permission means seek approval or choose a permitted alternative; this exercise is not a legal ruling.	A is not permitted for this use under L. B is permitted under the supplied M terms with attribution. Keep licence version and provenance.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week’s visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

Compare the cases

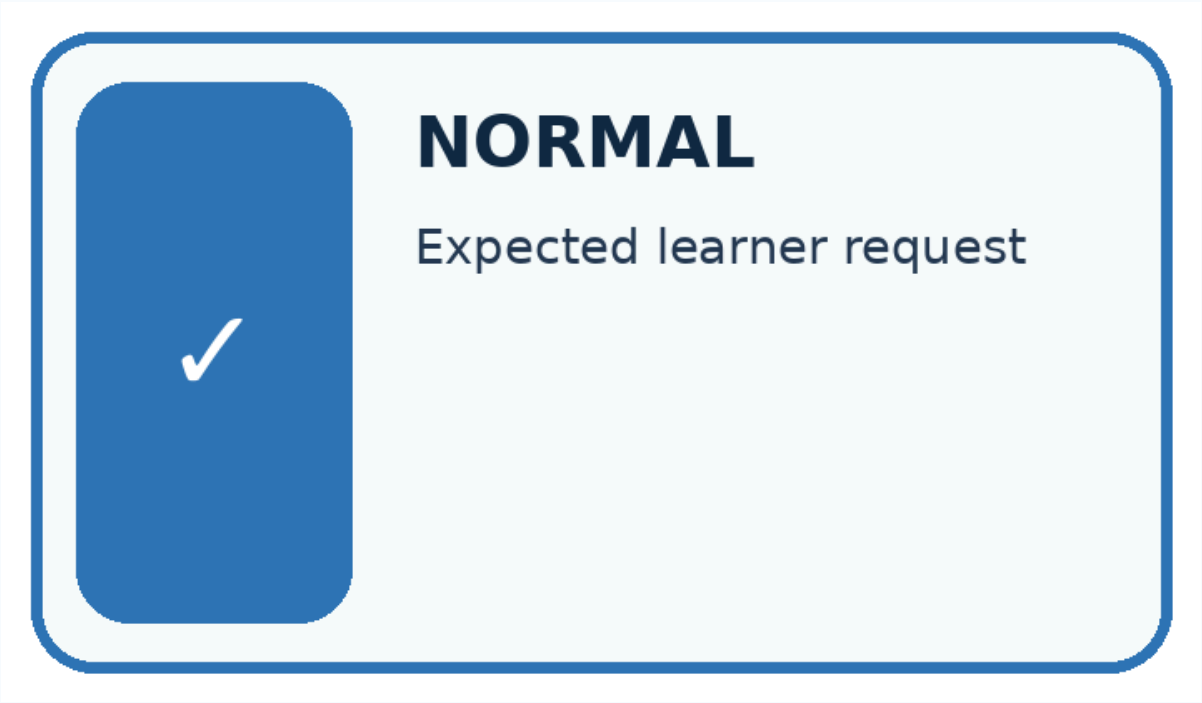

> Compare the supplied cases for Copyright and Provenance. Identify the detail that changes the conclusion.

