AI ACADEMY · LEVEL 2 · GRADE 7 · WEEK 8 · STUDENT LESSON

Operational Labels

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Transparent Book Recommender

Before you start

Week 3: boundary operators have exact meanings.

Plan time to read, investigate and explain. Keep predictions separate from observations.

STUDENT LESSON · 1 OF 18

Your mission

> Start with the target: Apply a category definition using explicit evidence and boundary rules. Try the recall before opening notes.

Your learning target

I can apply a **category** definition using explicit **evidence** and boundary rules.

I can distinguish a known failure from information that is missing or unreadable.

I can use **disagreement** to improve a **label**ling guide without mistaking **agreement** for truth.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Rows Columns and Data Types. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Loops and Stopping. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Decompose a Goal. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Week 8: Operational **Label**s

A **label** is reliable only when different people can apply its definition consistently.

THINKER MISSION

Write and test definitions for ‘easy book’ and ‘hard book.’

Thinker name and date:

Write or draw your reasoning and evidence.

Readiness for the connected explanation

A transcript leaves out an unclear word. Why should a later system not simply treat that missing word as a known value?

This week’s end goal

By the end, I can resolve **label disagreement** by checking an **operational definition** at equality.

STUDENT LESSON · 2 OF 18

Notice the evidence

Investigate the supplied Operational Labels case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Notice → Predict → Explain

Begin with visible **evidence**. Do not explain more than the picture and information support.

Start with this puzzle

MYSTERY

The learners must use operational **label**s to solve a problem. What information do they have? What decision or calculation do they make? What would count as **evidence** that it worked?

Three **observation**s (what you can point to):

> **Write or draw your reasoning and evidence.**

My **prediction** and the clue supporting it:

> **Write or draw your reasoning and evidence.**

A closer explanation

Two students are sorting fictional event cards for a classroom calendar. Their first instruction is Put the good cards together. Mina calls a colourful card good. Theo calls a plain card good because its room is easy to read.

They disagree even though both followed a reasonable interpretation of the word good.

A **category** is useful for a task when people can tell what **evidence** makes an example belong to it. An **operational definition** states the **observation**s or checks to perform.

For this paper exercise, we will check two printed fields: an event day and a room code. The task is to check the record against a classroom policy, not to judge the quality of the event or the person who wrote it.

Labels depend on the definition in use. A model fitted to **label**s can learn the distinctions those **label**s encode, including mistakes and inconsistencies.

Before asking a model to copy a **label**, ask whether people have a clear, useful guide for assigning it.

