Similarity

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Helpful Classroom Sorter

Before you start

Week 8: a useful feature depends on the task.

Plan time to read, investigate and explain. Keep predictions separate from observations.

Your mission

> Start with the target: Calculate similarity using explicitly selected features and a stated scoring rule. Try the recall before opening notes.

Your learning target

I can calculate **similarity** using explicitly selected features and a stated scoring rule.

I can explain how a change in feature **weight**s can change the highest scoring item.

I can handle ties and missing features without claiming that a **similarity** score proves suitability.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Confidence Is Not Correctness. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Boundaries and 'Not Sure'. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Learning from Examples. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Recommendations often begin by comparing selected traits, not whole objects.

Your target

LEARNING TARGET A reader wants mystery and short books. A has both traits, B only mystery, C only short. Score one point per matching trait. The reader now says short is essential. Explain how the decision should change.

Learner name:

Readiness for the connected explanation

A system gives an item two matching-feature points. Does that mean a two-thirds chance that the item is suitable? What must you read first?

This week’s end goal

By the end, I can calculate **similarity** under a declared feature rule and explain a changed ranking.

STUDENT LESSON · 2 OF 18

Notice the evidence

> Investigate the supplied Similarity case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Look Closely Before You Explain

Pictures give clues; **evidence** tells us what the clues mean.

Start with this puzzle

MYSTERY A book can be nearest to another by reading level, topic, length, or mood; the chosen features and scales determine the neighbor.

What do you notice?

Name three visible details without explaining them yet.

Circle the detail most connected to the system's decision.

Name one detail that may be decoration or distraction.

Make a first **prediction** and state the clue that supports it.

My **observation**s, **prediction**, and **evidence**:

Thinking habit

GOOD THINKING A **prediction** can change when stronger **evidence** appears.

A closer explanation

Two objects can be alike in colour and different in shape. A computer comparison needs a precise answer to similar in what way. Select features, state how their values are compared, and define what a larger score means.

The result belongs to that rule; it is not a universal judgment about the objects.

Our target card is red, round and smooth. Three **candidate** cards are A: red, round, rough; B: blue, square, smooth; C: red, square, rough.

First give one point for each feature that exactly matches the target and zero for each known mismatch. Add the points. Colour, shape and texture are the only selected features.

This paper exercise uses complete category values with agreed spelling. Real records can be missing or uncertain. Do not silently treat an unknown texture as a known mismatch or copy a value from the target.

First identify whether the information supports the comparison.

STUDENT LESSON · 3 OF 18

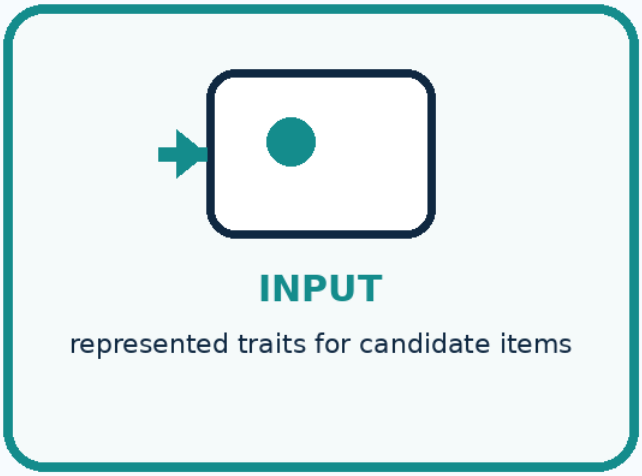

See how it works

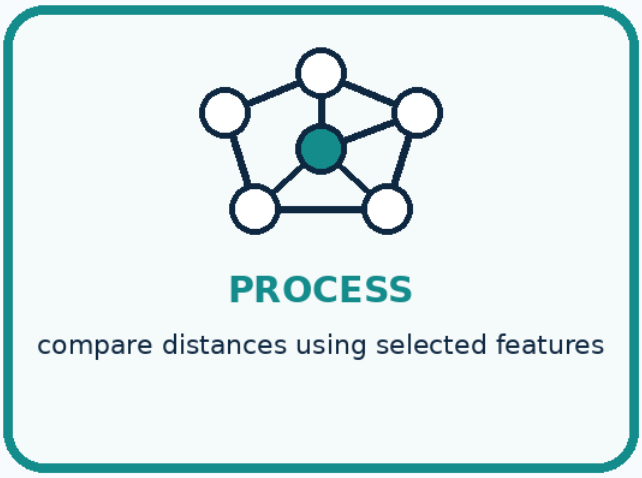

> Follow the mechanism for Similarity. Connect each labelled input, deciding step and result.

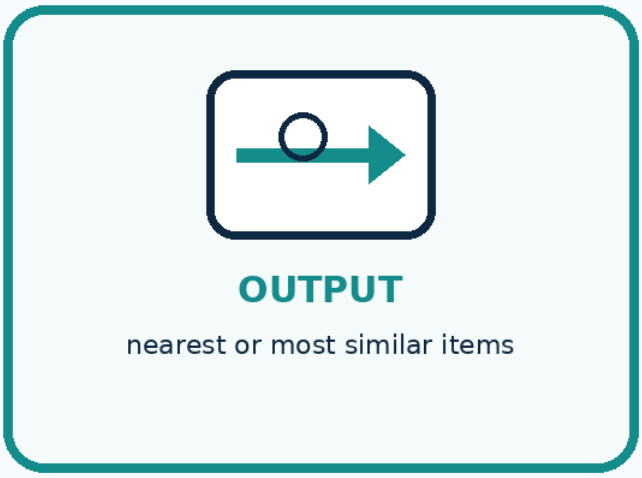

VISUAL MECHANISM

Input → Process → Output

Follow the information instead of imagining magic inside the machine.

INPUT represented traits for **candidate** items

PROCESS compare **distance**s using selected features

OUTPUT nearest or most similar items

Key idea

CORE IDEA Recommendations often begin by comparing selected traits, not whole objects.

How the mechanism works

UNDER THE HOOD **Similarity** is a designed measure over represented features. **Distance** changes with feature selection, scaling, **weight**ing, and missing values. Nearest does not mean identical, best, or fair.

Draw a fresh example with all three stages:

A closer explanation

Three features contribute to a score

CANDIDATE	MATCHES WITH TARGET	ONE POINT PER MATCH
A: red round rough	Colour and shape	2 points
B: blue square smooth	Texture only	1 point
C: red square rough	Colour only	1 point

The target is red, round and smooth. A has the largest score under equal weights. These points count selected feature matches; they are not probabilities or evidence that A suits every purpose.