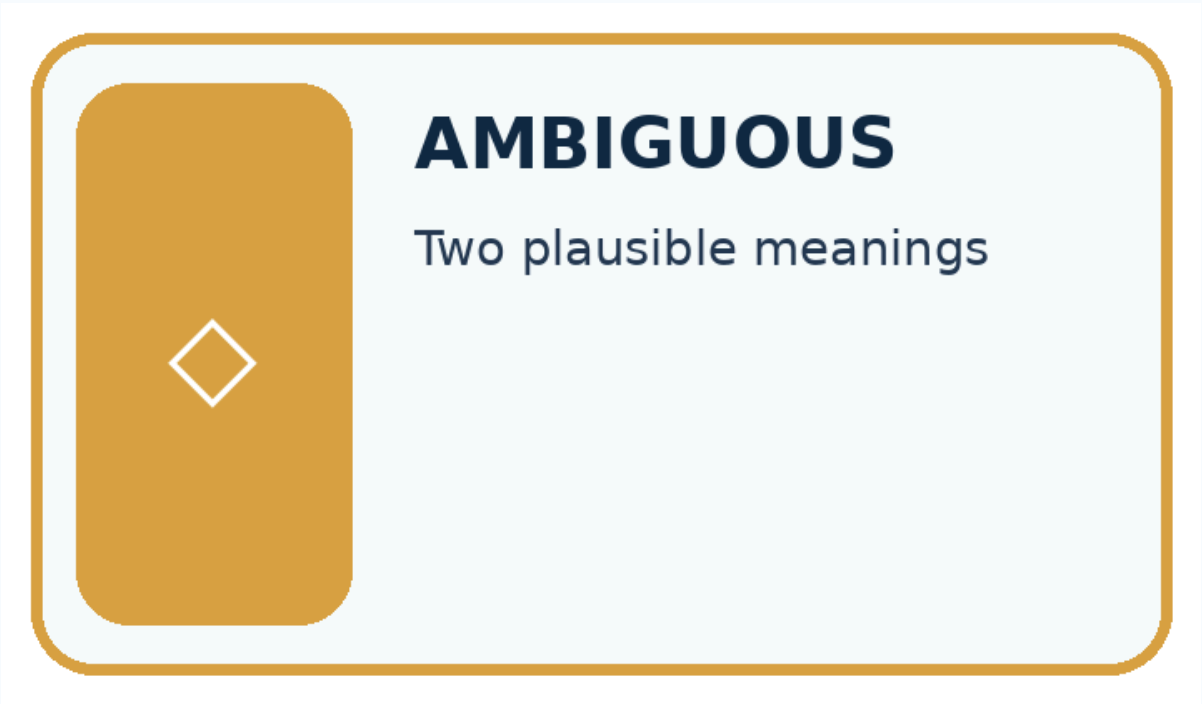

The case to investigate

CASE GALLERY

Four Tests, Four Kinds of **Evidence**

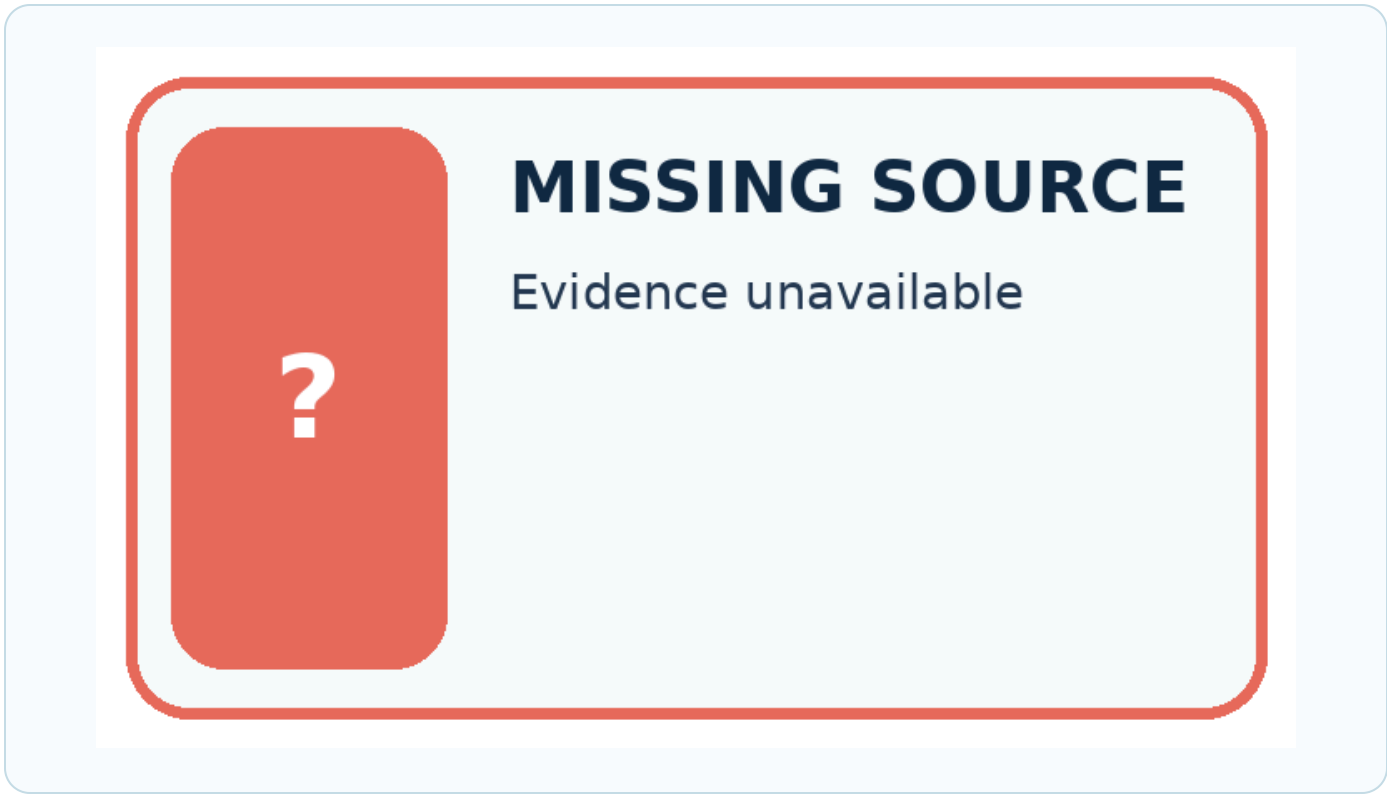

A system is not understood until it survives more than one comfortable example.

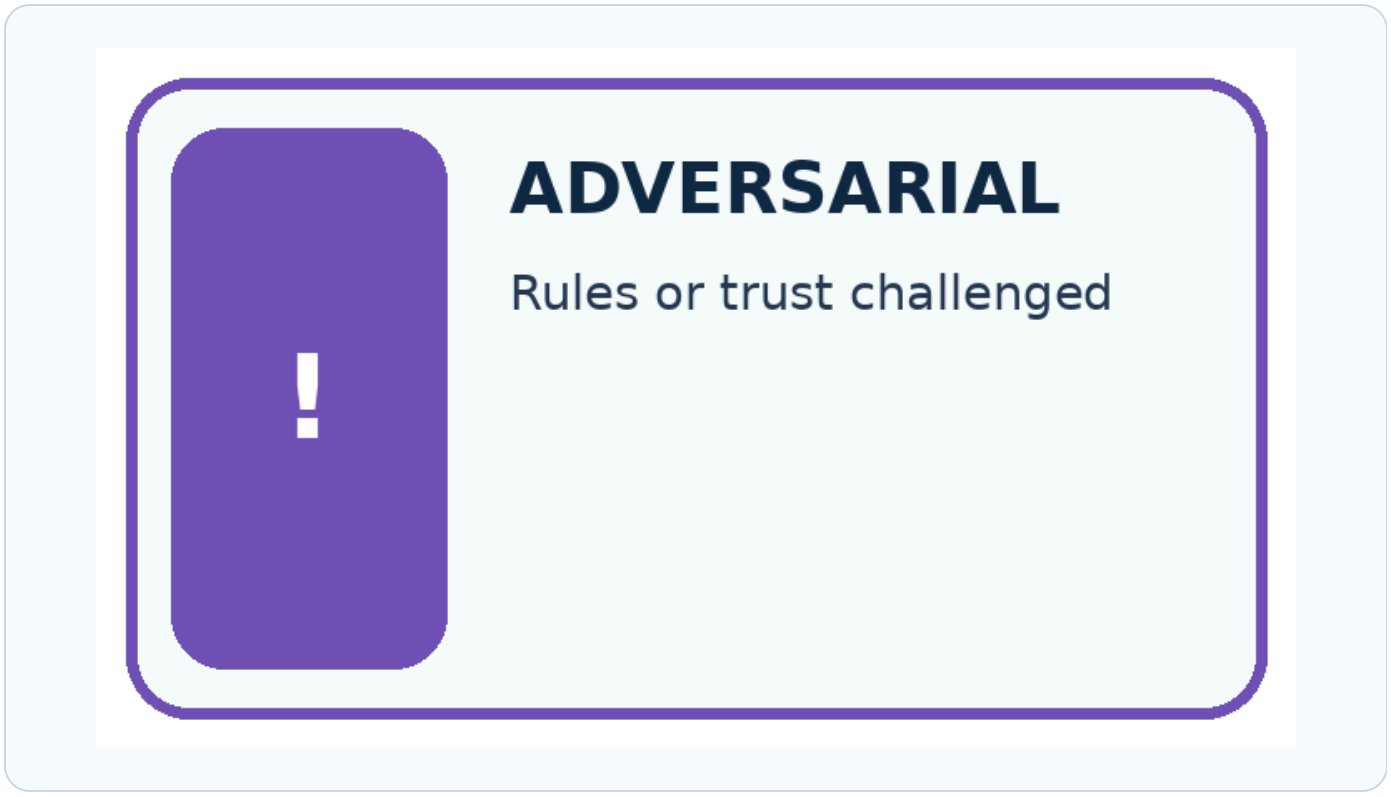

The normal case

NORMAL CASE: predict and name **evidence**. BOUNDARY CASE: predict and name **evidence**.

?
MISSING SOURCE
Evidence unavailable

!
ADVERSARIAL
Rules or trust challenged

Check missing information

MISSING INFORMATION: predict and name **evidence**. TRANSFER CASE: predict and name **evidence**.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change one thing

Change: Use Fern unchanged and include the required **attribution**.

Predicted result

Prediction: That use satisfies the stated fictional permission conditions.

Why the result follows

Reason: Its public redistribution is permitted when there is no alteration and **attribution** is included.

