AI ACADEMY · LEVEL 7 · GRADE 12 · WEEK 4 · STUDENT LESSON

Methods results and limitations

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Reproducible AI Research Study

Before you start

Recall Finding primary research. Explain why a recorded result needs its input conditions and evidence source before it can support a claim.

Plan time to read, investigate and explain. Keep predictions separate from observations.

STUDENT LESSON · 1 OF 18

Your mission

> Start with the target: Explain the mechanism and terminology of methods results and limitations. Try the recall before opening notes.

Your learning target

I can explain the **mechanism** and terminology of **method**s **result**s and **limitation**s.

I can apply the stated procedure to a new case with a traceable **result**.

I can identify an assumption or **limitation** and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Finding primary research. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from A question that **evidence** can answer. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

This week you will practise:

Explain the **mechanism** and terminology of **method**s **result**s and **limitation**s

Apply the stated procedure to a new case with a traceable **result**

Identify an assumption or **limitation** and design a revealing follow-up

Retrieve what you already know

Recall Finding primary research. Explain why a recorded **result** needs its **input** conditions and **evidence** source before it can support a claim.

> **My starting explanation**

This week's end goal

Explain **method**s **result**s and **limitation**s using the records and boundaries of this fictional investigation.

Notice the evidence

> Investigate the supplied Methods results and limitations case. Separate observations, given facts and assumptions before choosing an explanation.

Methods state what was done; **result**s state observed outcomes; **limitation**s state restrictions on interpretation. Mixing them hides missing **evidence**.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

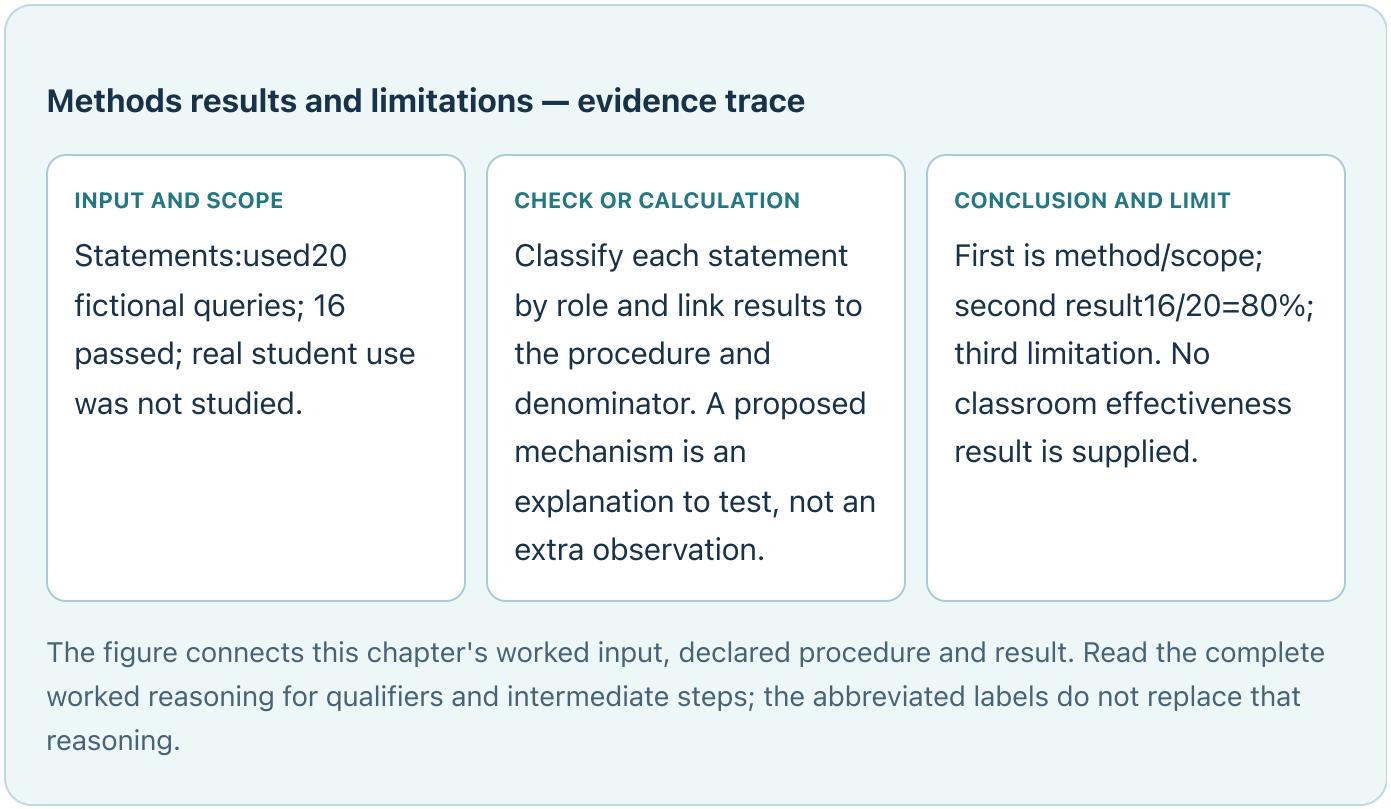

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

> **List the given facts and one fact that is not supplied.**

See how it works

> Follow the mechanism for Methods results and limitations. Connect each labelled input, deciding step and result.

