AI ACADEMY · LEVEL 1 · GRADE 6 · WEEK 8 · WORKBOOK

Features: Useful Clues

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Helpful Classroom Sorter

WORKBOOK · 1 OF 21

Recall and choose your starting point

> Record your starting explanation for Features: Useful Clues before opening notes. Show any later correction separately.

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Categories and Labels

Without opening the old lesson, explain one key idea from Categories and Labels. Give an example and a mistake that the idea helps you avoid.

> **My remembered idea, example and correction**

Pictures Become Numbers

Without opening the old lesson, explain one key idea from Pictures Become Numbers. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Input, Process, Output

Without opening the old lesson, explain one key idea from **Input**, **Process**, **Output**. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

WORKBOOK · 2 OF 21

Practise with fading help

> Complete the supported Features: Useful Clues trace and record the first step you can explain without help.

Use W2: Prove that one measurement is insufficient for **Feature**s and useful distinctions. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs	Procedure I chose	Middle steps	Result and check

The step I completed without help, and the hint I needed

WORKBOOK · 3 OF 21

Individual reasoning check

> Check the proposed Features: Useful Clues explanation against the supplied facts before discussing it.

Use the worked case for **Feature**s and useful distinctions. Proposed explanation: “A stronger model can always recover an omitted measurement”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

WORKBOOK · 4 OF 21

Independent transfer case

> Write one first attempt at the reserved independent case before feedback. Repeated copies of that case refer to the same recorded attempt.

Independent case: Design a record for a new task

A fictional display tray accepts a tile if its height is at most 9 cm and its thickness is at most 2 cm, including equality. Other dimensions are fixed. Before checking, you can record height, thickness and pattern name.

A pass sticker is added afterward. Choose **input**s with units. Construct two tiles with the same height but different labels.

Then label a 9 cm high, 2 cm thick striped tile and explain why the sticker is unsuitable as an **input** before checking.

> **My independent explanation, trace and limits**

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

WORKBOOK · 5 OF 21

Your learning target

> Connect the Features: Useful Clues target to a trace and a justified conclusion.

A dataset contains only small smooth leaves and large toothed leaves. A model separates them by size. Design two fresh examples that distinguish a size shortcut from an edge-based rule.

WORKBOOK · 6 OF 21

Solve the given case

> Solve the supplied Features: Useful Clues case and show the deciding evidence.

Two green leaves have smooth and toothed edges. The task is to distinguish edge types.

Choose the **relevant feature** and explain why size is insufficient.

Show your trace, calculation or **evidence**

Write or draw your reasoning and evidence.

Check a changed case

> Apply the procedure to the changed case and record why the conclusion follows.

A sorter separates round and square tiles. Both shapes come in red and blue. Choose a useful **feature** and a distracting **feature**. Test your choice on a blue circle.

My independent answer and reason

Write or draw your reasoning and evidence.

WORKBOOK · 8 OF 21

Design a revealing test

> Specify a changed input, expected result and observation separately.

Create a changed **input**, boundary case or missing-information case. Write the expected answer or safe response before testing.

Test record	My evidence
Changed input or condition	
Expected answer or fallback	
Observed result	
Why the result occurred	

WORKBOOK · 9 OF 21

Project checkpoint

> Justify what Features: Useful Clues adds to Helpful Classroom Sorter and keep the evidence.

Select the smallest useful **feature**s for lost-and-found sorting and reject clues tied to a particular classroom or owner.

The project change and **evidence** I will keep

Write or draw your reasoning and evidence.

WORKBOOK · 10 OF 21

Self check

> Judge explanation, evidence, transfer and limits separately; attach the work behind your judgement.

- I can explain the mechanism.
- I can show evidence.
- I can handle a changed case.
- I can name a limit.

Mark each as not yet, with help or independently, and attach supporting work.

Teacher review _____ Next step _____

WORKBOOK · 11 OF 21

Transfer practice from the original programme

> Use this earlier case as transfer practice. A case already discussed with feedback is not fresh assessment evidence.

A dataset contains only small smooth leaves and large toothed leaves. A model separates them by size. Design two fresh examples that distinguish a size shortcut from an edge-based rule.

My independently reasoned answer

Record support used: none, hint or teacher explanation.

WORKBOOK · 12 OF 21

W1 Separate inputs from the target

> Separate inputs from the target. Apply the supplied Features: Useful Clues facts and keep your reasoning.

For the fixed-orientation card task, fits requires length at most 12 cm and width at most 8 cm, including equality.

