AI ACADEMY · LEVEL 3 · GRADE 8 · WEEK 35 · STUDENT LESSON

Capstone Evaluate and Improve

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Verified Study Buddy

Before you start

AI-2 Week 35: a repair can introduce a regression.

Plan time to read, investigate and explain. Keep predictions separate from observations.

STUDENT LESSON · 1 OF 18

Your mission

> Start with the target: Explain the mechanism and terminology of capstone evaluation and revision. Try the recall before opening notes.

Your learning target

I can explain the **mechanism** and terminology of capstone evaluation and revision.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Capstone Build. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Human AI Workflow. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Copyright and Provenance. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Week 35: Capstone Evaluate and Improve

Improvements must follow measured failures on a fixed eval set.

CREATOR MISSION

Run tests, repair one cause, and compare scores.

Creator name and date:

> **Write or draw your reasoning and evidence.**

Readiness for the connected explanation

Recall Capstone grounded assistant. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

Readiness for Latency cost and resource use

Recall Human review and consequential use. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

> **My readiness explanation**

This week's end goal

By the end, I can explain capstone evaluate and improve using a traced example and a stated limitation.

Notice the evidence

> Investigate the supplied Capstone Evaluate and Improve case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Notice → Predict → Explain

Begin with visible **evidence**. Do not explain more than the picture and information support.

Start with this puzzle

MYSTERY

The learners must use capstone evaluate and improve to solve a problem. What information do they have? What decision or calculation do they make? What would count as **evidence** that it worked?

Three **observation**s (what you can point to):

Write or draw your reasoning and evidence.

My **prediction** and the clue supporting it:

Write or draw your reasoning and evidence.

A closer explanation

Capstone evaluation compares the frozen assistant with a baseline on reserved cases and preserves failures. Revision uses observed errors but needs fresh **evidence** for new final claims.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

Apply the connected idea: Latency cost and resource use

Latency, cost and quality are distinct measurements. Report the timing boundary, request counts and complete outcomes instead of a single attractive average.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

STUDENT LESSON · 3 OF 18

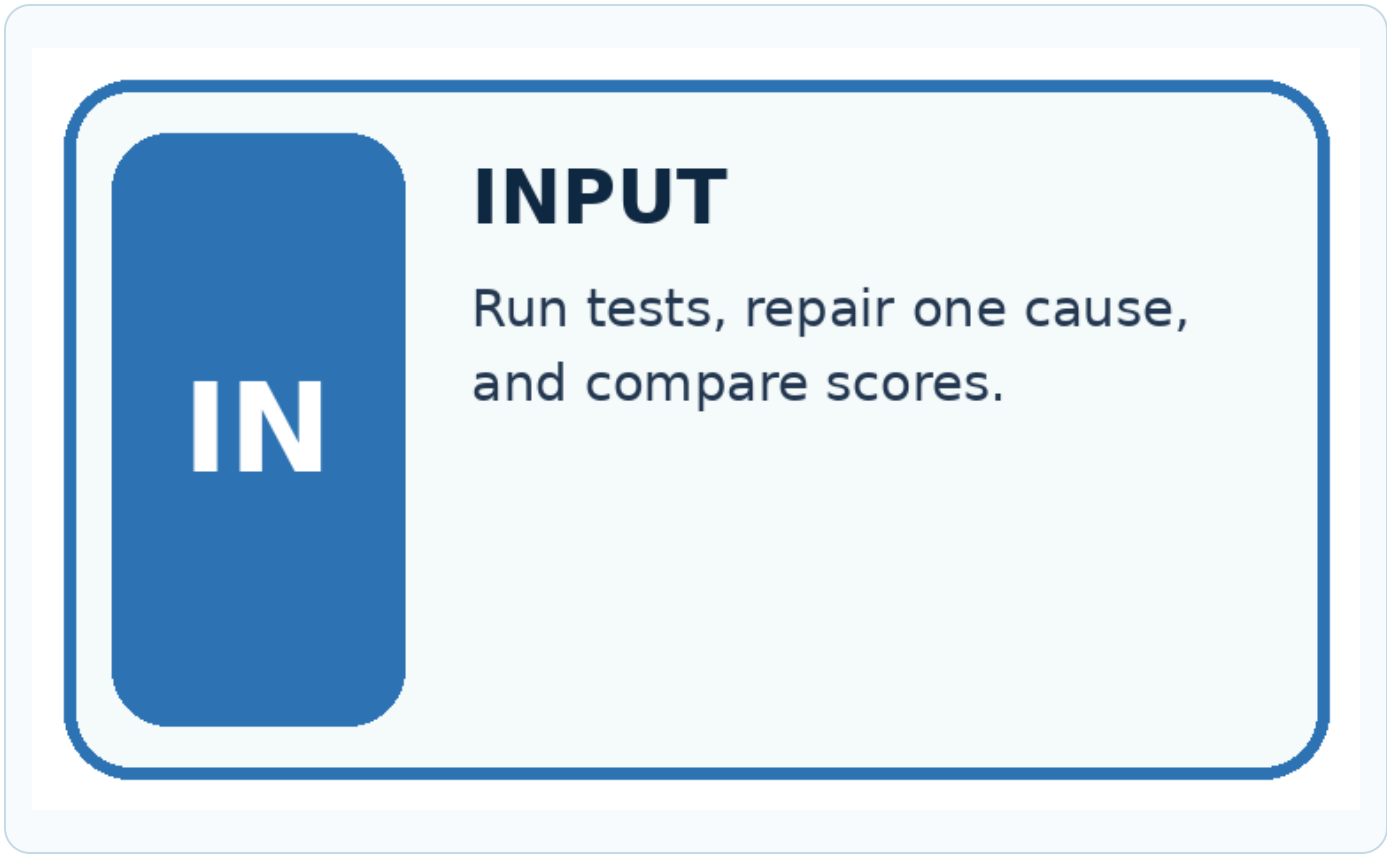

See how it works

> Follow the mechanism for Capstone Evaluate and Improve. Connect each labelled input, deciding step and result.

VISUAL MECHANISM

Input → Process → Output

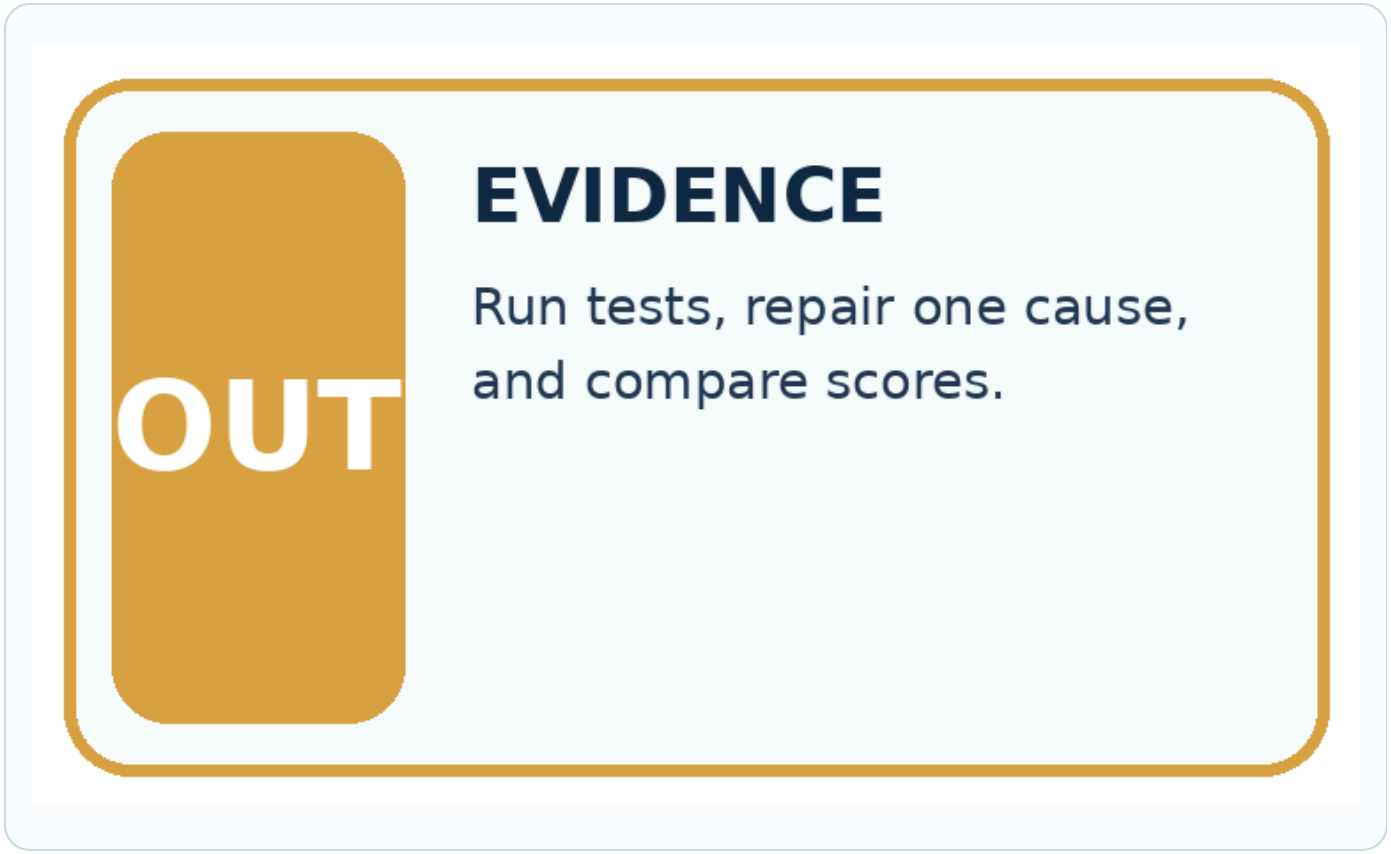

Trace the information. At each stage, ask what changed and how you could test it.