Classify each statement by role and link **result**s to the procedure and denominator. A proposed **mechanism** is an explanation to test, not an extra **observation**.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the **input**, the deciding step and the **result** in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

> Compare the supplied cases for Methods results and limitations. Identify the detail that changes the conclusion.

Compare a familiar case with a changed case

Statements:used20 fictional queries; 16 passed; real student use was not studied. Show the intermediate steps and give the conclusion with its scope.

Keep the procedure fixed. Explain what changed in the inputs and result.

Change one thing in the pictured case

Change one thing

Change: The conclusion says B is best for outdoor farming.

Predicted result

Prediction: Reject that extension without outdoor **evidence**.

Why the result follows

Reason: The reported conditions do not include the proposed use population.

STUDENT LESSON · 5 OF 18

Words that unlock the idea

Use the vocabulary of Methods results and limitations to explain a concrete decision, rather than only memorising definitions.

Word	Meaning
Method	The procedure used to obtain observations
Result	A reported observation or calculated outcome
Limitation	A restriction on what results establish

Use two terms to explain a step in this week's example.

STUDENT LESSON · 6 OF 18

Follow a worked example

Follow the worked trace for Methods results and limitations, predict a step, then compare with its explanation.

Statements:used20 fictional queries; 16 passed; real student use was not studied.

First is **method**/scope; second **result**16/20=**80%**; third **limitation**. No classroom effectiveness **result** is supplied.

Worked explanation · Methods results and limitations

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the **result** before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the **result** and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

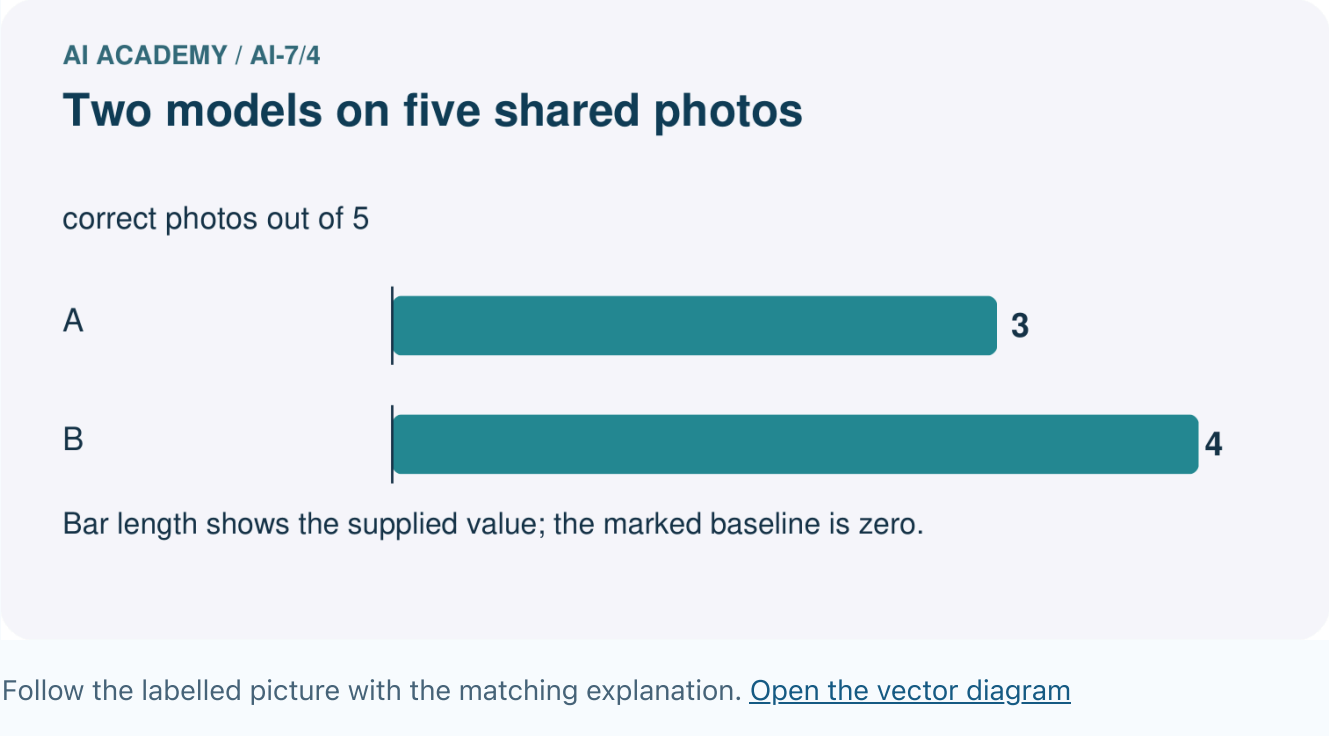

A pictorial worked case: Methods results and limitations

Separate procedure, finding and limit. A fictional report tests two frozen classifiers on five labelled leaf photos from one camera.

