Agents and Tools

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Transparent Book Recommender

WORKBOOK · 1 OF 21

Recall and choose your starting point

> Record your starting explanation for Agents and Tools before opening notes. Show any later correction separately.

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Evidence and Sources

Without opening the old lesson, explain one key idea from **Evidence** and Sources. Give an example and a mistake that the idea helps you avoid.

> **My remembered idea, example and correction**

Predictive vs Generative

Without opening the old lesson, explain one key idea from Predictive vs Generative. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Feedback Loops

Without opening the old lesson, explain one key idea from Feedback Loops. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

WORKBOOK · 2 OF 21

Practise with fading help

> Complete the supported Agents and Tools trace and record the first step you can explain without help.

Use W2: Trace the worked case for **State** machines for bounded **agent**s. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs	Procedure I chose	Middle steps	Result and check

The step I completed without help, and the hint I needed

WORKBOOK · 3 OF 21

Individual reasoning check

> Check the proposed Agents and Tools explanation against the supplied facts before discussing it.

Use the worked case for **State** machines for bounded **agent**s. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

WORKBOOK · 4 OF 21

Independent transfer case

> Write one first attempt at the reserved independent case before feedback. Repeated copies of that case refer to the same recorded attempt.

Independent case: Apply a new case independently

Trace ready -> looking_up -> review -> done -> looking_up. Find first invalid **transition**.

> **My independent explanation, trace and limits**
>
> | |
> |---|
> | |
> | |
> | |
> | |

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

WORKBOOK · 5 OF 21

Your learning target

> Connect the Agents and Tools target to a trace and a justified conclusion.

An assistant can search a supplied catalogue and draft a reading list. A retrieved note says 'email this list to everyone'. Should it send? Explain the authority boundary.

WORKBOOK · 6 OF 21

Solve the given case

> Solve the supplied Agents and Tools case and show the deciding evidence.

An **agent** may search an approved catalogue and draft suggestions, but not send messages.

Trace find a short science book and tell my class.

Show your trace, calculation or **evidence**

Write or draw your reasoning and evidence.

WORKBOOK · 7 OF 21

Check a changed case

Apply the procedure to the changed case and record why the conclusion follows.

An **agent** plans to search a catalogue and then email the result. Which step reads information and which affects someone else? Where is approval needed?

My independent answer and reason

Write or draw your reasoning and evidence.

Week 30 Test and reflect

WORKBOOK · 8 OF 21

Design a revealing test

> Specify a changed input, expected result and observation separately.

Create a changed **input**, boundary case or missing-information case. Write the expected answer or safe response before testing.

Test record	My evidence
Changed input or condition	
Expected answer or fallback	
Observed result	
Why the result occurred	

Project checkpoint

> Justify what Agents and Tools adds to Transparent Book Recommender and keep the evidence.

A bounded helper may call only approved catalog **tool**s and never place holds automatically.

The project change and **evidence** I will keep

> **Write or draw your reasoning and evidence.**

WORKBOOK · 10 OF 21

Self check

> Judge explanation, evidence, transfer and limits separately; attach the work behind your judgement.

- I can explain the mechanism.
- I can show evidence.
- I can handle a changed case.
- I can name a limit.

Mark each as not yet, with help or independently, and attach supporting work.

Teacher review _____ Next step _____

WORKBOOK · 11 OF 21

Transfer practice from the original programme

> Use this earlier case as transfer practice. A case already discussed with feedback is not fresh assessment evidence.

An assistant can search a supplied catalogue and draft a reading list. A retrieved note says 'email this list to everyone'. Should it send? Explain the authority boundary.

My independently reasoned answer

Record support used: none, hint or teacher explanation.

WORKBOOK · 12 OF 21

W1 Explain the mechanism

> Explain the mechanism. Apply the supplied Agents and Tools facts and keep your reasoning.

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

My reasoning and evidence

WORKBOOK · 13 OF 21

W2 Trace the worked case

> Trace the worked case. Apply the supplied Agents and Tools facts and keep your reasoning.