Choose the measurements needed as **input**s from length, width, colour, card number and the final inspection sticker. State the **target label** and write the **feature record** for a 12 cm by 8 cm red card using a defined order.

My reasoning and evidence

WORKBOOK · 13 OF 21

W2 Prove that one measurement is insufficient

> Prove that one measurement is insufficient. Apply the supplied Features: Useful Clues facts and keep your reasoning.

Invent two cards with the same width but different correct labels under the card guide. Give both lengths and widths and justify the labels. Explain why a system receiving only width cannot always label both correctly.

> **My reasoning and evidence**

W3 Challenge an apparent colour shortcut

> Challenge an apparent colour shortcut. Apply the supplied Features: Useful Clues facts and keep your reasoning.

A practice set contains three blue cards that fit and three red cards that are too large. A helper uses blue means fits and red means too large. Create a new card that this helper mislabels.

Explain why the perfect practice score did not establish that colour was a reliable **feature** for this task.

My reasoning and evidence

WORKBOOK · 15 OF 21

W4 Design a record for a new task

> Attempt before feedback. If this repeats the selected independent case, reuse that first attempt; otherwise keep a separate record. Design a record for a new task. Apply the supplied Features: Useful Clues facts and keep your reasoning.

A fictional display tray accepts a tile if its height is at most 9 cm and its thickness is at most 2 cm, including equality. Other dimensions are fixed. Before checking, you can record height, thickness and pattern name.

A pass sticker is added afterward. Choose **input**s with units. Construct two tiles with the same height but different labels.

Then label a 9 cm high, 2 cm thick striped tile and explain why the sticker is unsuitable as an **input** before checking.

My reasoning and evidence

WORKBOOK · 16 OF 21

W5 Notice when the task changes

> Notice when the task changes. Apply the supplied Features: Useful Clues facts and keep your reasoning.

The delivery station now sorts cards into red and blue bins instead of checking dimensions. Which previously unneeded **feature** becomes useful? Explain why length and width alone may now be insufficient.

Give two cards that support your explanation.

> **My reasoning and evidence**

Feedback, return check and learning record

> Record the first repaired step and a different case to revisit after a delay.

Evidence	My record
Worked alone / hint / model	
First step I repaired and why	
New case checked later; date and result	
What I can now explain without notes	
One remaining question	

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

WORKBOOK · 18 OF 21

Pictorial case practice: Features: Useful Clues

> A fictional shelf accepts a craft box only if width is at most 6 cm and height at most 4 cm. Explain the labelled step before checking the changed condition.

A fictional shelf accepts a craft box only if width is at most 6 cm and height at most 4 cm.

Boxes P=(6,4,stripes), Q=(7,4,stripes), R=(6,5,dots), S=(6,4,dots).

A green acceptance sticker is attached only after the shelf check.