STUDENT LESSON · 3 OF 18

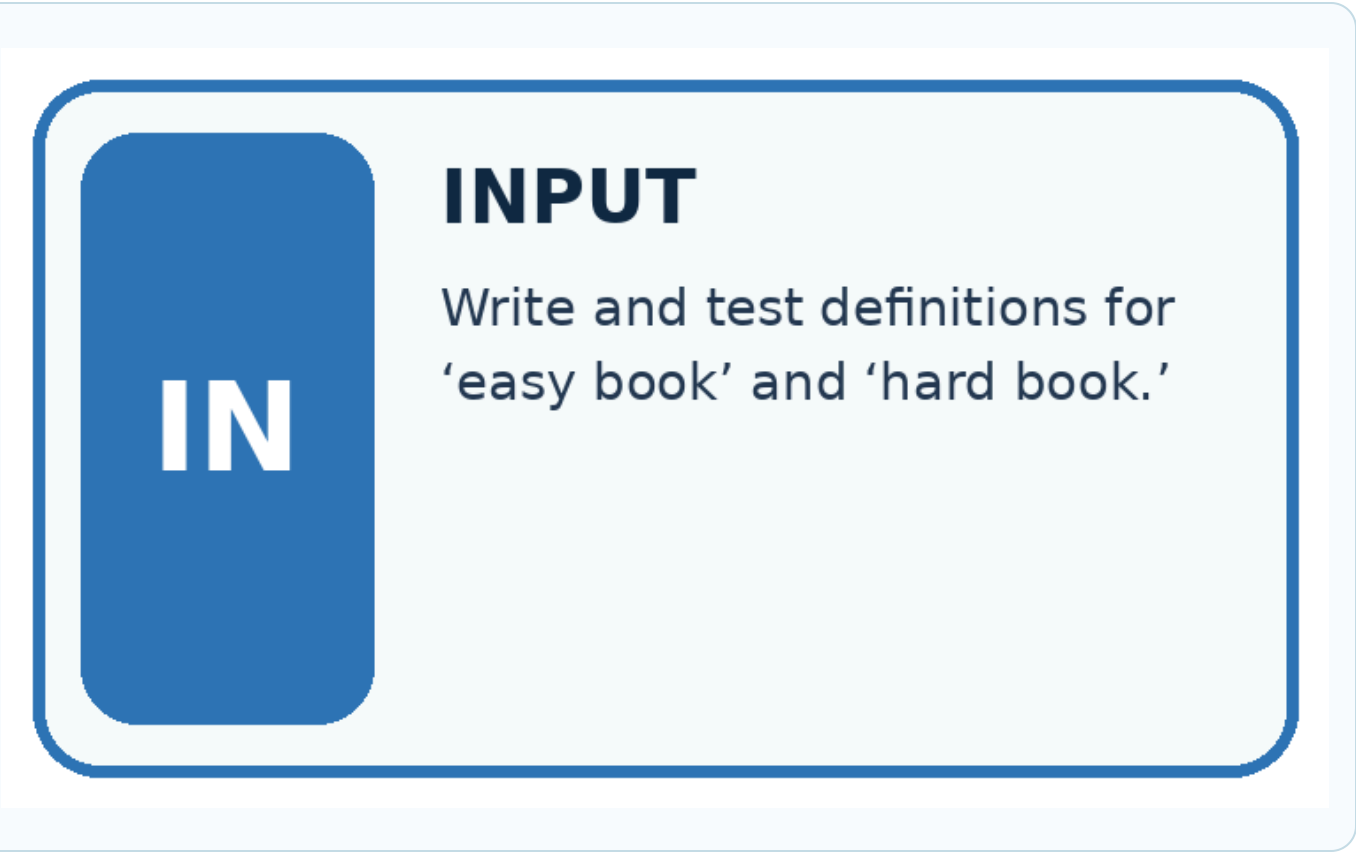

See how it works

> Follow the mechanism for Operational Labels. Connect each labelled input, deciding step and result.

VISUAL MECHANISM

Input → Process → Output

Trace the information. At each stage, ask what changed and how you could test it.

↓

PROCESS

A label is reliable only when different people can apply its definition consistently.

↓

OUT

OUTPUT

Write and test definitions for ‘easy book’ and ‘hard book.’

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

Our fictional calendar accepts a whole-number day from 1 through 30, including both endpoints, and exactly one room code, A or B. The month is already fixed for this exercise. A blank or unreadable field counts as unknown.

The categories are revise, review and ready. Use the checks in the order shown.

Three ordered checks for a calendar card

CHECK IN THIS ORDER	EVIDENCE	RECORDED LABEL
First check known values	Any known field fails its criterion	Revise even if another field is unknown
Then check missing information	No known failure but a field is blank or unreadable	Review because evidence is incomplete
Otherwise all checks have passed	Day is 1 through 30 and room is A or B	Ready under this record policy

Stop at the first matching row. The order resolves a card with both a known failure and an unknown field. Ready describes the printed record under this policy; it does not confirm that the event exists or has permission to run.

Known failure and unknown are different. Day 31 is known and outside the accepted range, so the card needs revision. An unreadable day might be valid or invalid; without another known failure, it needs review.

Never silently turn a blank into zero just to make a comparison possible.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