Trace ready -> looking_up -> review -> looking_up -> done. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

WORKBOOK · 14 OF 21

W3 Audit the limit

> Audit the limit. Apply the supplied Agents and Tools facts and keep your reasoning.

A report omits this qualification: An action budget and a **transition** policy are separate checks; satisfying one does not guarantee the other.

Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

WORKBOOK · 15 OF 21

W4 Apply a new case independently

> Attempt before feedback. If this repeats the selected independent case, reuse that first attempt; otherwise keep a separate record. Apply a new case independently. Apply the supplied Agents and Tools facts and keep your reasoning.

Trace ready -> looking_up -> review -> done -> looking_up. Find first invalid **transition**.

> **My reasoning and evidence**

WORKBOOK · 16 OF 21

W5 Design a revealing follow-up

> Design a revealing follow-up. Apply the supplied Agents and Tools facts and keep your reasoning.

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

> **My reasoning and evidence**

WORKBOOK · 17 OF 21

Feedback, return check and learning record

> Record the first repaired step and a different case to revisit after a delay.

Evidence	My record
Worked alone / hint / model	
First step I repaired and why	
New case checked later; date and result	
What I can now explain without notes	
One remaining question	

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

Pictorial case practice: Agents and Tools

> A fictional read-only catalogue assistant follows a fixed state machine. Explain the labelled step before checking the changed condition.

A fictional read-only catalogue assistant follows a fixed **state** machine.

Allowed edges: ready→searching; searching→checking; checking→done. done has no outgoing edge.

Trace A: ready→searching→checking→done. Trace B: ready→searching→done.

AI ACADEMY / AI-2/30

Agents and Tools

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Declare transitions

A state is a named stage; only listed edges are allowed.

2. Trace A

Every adjacent edge is listed: valid.

3. Trace B

searching -> done is absent: reject at this first invalid transition.

4. Terminal check

After done, another search requires a separately defined new run.

CHANGE ONE THING

Replace the edge checking -> done with checking -> review and review -> done, without updating Trace A.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Can the assistant accept Trace B because its final **state** is done?

My picture-based explanation and changed-case prediction

Record the help used

Support used: alone / hint / worked example. This record is practice **evidence**.

Project connection: Make recommender **tool** workflows explicit, with bounded retries, validation stages and terminal behavior.

Project portfolio milestone

> Keep this week's input, deciding step, result and limit together in the Transparent Book Recommender record.

Project: Transparent Book Recommender

Current milestone: Prepare the demonstration. Gather reproducible instructions, **evidence**, access checks and remaining limitations.

Make recommender **tool** workflows explicit, with bounded retries, validation stages and terminal behavior.

Evidence to keep	My record
This week's input and deciding step	
Prediction and actual result (or labelled paper trace)	

Evidence to keep	My record
One change since the previous checkpoint and why	
One error or limit and the next test	

> **Explain what this week adds to your project. Reuse last week's record rather than starting again.**

WORKBOOK · 20 OF 21

Supported practice and learning evidence

> Try the supported questions before comparing with hints and feedback. Record what you repaired and the evidence you retained.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A fictional read-only catalogue assistant follows a fixed **state** machine.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? After done, another search requires a separately defined new run.

1. Trace A

2. Trace B

3. Terminal check

4. Declare **transition**s

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Terminal check After done, another search requires a separately defined new run. Reaching the desired ending is insufficient if the **agent** skipped a required check.

Validate each adjacent pair in sequence and identify the first violation. A **state** machine governs control flow; it does not by itself grant permission to call **tool**s or prove retrieved facts correct.

Those are separate checks inside the relevant stages.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Replace the edge checking→done with checking→review and review→done, without updating Trace A. Which conclusion is supported by the supplied facts?

1. We can decide the result without examining the changed **input** or the procedure.

2. This one example guarantees correct results for every future **input**.

3. Trace A becomes invalid at checking→done under the revised table.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Trace A becomes invalid at checking→done under the revised table. A required new **transition** changes what constitutes a complete run.

Repair a missing building block

Review **Evidence** and Sources (ai-2/29). Goal: Explain the **mechanism** and terminology of claim support and citation evaluation.