STUDENT LESSON · 5 OF 18

Words that unlock the idea

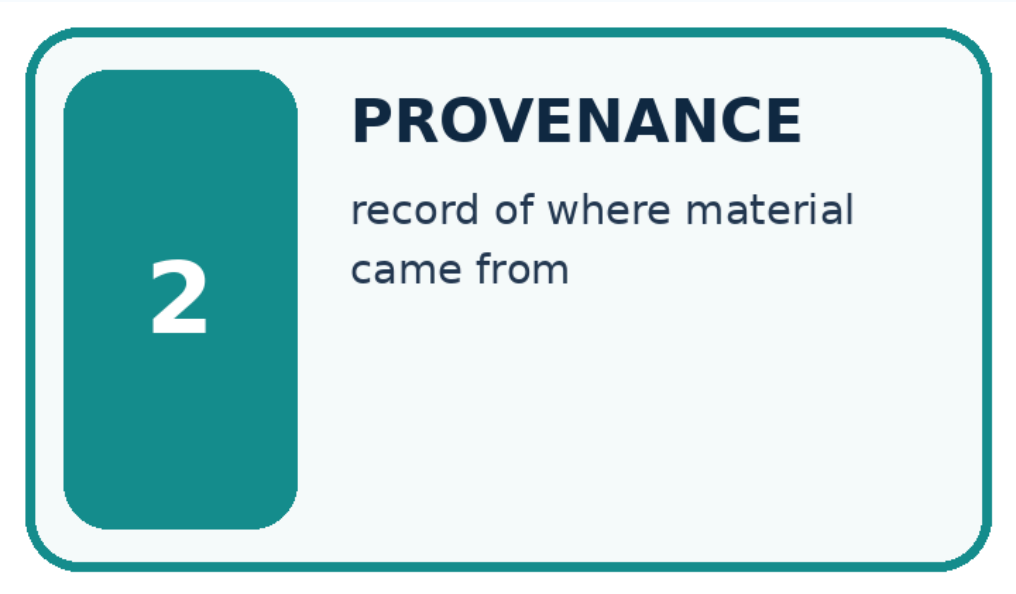

> Use the vocabulary of Copyright and Provenance to explain a concrete decision, rather than only memorising definitions.

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

2
PROVENANCE
record of where material came from

3
ATTRIBUTION
credit given to a source

Word	My own example	Not this / boundary
copyright	Legal rights concerning original creative expression; the permitted uses depend on the applicable rules and permissions.	
provenance	A record of where information or material came from and how it was changed.	
attribution	Identifying the source or creator of material; this alone does not establish permission to use it.	
license	Terms granting specified permissions to use material or software.	

Words used in the closer explanation

Word	Meaning
Licence	Terms specifying permitted uses
Permission ledger	A record linking each asset to its authorised use

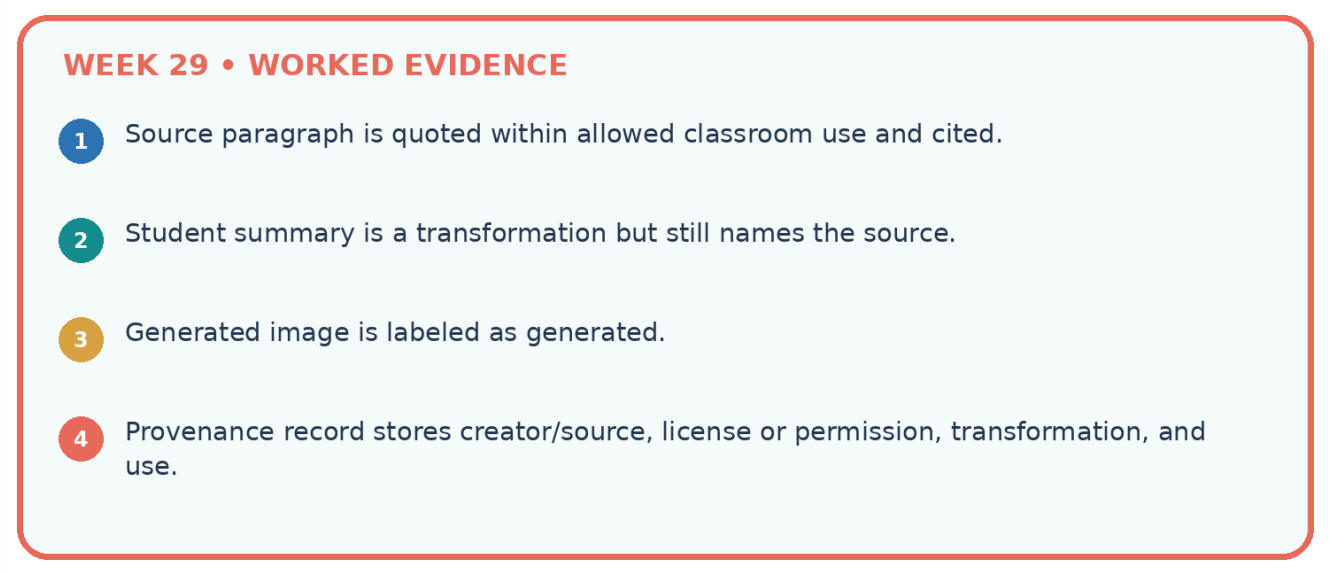

Follow a worked example

> Follow the worked trace for Copyright and Provenance, predict a step, then compare with its explanation.

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

1. Source paragraph is quoted within allowed classroom use and cited.

2. Student summary is a transformation but still names the source.

3. Generated image is labeled as generated.

4. **Provenance** record stores creator/source, **license** or permission, transformation, and use.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the **evidence** answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

Image A has L; image B has M. The project is a publicly downloadable adapted poster.

A is not permitted for this use under L. B is permitted under the supplied M terms with **attribution**. Keep **licence** version and **provenance**.

Worked explanation · Copyright and Provenance

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Copyright and Provenance

Read fictional reuse terms before decorating a public study guide.

The facts we will use

Supplied facts

Image Fern allows public redistribution with **attribution** but no alteration. Image Moss allows alteration and public redistribution with **attribution**. The plan crops an image.

Supplied facts

All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

AI ACADEMY / AI-3/29

Copyright and Provenance

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Read terms

Fern excludes alteration; Moss permits it.

2. Match proposed use

Cropping is an alteration in these declared toy terms.

3. Choose eligible asset

Use Moss with its required attribution; do not crop Fern for this public guide.

CHANGE ONE THING

Use Fern unchanged and include the required attribution.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Read terms	Fern excludes alteration; Moss permits it.
2. Match proposed use	Cropping is an alteration in these declared toy terms.
3. Choose eligible asset	Use Moss with its required attribution; do not crop Fern for this public guide.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

Read the picture in order. Use Moss with its required **attribution**; do not crop Fern for this public guide. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

What this example does not establish

Keep the stated limit

Real permission decisions require the actual **licence** and use context. These invented terms

teach condition matching, not legal advice.

Keep the stated limit

Read the labelled picture: Does acknowledging Fern make a cropped version permitted? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

Keep the stated limit

Change one thing: Use Fern unchanged and include the required **attribution**. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Copyright and Provenance claim and explain a repair using the supplied evidence.

Find the first error

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak **evidence**.

!

COMPARE • DIAGNOSE

Weak idea: Changing a few words removes the need to credit a source. Strong move: inspect the claim, source, stage, schema, or test evidence; repair one cause; rerun.