The facts we will use

Supplied facts

A is correct on 3/5; B on 4/5. No outdoor photos appear in the set.

Follow the labelled picture with the matching explanation. Open the vector diagram

AI ACADEMY / AI-7/4

Methods results and limitations

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Identify the method

Same five photos, labels and scoring are used for both models.

2. State the result

A scores 60%; B scores 80% on this fixed set.

3. State the limit

The set supplies no outdoor-camera performance evidence.

CHANGE ONE THING

The conclusion says B is best for outdoor farming.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Identify the method	Same five photos, labels and scoring are used for both models.
2. State the result	A scores 60%; B scores 80% on this fixed set.
3. State the limit	The set supplies no outdoor-camera performance evidence.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

Methods tell how **evidence** was produced; **result**s state **observation**s; **limitation**s describe what those **observation**s cannot settle. Keeping them distinct prevents a **result** from becoming an oversized claim.

What this example does not establish

Keep the stated limit

Five **observation**s cannot establish a stable ranking or causal **mechanism**; source and sampling assumptions remain important.

Keep the stated limit

Read the labelled picture: Place the five-photo procedure, 3/5 versus 4/5 finding and missing outdoor **evidence** in their proper categories. Why cannot the **result** establish that B is best for outdoor farming?

Keep the stated limit

Change one thing: The conclusion says B is best for outdoor farming. Predict the **result** before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Methods results and limitations claim and explain a repair using the supplied evidence.

A **limitation** should constrain a claim rather than be hidden in unrelated prose.

Check the claim against the facts

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised **method** and new **evidence**. Preserve unsuccessful cases so an improved **result** cannot hide the original problem.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Locate the earliest unsupported step

A report omits this qualification: A **limitation** should constrain a claim rather than be hidden in unrelated prose. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

State one repair and the checks you would rerun.

STUDENT LESSON · 8 OF 18

Practise together

> Practise Methods results and limitations with support, then explain the deciding step in your own words.

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Explain your prediction to a partner before comparing results.

Practise with less help: Trace the worked case

Use workbook W2 for the connected example "**Method**s **result**s and **limitation**s". First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for **Method**s **result**s and **limitation**s. Proposed explanation: "The worked **result** establishes every future case". Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

> Place the five-photo procedure, 3/5 versus 4/5 finding and missing outdoor **evidence** in their proper categories. Why cannot the **result** establish that B is best for outdoor farming?

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

Run the investigation

> Investigate Methods results and limitations. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

Predict, investigate and preserve the evidence

Statements:used20 fictional queries; 16 passed; real student use was not studied. Show the intermediate steps and give the conclusion with its scope.

Record	Your evidence
Given input and fixed rule	
Prediction before checking	
Actual result, or “not run”	

Record	Your evidence
First mismatch and one explanation	
Boundary or missing input and expected response	

On paper, trace the supplied procedure. If code is provided, predict before running it in a local practice file. Never write an expected answer as though it were an observed run.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Methods results and limitations. Explain why each step is justified.

Explain → apply → challenge

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

A report omits this qualification: A **limitation** should constrain a claim rather than be hidden in unrelated prose. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

Explain which evidence supports your conclusion and which claim remains unproved.

STUDENT LESSON · 11 OF 18

Connect your project

> Apply this week's idea to Reproducible AI Research Study. Keep an annotated decision and the evidence supporting it.

Add a labelled **method**s **result**s and **limitation**s **evidence** sheet to Reproducible AI Research Study. Show how you can explain the **mechanism** and terminology of **method**s **result**s and **limitation**s.

Use the supplied fictional case and keep its **input**s, intermediate steps, calculation or **prediction**, and **limitation**. Connect this record to last week's record; a matching answer without a trace is insufficient.

Project evidence	Record
Component and version	
Inputs permitted at prediction time	
Trace and comparison with earlier work	
Failure, limit and human review	

Evidence for your project

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

STUDENT LESSON · 12 OF 18

Show what you know

> Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the **result** alongside any revision.

> **Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.**

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

My limited claim and a useful next check

STUDENT LESSON · 13 OF 18

Study a complete case

Revisit the complete Methods results and limitations case for supported practice. Repeated examples do not become fresh assessments.