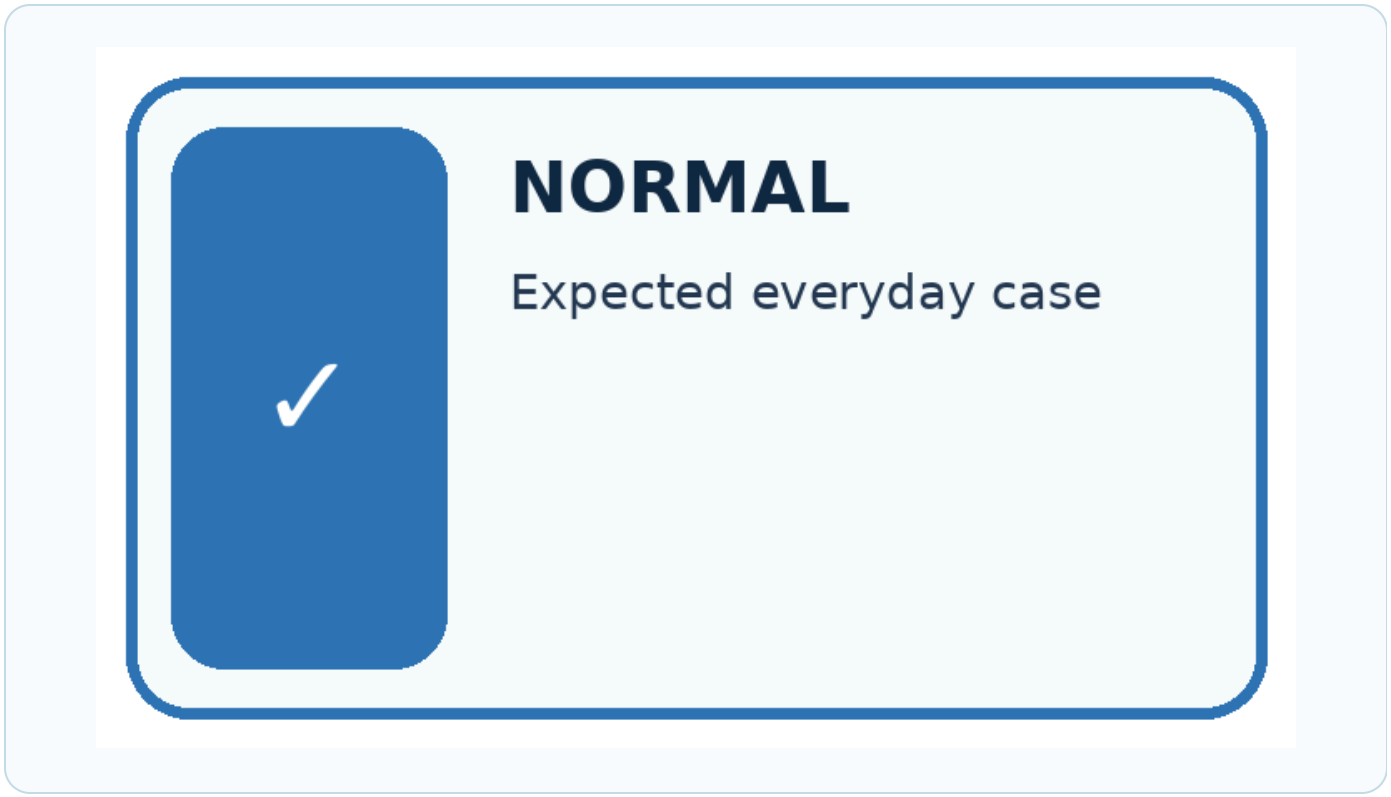

> Compare the supplied cases for Operational Labels. Identify the detail that changes the conclusion.

The case to investigate

CASE GALLERY

Four Tests, Four Kinds of **Evidence**

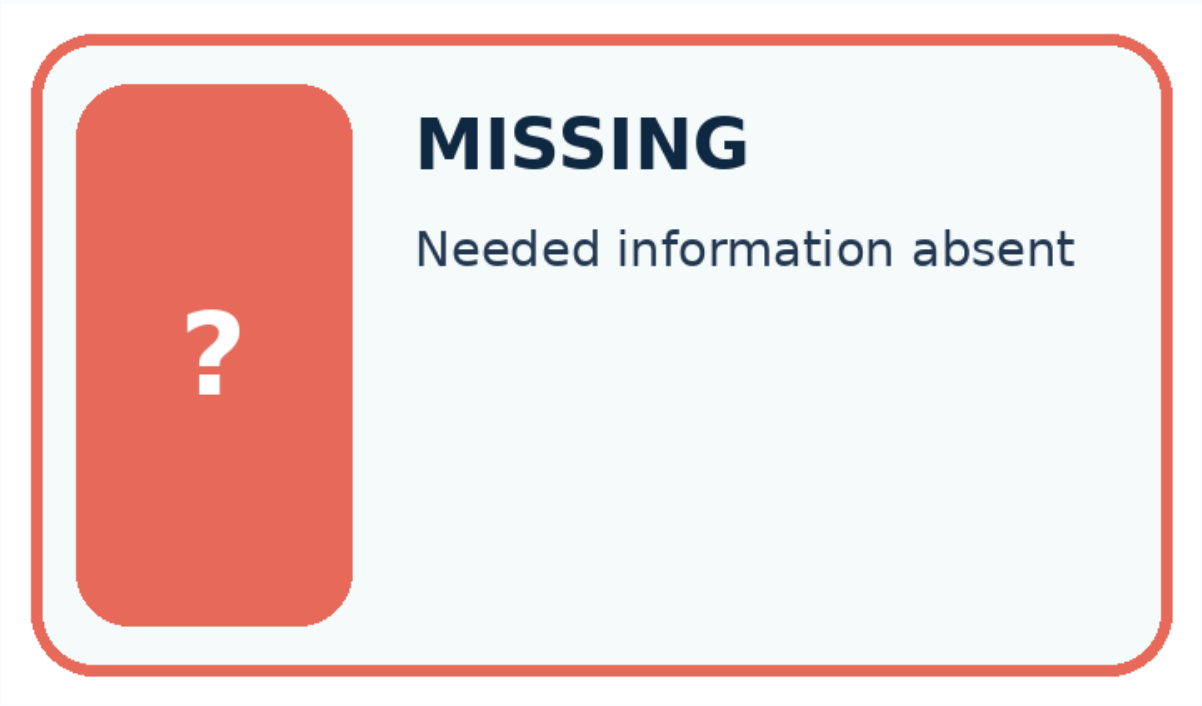

A system is not understood until it survives more than one comfortable example.