Evidence record	Expected	Actual	Likely cause / next test
normal case	works		
boundary case	stated rule		
missing input	safe response		
fresh transfer	generalizes		

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

Check the claim against the facts

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

STUDENT LESSON · 8 OF 18

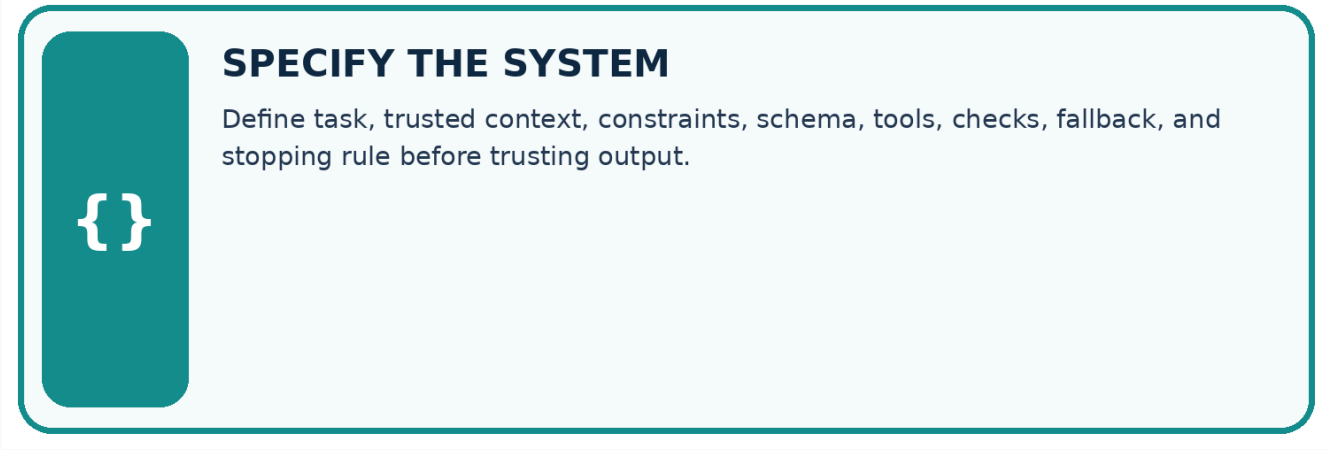

Practise together

> Practise Copyright and Provenance with support, then explain the deciding step in your own words.

LOGIC STUDIO

Specify Before You Run

Prompts, schemas, retrieval, tool calls, and code are inspectable parts of one AI product.

SET task, audience, constraints, **output**_schema LOAD approved_context or retrieval_result CALL model or allowed_tool VALIDATE fields, claims, citations, and safety IF **evidence** missing: ask, retrieve, or abstain RETURN useful **output** + source trail + limitations

> Trace one **input**. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

Real legal outcomes depend on jurisdiction and facts; supplied **licence** terms define this classroom exercise, not universal **copyright** law.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

Practise with less help: Trace the worked case

Use workbook W2 for the connected example "**Copyright** and permitted sources". First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for **Copyright** and permitted sources. Proposed explanation: "The worked result establishes every future case". Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Does acknowledging Fern make a cropped version permitted? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

Run the investigation

> Investigate Copyright and Provenance. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

Inspect a mixed project, classify original/quoted/transformed/generated parts, check permission, and build a complete **provenance** record.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

> **Test / input:** normal
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** boundary
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** missing
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** fresh transfer
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

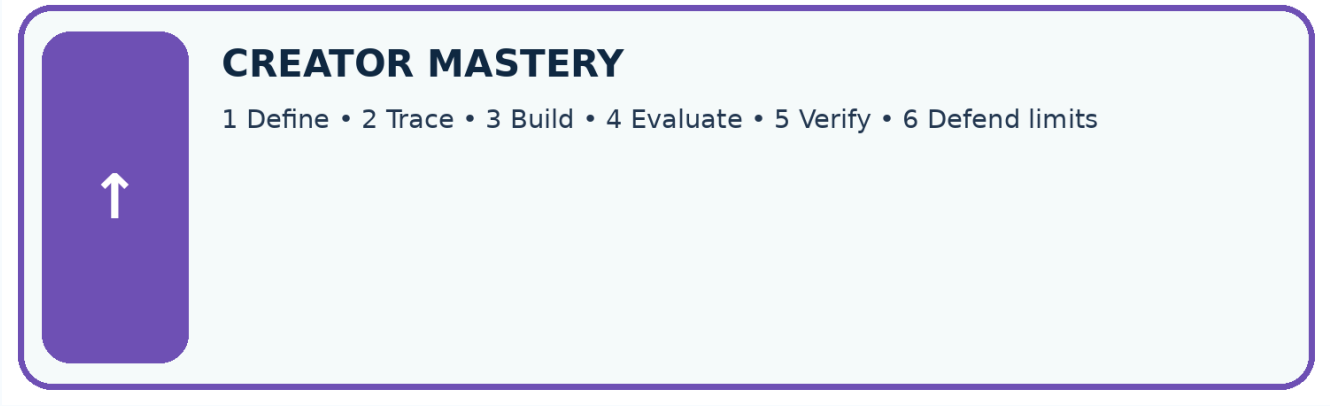

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Copyright and Provenance. Explain why each step is justified.

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce **evidence** without copying the worked example.

1 • NAME: Define the concept without repeating the textbook.

2 • TRACE: Show the information, state, branch, calculation, or **evidence** path.

3 • APPLY: Solve a different example independently.

4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest **evidence** of independent understanding:

> **Write or draw your reasoning and evidence.**

STUDENT LESSON · 11 OF 18

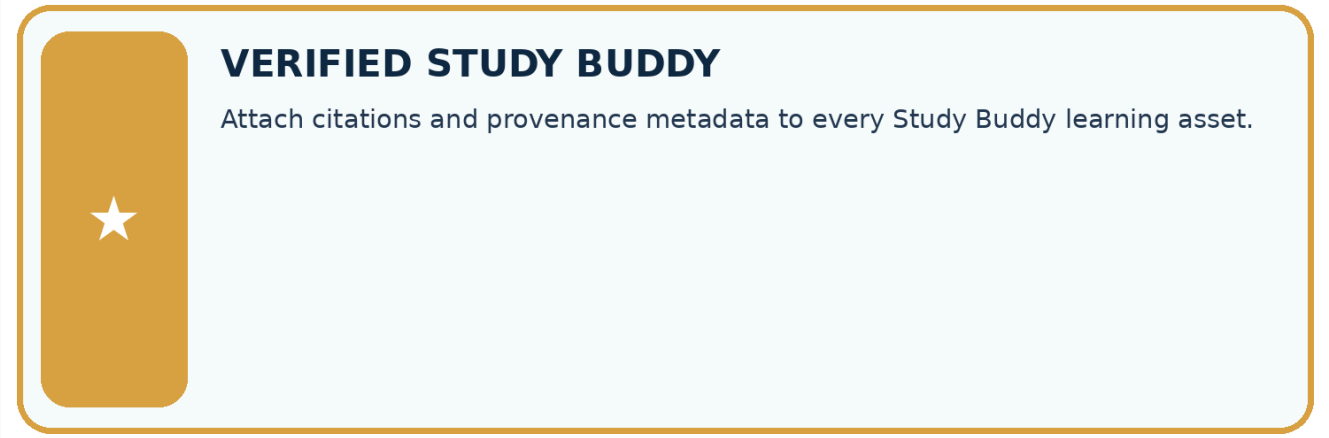

Connect your project

> Apply this week's idea to Verified Study Buddy. Keep an annotated decision and the evidence supporting it.