A receives 1 for colour, 1 for shape and 0 for texture: total 2. B receives 0, 0 and 1: total 1. C receives 1, 0 and 0: total 1. Record the contributions, not just the totals, so another learner can check the computation.

A is most similar among these three **candidate**s under this rule. That sentence names the **candidate** set and the rule.

It does not say A is identical to the target, has the right texture or will be the best choice for a task that needs smooth material.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

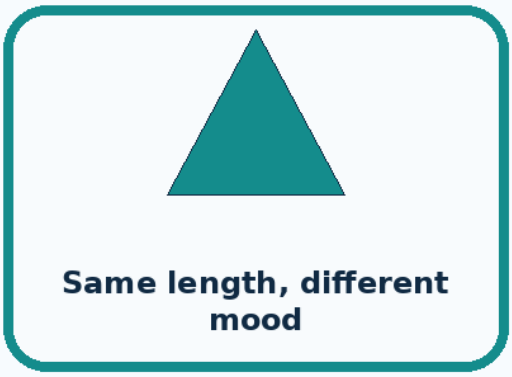

> Compare the supplied cases for Similarity. Identify the detail that changes the conclusion.

PICTURE GALLERY

Four Cases, Four Clues

Use the visual cue, then read the **evidence** carefully.

The case to investigate

CASE 1 — Same topic, different level Clue: close on topic. Meaning: far on reading level.

The case to investigate

CASE 2 — Same length, different mood Clue: close on length. Meaning: far on mood.

The case to investigate

CASE 3 — **Weight**ed topic Clue: topic counts more. Meaning: neighbor changes.

The case to investigate

CASE 4 — Missing feature Clue: **distance** incomplete. Meaning: need policy.

Keep this boundary clear

BOUNDARY **Similarity** is a tool designed for a purpose, not a universal property.

Which two pictures are easiest to confuse? What **evidence** separates them?

Change one thing in the pictured case

Change one thing

Change: Keep original **weight**s but change the target texture to rough.

Predicted result

Prediction: C scores 3; A and B each score 1.

Why the result follows

Reason: C now matches all three target features; the others lose their smooth-texture match.

STUDENT LESSON · 5 OF 18

Words that unlock the idea

> Use the vocabulary of Similarity to explain a concrete decision, rather than only memorising definitions.

VOCABULARY

Words You Can See and Use

The badge is a memory cue; the definition does the real thinking work.

Word	Meaning	My example
similarity	degree of likeness under chosen traits	
distance	numeric or ordered difference between representations	

Word	Meaning	My example
weight	importance assigned to a feature	
nearest neighbor	item with smallest chosen distance	

Misconception detective

> **Find the unsupported claim**
>
> CLAIM TO REPAIR The nearest item is automatically the best recommendation.

Use one vocabulary word and one piece of **evidence** to repair it:

> WORD POWER A strong definition helps you decide something in a new case.

Words used in the closer explanation

Word	Meaning
Feature match	Agreement between two recorded values for a selected feature
Tie	Two or more candidates sharing the same score
Candidate	An item being considered in a comparison

STUDENT LESSON · 6 OF 18

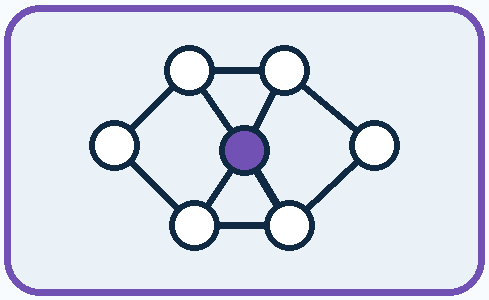

Follow a worked example

> Follow the worked trace for Similarity, predict a step, then compare with its explanation.

WORKED EXAMPLE

Watch the Reasoning, Not Just the Answer

Every step connects a claim to observable **evidence**.

The case to investigate

CASE A book can be nearest to another by reading level, topic, length, or mood; the chosen features and scales determine the neighbor.

Step 1

STEP 1 — OBSERVE represented traits for **candidate** items

Step 2

STEP 2 — TRACE compare **distance**s using selected features

Step 3

STEP 3 — CONCLUDE nearest or most similar items

Model answer

MODEL REASONING Plot items consistently, define how each axis is measured, and compare **distance**s. A different axis or **weight** can change the nearest item without any item moving in the real world.

A claim to avoid

DO NOT OVERCLAIM **Similarity** is a tool designed for a purpose, not a universal property.

What new **evidence** could change this answer?

A closer explanation

Candidate	Colour and shape points	Texture worth 3 points	New total
A	1 + 1	0	2
B	0 + 0	3	3
C	1 + 0	0	1

Worked explanation · Similarity

Suppose texture matters more for the stated comparison. Keep colour and shape worth one point each, but give three points for a texture match. B now scores 3 and becomes the unique highest scoring **candidate**.

No card changed; the rule changed. Record both versions rather than overwriting the first result.

Worked explanation · Similarity

Weights express priorities in this designed rule. They need a reason connected to the task and should be set before inspecting the final evaluation results. A convenient winner does not justify a **weight**.

If smooth texture is required without exception, use a requirement check rather than hoping a **weight**ed score will always enforce it.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Similarity

A fictional craft-card matcher compares each **candidate** with a target.

The facts we will use

Supplied facts

Target: red, round, smooth. A: red,square,smooth. B: blue,round,smooth. C: red,round,rough.

Supplied facts

Initially each exact **feature match** scores 1; return all highest scorers.

Supplied facts

For the second comparison only, colour and shape matches score 1 each and a texture match scores 3.

AI ACADEMY / AI-1/19

Declared weights change similarity

	All weights 1	Texture weight 3
A	2	4
B	2	4
C	2	2

Read a cell using both its row and column labels.

Follow the labelled picture with the matching explanation. Open the vector diagram

AI ACADEMY / AI-1/19

Similarity

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Target features

Compare colour, shape and texture separately.

2. Equal weights

A matches colour+texture=2; B shape+texture=2; C colour+shape=2.

3. Initial result

All three tie at 2.

4. Texture weight 3

New scores A=4, B=4, C=2; A and B remain tied.