Complete evidence record

Methods results and limitations — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Statements:used20 fictional queries; 16 passed; real student use was not studied.	Classify each statement by role and link results to the procedure and denominator. A proposed mechanism is an explanation to test, not an extra observation.	First is method/scope; second result16/20=80%; third limitation. No classroom effectiveness result is supplied.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Follow the **input** through the stated procedure to its **result**. Cover the **result** first, predict it, then explain every intermediate step. The text/table accompanies the figure so the example can be read without colour.

My complete trace of the worked case

STUDENT LESSON · 14 OF 18

Try a new case independently

Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Apply a new case independently

Statements:fixed cutoff5; 12/15 relevant returned items; judgments came from one reviewer. Classify.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Attempt this without hints

Statements:fixed cutoff5; 12/15 relevant returned items; judgments came from one reviewer. Classify.

My independent procedure, result and limitation

Record support used: none, hint or teacher explanation. After feedback, a different case is needed to demonstrate independence.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Methods results and limitations, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: Separate procedure, finding and limit. A fictional report tests two frozen classifiers on five labelled leaf photos from one camera.

By the end, I can	How I will show it
Explain the mechanism and terminology of methods results and limitations	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Methods results and limitations without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of **method**s **result**s and **limitation**s

> **My deciding step, evidence and one remaining question**

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building

> block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Separate procedure, finding and limit. A fictional report tests two frozen classifiers on five labelled leaf photos from one camera.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? The set supplies no outdoor-camera performance **evidence**.

1. State the **result**

2. State the limit

3. Identify the **method**

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: State the limit The set supplies no outdoor-camera performance **evidence**.

Methods tell how **evidence** was produced; **result**s state **observation**s; **limitation**s describe what those **observation**s cannot settle. Keeping them distinct prevents a **result** from becoming an oversized claim.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: The conclusion says B is best for outdoor farming. Which conclusion is supported by the supplied facts?

1. Reject that extension without outdoor **evidence**.

2. This one example guarantees correct **result**s for every future **input**.

3. We can decide the **result** without examining the changed **input** or the procedure.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Reject that extension without outdoor **evidence**. The reported conditions do not include the proposed use population.

Repair a missing building block

Review Finding primary research (ai-7/3). Goal: Explain the **mechanism** and terminology of finding primary research. Short practice: Separate what the blog claims from what the original report records.

Which **method**s and denominator must be inspected, and what status is honest if the original report is unavailable?. Return to this week and explain what you changed.

Review A question that **evidence** can answer (ai-7/1). Goal: Explain the **mechanism** and terminology of a question that **evidence** can answer. Short practice: Which proposed diagram question has a measurable outcome?

Name its versions, six-case denominator and fixed scoring, then explain why giving only B easier tasks spoils the comparison.. Return to this week and explain what you changed.