CUMULATIVE PROJECT

Verified Study Buddy

Every week adds one inspectable piece. The system must show how it reached a result.

THIS WEEK'S CHECKPOINT Attach citations and **provenance** metadata to every Study Buddy learning asset.

Trace the system

SYSTEM MAP Learner need → prompt/schema → approved sources/retrieval → model/tool → structured answer → verification → **human decision**

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under **human control**?

Write or draw your reasoning and evidence.

Responsible design

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse fluent **output** with verified truth.

Evidence for your project

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding.

STUDENT LESSON · 12 OF 18

Show what you know

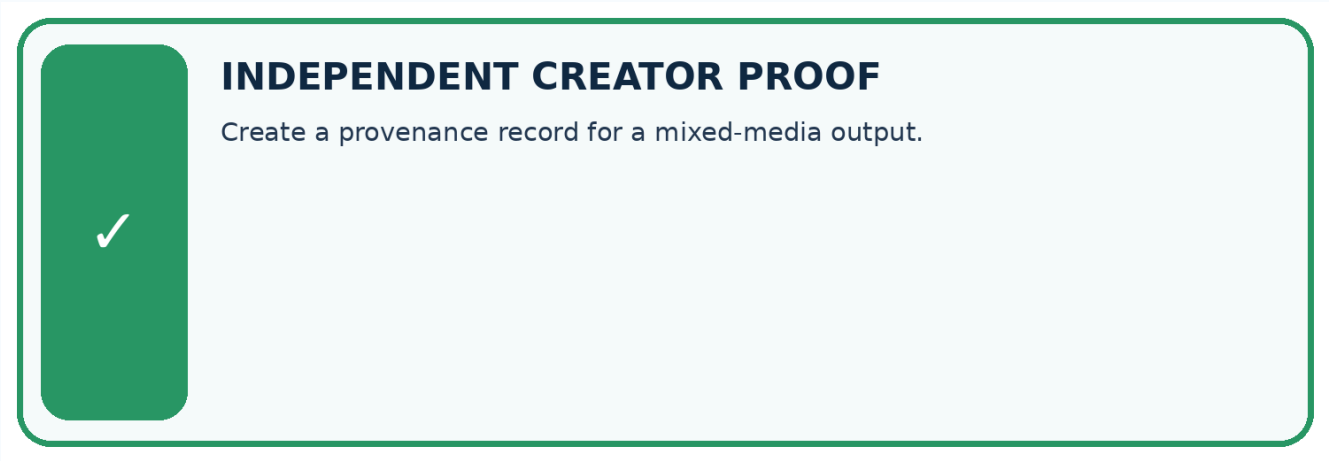

Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Independent evidence

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

Try a more demanding case

CHALLENGE Create a **provenance** record for a mixed-media **output**.

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My **evidence** that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One limitation, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

Check your explanation

SELF-CHECK ☐ I explained the **mechanism** ☐ I used **evidence** ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

Study a complete case

Revisit the complete Copyright and Provenance case for supported practice. Repeated examples do not become fresh assessments.

Week 29 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

A slide reuses an online photograph and textbook paragraph.

The question

> What **provenance** and reuse checks are needed?

Worked explanation

Record creator, source, **licence** or permission, **attribution** requirements and modifications. **Attribution** alone is not permission; classroom context is not a universal exemption.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Provenance makes reuse conditions visible

Evidence or stage	Value or result
Origin	Creator and source

Evidence or stage	Value or result
Permission	Licence or explicit permission
Conditions	Attribution and other limits
Modifications	Record what changed

A slide reuses an online photograph and textbook paragraph.

> What **provenance** and reuse checks are needed?

Record creator, source, **licence** or permission, **attribution** requirements and modifications. **Attribution** alone is not permission; classroom context is not a universal exemption.

STUDENT LESSON · 14 OF 18

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Apply a new case independently

Text C permits internal reading only; D permits public quotation up to 30 words with **attribution**. Proposed public handout reproduces 40 words. Apply the fictional terms.

> **My independent explanation, trace and limits**

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 29 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

> You find an attractive illustration online with no **license** information. What should you record and check before reusing it in a public project?

My answer, with a trace, calculation or supporting **evidence**

> **Write or draw your reasoning and evidence.**

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

> **Write or draw your reasoning and evidence.**

Connect to your project

Attach citations and **provenance** metadata to every Study Buddy learning asset.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

A project uses an image found through search. Its author is known but its **licence** is missing. Is naming the author enough to establish reuse permission? Describe a **provenance** record and next action.

Explain the mechanism, evidence and one limit.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

Use this map to navigate Copyright and Provenance, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: Read fictional reuse terms before decorating a public study guide.

By the end, I can	How I will show it
Explain the mechanism and terminology of copyright and permitted sources	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Copyright and Provenance without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of **copyright** and permitted sources

> **My deciding step, evidence and one remaining question**

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Read fictional reuse terms before decorating a public study guide.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Use Moss with its required **attribution**; do not crop Fern for this public guide.

1. Choose eligible asset

2. Read terms

3. Match proposed use

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Choose eligible asset Use Moss with its required **attribution**; do not crop Fern for this public guide. Read the picture in order.

Use Moss with its required **attribution**; do not crop Fern for this public guide. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Use Fern unchanged and include the required **attribution**. Which conclusion is supported by the supplied facts?

1. That use satisfies the stated fictional permission conditions.

2. This one example guarantees correct results for every future **input**.

3. We can decide the result without examining the changed **input** or the procedure.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: That use satisfies the stated fictional permission conditions. Its public redistribution is permitted when there is no alteration and **attribution** is included.

Repair a missing building block

Review Privacy by Design (ai-3/28). Goal: Explain the **mechanism** and terminology of data retention and deletion. Short practice: Which IDs and locations must appear in the deletion **evidence**?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Evaluation Sets (ai-3/26). Goal: Explain the **mechanism** and terminology of system evaluation sets. Short practice: Did the added cases demonstrate better answering?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Block to Python Bridge (ai-3/23). Goal: Translate a short paper calculation into a Python script. Short practice: Trace the changed list and identify where the result differs.