IN
INPUT
Run tests, repair one cause, and compare scores.

↓

SYSTEM
Improvements must follow measured failures on a fixed eval set.

↓

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

Report paired case outcomes, condition rates and permission violations separately. A critical access failure can block release even when overall pass rate rises. Never overwrite the original final run.

Capstone evaluation and revision — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
On ten final cases baseline passes seven and assistant eight. One assistant failure exposes a teacher-only source to a student.	Report paired case outcomes, condition rates and permission violations separately. A critical access failure can block release even when overall pass rate rises. Never overwrite the original final run.	Rates 70% and 80%, gain 10 percentage points. The access violation blocks the declared release policy; aggregate improvement does not excuse it.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Apply the connected idea: Latency cost and resource use

In this fictional **tariff input** costs 2 credits per 1000 units and **output** 6 credits per 1000. Sum per-request costs; separately calculate elapsed duration from start/end records.

Do not label credits as a current provider price.

Latency cost and resource use — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
A request uses 500 input units and 200 output units; starts at 10.0 seconds and finishes at 13.5.	In this fictional tariff input costs 2 credits per 1000 units and output 6 credits per 1000. Sum per-request costs; separately calculate elapsed duration from start/end records. Do not label credits as a current provider price.	Input cost 1 credit; output 1.2; total 2.2 credits. Elapsed 3.5 seconds within the recorded boundary. Quality is unmeasured.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

Compare the cases

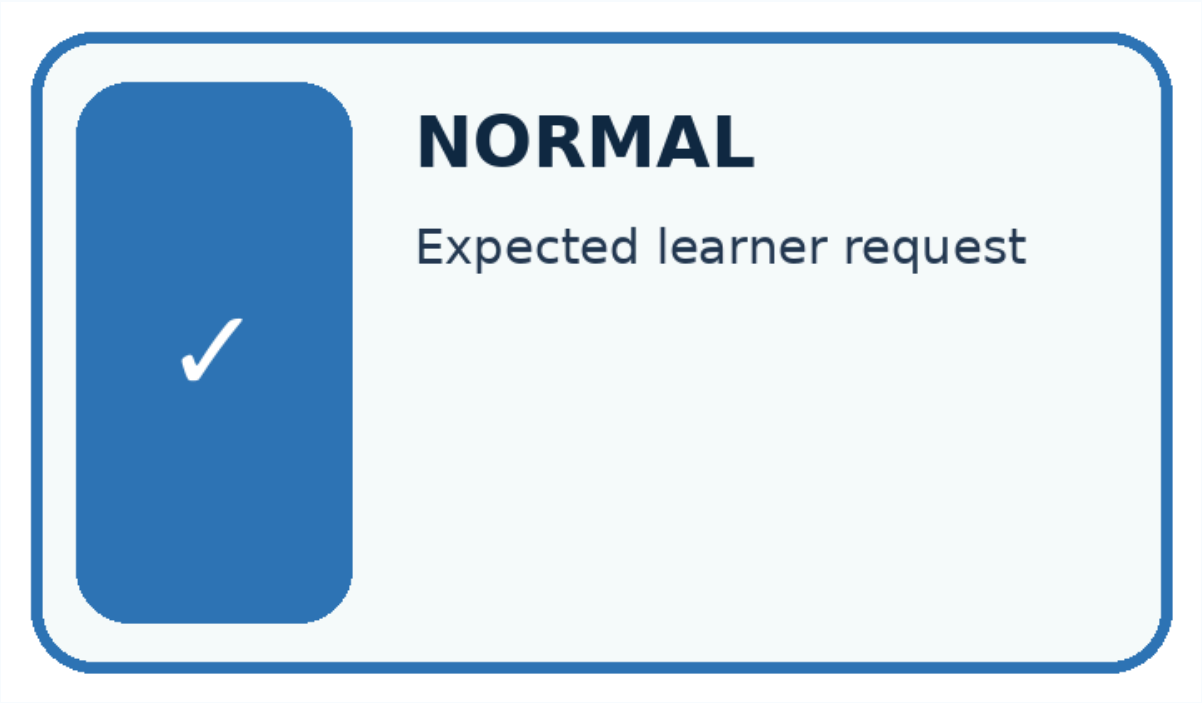

> Compare the supplied cases for Capstone Evaluate and Improve. Identify the detail that changes the conclusion.