Keep your completed work

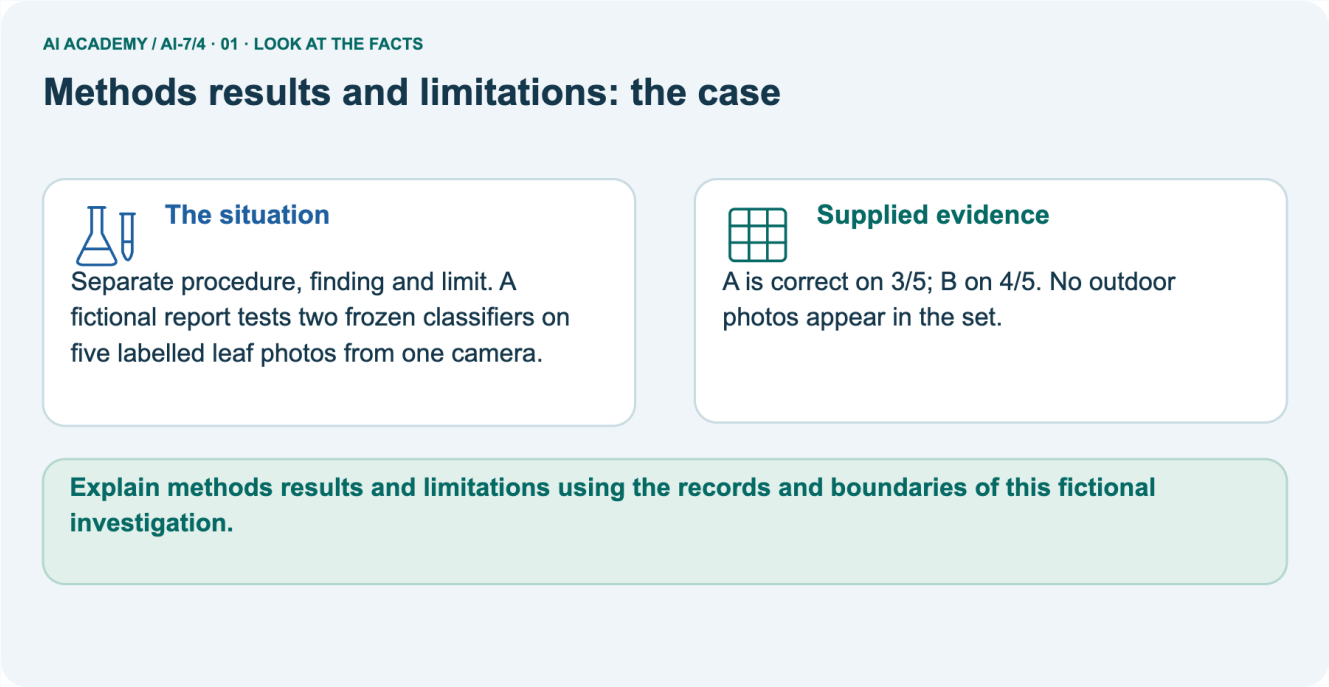

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

Visual concept journey

> Explain each Methods results and limitations graphic using its labels, deciding evidence and relevant limitation.

01. Methods results and limitations: the case

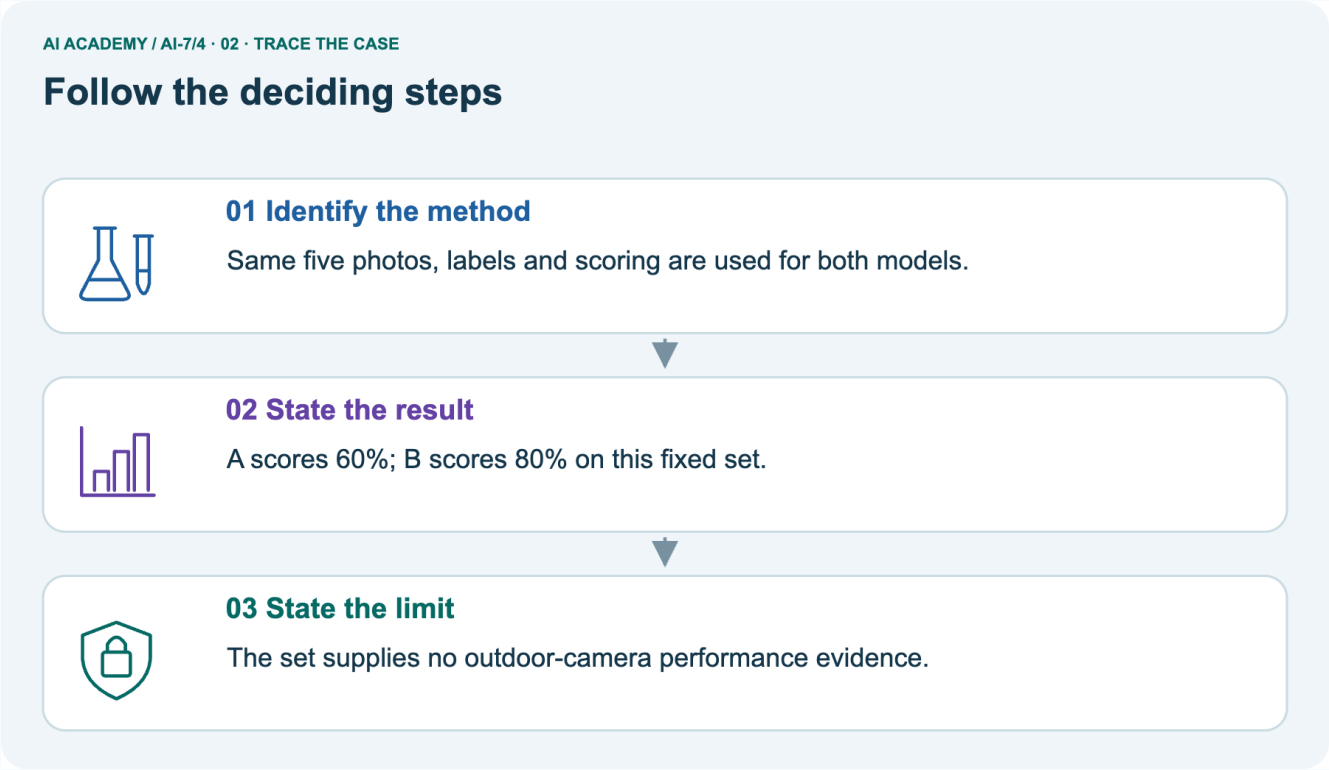

Follow the labelled picture with the matching explanation. Open the vector diagram

Separate procedure, finding and limit. A fictional report tests two frozen classifiers on five labelled leaf photos from one camera. Supplied facts: A is correct on 3/5; B on 4/5. No outdoor photos appear in the set.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