NORMAL
Expected everyday case

BOUNDARY
Near a decision edge

The normal case

NORMAL CASE: predict and name **evidence**. BOUNDARY CASE: predict and name **evidence**.

Check missing information

MISSING INFORMATION: predict and name **evidence**. TRANSFER CASE: predict and name **evidence**.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change one thing

Change: Change the documented policy to fewer than 80 instead.

Predicted result

Prediction: A's original **label**s now match; B must change its equality behavior.

Why the result follows

Reason: The authoritative definition changed, not the physical books.

STUDENT LESSON · 5 OF 18

Words that unlock the idea

> Use the vocabulary of Operational Labels to explain a concrete decision, rather than only memorising definitions.

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

1
LABEL
a named target or category

2
OPERATIONAL DEFIN
a testable rule for applying
a label

Word	My own example	Not this / boundary
label	The recorded target category or value attached to an example.	
operational definition	A precise rule explaining how a concept will be observed, measured or labelled in this activity.	

Word	My own example	Not this / boundary
agreement	How often two judgments match; matching judgments can still both be wrong.	
ambiguous	Having more than one reasonable interpretation given the available information.	

Words used in the closer explanation

Word	Meaning
Category	A group defined by stated membership criteria
Annotator	A person who assigns labels to examples
Disagreement	A case where annotators assign different labels to the same example

---

STUDENT LESSON · 6 OF 18

Follow a worked example

> Follow the worked trace for Operational Labels, predict a step, then compare with its explanation.

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

Worked evidence for Operational Labels

STEP	EVIDENCE AND REASONING
1	Weak label: ‘easy book.’
2	Operational rule: easy for this reader if difficulty level ≤ 2 and unfamiliar words per page ≤ 3.
3	Two labelers test the same 8 books.
4	Agreement of 7/8 identifies one disagreement to review. Check the source, each annotator’s application and the label rule before choosing a repair.

Trace these corrected steps. Keep the stated metric, assumptions and interpretation when you change the case.

1. Weak **label**: ‘easy book.’

2. Operational rule: easy for this reader if difficulty level ≤ 2 and unfamiliar words per page ≤ 3.

3. Two **label**ers test the same 8 books.

4. **Agreement** of 7/8 identifies one **disagreement** to review. Check the source, each **annotator**'s application and the **label** rule before choosing a repair.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the **evidence** answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

Card fields	Relevant evidence	Label and reason
Day 12 room A	Both values satisfy the criteria	Ready because both checks pass
Day 31 room A	31 is outside 1 through 30	Revise because a known value fails
Day 12 room unreadable	No known failure but the room is unknown	Review until the room is checked
Day 31 room unreadable	The day already fails although the room is unknown	Revise because the first check has priority

For the last card, first read only what is known: day 31. Compare it with the allowed range and record a failure. The guide therefore selects revise before the missing-room check.

Checking the room later could reveal another problem, but it cannot make day 31 satisfy this policy.

A clear explanation cites the particular criterion. Saying It looks wrong is not enough. Write Day 31 exceeds the accepted maximum of 30 instead.

That explanation lets another person reproduce the check and challenge it if the recorded value or policy is different.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Operational Labels

Two fictional catalogue reviewers **label** books compact or extended.

The facts we will use

> **Supplied facts**
>
> Agreed policy: compact means at most 80 pages; extended means more than 80.

> **Supplied facts**
>
> Reviewer A uses pages<80; reviewer B uses pages<=80. Inspect books of 79,80,81 pages.

AI ACADEMY / AI-2/8

Operational label boundary

	Pages	A labels	B labels
Book 1	79	compact	compact
Book 2	80	extended	compact
Book 3	81	extended	extended

Read a cell using both its row and column labels.

Follow the labelled picture with the matching explanation. Open the vector diagram

AI ACADEMY / AI-2/8

Operational Labels

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Shared definition

At most 80 includes a book with exactly 80 pages.

2. Reviewer A

79 compact; 80 and 81 extended.

3. Reviewer B

79 and 80 compact; 81 extended.

4. Repair boundary

A must use <=80; retain the disagreement and changed policy implementation.

CHANGE ONE THING

Change the documented policy to fewer than 80 instead.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Shared definition	At most 80 includes a book with exactly 80 pages.
2. Reviewer A	79 compact; 80 and 81 extended.
3. Reviewer B	79 and 80 compact; 81 extended.
4. Repair boundary	A must use <=80; retain the disagreement and changed policy implementation.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

The reviewers agree on two of three examples, but that fraction does not decide which definition to keep. The documented policy decides the equality case. Repairing A's implementation aligns its **label**s with the agreed meaning.