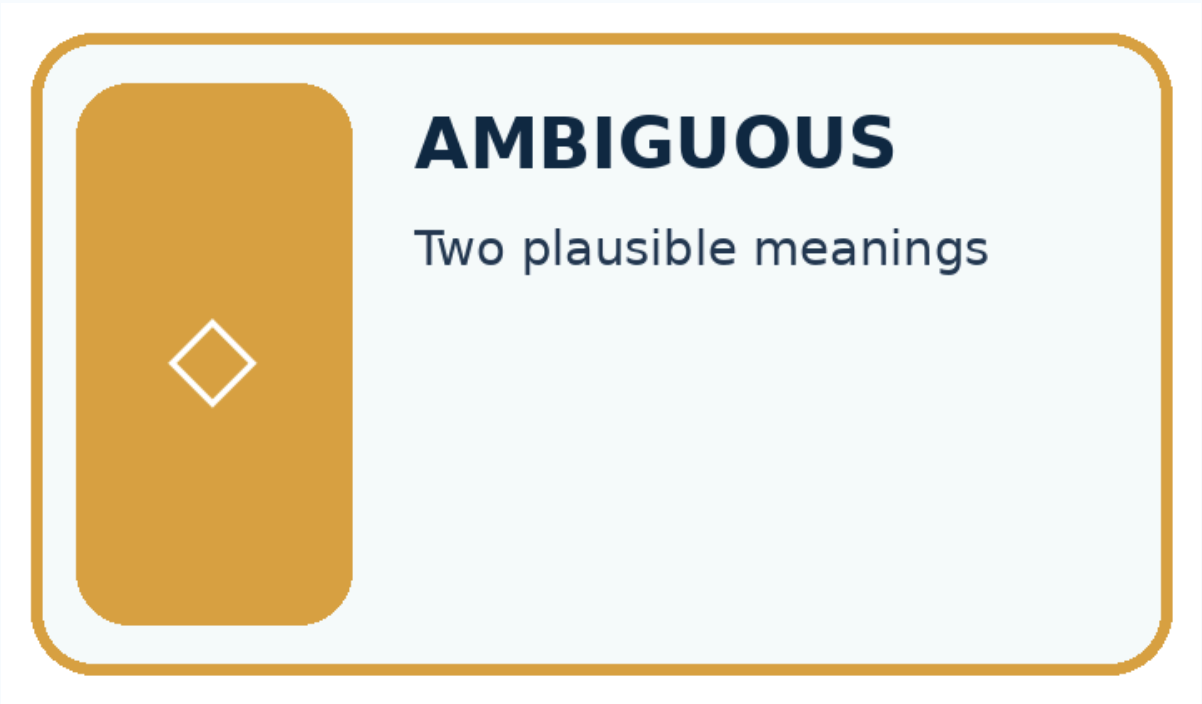

The case to investigate

CASE GALLERY

Four Tests, Four Kinds of **Evidence**

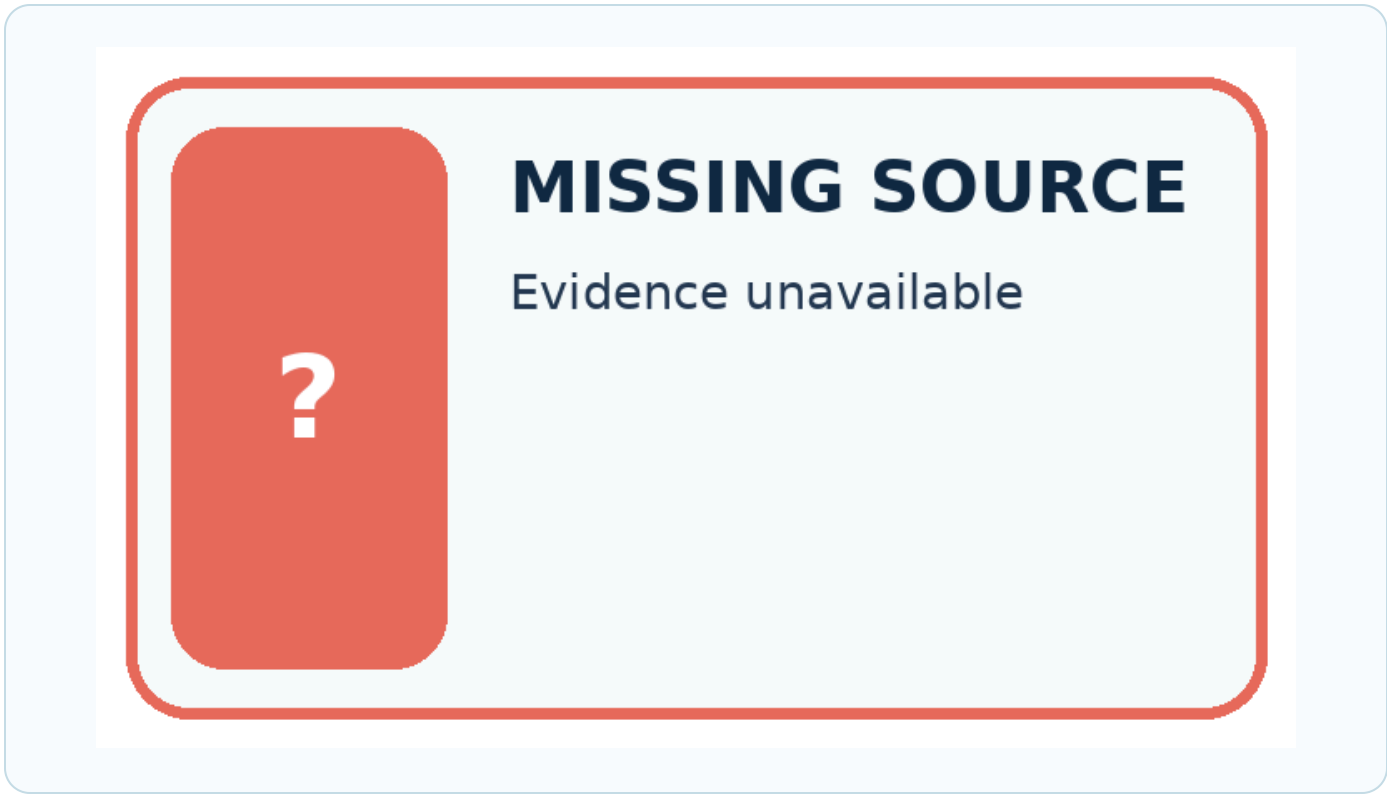

A system is not understood until it survives more than one comfortable example.

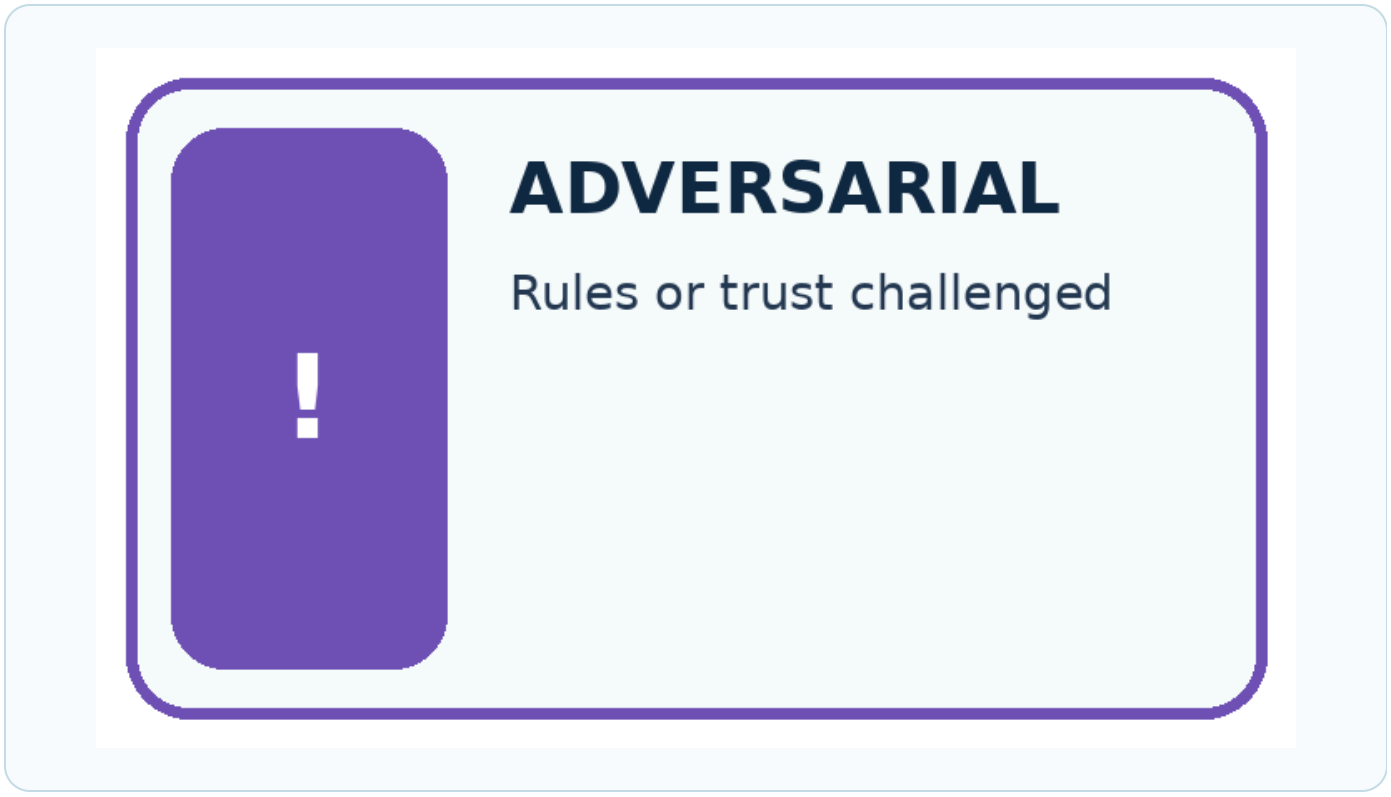

The normal case

NORMAL CASE: predict and name **evidence**. BOUNDARY CASE: predict and name **evidence**.

?
MISSING SOURCE
Evidence unavailable

!
ADVERSARIAL
Rules or trust challenged

Check missing information

MISSING INFORMATION: predict and name **evidence**. TRANSFER CASE: predict and name **evidence**.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change one thing

Change: A repaired candidate passes 6/8 with zero restricted-note exposures.

Predicted result

Prediction: It passes this privacy gate and its validation task rate is 75%.

Why the result follows

Reason: A smaller task total does not override the mandatory boundary; fresh final checks are still needed.