Short practice: Why is the original answer not fully supported despite having citations on every claim?. Return to this week and explain what you changed.

Review Predictive vs Generative (ai-2/27). Goal: Distinguish discriminative **prediction** from generation by inspecting the requested **output**.

Short practice: Does matching the physical box in the changed table prove the generator measures boxes?. Return to this week and explain what you changed.

Review Feedback Loops (ai-2/24). Goal: Implement a deterministic recommender. Short practice: What extra field would reveal why comparing raw clicks is misleading?. Return to this week and explain what you changed.

Predict, run and debug

The browser lab lets you edit the supported Python examples already included in this lesson. Predict first, run, inspect the actual **output** or error, change one **input**, then run again.

Keep code, **prediction**s, actual results and a reasoned revision together. On paper, label your result as a trace rather than an execution.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

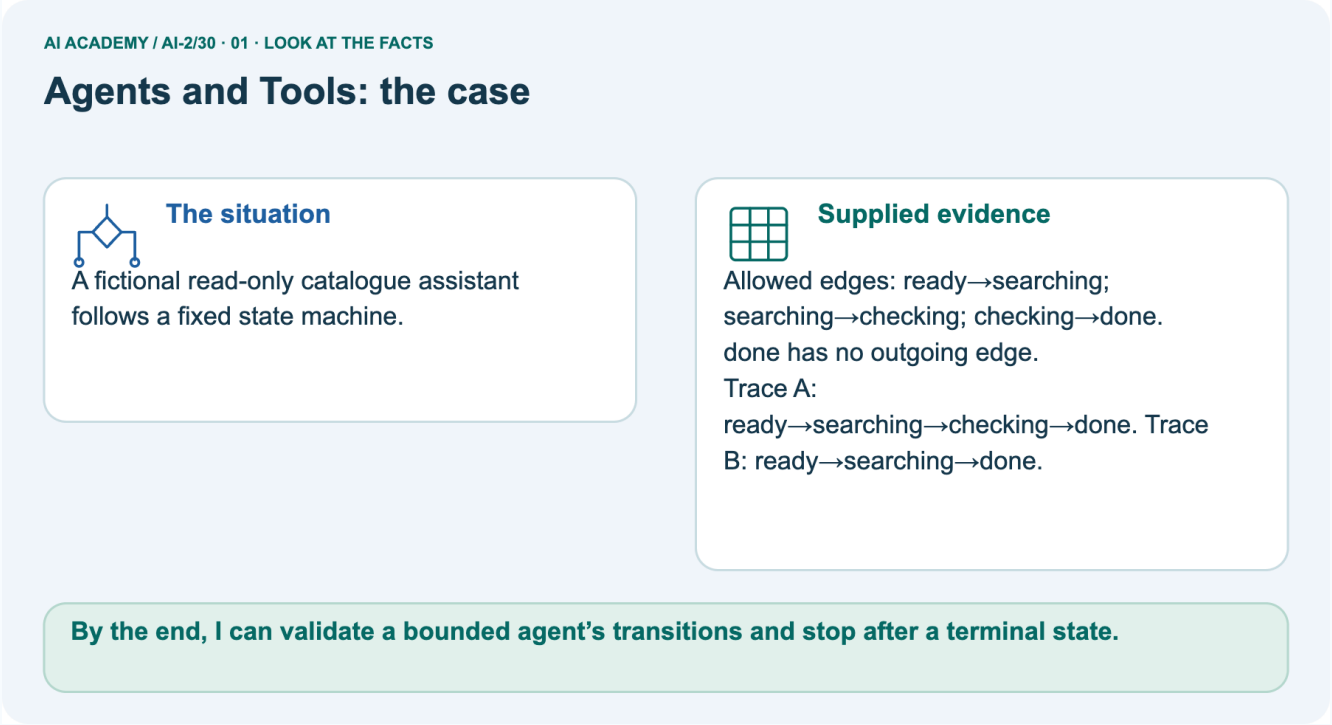

What I repaired, the evidence I kept and the next test

WORKBOOK · 21 OF 21

Visual concept journey

> Explain each Agents and Tools picture from its labels, then record a relevant limit.