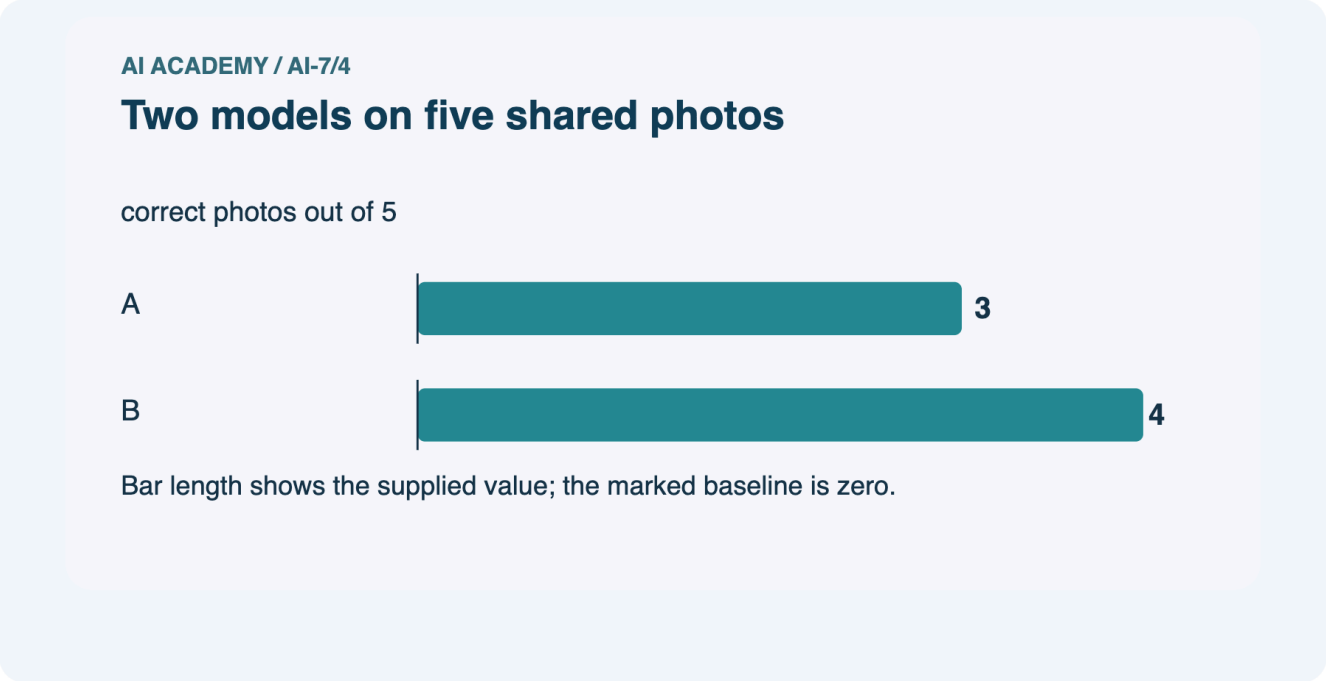

Follow the labelled picture with the matching explanation. Open the vector diagram

Identify the **method**: Same five photos, labels and scoring are used for both models. → State the **result**: A scores **60%**; B scores **80%** on this fixed set. → State the limit: The set supplies no outdoor-camera performance **evidence**.

> Point to each numbered stage and explain which recorded **input** it uses.