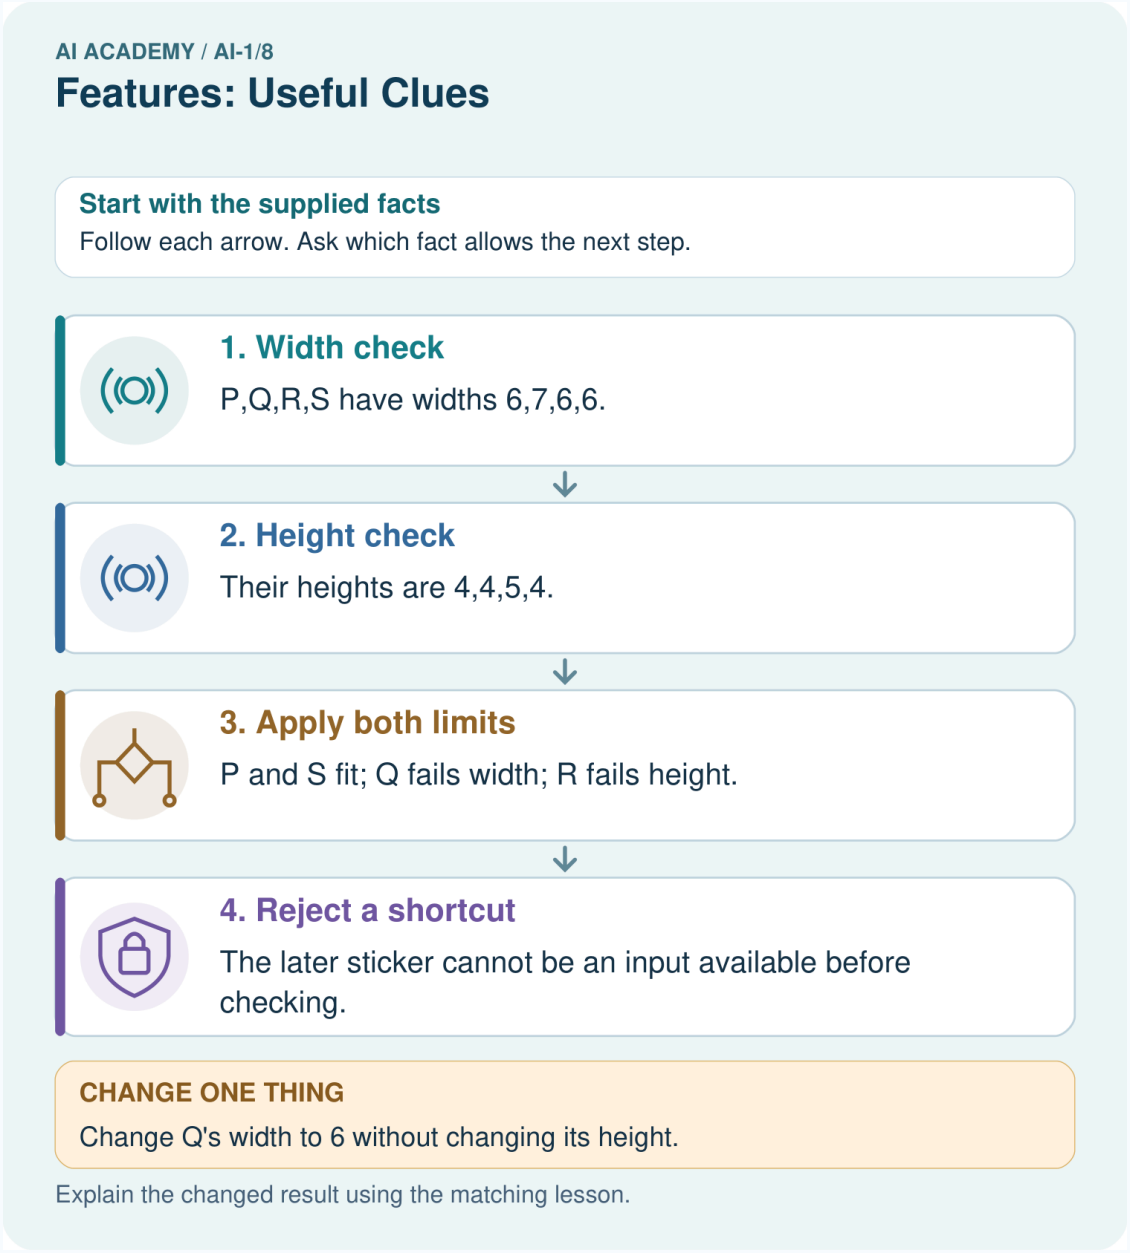

AI ACADEMY / AI-1/8

Dimensions determine shelf acceptance

	Width cm	Height cm	Outcome
P stripes	6	4	fits
Q stripes	7	4	width fails
R dots	6	5	height fails
S dots	6	4	fits

Read a cell using both its row and column labels.

Follow the labelled picture with the matching explanation. Open the vector diagram

Follow the labelled picture with the matching explanation. Open the vector diagram

Point to the pair that tests pattern, then explain why the sticker is a bad early **input**.

My picture-based explanation and changed-case prediction

Record the help used

Support used: alone / hint / worked example. This record is practice **evidence**.

Project connection: Choose sorter **feature**s that exist at decision time and actually connect to the stated classroom requirement.

WORKBOOK · 19 OF 21

Project portfolio milestone

> Keep this week's input, deciding step, result and limit together in the Helpful Classroom Sorter record.

Project: Helpful Classroom Sorter

Current milestone: Make a transparent first version. Keep a trace of how one **input** becomes an **output**; explain the rule or learned component.

Choose sorter **feature**s that exist at decision time and actually connect to the stated classroom requirement.

Evidence to keep	My record
This week's input and deciding step	
Prediction and actual result (or labelled paper trace)	
One change since the previous checkpoint and why	
One error or limit and the next test	

Explain what this week adds to your project. Reuse last week's record rather than starting again.

WORKBOOK · 20 OF 21

Supported practice and learning evidence

> Try the supported questions before comparing with hints and feedback. Record what you repaired and the evidence you retained.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A fictional shelf accepts a craft box only if width is at most 6 cm and height at most 4 cm.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? The later sticker cannot be an **input** available before checking.