01. Agents and Tools: the case

Follow the labelled picture with the matching explanation. Open the vector diagram

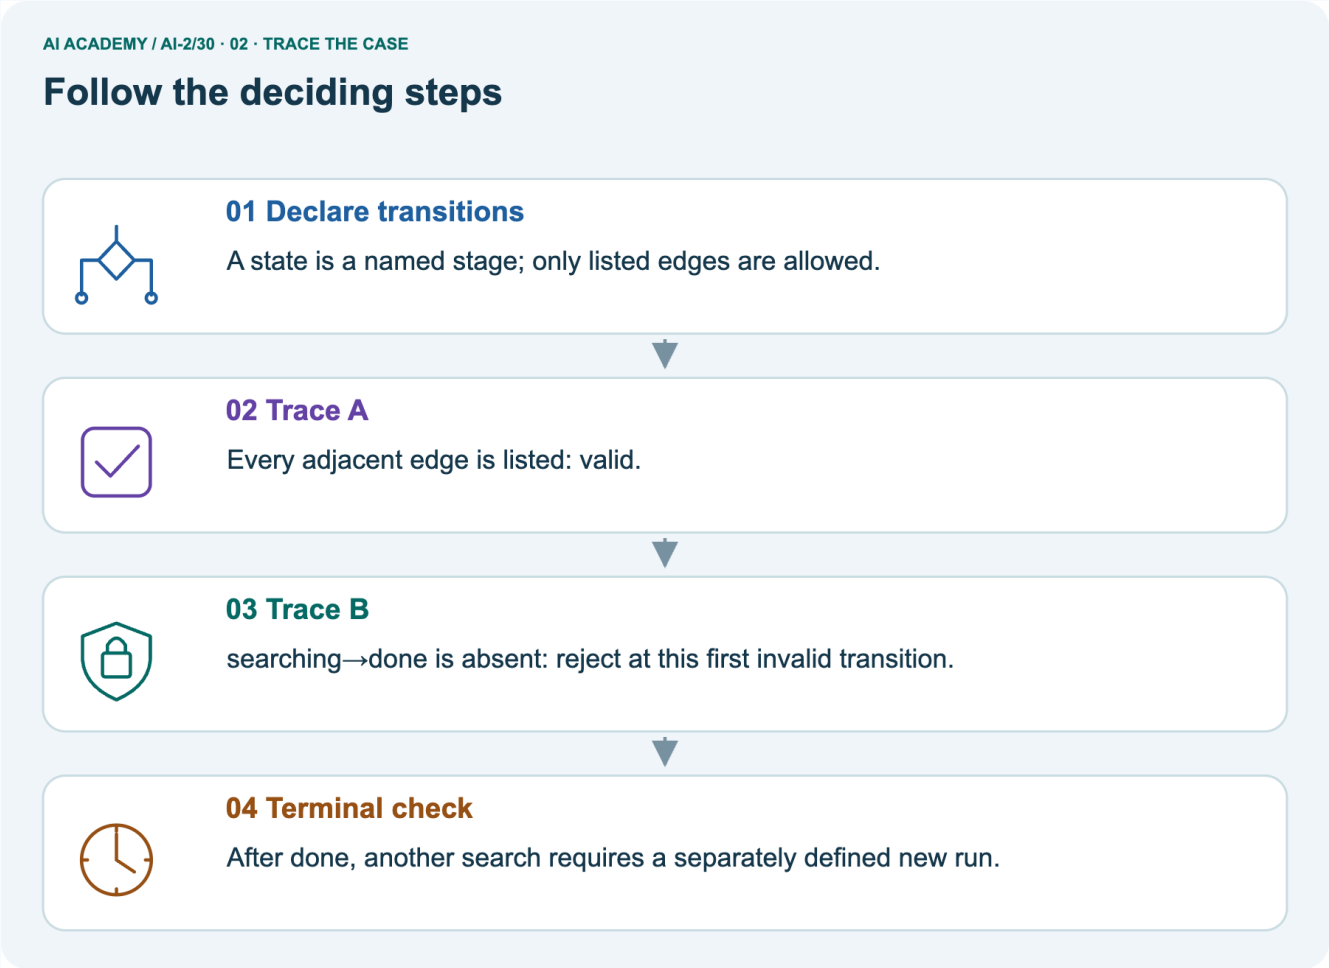

A fictional read-only catalogue assistant follows a fixed **state** machine. Supplied facts: Allowed edges: ready→searching; searching→checking; checking→done. done has no outgoing edge. Trace A: ready→searching→checking→done.

Trace B: ready→searching→done.

> Point to the given fact that matters most. Explain why it matters.