03. Two models on five shared photos

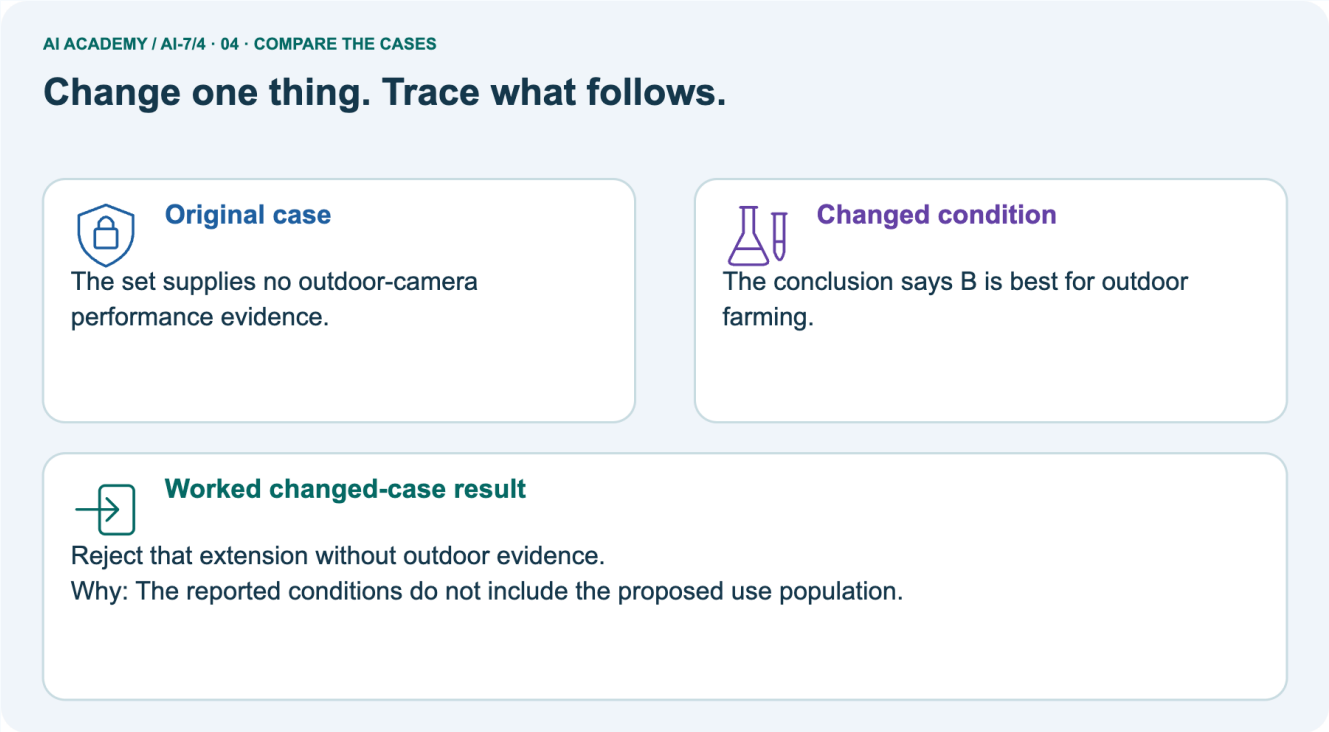

Follow the labelled picture with the matching explanation. Open the vector diagram

Two models on five shared photos. Units: correct photos out of 5. A: 3. B: 4.

> Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

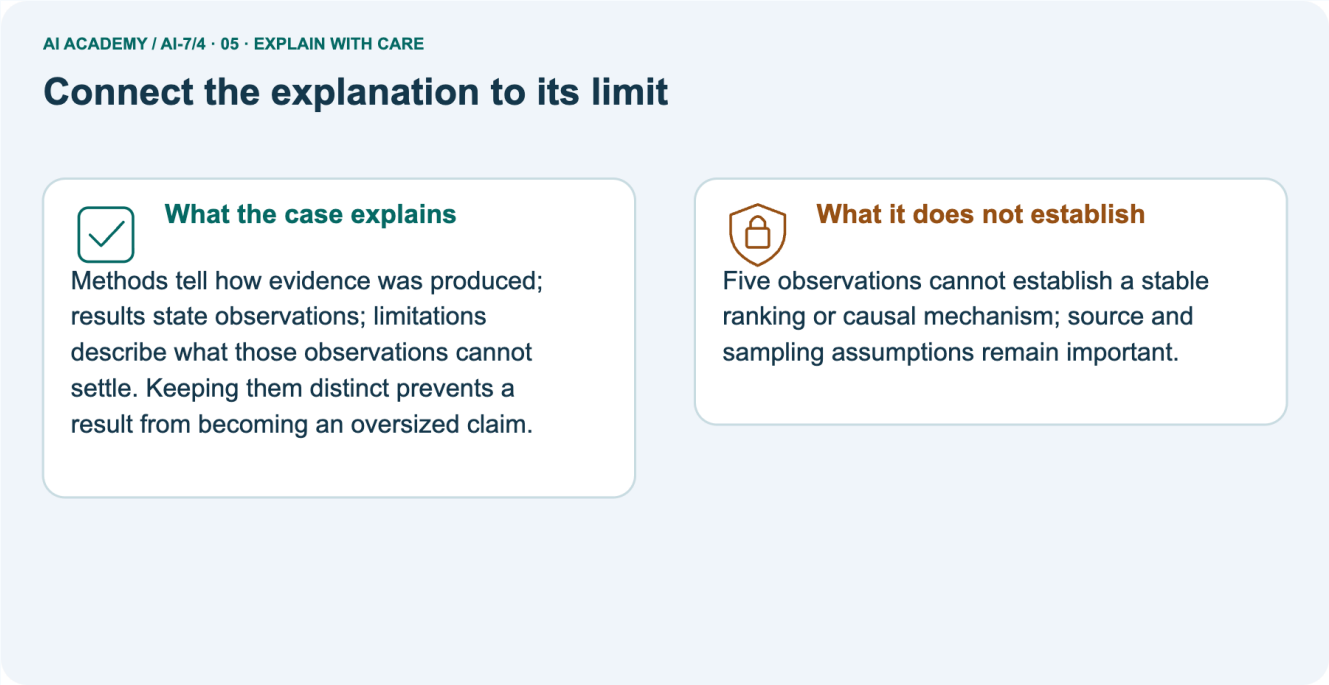

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: The set supplies no outdoor-camera performance **evidence**. Changed condition: The conclusion says B is best for outdoor farming. Expected **result**: Reject that extension without outdoor **evidence**.