Rechecking 79 and 81 ensures the boundary fix preserves adjacent decisions.

What this example does not establish

Keep the stated limit

A shared definition improves consistency but does not prove the **category** captures every learner's needs.

Keep the stated limit

Read the **label**led picture: Why can we not resolve the **disagreement** merely by taking a majority of reviewers?

Keep the stated limit

Change one thing: Change the documented policy to fewer than 80 instead. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Operational Labels claim and explain a repair using the supplied evidence.

Find the first error

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak **evidence**.

!

COMPARE • DIAGNOSE

Weak idea: People who mean well will always create identical labels. Strong move: locate evidence, change one cause, and retest.

Evidence record	Expected	Actual	Likely cause / next test
normal case	works		
boundary case	stated rule		
missing input	safe response		
fresh transfer	generalizes		

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

Check the claim against the facts

If two **annotator**s agree on four of six cards, we know that four assigned **label**s matched. We do not yet know whether those **label**s followed the guide. Both **annotator**s might have made the same mistake.

Check their reasoning against the criteria and, where necessary, the source record.

Check the claim against the facts

Even perfect **agreement** under our calendar policy would not prove that the room is really booked. It would only show **agreement** about whether the printed fields pass the specified checks.

The policy itself may need changes for a real calendar. Record the policy version so examples **label**led under different instructions are not mixed without review.

Two people label every card ready. Explain why their agreement alone does not establish correct labels or confirm the events

STUDENT LESSON · 8 OF 18

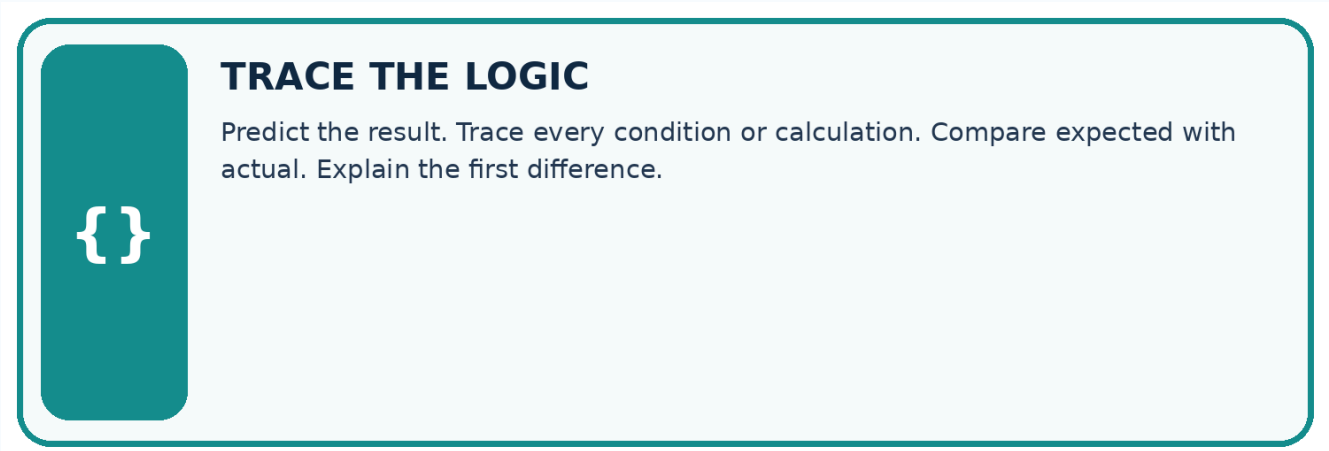

Practise together

Practise Operational Labels with support, then explain the deciding step in your own words.

LOGIC STUDIO

Trace Before You Run

Block code, pseudocode, tables, and diagrams are different ways to expose the same reasoning.

SET **evidence**_record PREDICT expected_result RUN one normal case and one boundary case COMPARE actual_result with expected_result IF different: locate first cause; change one factor; RETEST EXPLAIN result, limitation, and next safe step

> Trace one **input**. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

Mina **label**s day 30, room B as ready; Theo **label**s it revise because he thought the range stopped before 30. The **disagreement** points to a boundary interpretation. The guide says including both endpoints, so 30 passes.

The appropriate repair is to clarify and practise the inclusive boundary, not to change the **label** merely because one student is more confident.

> **Label day 0 with room A and day 18 with a blank room. Cite the exact rule for each and explain why the two cards need different next steps**

Ask **annotator**s to **label** examples independently before comparing. If they copy one another, **agreement** no longer tells us whether the guide can be applied independently.

Keep the original **label**s and reasons when discussing differences, then record any corrected **label**s separately.