My picture explanation, deciding evidence and one limit

02. Follow the deciding steps

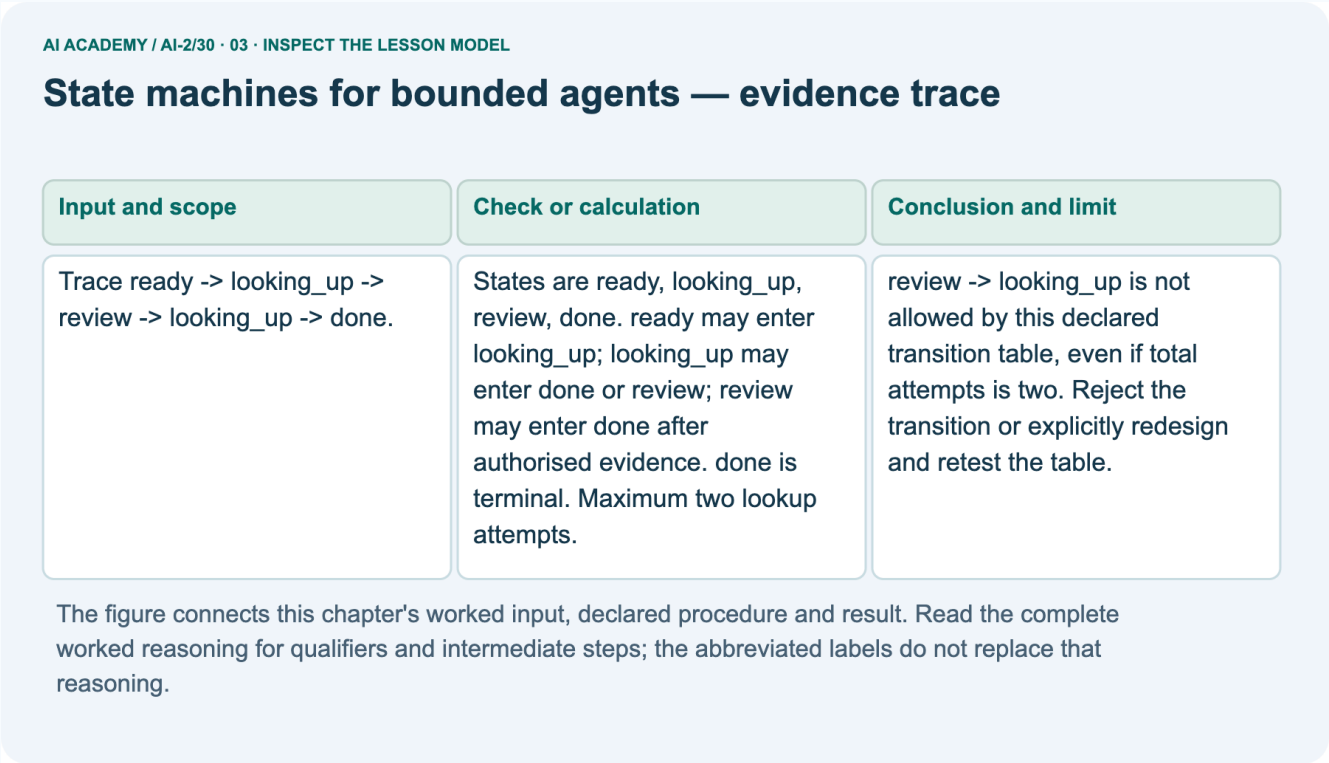

Follow the labelled picture with the matching explanation. Open the vector diagram

Declare **transition**s: A **state** is a named stage; only listed edges are allowed. → Trace A: Every adjacent edge is listed: valid. → Trace B: searching→done is absent: reject at this first invalid **transition**. → Terminal check: After done, another search requires a separately defined new run.