CHANGE ONE THING

Keep original weights but change the target texture to rough.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Target features	Compare colour, shape and texture separately.
2. Equal weights	A matches colour+texture=2; B shape+texture=2; C colour+shape=2.
3. Initial result	All three tie at 2.
4. Texture weight 3	New scores A=4, B=4, C=2; A and B remain tied.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

Similarity is defined by the chosen representation and **weight**s. The cards did not change when texture gained **weight**; the comparison rule did. Two high scores need not mean two identical cards.

A complete rule also says what to do with tied scores, rather than choosing whichever appears first by accident.

What this example does not establish

Keep the stated limit

A high feature-match score does not establish usefulness or suitability beyond the features represented.

Keep the stated limit

Read the labelled picture: Point to the matches supporting C's new score and explain why there is no tie.

Keep the stated limit

Change one thing: Keep original **weight**s but change the target texture to rough. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Similarity claim and explain a repair using the supplied evidence.

COMPARE

Same Result, Different Reason

A comparison helps reveal the true concept boundary.

Case	Evidence	What it shows
Same topic, different level	close on topic	far on reading level
Same length, different mood	close on length	far on mood
Weighted topic	topic counts more	neighbor changes
Missing feature	distance incomplete	need policy

Repair two tempting claims

> **Challenge claim A**
>
> CLAIM A The nearest item is automatically the best recommendation.

Repair:

> **Challenge claim B**
>
> CLAIM B Two items have one permanent **similarity** score.

Repair:

> **A frame for explaining**
>
> STRONG ANSWER FRAME I claim _____ because the **evidence** shows _____. The **process** is _____. One limit is _____.

A closer explanation

Check the claim against the facts

Feature selection leaves information out. A card comparison ignores size and material unless those are included. A book comparison using topic and format may ignore language or reading difficulty.

More features are not automatically better: irrelevant or repeatedly copied features can change a score without improving the decision.

Check the claim against the facts

A useful report states the purpose, **candidate**s, selected features, **weight**s, missing-value policy and tie policy. Check the proposed method on relevant cases that include ties and imperfect records.

If it supports a recommendation, keep the explanation limited to what was actually compared.

A learner says A is objectively the closest card because it won the original comparison. Use the changed texture weight and the added candidate D to explain why the claim needs qualification

---

STUDENT LESSON · 8 OF 18

Practise together

> Practise Similarity with support, then explain the deciding step in your own words.

GUIDED PRACTICE

Try It, Check It, Explain It

Use support now so you can succeed independently later.

Explain how the picture story demonstrates this idea: Recommendations often begin by comparing selected traits, not whole objects.

Use a fresh example to explain **similarity**.

Trace a new **input** → **process** → **output** example.

Find and repair the error in: Two items have one permanent **similarity** score.

Invent one edge case and name the safe response.

Check with a partner

PARTNER CHECK Point to the **evidence**. Do not accept an answer that only repeats the vocabulary word.

A closer explanation

Add **candidate** D: blue, round, smooth. Under the original one-point rule, D scores 2, tying A. Our policy is to return every **candidate** with the largest score, so the result is A and D.

Returning only the first row would silently introduce a different policy.

> **Using A, B, C and D, calculate the four totals under the original rule and then under texture worth 3. Return every highest scoring candidate each time. Explain which matches caused the change and why neither result establishes a probability of suitability**

If a required comparison value is missing, our classroom policy pauses the final ranking and requests the missing value. Retain the known contributions and the reason for the pause.

A different policy could be designed, but it would need to be explicit and checked for its effects. Unknown and different are separate states.

Practise with less help: Explain a changed winner

Use workbook W2 for the connected example "**Similarity** and selected features". First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for **Similarity** and selected features. Proposed explanation: "Similar has one objective meaning for every task". Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Point to the matches supporting C's new score and explain why there is no tie.

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

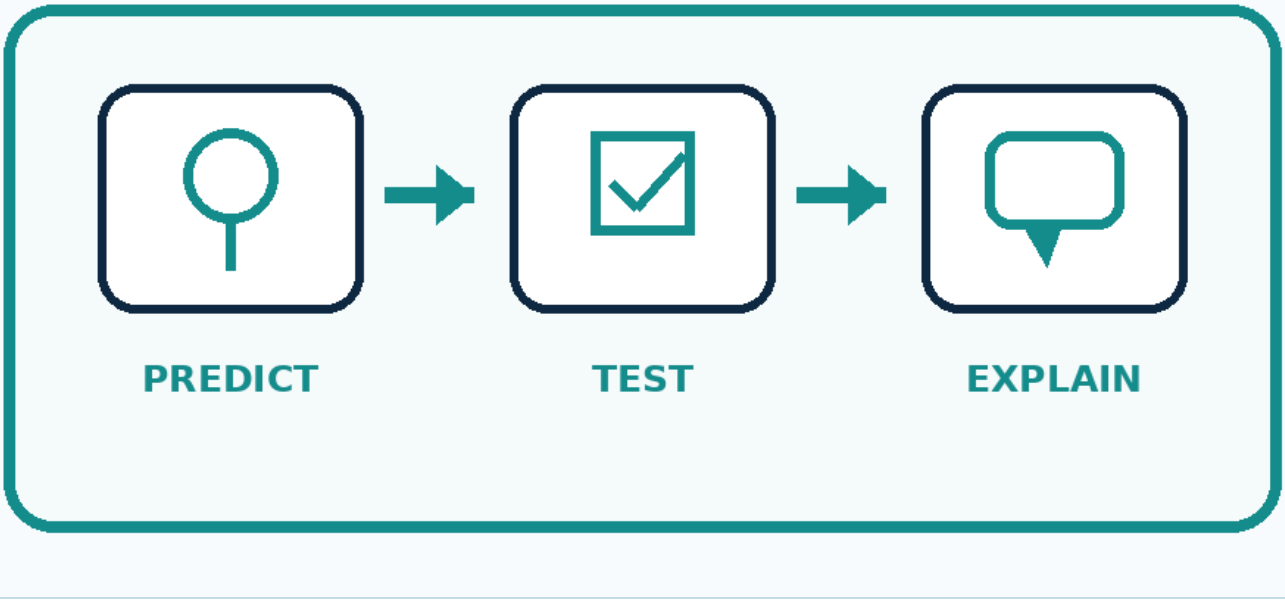

Run the investigation

> Investigate Similarity. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EXPLORER LAB

Trait Map Neighbors

Predict first, test honestly, and explain what the **evidence** means.

