Accessibility and user feedback

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Grounded Learning Service

WORKBOOK · 1 OF 15

Recall and choose your starting point

> Record your starting explanation for Accessibility and user feedback before opening notes. Show any later correction separately.

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Human escalation workflows

Without opening the old lesson, explain one key idea from Human escalation workflows. Give an example and a mistake that the idea helps you avoid.

> **My remembered idea, example and correction**

Monitoring quality drift

Without opening the old lesson, explain one key idea from Monitoring quality drift. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Queues and asynchronous work

Without opening the old lesson, explain one key idea from Queues and asynchronous work. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Lesson reference for workbook practice

> Use this reference for the original W1–W3 and W5 exercises. The separately named independent case supplies its own changed facts; use those facts for that attempt before feedback.

Accessibility makes information and controls usable across stated needs. Feedback should describe the problem and recovery action without exposing sensitive details.

A form provides visible labels, keyboard access, associated error text and a non-colour status indicator. Test at zoom and with keyboard. Do not treat automated checks as a complete user evaluation.

Practise with fading help

> Complete the supported Accessibility and user feedback trace and record the first step you can explain without help.

Use W2: Trace the worked case for Accessibility and user feedback. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs	Procedure I chose	Middle steps	Result and check

> **The step I completed without help, and the hint I needed**

Individual reasoning check

> Check the proposed Accessibility and user feedback explanation against the supplied facts before discussing it.

Use the worked case for Accessibility and user feedback. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

WORKBOOK · 4 OF 15

Independent transfer case

> Write one first attempt at the reserved independent case before feedback. Repeated copies of that case refer to the same recorded attempt.

Independent case: Apply a new case independently

Submit is mouse-only; timeout replaces the entire form and loses **input**. Propose two concrete improvements.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

WORKBOOK · 5 OF 15

W1 Explain the mechanism

> Explain the mechanism. Apply the supplied Accessibility and user feedback facts and keep your reasoning.

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

My reasoning and evidence

WORKBOOK · 6 OF 15

W2 Trace the worked case

> Trace the worked case. Apply the supplied Accessibility and user feedback facts and keep your reasoning.

An invalid room is marked only by a red border; no text error or associated label is provided. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

W3 Audit the limit

> Audit the limit. Apply the supplied Accessibility and user feedback facts and keep your reasoning.

A report omits this qualification: Accessibility requirements need real interaction checks and appropriate user feedback; a checklist alone is incomplete.

Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

W4 Apply a new case independently

> Attempt before feedback. If this repeats the selected independent case, reuse that first attempt; otherwise keep a separate record. Apply a new case independently. Apply the supplied Accessibility and user feedback facts and keep your reasoning.

Submit is mouse-only; timeout replaces the entire form and loses **input**. Propose two concrete improvements.

My reasoning and evidence

WORKBOOK · 9 OF 15

W5 Design a revealing follow-up

> Design a revealing follow-up. Apply the supplied Accessibility and user feedback facts and keep your reasoning.

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

WORKBOOK · 10 OF 15

Project checkpoint and reflection

> Connect Accessibility and user feedback to Grounded Learning Service, identify a limit and choose the next useful test.

Add a labelled accessibility and user feedback **evidence** sheet to Grounded Learning Service. Show how you can explain the **mechanism** and terminology of accessibility and user feedback.

Use the supplied fictional case and keep its **input**s, intermediate steps, calculation or **prediction**, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

My project change, supporting evidence and remaining limit

WORKBOOK · 11 OF 15

Feedback, return check and learning record

> Record the first repaired step and a different case to revisit after a delay.

Evidence	My record
Worked alone / hint / model	
First step I repaired and why	
New case checked later; date and result	
What I can now explain without notes	
One remaining question	

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

WORKBOOK · 12 OF 15

Pictorial case practice: Accessibility and user feedback

> Make feedback accessible. An app marks an incomplete answer with a red circle only; a revision adds equivalent text and keyboard access. Explain the labelled step before checking the changed condition.

Make feedback accessible. An app marks an incomplete answer with a red circle only; a revision adds equivalent text and keyboard access.

New text: "More explanation needed". The next-action link is labelled and focusable; status is exposed to assistive technology.