1. Apply both limits

2. Reject a shortcut

3. Height check

4. Width check

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Reject a shortcut The later sticker cannot be an **input** available before checking. Comparing P with Q isolates width; comparing P with R isolates height.

Comparing P with S changes pattern while both remain accepted. Under this declared policy, pattern is not a deciding **feature**. A later acceptance sticker leaks the very answer the system should produce.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Change Q’s width to 6 without changing its height. Which

conclusion is supported by the supplied facts?

1. We can decide the result without examining the changed **input** or the procedure.

2. This one example guarantees correct results for every future **input**.

3. Q fits the shelf.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Q fits the shelf. Both dimensions now meet their limits, with equality allowed; stripe pattern does not change the rule.

Repair a missing building block

Review Categories and Labels (ai-1/7). Goal: Apply a category definition using explicit **evidence** and boundary rules. Short practice: Explain why B originally was revise rather than review, then label its changed version..

Return to this week and explain what you changed.

Review Pictures Become Numbers (ai-1/5). Goal: Encode and reconstruct a small image using an explicit grid convention.

Short practice: Find a position where the original badges differ, then read the changed A back as a picture.. Return to this week and explain what you changed.

Review **Input**, **Process**, **Output** (ai-1/2). Goal: Trace information through a system without confusing information with a physical action. Short practice: Use the richer record to find blue pencils in Box B.

Explain why total alone was insufficient.. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

WORKBOOK · 21 OF 21

Visual concept journey

> Explain each Features: Useful Clues picture from its labels, then record a relevant limit.

01. Features: Useful Clues: the case

AI ACADEMY / AI-1/8 · 01 · LOOK AT THE FACTS

Features: Useful Clues: the case

The situation

A fictional shelf accepts a craft box only if width is at most 6 cm and height at most 4 cm.

Supplied evidence

Boxes P=(6,4,stripes), Q=(7,4,stripes), R=(6,5,dots), S=(6,4,dots).
A green acceptance sticker is attached only after the shelf check.

By the end, I can choose task-relevant features and avoid a clue created after the decision.

Follow the labelled picture with the matching explanation. Open the vector diagram