Practise with less help: Replace a vague instruction

Use workbook W2 for the connected example "Categories and operational **label**s". First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Categories and operational **label**s. Proposed explanation: "A blank is the same as a failing value". Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

> Why can we not resolve the **disagreement** merely by taking a majority of reviewers?

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

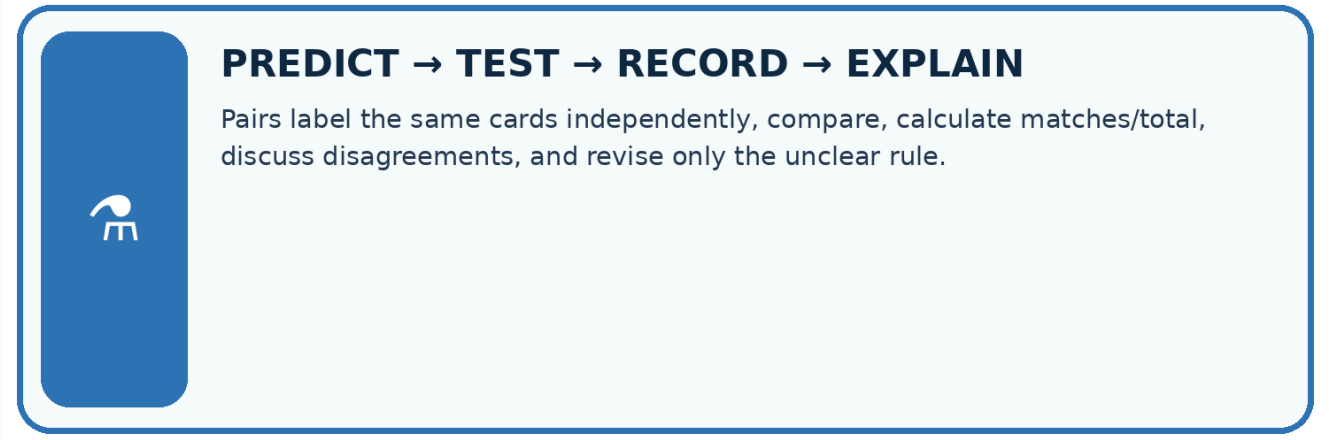

Run the investigation

> Investigate Operational Labels. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

Pairs **label** the same cards independently, compare, calculate matches/total, discuss **disagreement**s, and revise only the unclear rule.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

> **Test / input:** normal
>
> **Prediction:** _____
>
> **Actual:** _____
>
> **Evidence / calculation:** _____
>
> **Change or keep?:** _____

> **Test / input:** boundary
>
> **Prediction:** _____
>
> **Actual:** _____
>
> **Evidence / calculation:** _____
>
> **Change or keep?:** _____

> **Test / input:** missing
>
> **Prediction:** _____
>
> **Actual:** _____
>
> **Evidence / calculation:** _____

Change or keep?: _____

Test / input: fresh transfer

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

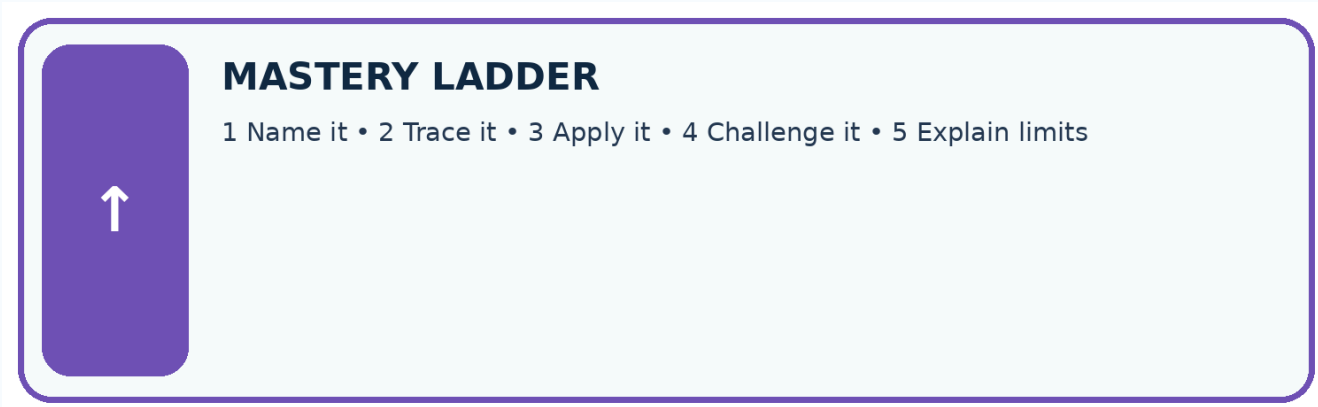

Build your understanding

Move from recall to tracing, diagnosis and transfer in Operational Labels. Explain why each step is justified.