1. Predict

State your **prediction** before the result is known.

2. Investigate

Complete the task: Create a trait map and find two different 'nearest' items.

3. Compare cases

Keep a normal case and an edge case clearly separated.

4. Record honestly

Record what happened—even when it does not match your **prediction**.

5. Explain and plan the next test

Explain the result, one limitation, and the next useful test.

Case	Prediction	Observed result	What it means
Normal			
Edge			

Use a fresh case after support

INDEPENDENCE After support is removed, repeat the proof with a fresh case.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

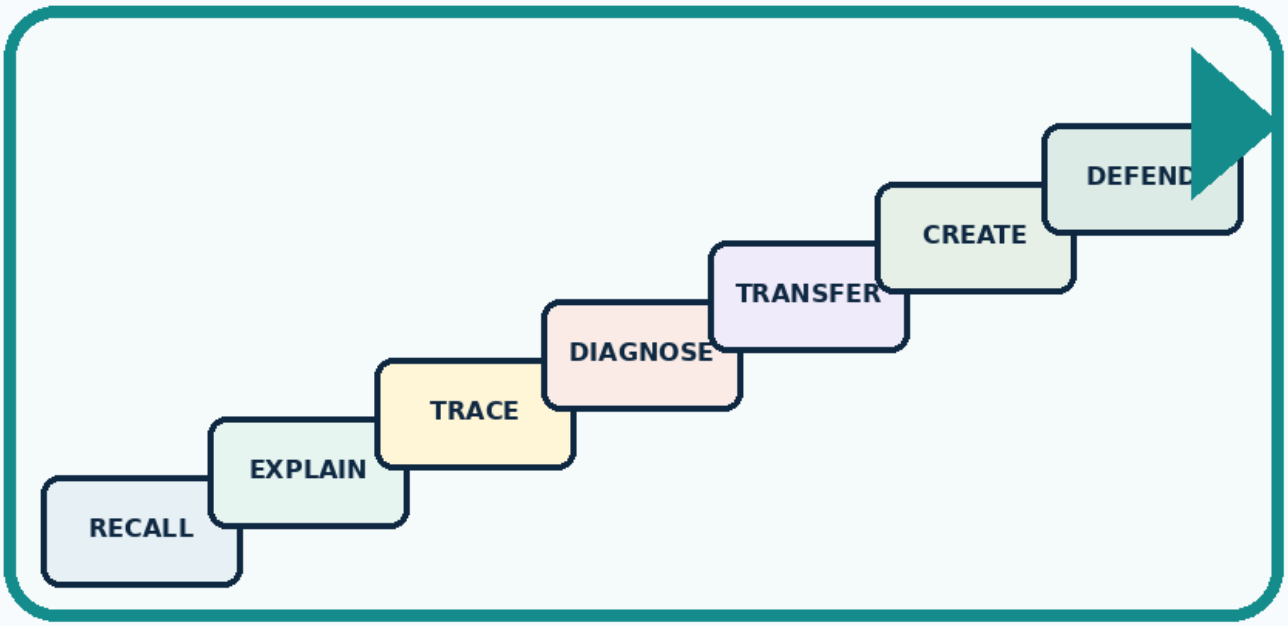

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Similarity. Explain why each step is justified.

PRACTICE LADDER

Climb from Recall to Defense

Each step asks for a stronger kind of understanding.

RECALL Define **similarity**.

EXPLAIN Recommendations often begin by comparing selected traits, not whole objects.

TRACE Show the **input**, **process**, and **output**.

DIAGNOSE Repair: The nearest item is automatically the best recommendation.

TRANSFER Apply the idea to a new home or classroom case.

CREATE Design one revealing test.

DEFEND Give a claim, **evidence**, **mechanism**, limit, and safe action.

When to retry

RETRY RULE A coached answer becomes mastery only after you solve a different case independently.

STUDENT LESSON · 11 OF 18

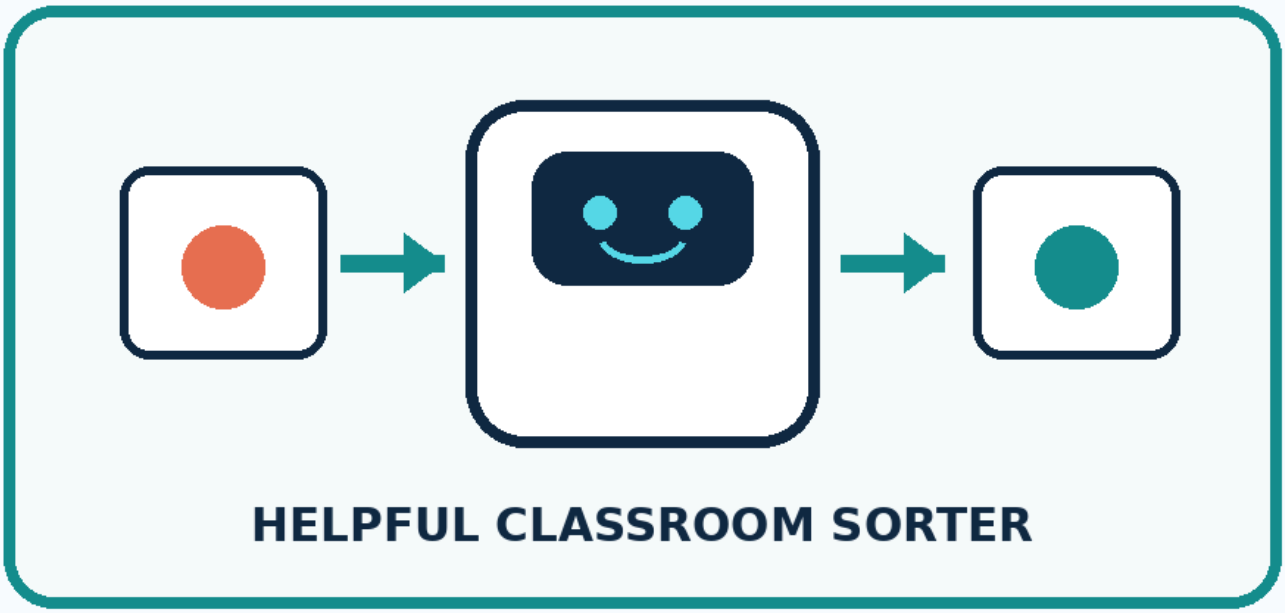

Connect your project

> Apply this week's idea to Helpful Classroom Sorter. Keep an annotated decision and the evidence supporting it.