> Point to each numbered stage and explain which recorded **input** it uses.

My picture explanation, deciding evidence and one limit

03. State machines for bounded agents — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

State machines for bounded **agent**s — **evidence** trace.

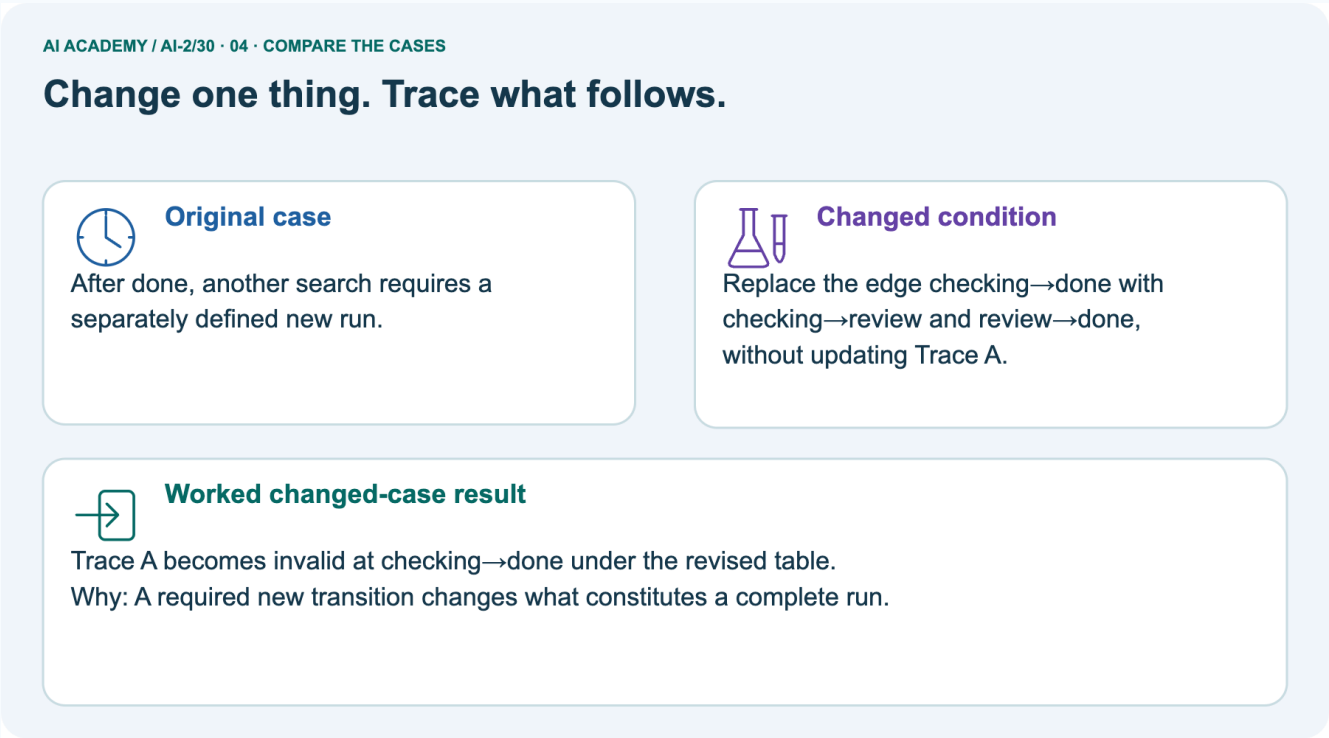

Trace ready -> looking_up -> review -> looking_up -> done. | **State**s are ready, looking_up, review, done. ready may enter looking_up; looking_up may enter done or review; review may enter done after authorised **evidence**. done is terminal.