AI ACADEMY / AI-6/28

Accessibility and user feedback

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Find the barrier

Colour alone may not communicate the status to every learner.

2. Provide meaning

Text and programmatic status explain the same result.

3. Test next action

A keyboard user can reach the labelled explanation link.

CHANGE ONE THING

Change the circle to orange without labels.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Explain what each text, keyboard and assistive-technology change adds to the feedback. Why does changing the red circle to orange alone not solve the communication barrier?

My picture-based explanation and changed-case prediction

Record the help used

Support used: alone / hint / worked example. This record is practice **evidence**.

Project connection: For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or **evidence** that makes the deciding step valid, so another team can review it.

WORKBOOK · 13 OF 15

Project portfolio milestone

> Keep this week's input, deciding step, result and limit together in the Grounded Learning Service record.

Project: Grounded Learning Service

Current milestone: Prepare the demonstration. Gather reproducible instructions, **evidence**, access checks and remaining limitations.

For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or **evidence** that makes the deciding step valid, so another team can review it.

Evidence to keep	My record
This week's input and deciding step	
Prediction and actual result (or labelled paper trace)	

Evidence to keep	My record
One change since the previous checkpoint and why	
One error or limit and the next test	

> **Explain what this week adds to your project. Reuse last week's record rather than starting again.**

WORKBOOK · 14 OF 15

Supported practice and learning evidence

> Try the supported questions before comparing with hints and feedback. Record what you repaired and the evidence you retained.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Make feedback accessible. An app marks an incomplete answer with a red circle only; a revision adds equivalent text and keyboard access.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? A keyboard user can reach the labelled explanation link.

> 1. Provide meaning

2. Find the barrier

3. Test next action

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Test next action A keyboard user can reach the labelled explanation link. Accessibility offers the same meaning and actions through usable channels.

Feedback should say what to improve, not merely show a mark.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Change the circle to orange without labels. Which conclusion is supported by the supplied facts?

1. This one example guarantees correct results for every future **input**.

2. The colour-only communication barrier remains.

3. We can decide the result without examining the changed **input** or the procedure.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: The colour-only communication barrier remains. A different hue supplies no textual or programmatic equivalent.

Repair a missing building block

Review Human escalation workflows (ai-6/27). Goal: Explain the **mechanism** and terminology of human escalation workflows. Short practice: Identify the exact service boundary in the bottle question.

What accurate information belongs in the supervisor handoff, and what remains unresolved if nobody is reachable?. Return to this week and explain what you changed.

Review Monitoring quality drift (ai-6/25). Goal: Explain the **mechanism** and terminology of monitoring quality drift. Short practice: Compute both clear and ambiguous slice rates for A and B.

Which slice weakens, and how should that slice be reported when no ambiguous questions are observed?. Return to this week and explain what you changed.

Review Queues and asynchronous work (ai-6/22). Goal: Explain the **mechanism** and terminology of queues and asynchronous work. Short practice: Explain what the queued J12 submission response proves and what it does not.

Which event permits succeeded status, and what status is honest after a worker crash?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