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

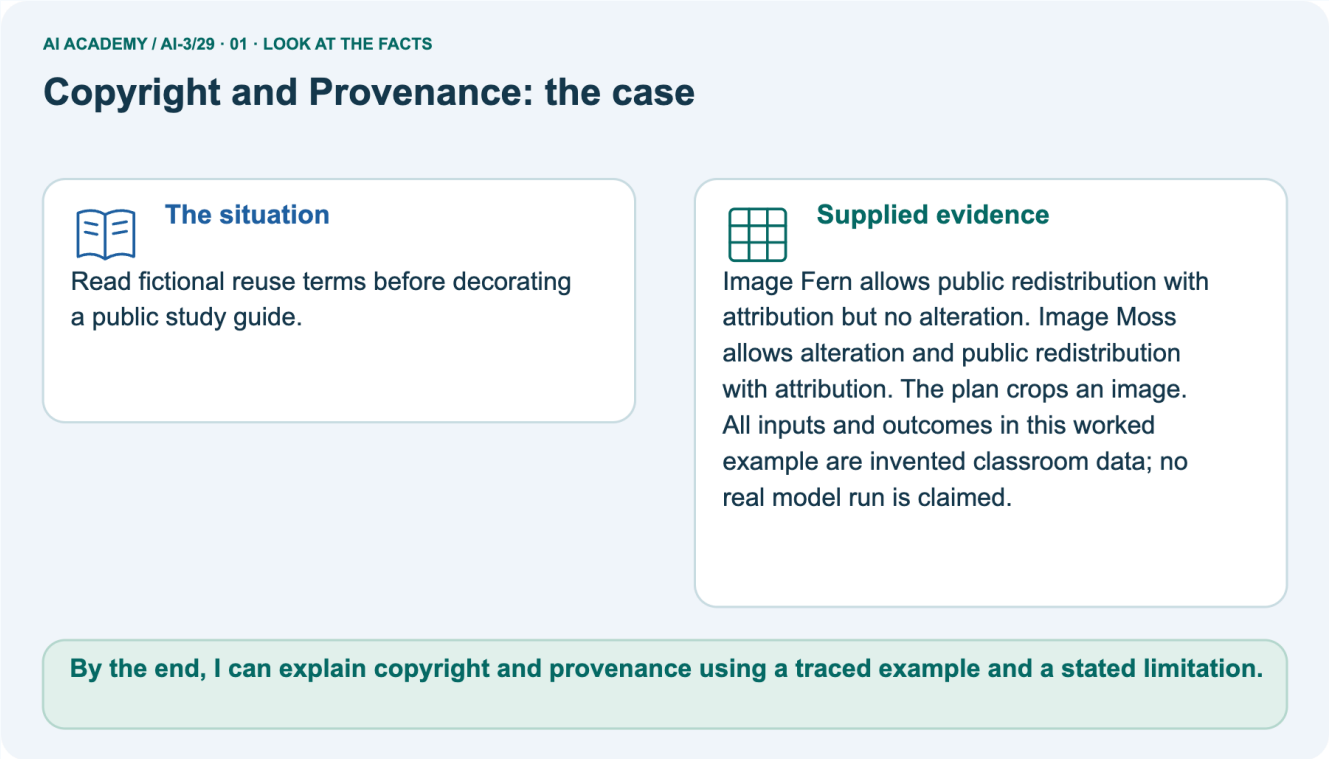

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Copyright and Provenance graphic using its labels, deciding evidence and relevant limitation.

01. Copyright and Provenance: the case

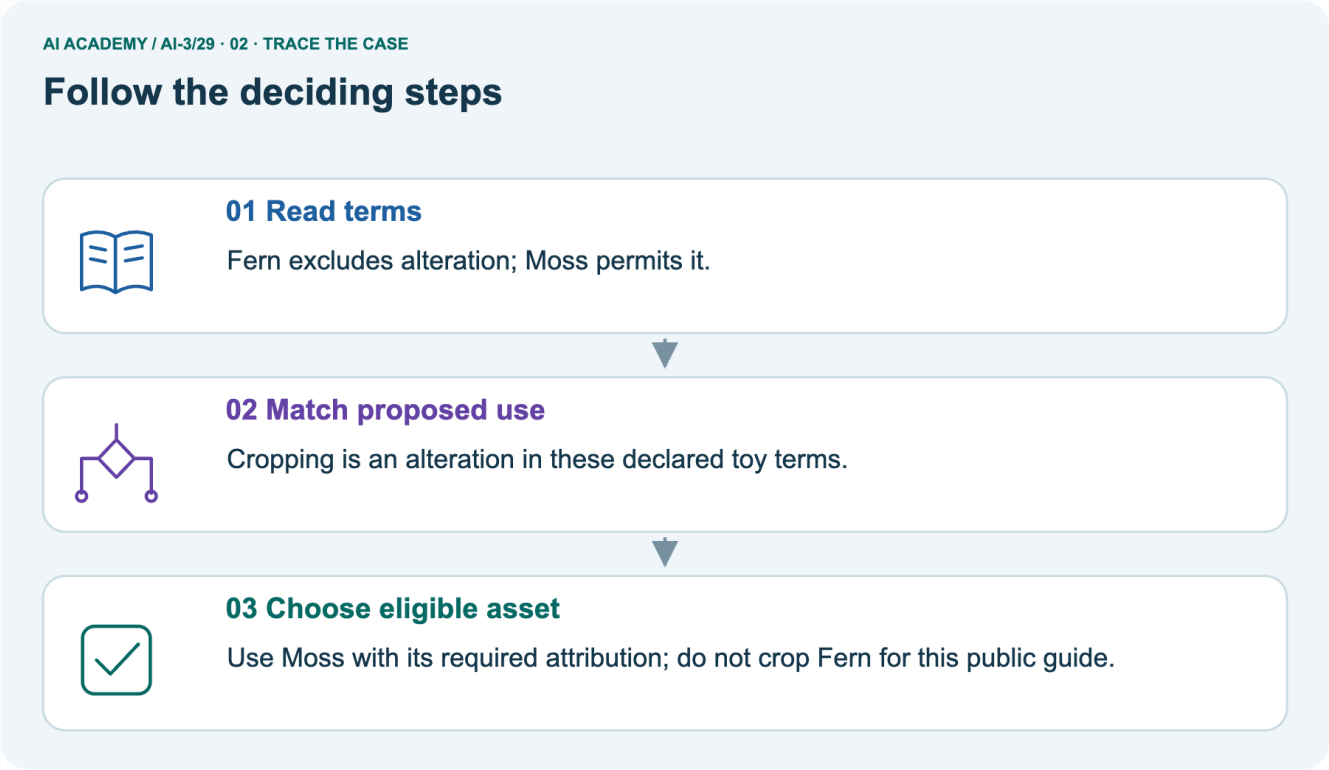

Follow the labelled picture with the matching explanation. Open the vector diagram

Read fictional reuse terms before decorating a public study guide. Supplied facts: Image Fern allows public redistribution with **attribution** but no alteration.