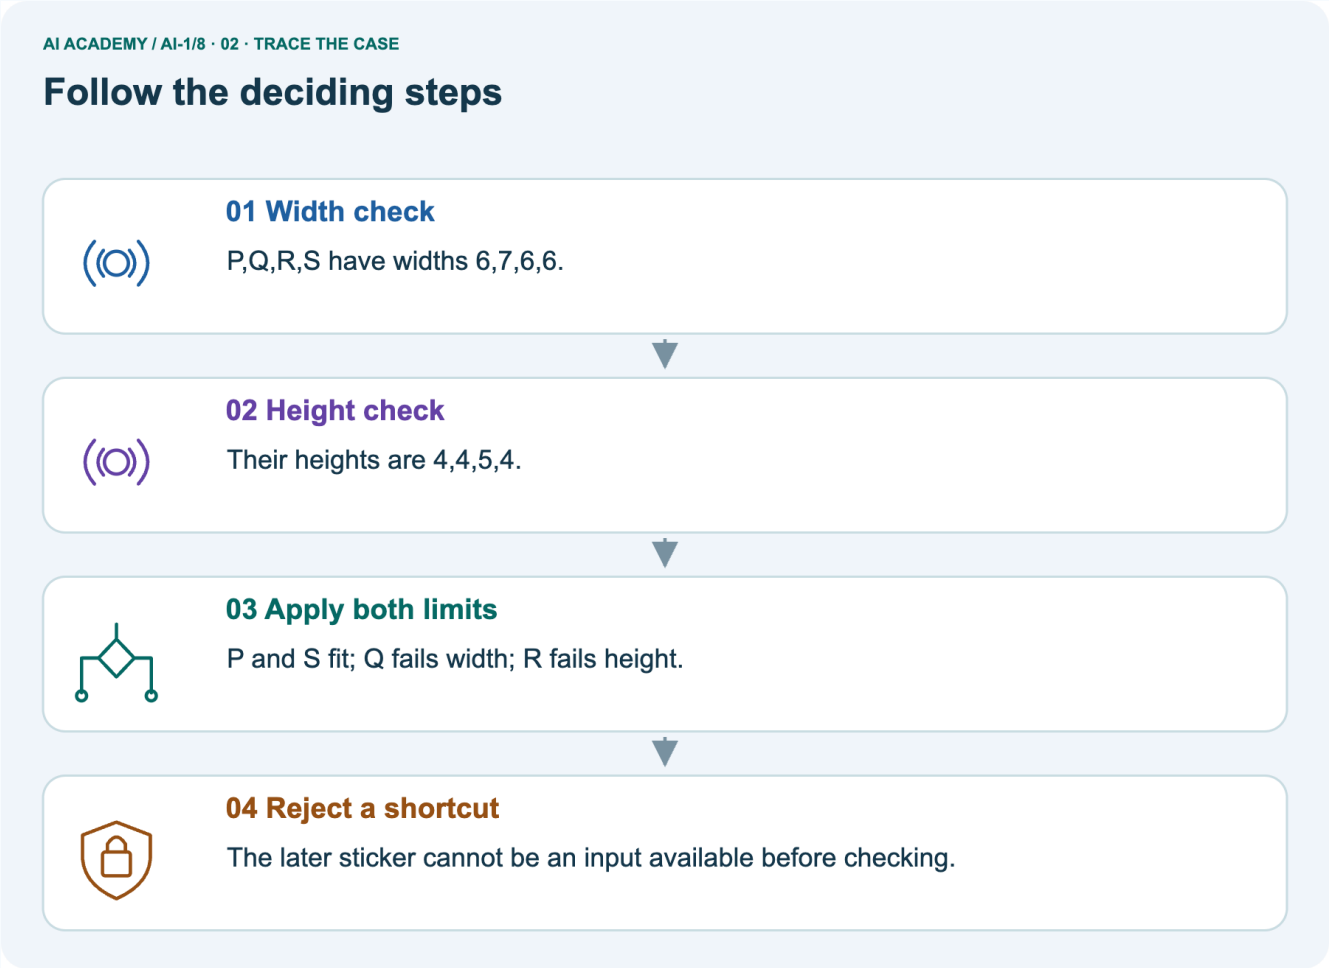

A fictional shelf accepts a craft box only if width is at most 6 cm and height at most 4 cm. Supplied facts: Boxes P=(6,4,stripes), Q=(7,4,stripes), R=(6,5,dots), S=(6,4,dots).

A green acceptance sticker is attached only after the shelf check.

Point to the given fact that matters most. Explain why it matters.