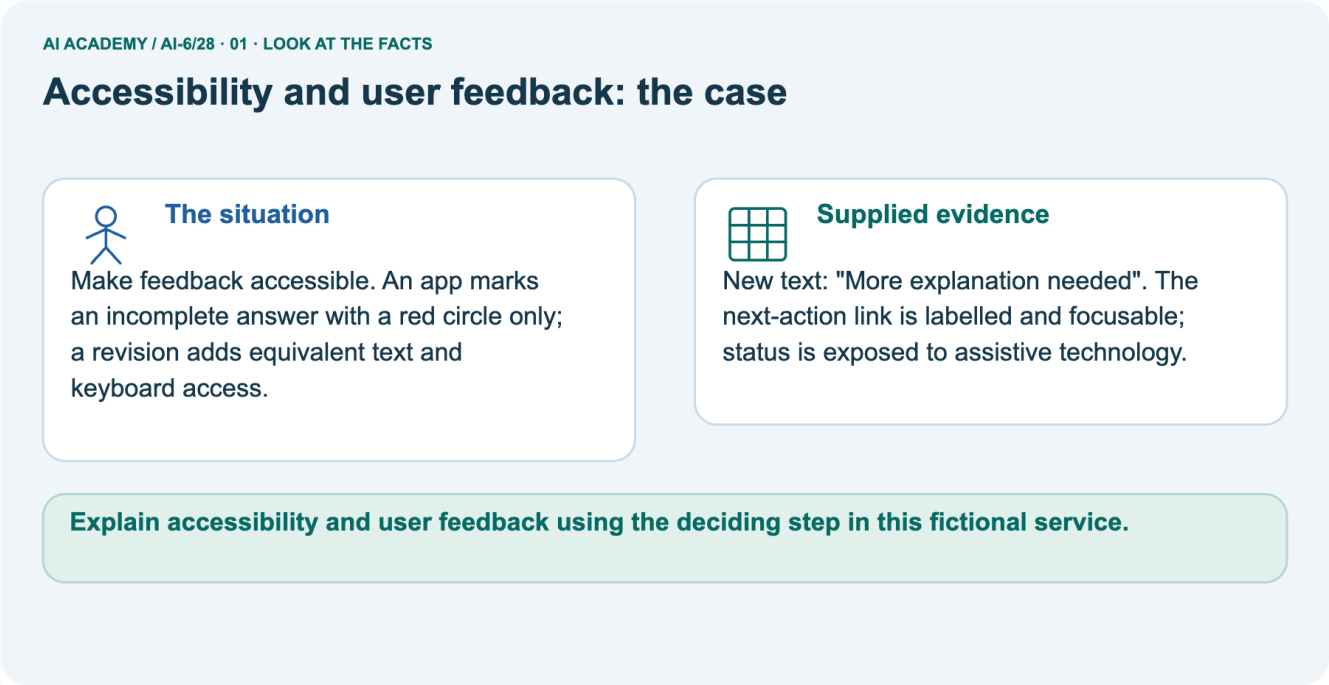

> **What I repaired, the evidence I kept and the next test**

WORKBOOK · 15 OF 15

Visual concept journey

> Explain each Accessibility and user feedback picture from its labels, then record a relevant limit.

01. Accessibility and user feedback: the case

Follow the labelled picture with the matching explanation. Open the vector diagram