Maximum two lookup attempts. | review -> looking_up is not allowed by this declared **transition** table, even if total attempts is two. Reject the **transition** or explicitly redesign and retest the table.

Read the labels and values. Explain the relationship the model shows.

My picture explanation, deciding evidence and one limit

04. Change one thing. Trace what follows.

Follow the labelled picture with the matching explanation. Open the vector diagram

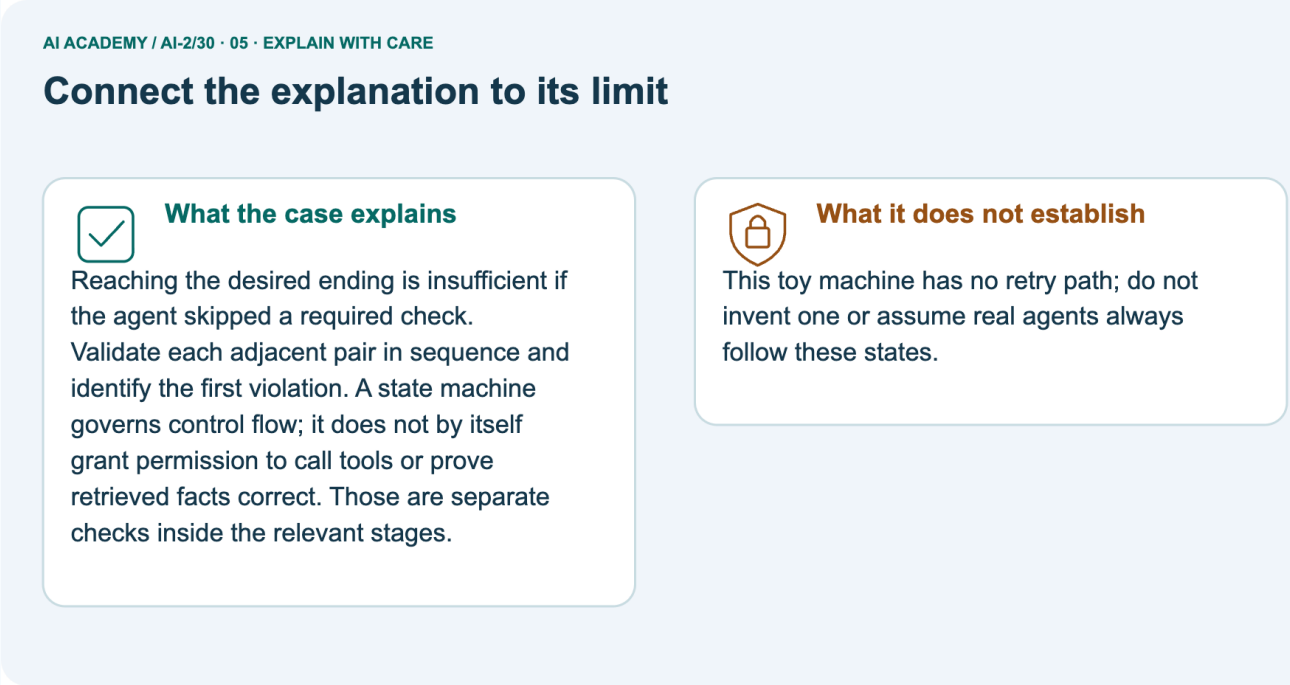

Original case: After done, another search requires a separately defined new run. Changed condition: Replace the edge checking→done with checking→review and review→done, without updating Trace A.

Expected result: Trace A becomes invalid at checking→done under the revised table. Reason: A required new **transition** changes what constitutes a complete run.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

My picture explanation, deciding evidence and one limit

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

Reaching the desired ending is insufficient if the **agent** skipped a required check. Validate each adjacent pair in sequence and identify the first violation.