STUDENT LESSON · 5 OF 18

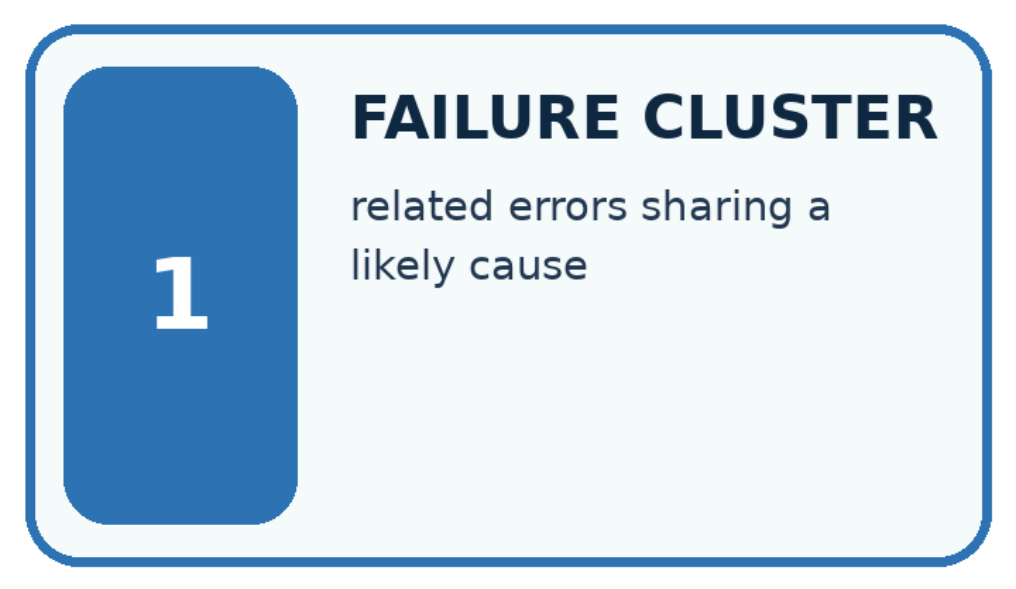

Words that unlock the idea

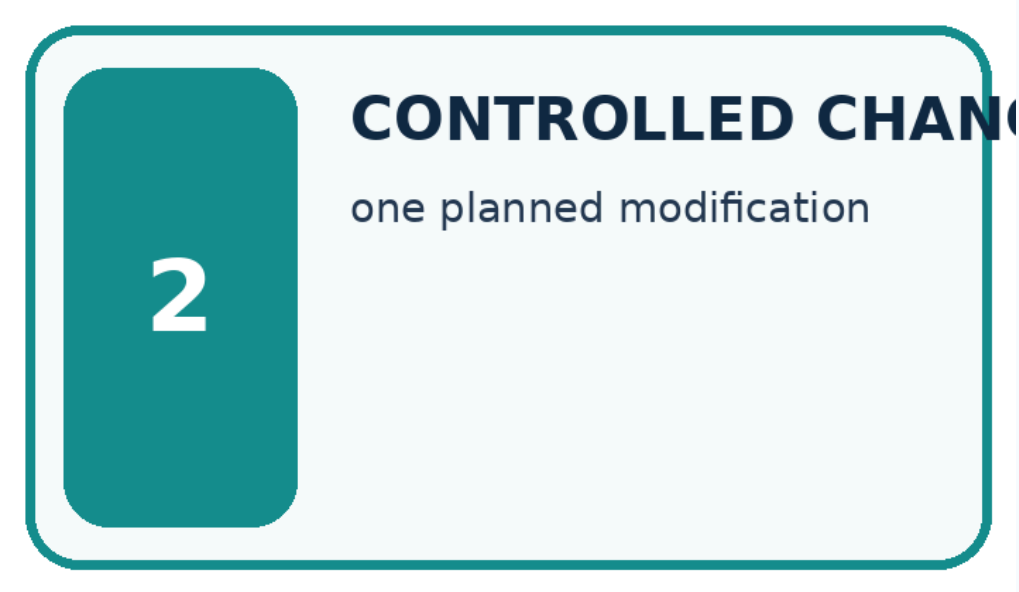

> Use the vocabulary of Capstone Evaluate and Improve to explain a concrete decision, rather than only memorising definitions.

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

2
CONTROLLED CHAN
one planned modification

3
BEFORE/AFTER
same evaluation before and after

Word	My own example	Not this / boundary
failure cluster	A group of failures sharing a relevant pattern or condition.	
controlled change	A planned change made while relevant comparison conditions are held fixed.	
before/after	Results recorded prior to and following a change; other changes can affect the comparison.	
regression	In testing, a new failure introduced by a change; in modelling, prediction of a numeric target. Use the meaning indicated by the lesson.	

Words used in the closer explanation

Word	Meaning
Release gate	A required condition before a package or service is approved
Failure record	A preserved account of an unsuccessful case
Revision evaluation	Evidence collected after modifying a procedure

Terms for Latency cost and resource use

Term	Meaning
Latency	Elapsed time within a stated measurement boundary
Tariff	A declared rate for accounting
Quality constraint	A task outcome required alongside resource performance

---

STUDENT LESSON · 6 OF 18

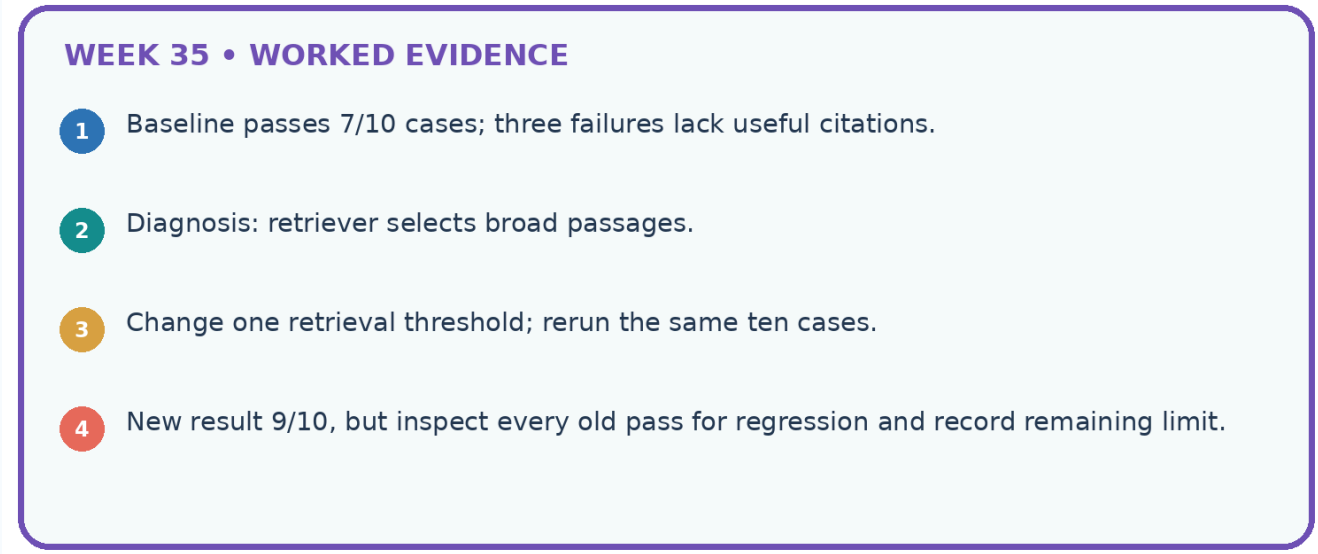

Follow a worked example

> Follow the worked trace for Capstone Evaluate and Improve, predict a step, then compare with its explanation.

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

1. Baseline passes 7/10 cases; three failures lack useful citations.

2. Diagnosis: retriever selects broad passages.

3. Change one retrieval threshold; rerun the same ten cases.

4. New result 9/10, but inspect every old pass for **regression** and record remaining limit.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the **evidence** answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

On ten final cases baseline passes seven and assistant eight. One assistant failure exposes a teacher-only source to a student.

Rates **70%** and **80%**, gain 10 percentage points. The access violation blocks the declared release policy; aggregate improvement does not excuse it.

Worked explanation · Capstone Evaluate and Improve

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Apply the connected idea: Latency cost and resource use

A request uses 500 **input** units and 200 **output** units; starts at 10.0 seconds and finishes at 13.5.

Input cost 1 credit; **output** 1.2; total 2.2 credits. Elapsed 3.5 seconds within the recorded boundary. Quality is unmeasured.

Worked explanation · Capstone Evaluate and Improve

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Capstone Evaluate and Improve

Choose a study-buddy revision using task performance and a mandatory privacy gate.

The facts we will use

Supplied facts

On eight fixed validation cases, baseline passes 5 and candidate passes 7. One candidate response includes a restricted teacher note; privacy requires zero such exposures.

Supplied facts

All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

AI ACADEMY / AI-3/35

Capstone Evaluate and Improve

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Compare totals

Baseline: 5/8. Candidate: 7/8.

2. Apply privacy gate

The restricted-note exposure fails the mandatory release condition.

3. Revise and retest

Repair source filtering; use validation to revise, then reserve genuinely fresh cases for final evaluation.

CHANGE ONE THING

A repaired candidate passes 6/8 with zero restricted-note exposures.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Compare totals	Baseline: 5/8. Candidate: 7/8.
2. Apply privacy gate	The restricted-note exposure fails the mandatory release condition.
3. Revise and retest	Repair source filtering; use validation to revise, then reserve genuinely fresh cases for final evaluation.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

Read the picture in order. Repair source filtering; use validation to revise, then reserve genuinely fresh cases for final evaluation. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

What this example does not establish

Keep the stated limit

Passing a limited privacy test is bounded **evidence**, not a guarantee against all future

disclosure.

Keep the stated limit

Read the labelled picture: May the team call the repaired validation cases an untouched final test? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

Keep the stated limit

Change one thing: A repaired candidate passes 6/8 with zero restricted-note exposures. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Capstone Evaluate and Improve claim and explain a repair using the supplied evidence.

Find the first error

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak **evidence**.

!

COMPARE • DIAGNOSE

Weak idea: A higher total score means the product improved in every way. Strong move: inspect the claim, source, stage, schema, or test evidence; repair one cause; rerun.

Evidence record	Expected	Actual	Likely cause / next test
normal case	works		
boundary case	stated rule		
missing input	safe response		
fresh transfer	generalizes		

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

Check the claim against the facts

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

Apply the connected idea: Latency cost and resource use

Check the claim against the facts

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

STUDENT LESSON · 8 OF 18

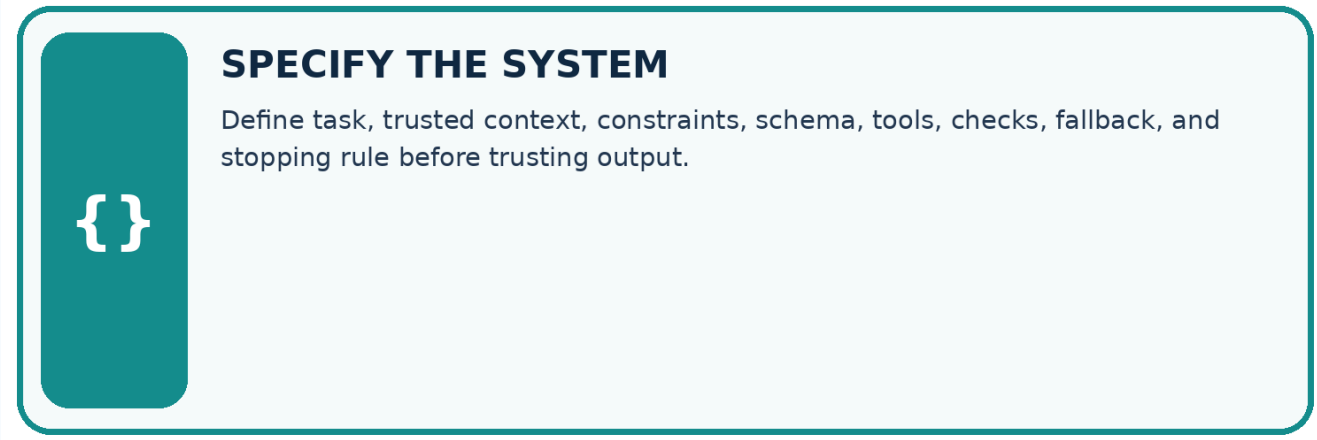

Practise together

> Practise Capstone Evaluate and Improve with support, then explain the deciding step in your own words.