PROJECT

Helpful Classroom Sorter

Build one coherent system across the year, one **evidence**-based decision at a time.

THIS WEEK'S CHECKPOINT Choose two useful item traits for **similarity**-based sorting and explain why each deserves its **weight**.

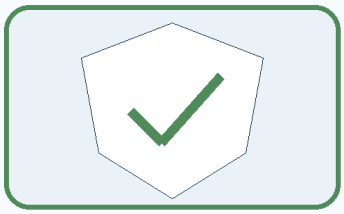

What real classroom need does this serve?

What information is necessary—and what should stay private?

What happens inside the **process**?

What normal and edge cases will you test?

When should it say not sure or ask a person?

Responsible design

RESPONSIBLE DESIGN **Similarity** is a tool designed for a purpose, not a universal property.

My project decision:

Evidence for your project

Declare sorter **similarity** features, **weight**s and tie behavior before using scores to explain recommendations.

STUDENT LESSON · 12 OF 18

Show what you know

> Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

MASTERY

Fresh-Case Independent Proof

Complete this after teaching and guided practice have ended.

What success looks like

REQUIRED PROOF Create a two-trait map and show how changing one trait **weight**

produces a different nearest item.

- ☐ Name or draw the fresh case.
- ☐ Trace **input**, **process**, and **output**.
- ☐ State the conclusion and strongest **evidence**.
- ☐ Name one limit, failure, missing clue, or fairness/privacy concern.
- ☐ Explain one safe next action or improvement.

Independent **evidence**:

Check your explanation

SELF-CHECK Plot items consistently, define how each axis is measured, and compare **distance**s. A different axis or **weight** can change the nearest item without any item moving in the real world.

My level: ☐ Not yet ☐ With one hint ☐ Independently ☐ I can teach it

Connect to the next lesson

NEXT BRIDGE Carry today's **evidence** habit into: Recommendations.

STUDENT LESSON · 13 OF 18

Study a complete case

Revisit the complete Similarity case for supported practice. Repeated examples do not become fresh assessments.

Week 19 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

Book A has animals and adventure; B has animals only; C has neither. A reader wants both traits.

The question

Rank by number of matching traits.

Worked explanation

A scores 2, B 1, C 0. Ranking depends on the chosen traits; it is not a universal measure of book quality.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Count matching book traits

Evidence or stage	Value or result
Book A	2
Book B	1

Evidence or stage	Value or result
Book C	0

Book A has animals and adventure; B has animals only; C has neither. A reader wants both traits.

Rank by number of matching traits.

A scores 2, B 1, C 0. Ranking depends on the chosen traits; it is not a universal measure of book quality.

STUDENT LESSON · 14 OF 18

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Transfer the comparison to books

A target book has topic space, format comic and language English. **Candidate**s are J: space, prose, English; K: animals, comic, English; L: space, comic, Spanish. Give 1 point per exact match and return all tied highest scorers.

Then make topic worth 3 points while keeping the other **weight**s at 1. Report both sets of totals and winners. Explain why a winner may still fail a requirement to read English.

> **My independent explanation, trace and limits**

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 19 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

> Compare books using topic only. Book A is about space with a red cover; B is about space with a blue cover; C is about dogs with a red cover. Which matches A best?

My answer, with a trace, calculation or supporting **evidence**

> **Write or draw your reasoning and evidence.**

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

> **Write or draw your reasoning and evidence.**

Connect to your project

Choose two useful item traits for **similarity**-based sorting and explain why each deserves its **weight**.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

A reader wants mystery and short books. A has both traits, B only mystery, C only short. Score one point per matching trait. The reader now says short is essential. Explain how the decision should change.

Explain the mechanism, evidence and one limit.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Similarity, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: A fictional craft-card matcher compares each **candidate** with a target.

By the end, I can	How I will show it
Calculate similarity using explicitly selected features and a stated scoring rule	Explain the deciding step, show a trace or test, and state one limit.
Explain how a change in feature weights can change the highest scoring item	Explain the deciding step, show a trace or test, and state one limit.
Handle ties and missing features without claiming that a similarity score proves suitability	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Similarity without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Calculate **similarity** using explicitly selected features and a stated scoring rule

> **My deciding step, evidence and one remaining question**

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A fictional craft-card matcher compares each **candidate** with a target.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? New scores A=4, B=4, C=2; A and B remain tied.

1. Target features

2. Initial result

3. Texture **weight** 3

4. Equal **weight**s

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Texture **weight** 3 New scores A=4, B=4, C=2; A and B remain tied. **Similarity** is defined by the chosen representation and **weight**s.

The cards did not change when texture gained **weight**; the comparison rule did. Two high scores need not mean two identical cards.

A complete rule also says what to do with tied scores, rather than choosing whichever appears first by accident.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Keep original **weight**s but change the target texture to rough. Which conclusion is supported by the supplied facts?

1. We can decide the result without examining the changed **input** or the procedure.

2. This one example guarantees correct results for every future **input**.

3. C scores 3; A and B each score 1.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: C scores 3; A and B each score 1. C now matches all three target features; the others lose their smooth-texture match.

Repair a missing building block

Review Confidence Is Not Correctness (ai-1/18). Goal: Distinguish a confidence claim from **evidence** that a **prediction** was correct. Short practice: Was the unknown label guaranteed correct because its confidence was **80%**?.

Return to this week and explain what you changed.

Review Boundaries and 'Not Sure' (ai-1/16). Goal: Identify a specific source of uncertainty and explain how it affects a **prediction**. Short practice: Which original block needs a better width before accepting or rejecting it?

What should the reviewer do?. Return to this week and explain what you changed.

Review Learning from Examples (ai-1/13). Goal: Fit a threshold by tracing **prediction**s and counting disagreements for every **candidate**. Short practice: Which new measured length would reveal disagreement between the **candidate**s?.

Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

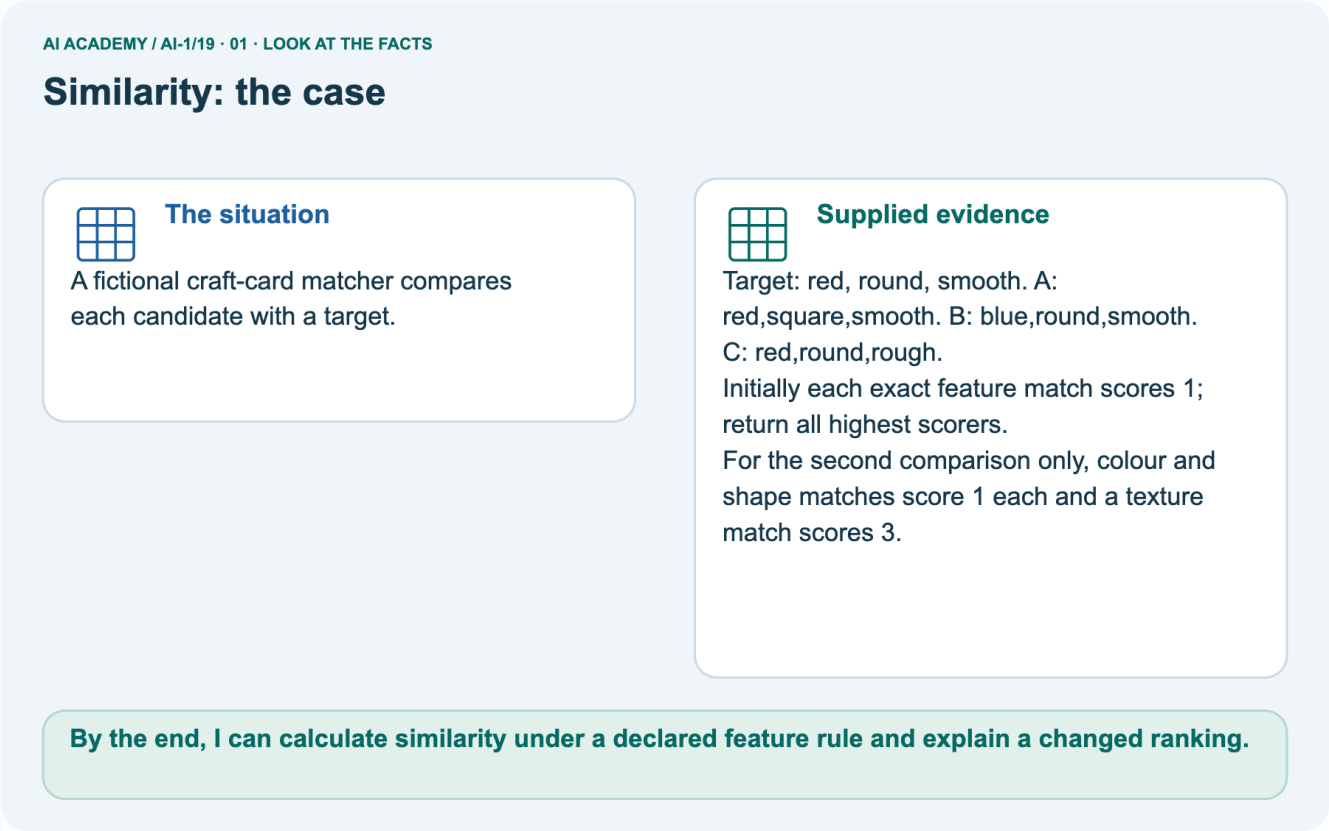

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Similarity graphic using its labels, deciding evidence and relevant limitation.