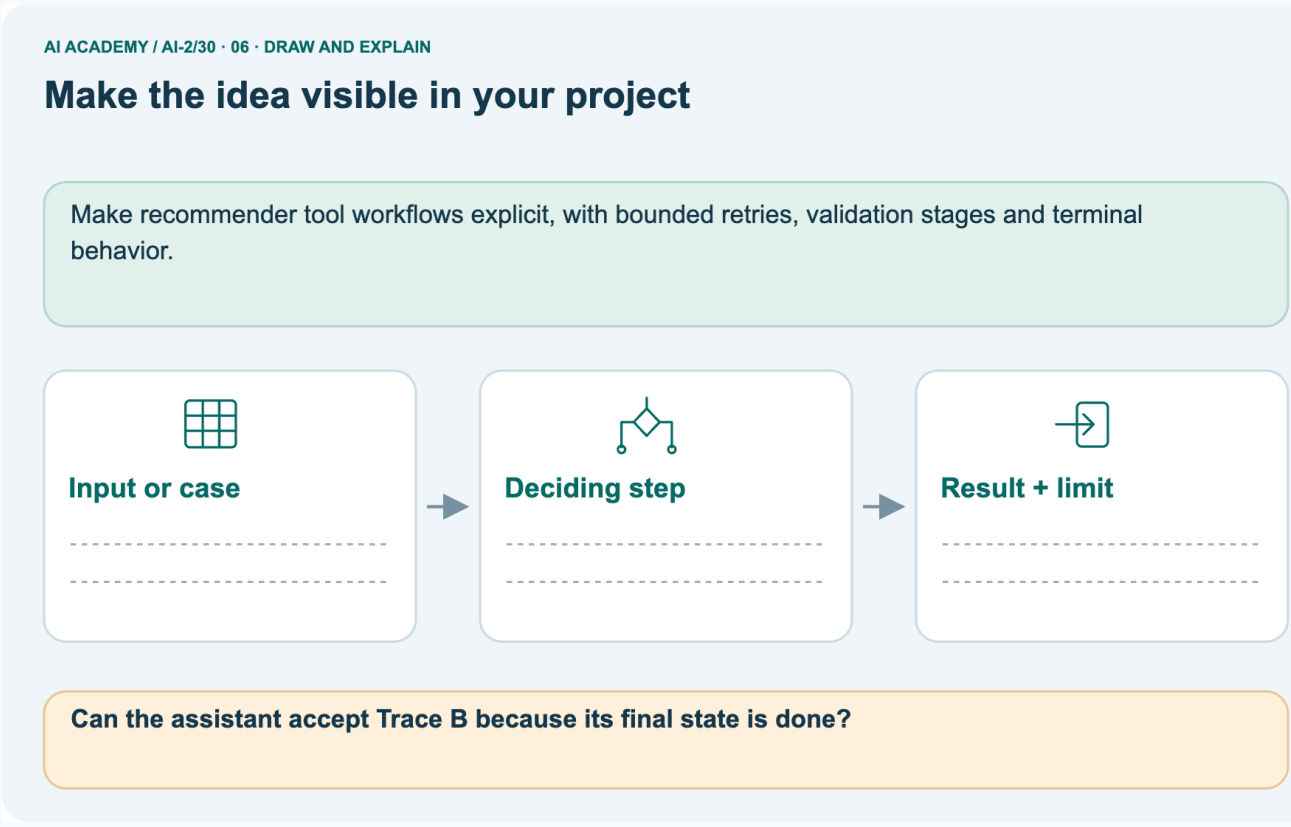

A **state** machine governs control flow; it does not by itself grant permission to call **tool**s or prove retrieved facts correct. Those are separate checks inside the relevant stages.

Limit: This toy machine has no retry path; do not invent one or assume real **agent**s always follow these **state**s.

> Explain the case, then point to a limit on the claim.

My picture explanation, deciding evidence and one limit

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Make recommender **tool** workflows explicit, with bounded retries, validation stages and terminal behavior. Draw your **input**, deciding step, result and limit.

Supported question: Can the assistant accept Trace B because its final **state** is done?

Draw your project trace and justify the deciding step using **evidence**.

My picture explanation, deciding evidence and one limit

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