LOGIC STUDIO

Specify Before You Run

Prompts, schemas, retrieval, tool calls, and code are inspectable parts of one AI product.

SET task, audience, constraints, **output**_schema LOAD approved_context or retrieval_result CALL model or allowed_tool VALIDATE fields, claims, citations, and safety IF **evidence** missing: ask, retrieve, or abstain RETURN useful **output** + source trail + limitations

Trace one **input**. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

A revised procedure evaluated on inspected cases cannot be described as newly independent final testing.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Apply the connected idea: Latency cost and resource use

Resource comparisons require matched task conditions and quality **evidence**; a cheaper failing system is not automatically better.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

Practise with less help: Trace the worked case

Use workbook W2 for the connected example “Capstone evaluation and revision”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Capstone evaluation and revision. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Practise the connected topic: Latency cost and resource use

Use its named workbook W2. Identify the given **input**s, try the middle steps with less help, then explain your trace. Check this claim before group discussion: The worked result establishes every future case

Explain the picture

May the team call the repaired validation cases an untouched final test? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

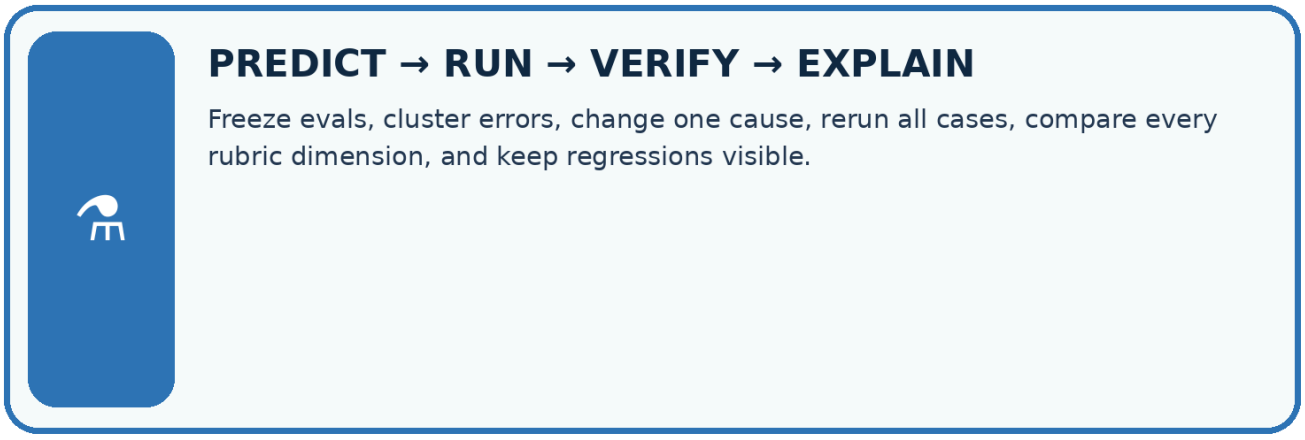

Run the investigation

> Investigate Capstone Evaluate and Improve. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

Freeze evals, cluster errors, change one cause, rerun all cases, compare every rubric dimension, and keep **regression**s visible.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

> **Test / input:** normal
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** boundary
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** missing
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** fresh transfer
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

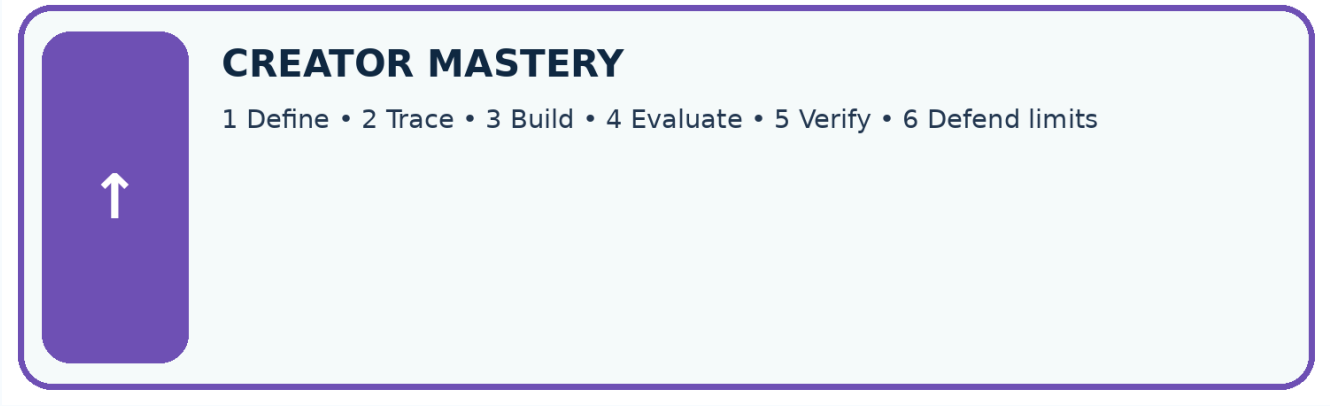

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Capstone Evaluate and Improve. Explain why each step is justified.

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce **evidence** without copying the worked example.

1 • NAME: Define the concept without repeating the textbook.

2 • TRACE: Show the information, state, branch, calculation, or **evidence** path.

3 • APPLY: Solve a different example independently.

4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest **evidence** of independent understanding:

Write or draw your reasoning and evidence.

STUDENT LESSON · 11 OF 18

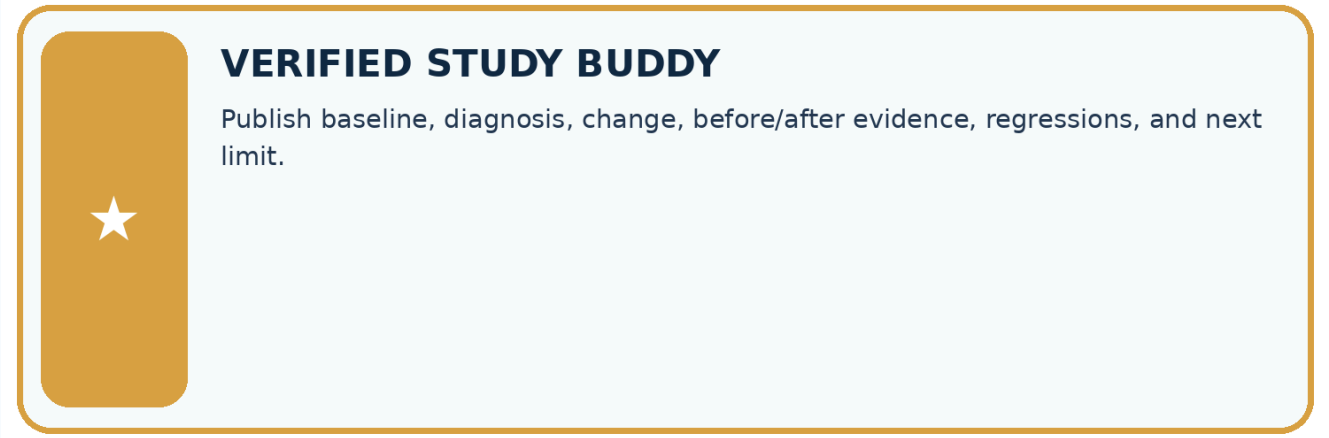

Connect your project

Apply this week's idea to Verified Study Buddy. Keep an annotated decision and the evidence supporting it.

CUMULATIVE PROJECT

Verified Study Buddy

Every week adds one inspectable piece. The system must show how it reached a result.

THIS WEEK'S CHECKPOINT Publish baseline, diagnosis, change, **before/after evidence**, **regression**s, and next limit.

Trace the system

SYSTEM MAP Learner need → prompt/schema → approved sources/retrieval → model/tool → structured answer → verification → **human decision**

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under **human control**?

Write or draw your reasoning and evidence.

Responsible design

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse fluent **output** with verified truth.

Evidence for your project

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding.