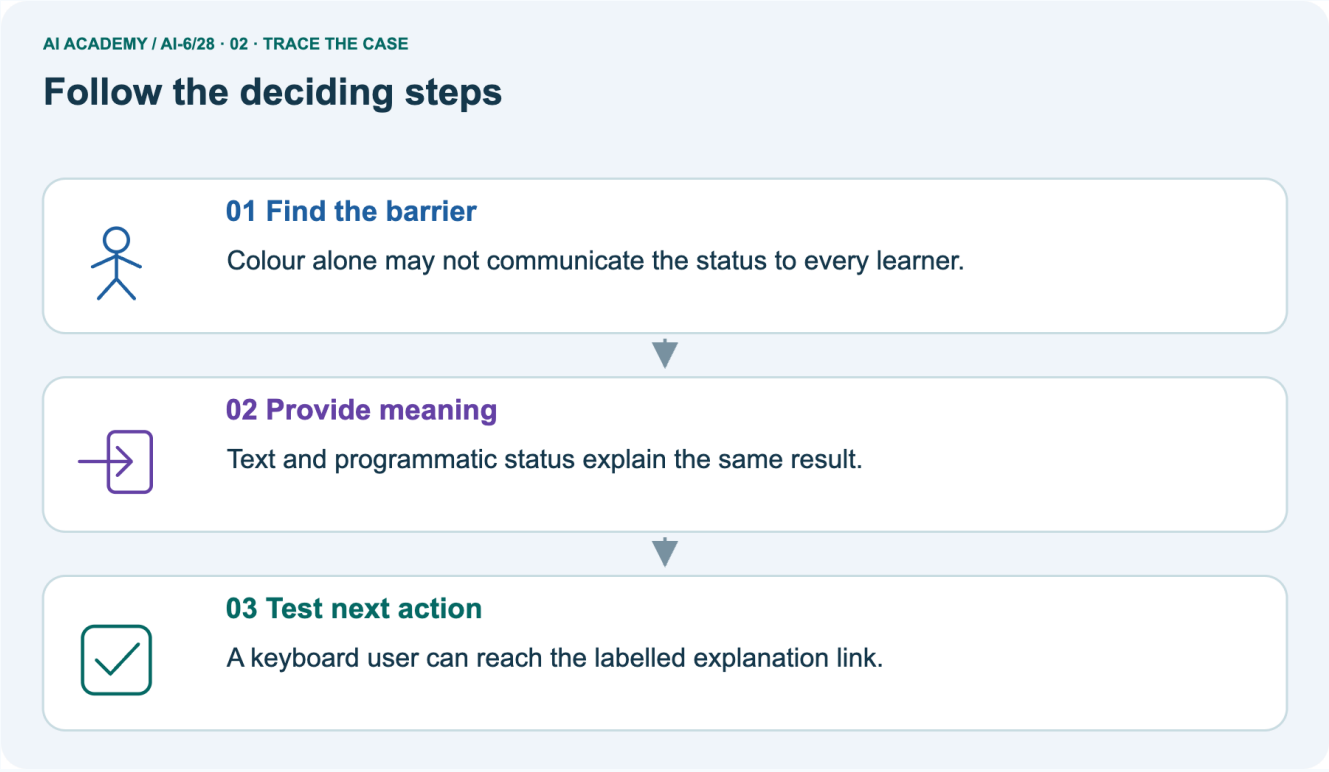

Make feedback accessible. An app marks an incomplete answer with a red circle only; a revision adds equivalent text and keyboard access. Supplied facts: New text: "More explanation needed".

The next-action link is labelled and focusable; status is exposed to assistive technology.

> Point to the given fact that matters most. Explain why it matters.