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce **evidence** without copying the worked example.

1 • NAME: Define the concept without repeating the textbook.

2 • TRACE: Show the information, state, branch, calculation, or **evidence** path.

3 • APPLY: Solve a different example independently.

4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest **evidence** of independent understanding:

Write or draw your reasoning and evidence.

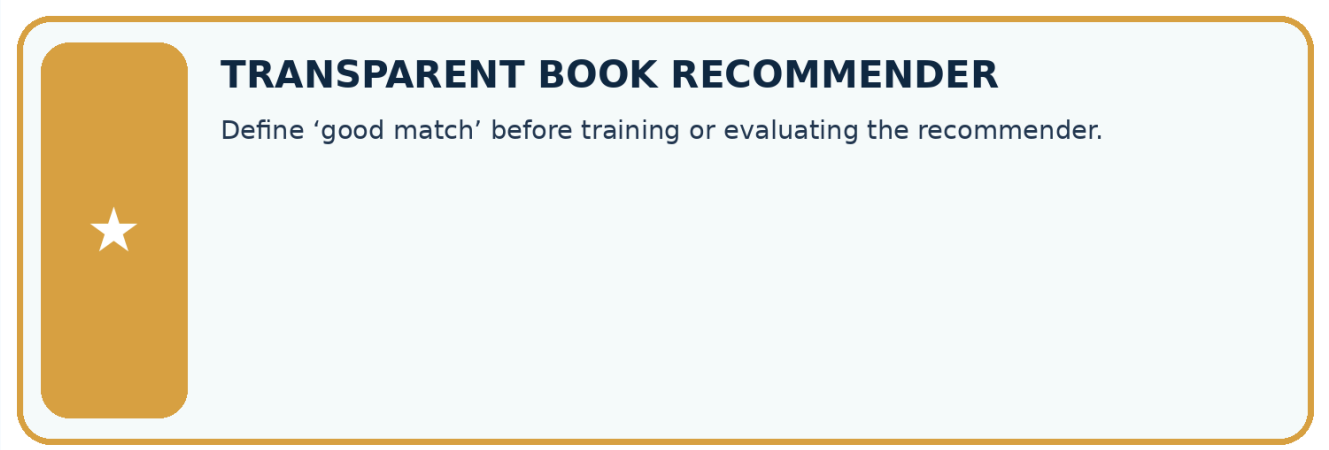

Connect your project

> Apply this week's idea to Transparent Book Recommender. Keep an annotated decision and the evidence supporting it.

CUMULATIVE PROJECT

Transparent Book Recommender

Every week adds one inspectable piece. The system must show how it reached a result.

THIS WEEK'S CHECKPOINT Define 'good match' before **training** or evaluating the recommender.

Trace the system

SYSTEM MAP Reader need → allowed **input**s → transparent rule or score → ranked candidates → explanation → test record → **human decision**

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under **human control**?

Write or draw your reasoning and evidence.

Responsible design

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse a ranking with a fact about a person.

Evidence for your project

Give Transparent Book Recommender metadata **label**s explicit definitions and boundary examples for reviewers.

STUDENT LESSON · 12 OF 18

Show what you know

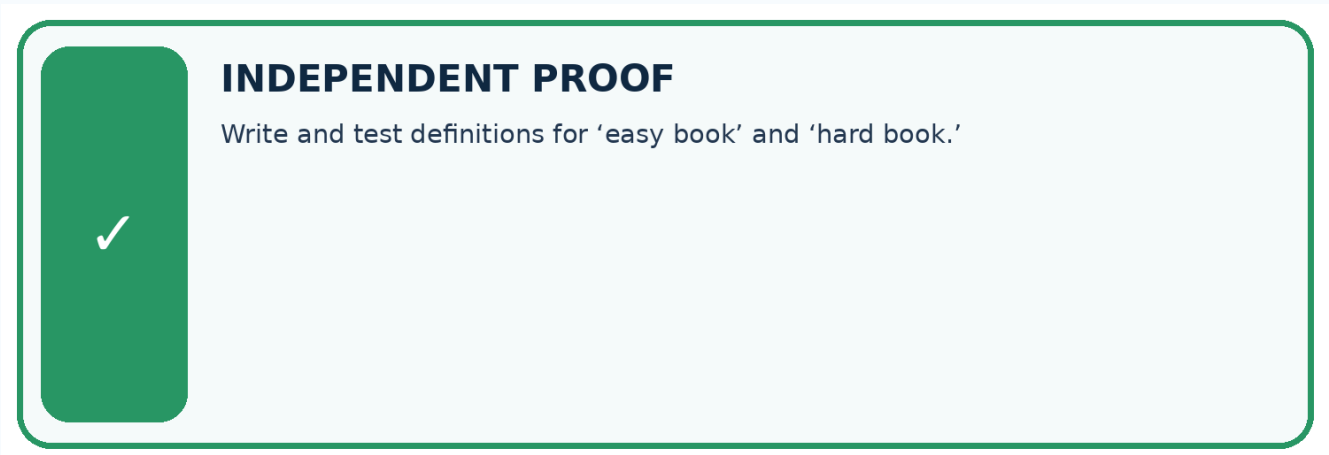

Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Independent evidence

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

Try a more demanding case

CHALLENGE Write and test definitions for ‘easy book’ and ‘hard book.’