STUDENT LESSON · 12 OF 18

Show what you know

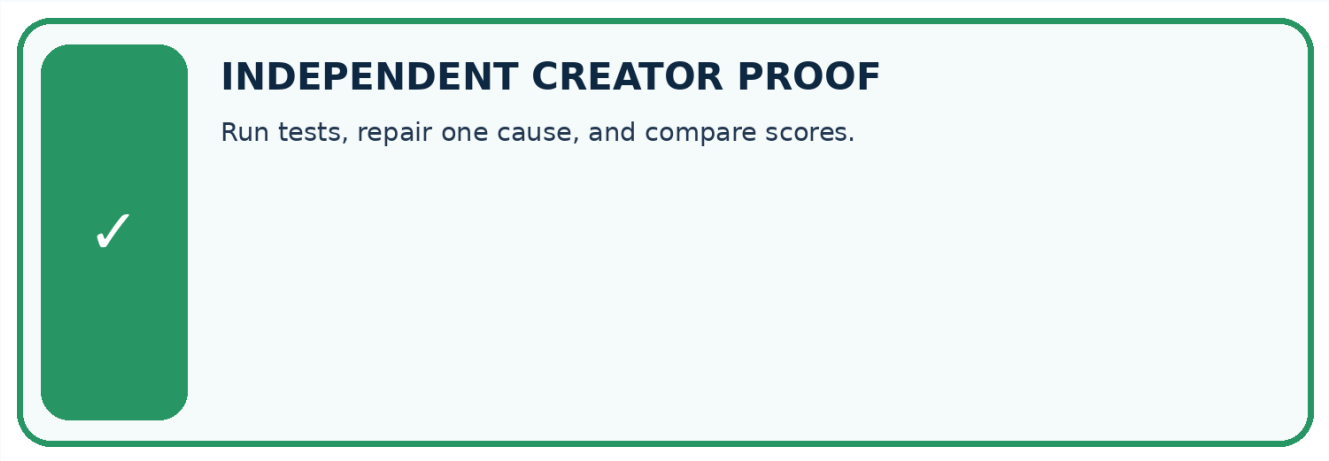

Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Independent evidence

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

Try a more demanding case

CHALLENGE Run tests, repair one cause, and compare scores.

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My **evidence** that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One limitation, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

Check your explanation

SELF-CHECK ☐ I explained the **mechanism** ☐ I used **evidence** ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

STUDENT LESSON · 13 OF 18

Study a complete case

Revisit the complete Capstone Evaluate and Improve case for supported practice. Repeated examples do not become fresh assessments.

Week 35 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

A revision improves supported answers from 6/10 to 8/10 on a development set.

The question

> What belongs in the report?

Worked explanation

Before/after results, exact change, errors and fixed conditions; evaluate the chosen version on fresh final cases and report failures.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Compare supported answers on fixed cases

Evidence or stage	Value or result
Before	6/10

Evidence or stage	Value or result
After	8/10

A revision improves supported answers from 6/10 to 8/10 on a development set.

> What belongs in the report?

Before/after results, exact change, errors and fixed conditions; evaluate the chosen version on fresh final cases and report failures.

STUDENT LESSON · 14 OF 18

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Apply a new case independently

Twelve final cases baseline passes nine, candidate ten; candidate makes one unauthorised booking. Policy requires zero unauthorised actions. Decide release and revision **evidence**.

> **My independent explanation, trace and limits**

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 35 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

> A revision improves four factual questions but fails two previously successful abstention cases. What should the evaluation report?

My answer, with a trace, calculation or supporting **evidence**

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

Write or draw your reasoning and evidence.

Connect to your project

Publish baseline, diagnosis, change, **before/after evidence**, **regression**s, and next limit.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

An assistant improves from 6/10 to 8/10 on reused development questions, but now answers one formerly safe unanswerable case with a guess. Assess the change and specify final testing.

Explain the mechanism, evidence and one limit.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

Use this map to navigate Capstone Evaluate and Improve, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: Choose a study-buddy revision using task performance and a mandatory privacy gate.

By the end, I can	How I will show it
Explain the mechanism and terminology of capstone evaluation and revision	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Capstone Evaluate and Improve without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of capstone evaluation and revision

> **My deciding step, evidence and one remaining question**

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Choose a study-buddy revision using task performance and a mandatory privacy gate.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Repair source filtering; use validation to revise, then reserve genuinely fresh cases for final evaluation.

1. Revise and retest

2. Compare totals

3. Apply privacy gate

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Revise and retest Repair source filtering; use validation to revise, then reserve genuinely fresh cases for final evaluation. Read the picture in order.

Repair source filtering; use validation to revise, then reserve genuinely fresh cases for final evaluation. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: A repaired candidate passes 6/8 with zero restricted-note exposures. Which conclusion is supported by the supplied facts?

1. This one example guarantees correct results for every future **input**.

2. We can decide the result without examining the changed **input** or the procedure.

3. It passes this privacy gate and its validation task rate is 75%.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: It passes this privacy gate and its validation task rate is 75%. A smaller task total does not override the mandatory boundary; fresh final checks are still needed.

Repair a missing building block

Review Capstone Build (ai-3/34). Goal: Explain the **mechanism** and terminology of capstone grounded assistant. Short practice: What additional numbers would a half-water claim require?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Human AI Workflow (ai-3/32). Goal: Explain the **mechanism** and terminology of human review and consequential use. Short practice: Why can H1's approval not automatically approve H2?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Copyright and Provenance (ai-3/29). Goal: Explain the **mechanism** and terminology of copyright and permitted sources. Short practice: Does acknowledging Fern make a cropped version permitted?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

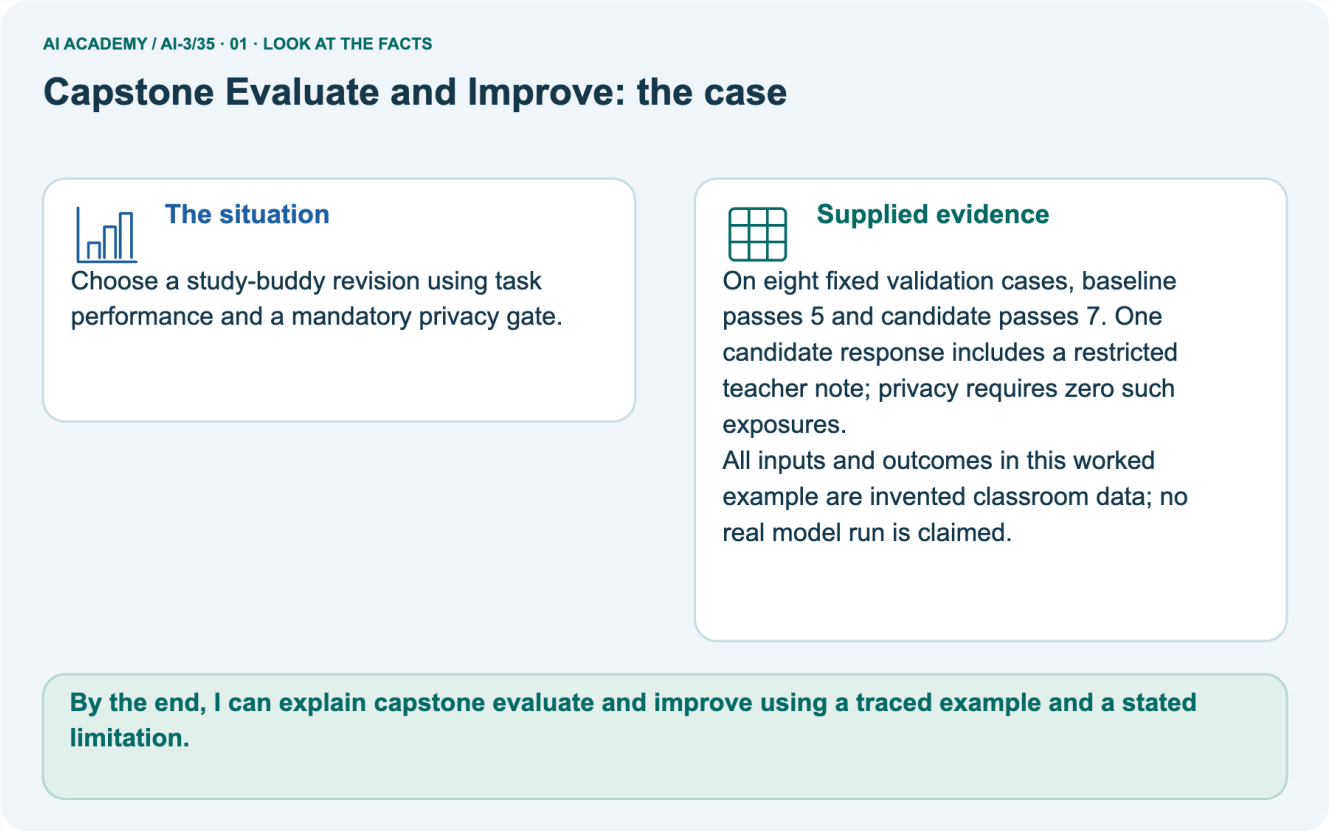

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Capstone Evaluate and Improve graphic using its labels, deciding evidence and relevant limitation.