Reason: The reported conditions do not include the proposed use population.

> Predict before checking the worked changed-case **result**. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

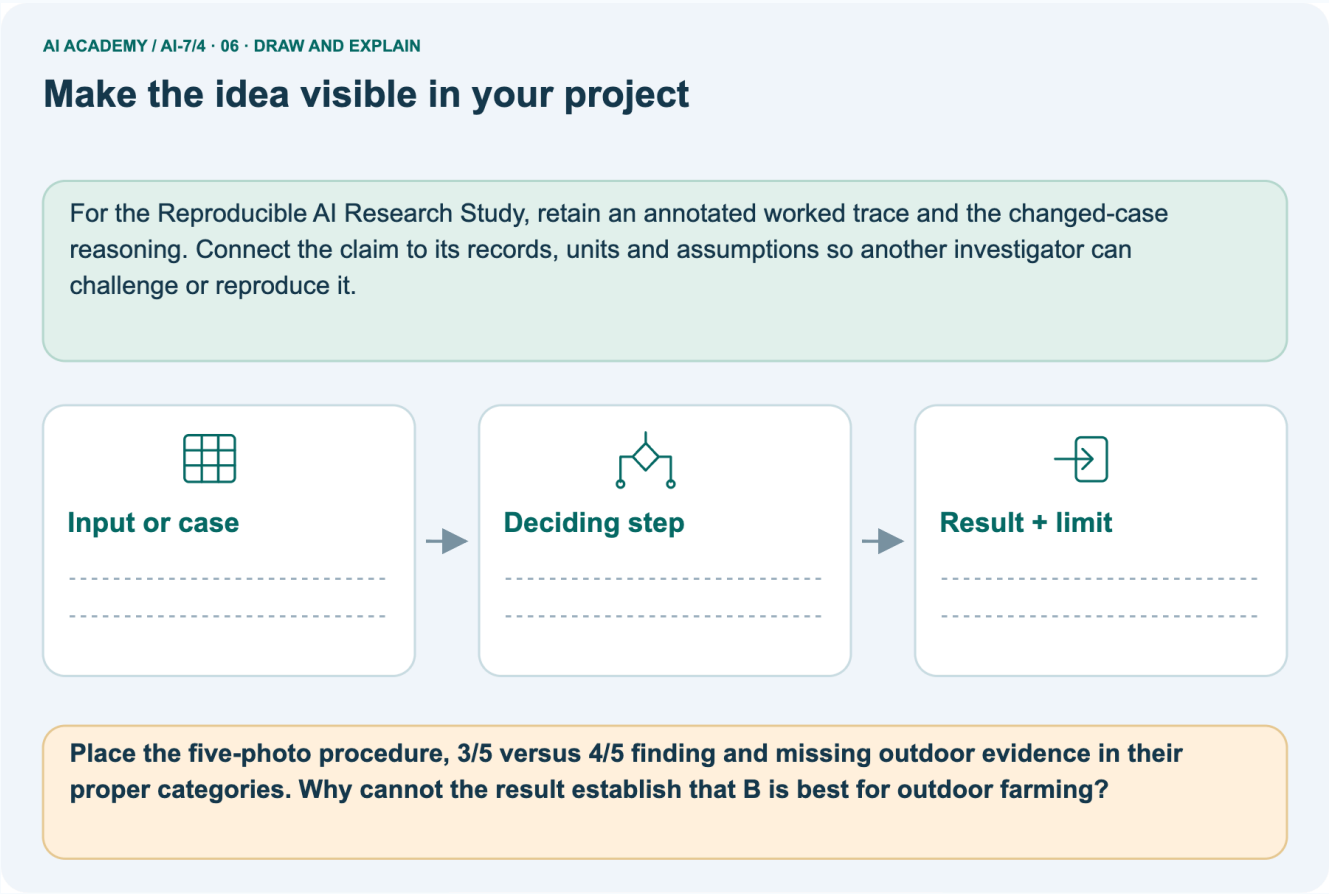

Follow the labelled picture with the matching explanation. Open the vector diagram

Methods tell how **evidence** was produced; **result**s state **observation**s; **limitation**s describe what those **observation**s cannot settle. Keeping them distinct prevents a **result** from becoming an oversized claim.

Limit: Five **observation**s cannot establish a stable ranking or causal **mechanism**; source and sampling assumptions remain important.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Draw your **input**, deciding step, **result** and limit. Supported question: Place the five-photo procedure, 3/5 versus 4/5 finding and missing outdoor **evidence** in their proper categories.

Why cannot the **result** establish that B is best for outdoor farming?

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