My picture explanation, deciding evidence and one limit

02. Follow the deciding steps

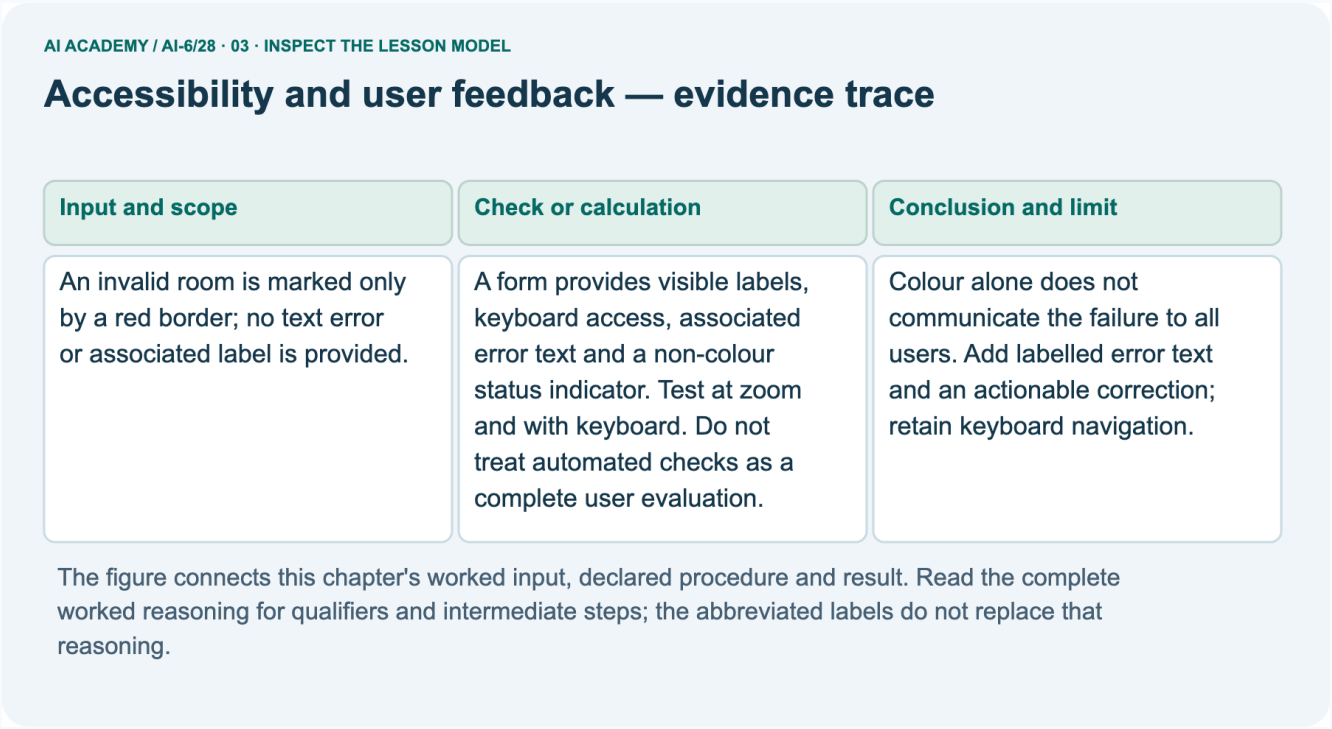

Follow the labelled picture with the matching explanation. Open the vector diagram

Find the barrier: Colour alone may not communicate the status to every learner. → Provide meaning: Text and programmatic status explain the same result. → Test next action: A keyboard user can reach the labelled explanation link.

> Point to each numbered stage and explain which recorded **input** it uses.

My picture explanation, deciding evidence and one limit

03. Accessibility and user feedback — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

Accessibility and user feedback — **evidence** trace.

An invalid room is marked only by a red border; no text error or associated label is provided. | A form provides visible labels, keyboard access, associated error text and a non-colour status indicator.

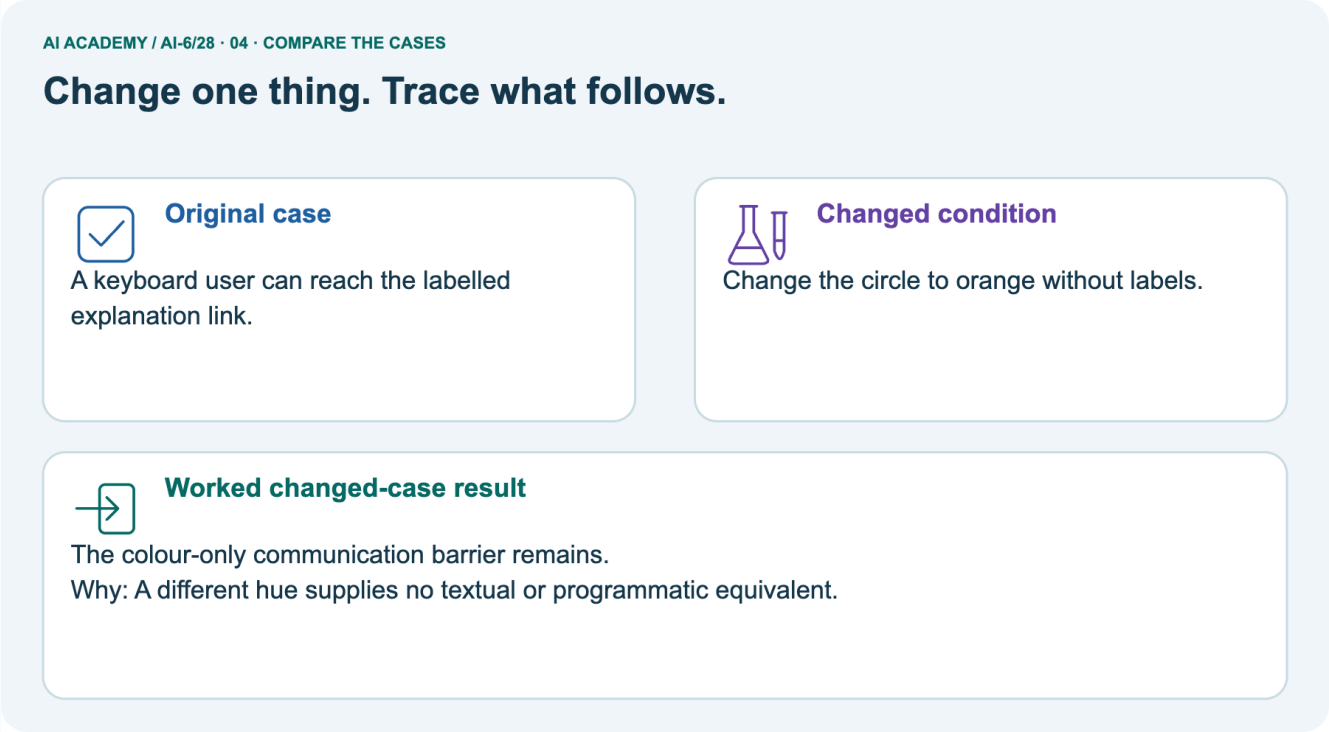

Test at zoom and with keyboard. Do not treat automated checks as a complete user evaluation. | Colour alone does not communicate the failure to all users.