01. Similarity: the case

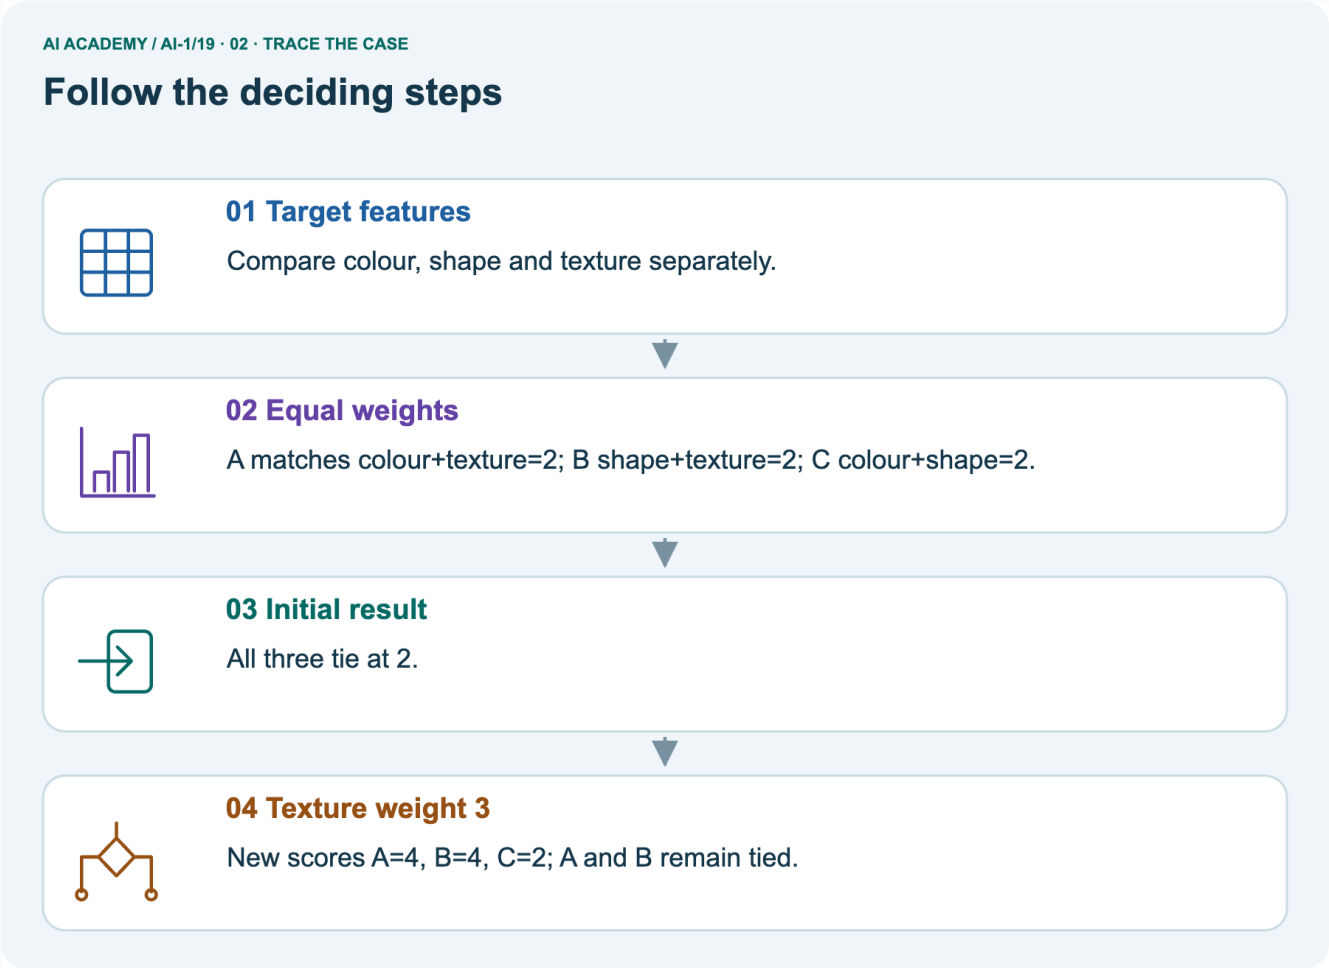

Follow the labelled picture with the matching explanation. Open the vector diagram

A fictional craft-card matcher compares each **candidate** with a target. Supplied facts: Target: red, round, smooth. A: red,square,smooth. B: blue,round,smooth. C: red,round,rough.

Initially each exact **feature match** scores 1; return all highest scorers. For the second comparison only, colour and shape matches score 1 each and a texture match scores 3.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

Follow the labelled picture with the matching explanation. Open the vector diagram

Target features: Compare colour, shape and texture separately. → Equal **weight**s: A matches colour+texture=2; B shape+texture=2; C colour+shape=2. → Initial result: All three tie at 2. → Texture **weight** 3: New scores A=4, B=4, C=2; A and B remain tied.

> Point to each numbered stage and explain which recorded **input** it uses.

03. Declared weights change similarity

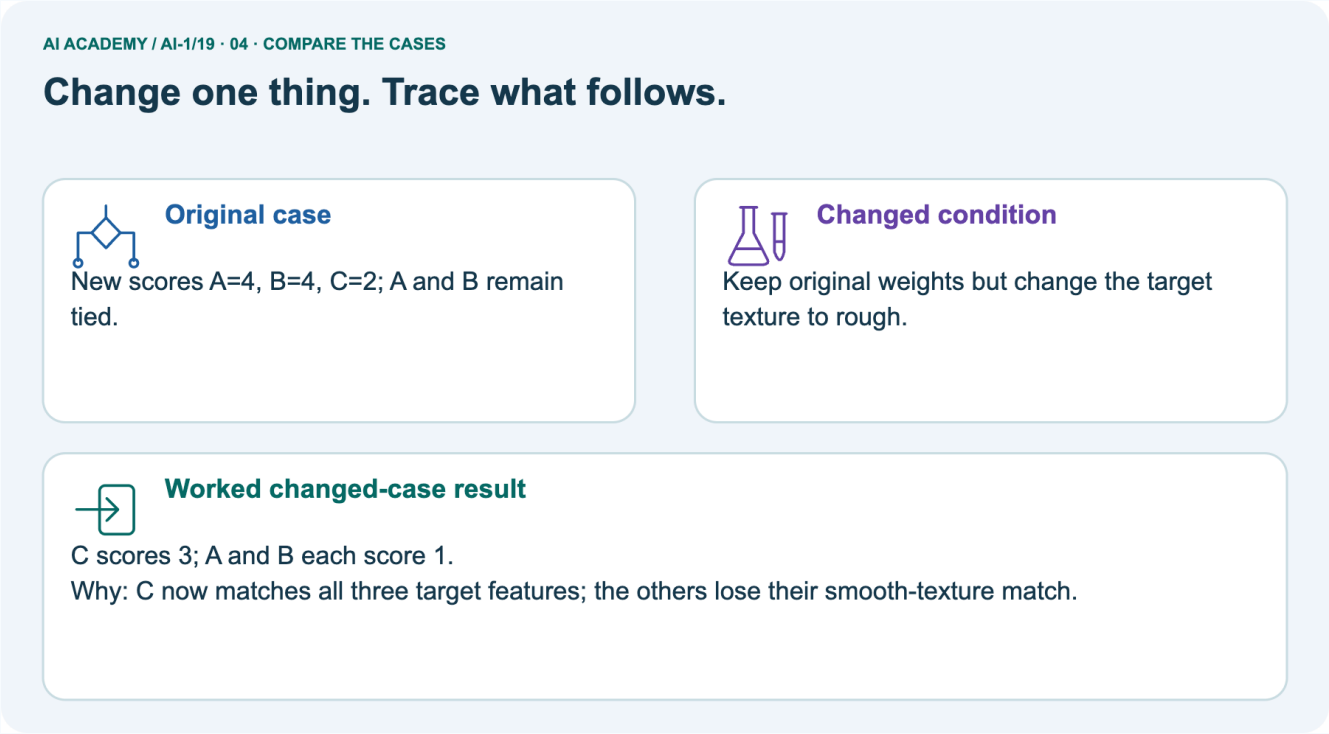

Follow the labelled picture with the matching explanation. Open the vector diagram

Declared **weight**s change **similarity**. A: All **weight**s 1 = 2, Texture **weight** 3 = 4. B: All **weight**s 1 = 2, Texture **weight** 3 = 4. C: All **weight**s 1 = 2, Texture **weight** 3 = 2.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