01. Capstone Evaluate and Improve: the case

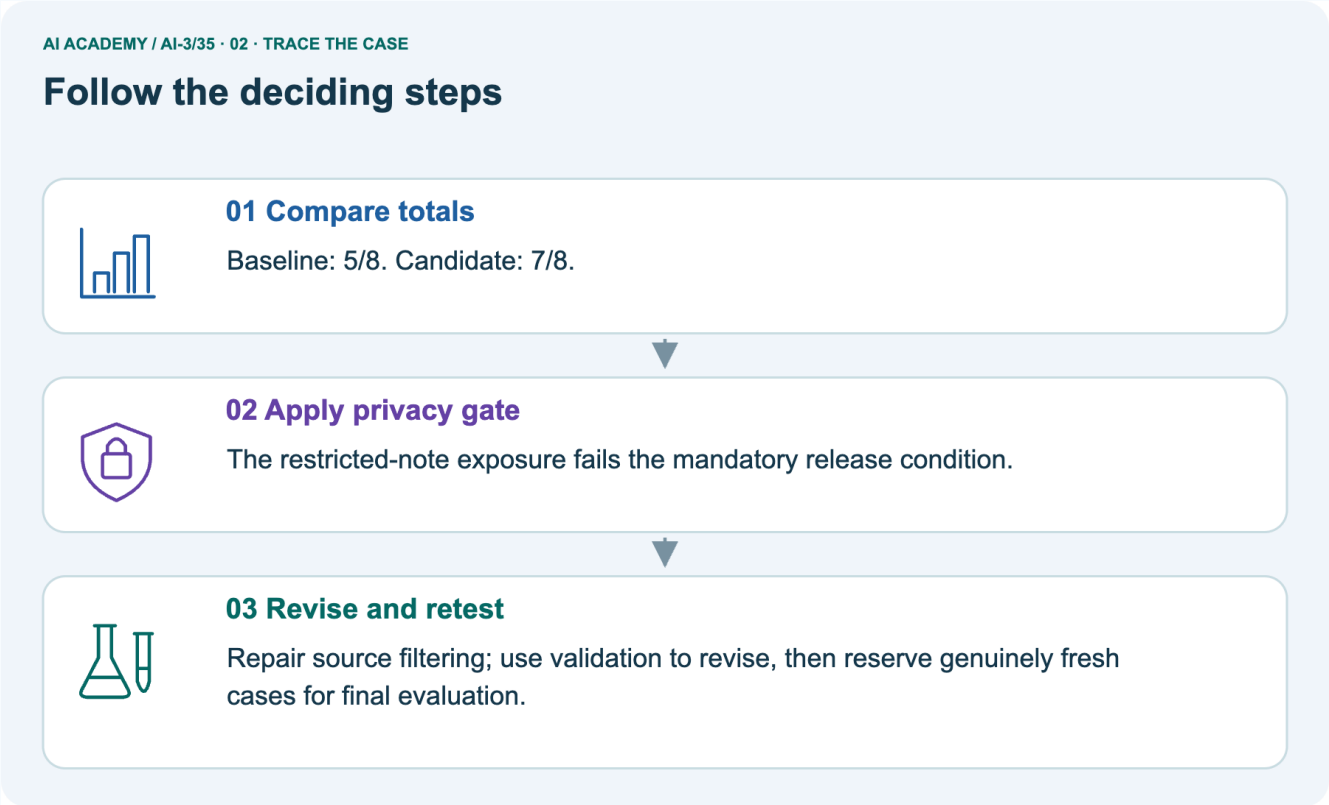

Follow the labelled picture with the matching explanation. Open the vector diagram

Choose a study-buddy revision using task performance and a mandatory privacy gate. Supplied facts: On eight fixed validation cases, baseline passes 5 and candidate passes 7.

One candidate response includes a restricted teacher note; privacy requires zero such exposures. All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

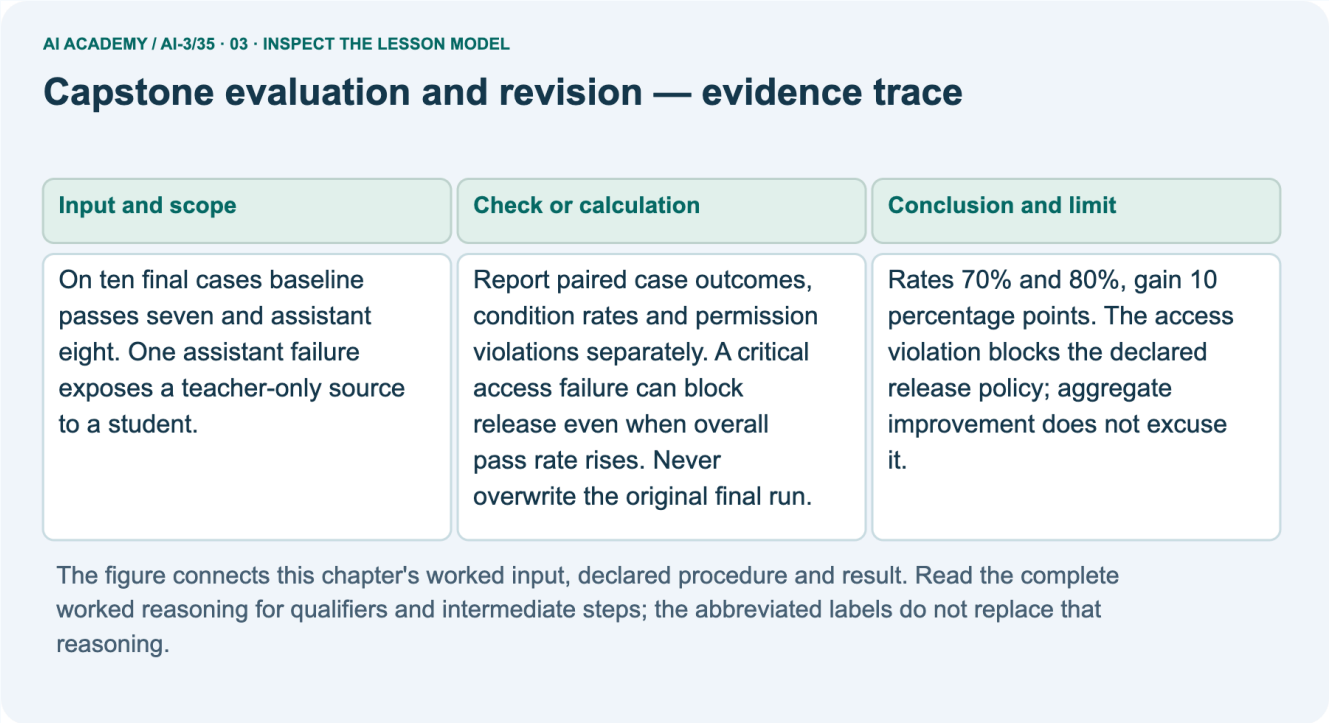

Follow the labelled picture with the matching explanation. Open the vector diagram

Compare totals: Baseline: 5/8.

Candidate: 7/8. → Apply privacy gate: The restricted-note exposure fails the mandatory release condition. → Revise and retest: Repair source filtering; use validation to revise, then reserve genuinely fresh cases for final evaluation.

> Point to each numbered stage and explain which recorded **input** it uses.

03. Capstone evaluation and revision — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

Capstone evaluation and revision — **evidence** trace. On ten final cases baseline passes seven and assistant eight.