Add labelled error text and an actionable correction; retain keyboard navigation.

> Read the labels and values. Explain the relationship the model shows.

My picture explanation, deciding evidence and one limit

04. Change one thing. Trace what follows.

Follow the labelled picture with the matching explanation. Open the vector diagram

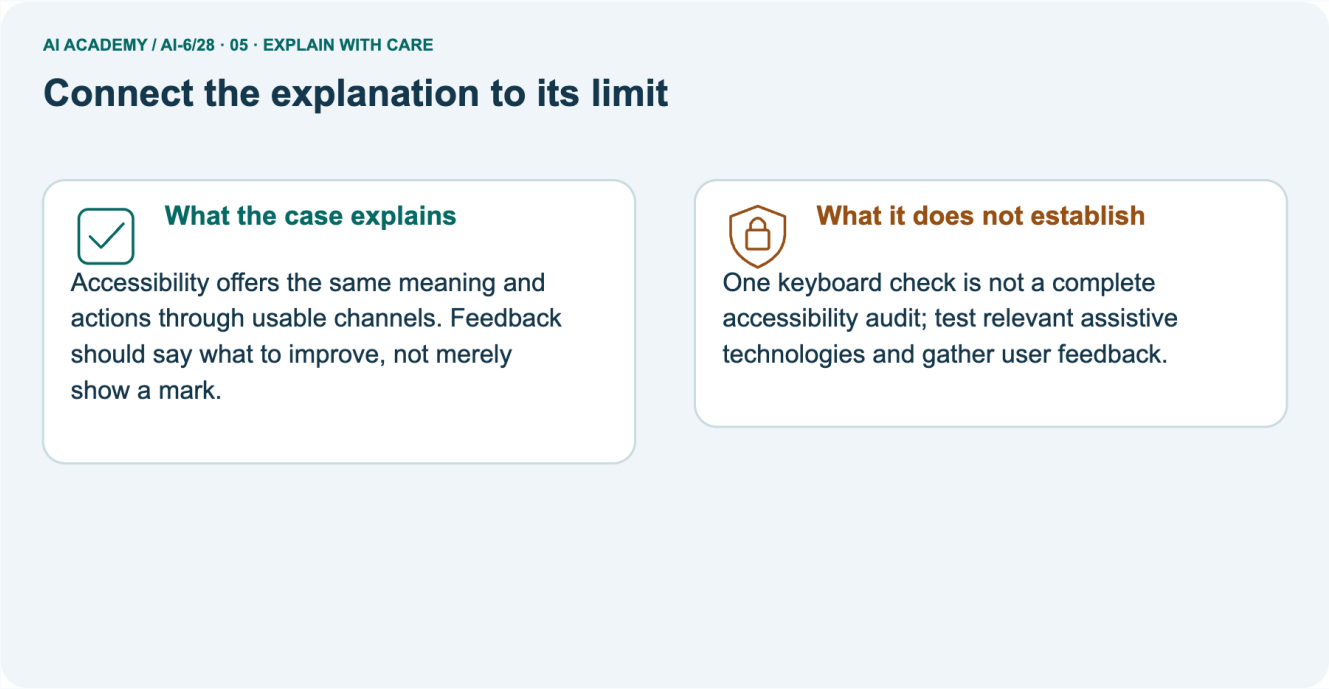

Original case: A keyboard user can reach the labelled explanation link. Changed condition: Change the circle to orange without labels. Expected result: The colour-only communication barrier remains.