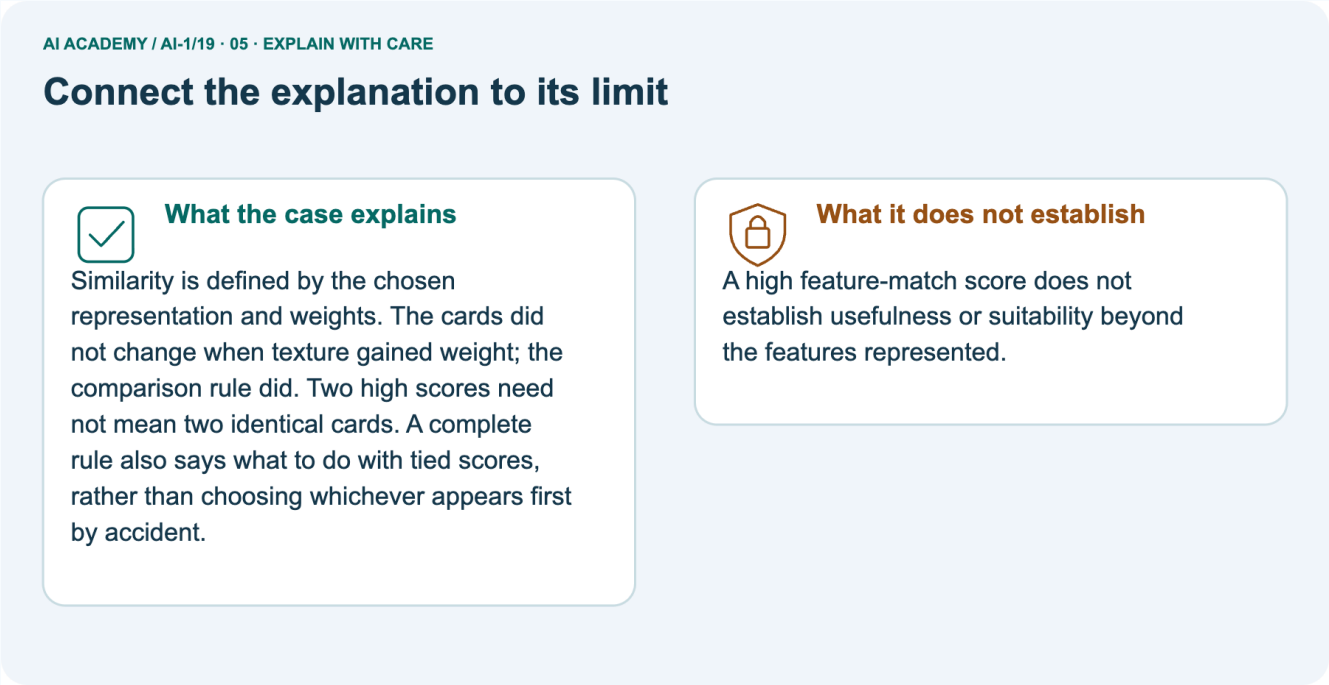

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: New scores A=4, B=4, C=2; A and B remain tied. Changed condition: Keep original **weight**s but change the target texture to rough. Expected result: C scores 3; A and B each score 1.

Reason: C now matches all three target features; the others lose their smooth-texture match.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

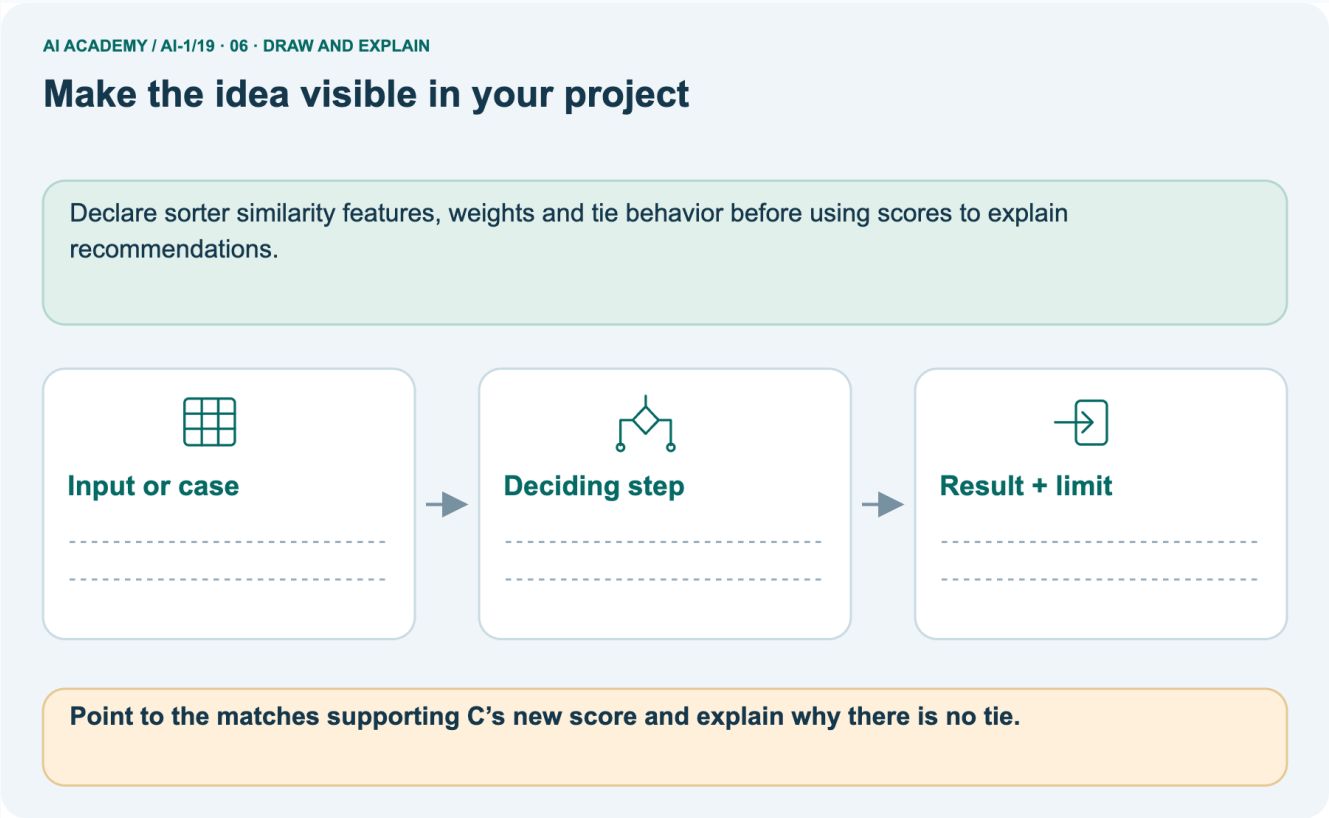

Follow the labelled picture with the matching explanation. Open the vector diagram

Similarity is defined by the chosen representation and **weight**s. The cards did not change when texture gained **weight**; the comparison rule did. Two high scores need not mean two identical cards.

A complete rule also says what to do with tied scores, rather than choosing whichever appears first by accident. Limit: A high feature-match score does not establish usefulness or suitability beyond the features represented.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Declare sorter **similarity** features, **weight**s and tie behavior before using scores to explain recommendations. Draw your **input**, deciding step, result and limit.

Supported question: Point to the matches supporting C's new score and explain why there is no tie.

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