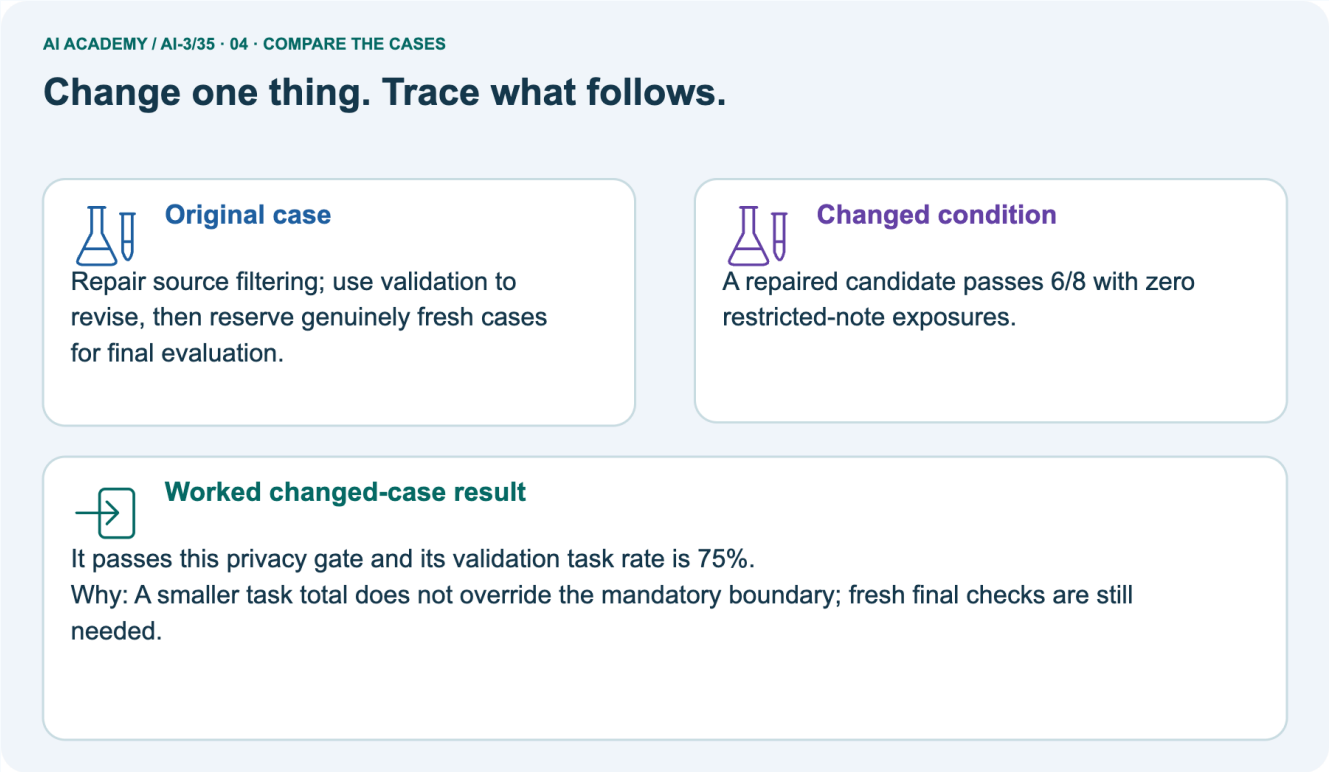

One assistant failure exposes a teacher-only source to a student. | Report paired case outcomes, condition rates and permission violations separately.

A critical access failure can block release even when overall pass rate rises. Never overwrite the original final run. | Rates **70%** and **80%**, gain 10 percentage points.

The access violation blocks the declared release policy; aggregate improvement does not excuse it.

> Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

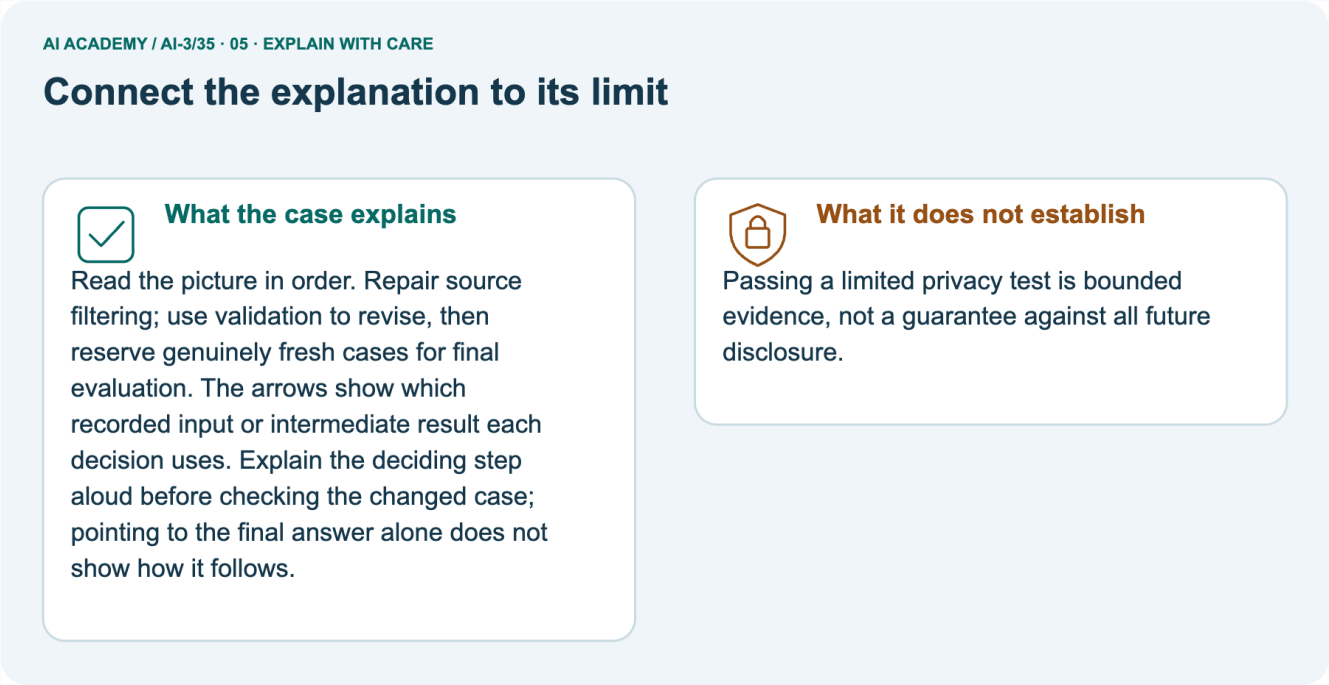

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Repair source filtering; use validation to revise, then reserve genuinely fresh cases for final evaluation. Changed condition: A repaired candidate passes 6/8 with zero restricted-note exposures.

Expected result: It passes this privacy gate and its validation task rate is 75%. Reason: A smaller task total does not override the mandatory boundary; fresh final checks are still needed.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

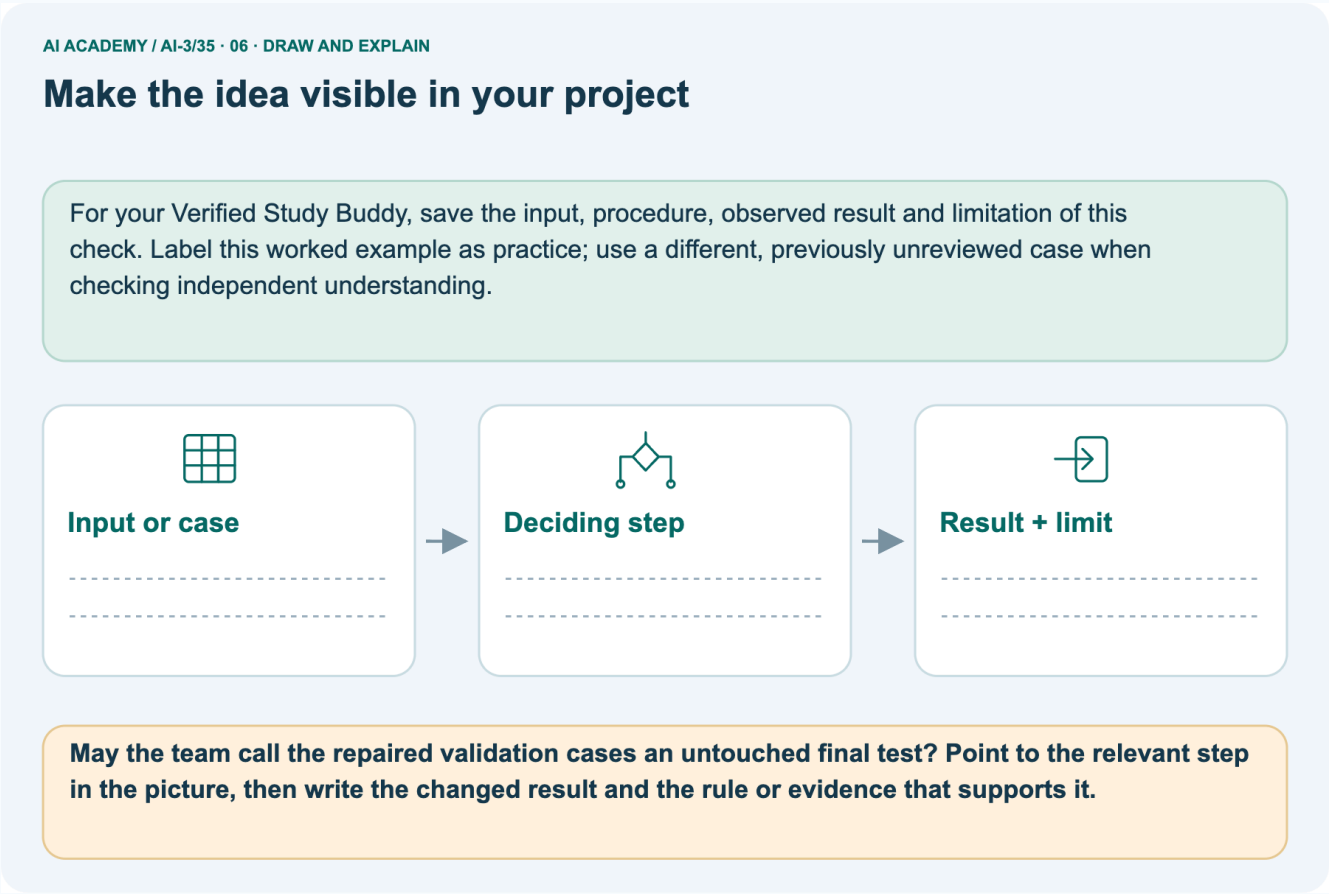

Read the picture in order. Repair source filtering; use validation to revise, then reserve genuinely fresh cases for final evaluation. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Limit: Passing a limited privacy test is bounded **evidence**, not a guarantee against all future disclosure.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding. Draw your **input**, deciding step, result and limit.

Supported question: May the team call the repaired validation cases an untouched final test? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