My picture explanation, deciding evidence and one limit

02. Follow the deciding steps

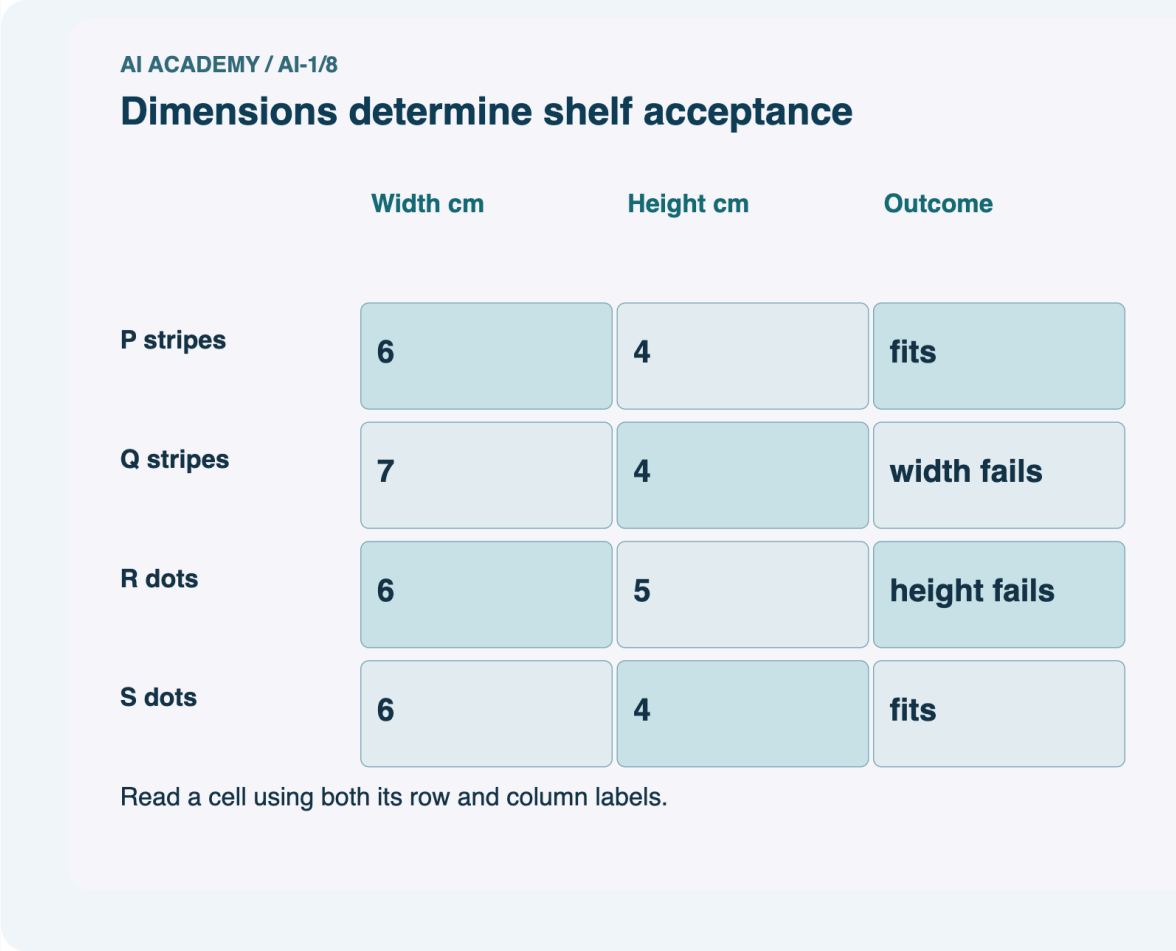

Follow the labelled picture with the matching explanation. Open the vector diagram

Width check: P,Q,R,S have widths 6,7,6,6. → Height check: Their heights are 4,4,5,4. → Apply both limits: P and S fit; Q fails width; R fails height. → Reject a shortcut: The later sticker cannot be an **input** available before checking.

> Point to each numbered stage and explain which recorded **input** it uses.

My picture explanation, deciding evidence and one limit

03. Dimensions determine shelf acceptance

Follow the labelled picture with the matching explanation. Open the vector diagram