Image Moss allows alteration and public redistribution with **attribution**. The plan crops an image. All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

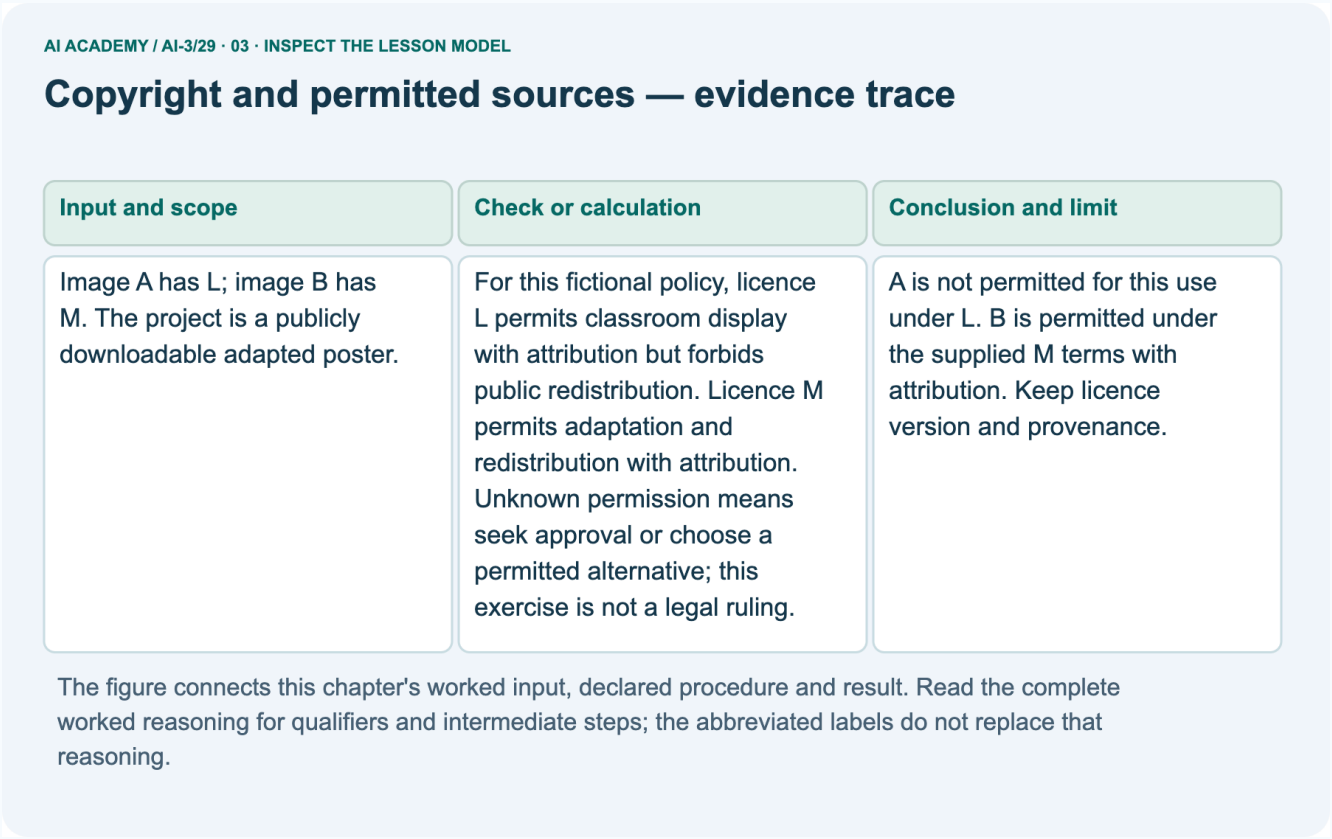

Follow the labelled picture with the matching explanation. Open the vector diagram

Read terms: Fern excludes alteration; Moss permits it. → Match proposed use: Cropping is an alteration in these declared toy terms. → Choose eligible asset: Use Moss with its required **attribution**; do not crop Fern for this public guide.

> Point to each numbered stage and explain which recorded **input** it uses.

03. Copyright and permitted sources — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

Copyright and permitted sources — **evidence** trace. Image A has L; image B has M.

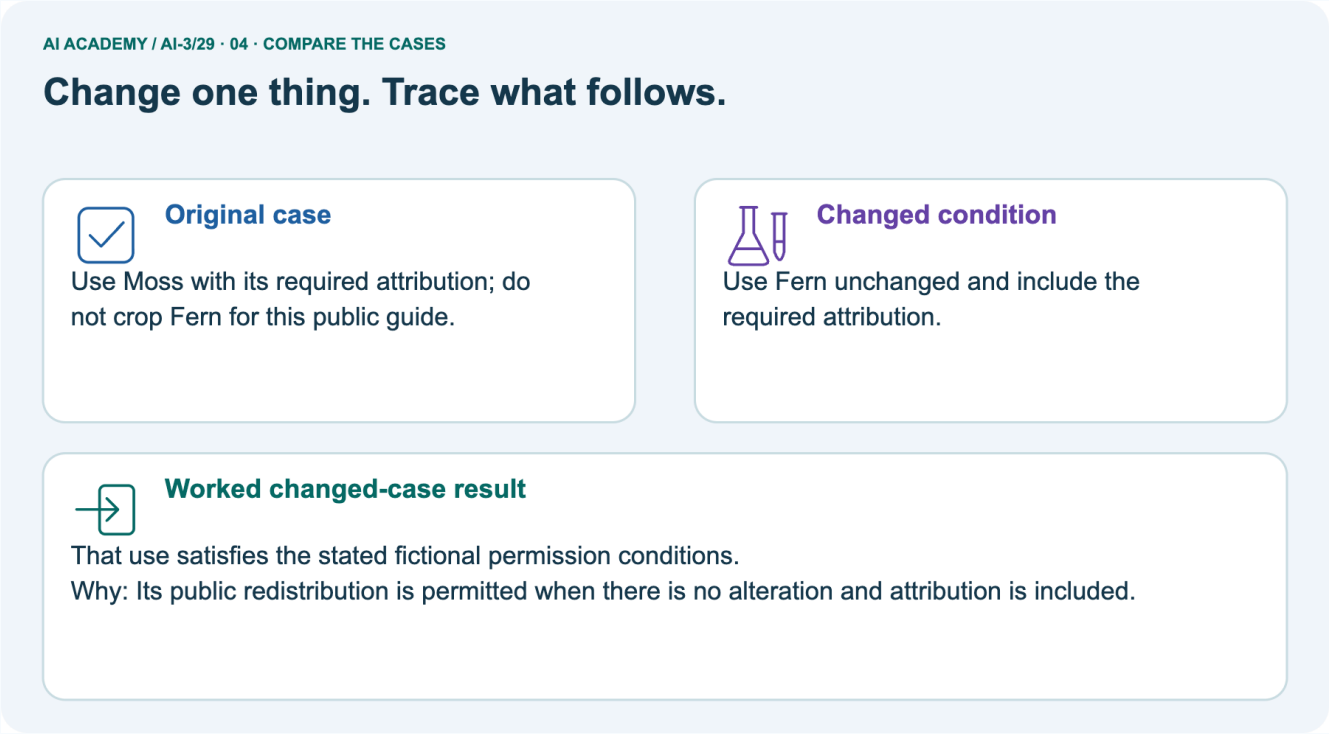

The project is a publicly downloadable adapted poster. | For this fictional policy, **licence** L permits classroom display with **attribution** but forbids public redistribution.

Licence M permits adaptation and redistribution with **attribution**. Unknown permission means seek approval or choose a permitted alternative; this exercise is not a legal ruling. | A is not permitted for this use under L.

B is permitted under the supplied M terms with **attribution**. Keep **licence** version and **provenance**.

> Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

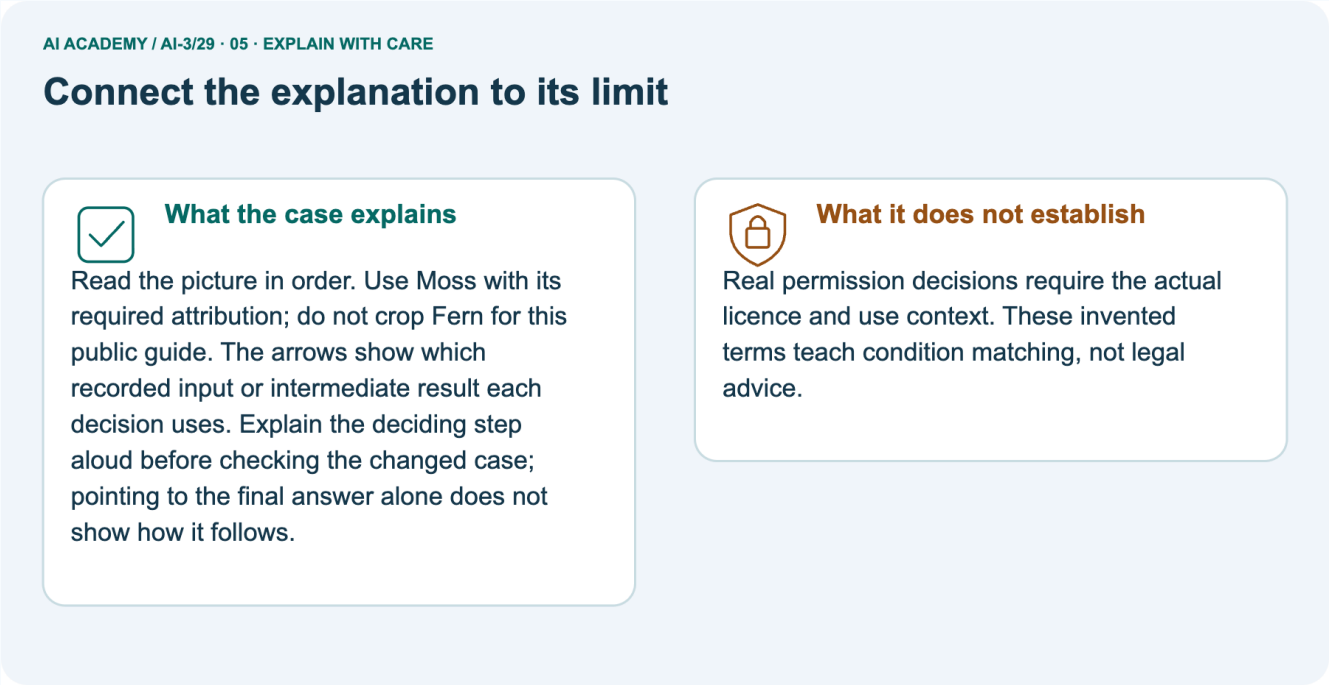

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Use Moss with its required **attribution**; do not crop Fern for this public guide.
Changed condition: Use Fern unchanged and include the required **attribution**.

Expected result: That use satisfies the stated fictional permission conditions. Reason: Its public redistribution is permitted when there is no alteration and **attribution** is included.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

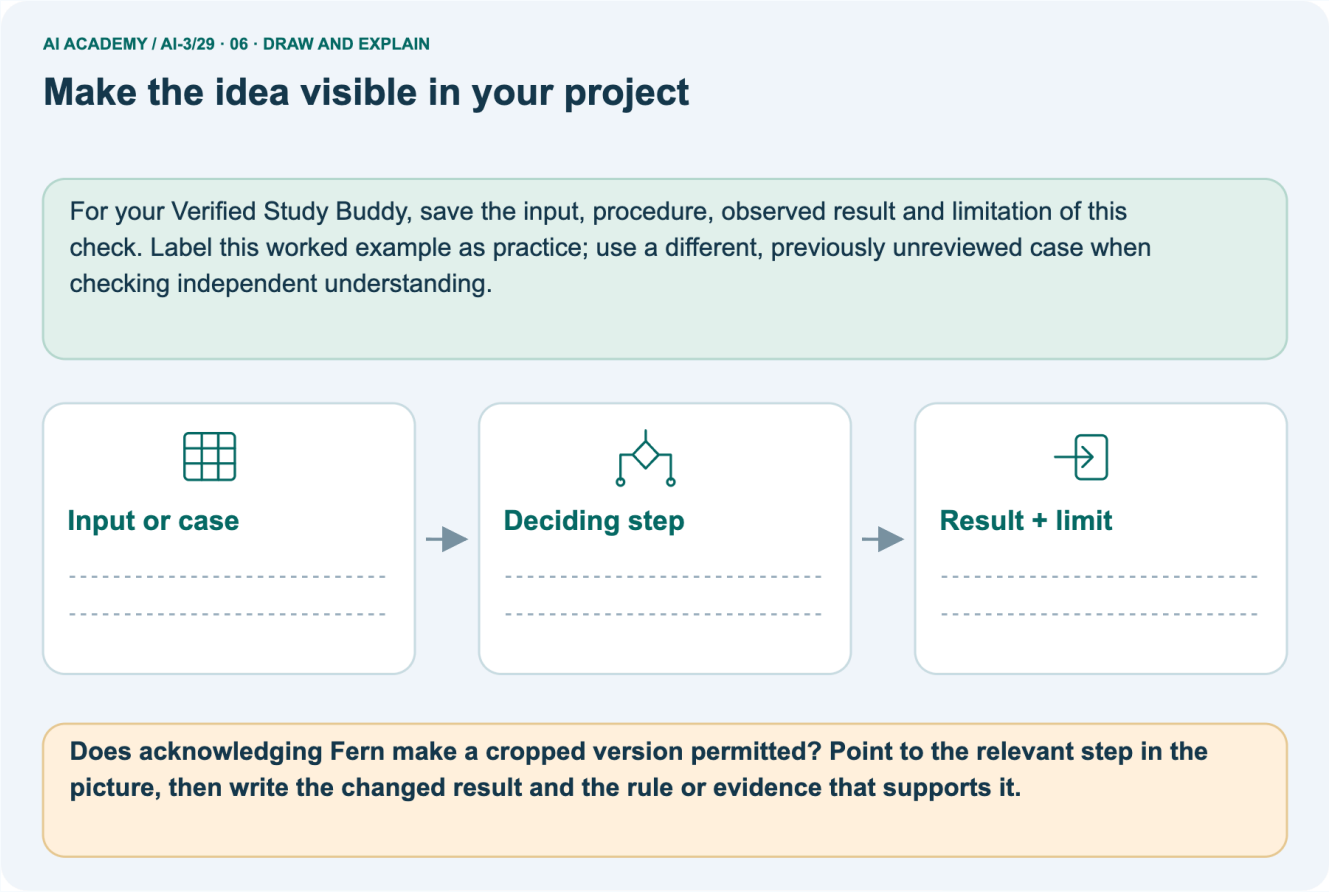

Read the picture in order. Use Moss with its required **attribution**; do not crop Fern for this public guide. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows. Limit: Real permission decisions require the actual **licence** and use context.

These invented terms teach condition matching, not legal advice.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding. Draw your **input**, deciding step, result and limit.

Supported question: Does acknowledging Fern make a cropped version permitted? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