Reason: A different hue supplies no textual or programmatic equivalent.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

My picture explanation, deciding evidence and one limit

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

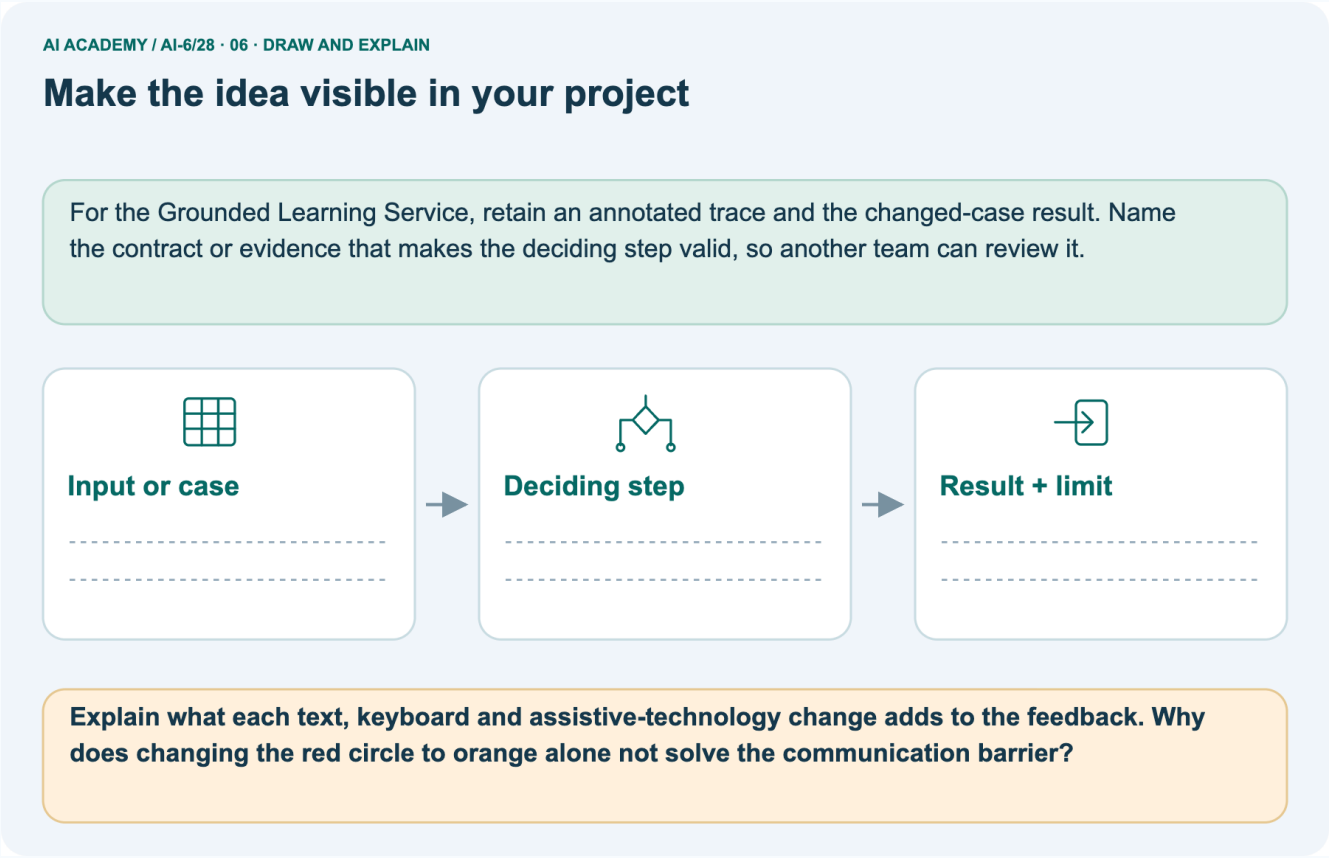

Accessibility offers the same meaning and actions through usable channels. Feedback should say what to improve, not merely show a mark.

Limit: One keyboard check is not a complete accessibility audit; test relevant assistive technologies and gather user feedback.

Explain the case, then point to a limit on the claim.

My picture explanation, deciding evidence and one limit

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or **evidence** that makes the deciding step valid, so another team can review it.

Draw your **input**, deciding step, result and limit. Supported question: Explain what each text, keyboard and assistive-technology change adds to the feedback.

Why does changing the red circle to orange alone not solve the communication barrier?

Draw your project trace and justify the deciding step using **evidence**.

My picture explanation, deciding evidence and one limit

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