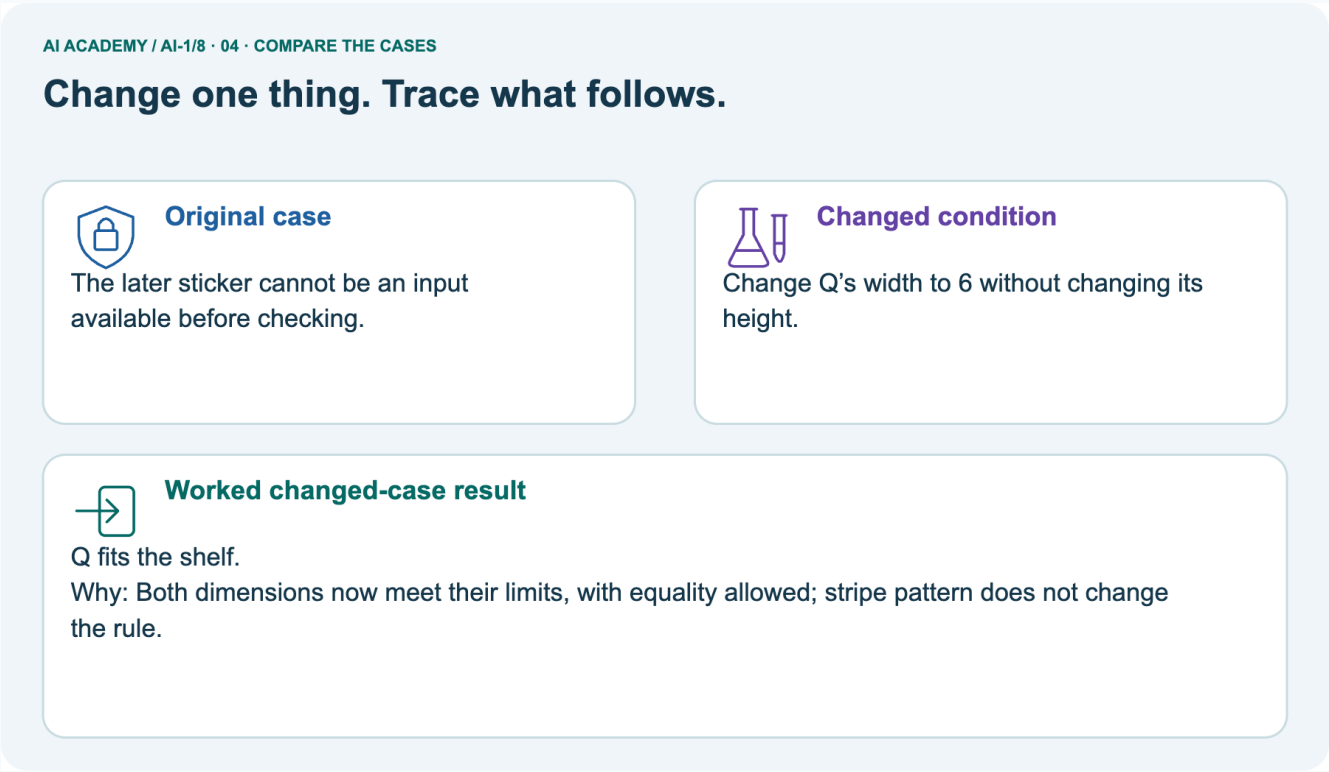

Dimensions determine shelf acceptance. P stripes: Width cm = 6, Height cm = 4, Outcome = fits. Q stripes: Width cm = 7, Height cm = 4, Outcome = width fails. R dots: Width cm = 6, Height cm = 5, Outcome = height fails.

S dots: Width cm = 6, Height cm = 4, Outcome = fits.

Read the labels and values. Explain the relationship the model shows.

My picture explanation, deciding evidence and one limit

04. Change one thing. Trace what follows.

Follow the labelled picture with the matching explanation. Open the vector diagram

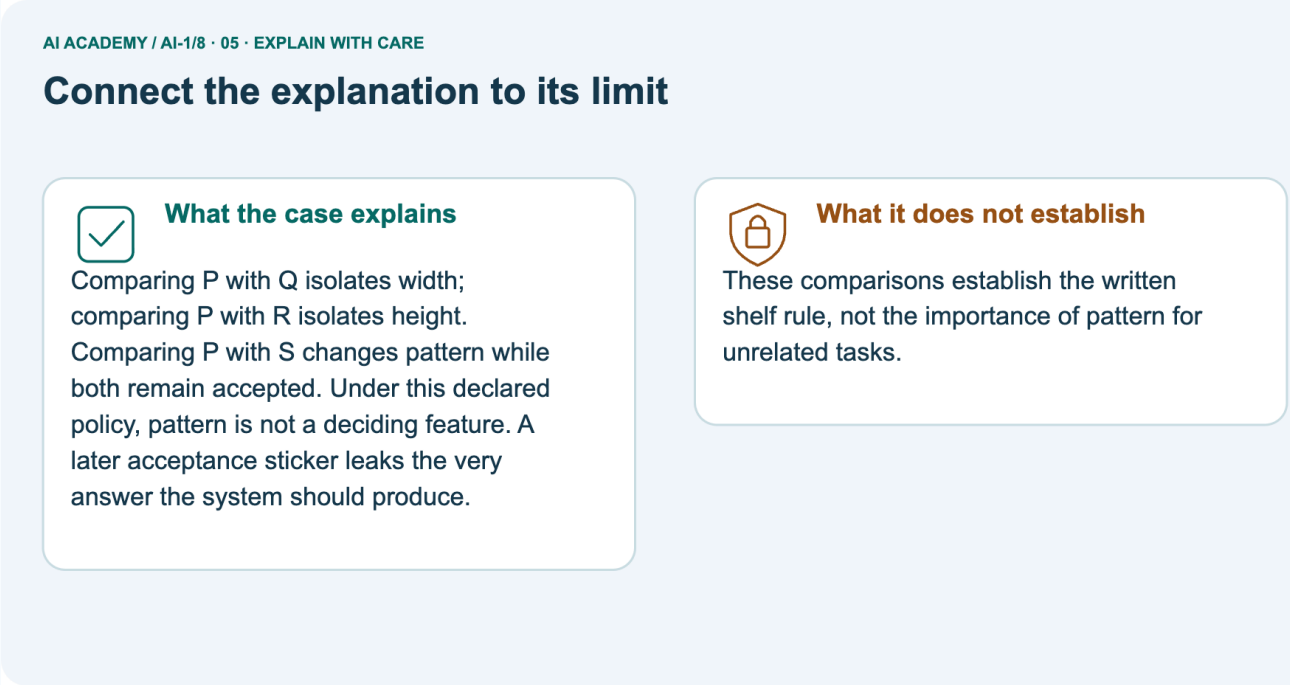

Original case: The later sticker cannot be an **input** available before checking. Changed condition: Change Q's width to 6 without changing its height. Expected result: Q fits the shelf.

Reason: Both dimensions now meet their limits, with equality allowed; stripe pattern does not change the rule.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

My picture explanation, deciding evidence and one limit

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

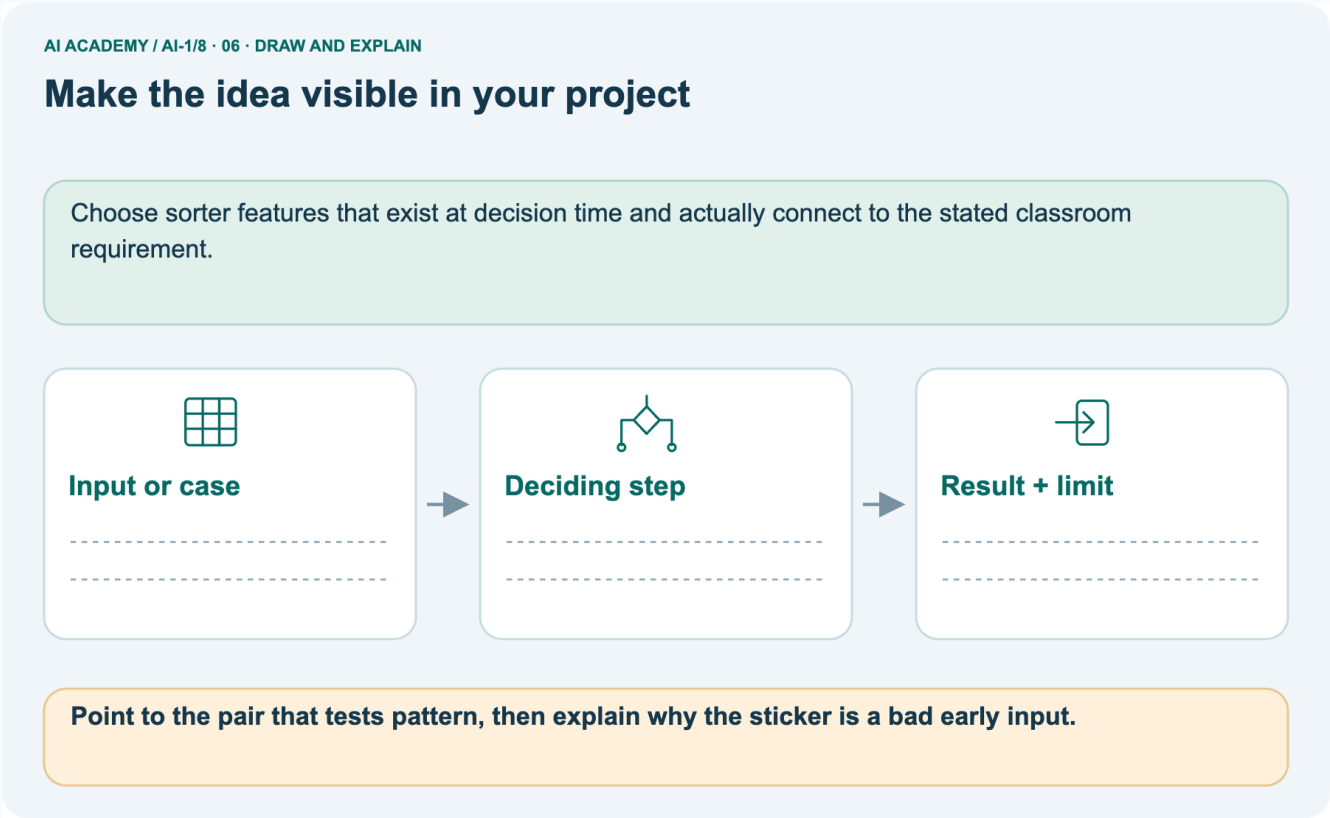

Comparing P with Q isolates width; comparing P with R isolates height. Comparing P with S changes pattern while both remain accepted. Under this declared policy, pattern is not a deciding **feature**.

A later acceptance sticker leaks the very answer the system should produce. Limit: These comparisons establish the written shelf rule, not the importance of pattern for unrelated tasks.

Explain the case, then point to a limit on the claim.

My picture explanation, deciding evidence and one limit

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Choose sorter **feature**s that exist at decision time and actually connect to the stated classroom requirement. Draw your **input**, deciding step, result and limit.

Supported question: Point to the pair that tests pattern, then explain why the sticker is a bad early **input**.

Draw your project trace and justify the deciding step using **evidence**.

My picture explanation, deciding evidence and one limit

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