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My **evidence** that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One limitation, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

Check your explanation

SELF-CHECK ☐ I explained the **mechanism** ☐ I used **evidence** ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

STUDENT LESSON · 13 OF 18

Study a complete case

Revisit the complete Operational Labels case for supported practice. Repeated examples do not become fresh assessments.

Week 8 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

Short means fewer than 100 pages. Two **annotator**s disagree about a 100-page book.

The question

Resolve the **label**.

Worked explanation

It is not Short under the stated definition. Agree operational boundaries before **label**ling.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Define Short before labelling books

Evidence or stage	Value or result
99 pages	Short
100 pages	Not Short
101 pages	Not Short

Short means fewer than 100 pages. Two **annotator**s disagree about a 100-page book.

Resolve the **label**.

It is not Short under the stated definition. Agree operational boundaries before **label**ling.

STUDENT LESSON · 14 OF 18

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Changed independent case

Two **label**lers use book-length rules: fewer than 120 pages and at most 120 pages. **Label** books with 110,120,121 pages. The agreed policy is at most 120. Repair the **disagreement**.

> **My independent explanation, trace and limits**

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 8 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

> Use a clear **label** rule: short means 80 pages or fewer. Two judges **label** an 80-page book differently. What shared instruction resolves this **disagreement**?

My answer, with a trace, calculation or supporting **evidence**

> **Write or draw your reasoning and evidence.**

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

> **Write or draw your reasoning and evidence.**

Connect to your project

Define ‘good match’ before **training** or evaluating the recommender.

The **evidence** I will keep

> **Write or draw your reasoning and evidence.**

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

Two **label**ers use 'short' to mean pages<100 and pages<=100. They disagree only on 100-page books. Write a shared definition and explain how to repair the existing **label**s.

> **Explain the mechanism, evidence and one limit.**

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Operational Labels, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: Two fictional catalogue reviewers **label** books compact or extended.

By the end, I can	How I will show it
Apply a category definition using explicit evidence and boundary rules	Explain the deciding step, show a trace or test, and state one limit.
Distinguish a known failure from information that is missing or unreadable	Explain the deciding step, show a trace or test, and state one limit.
Use disagreement to improve a labelling guide without mistaking agreement for truth	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Operational Labels without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Apply a **category** definition using explicit **evidence** and boundary rules

> **My deciding step, evidence and one remaining question**
>
> | |
> |---|
> | |
> | |
> | |
> | |

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building

> block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Two fictional catalogue reviewers **label** books compact or extended.

Practice 1: explain the deciding evidence

Which **label**led step matches this detail? A must use <=80; retain the **disagreement** and changed policy implementation.

1. Repair boundary

2. Reviewer B

3. Reviewer A

4. Shared definition

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Repair boundary A must use <=80; retain the **disagreement** and changed policy implementation.

The reviewers agree on two of three examples, but that fraction does not decide which definition to keep. The documented policy decides the equality case. Repairing A's implementation aligns its **label**s with the agreed meaning.

Rechecking 79 and 81 ensures the boundary fix preserves adjacent decisions.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Change the documented policy to fewer than 80 instead. Which conclusion is supported by the supplied facts?

1. A's original **label**s now match; B must change its equality behavior.

2. We can decide the result without examining the changed **input** or the procedure.

3. This one example guarantees correct results for every future **input**.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: A's original **label**s now match; B must change its equality behavior. The authoritative definition changed, not the physical books.

Repair a missing building block

Review Rows Columns and Data Types (ai-2/7). Goal: Specify a table schema. Short practice: Which two rows originally fail, and do they fail for the same reason?. Return to this week and explain what you changed.

Review Loops and Stopping (ai-2/5). Goal: Trace variable values before and after each loop iteration. Short practice: Why is report 0 correct for the original loop, and why is equality-only stopping risky here?.

Return to this week and explain what you changed.

Review Decompose a Goal (ai-2/2). Goal: Distinguish a function definition from a function call. Short practice: What happens visibly if the caller stores needed but omits print(needed)?.

Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Operational Labels graphic using its labels, deciding evidence and relevant limitation.

01. Operational Labels: the case

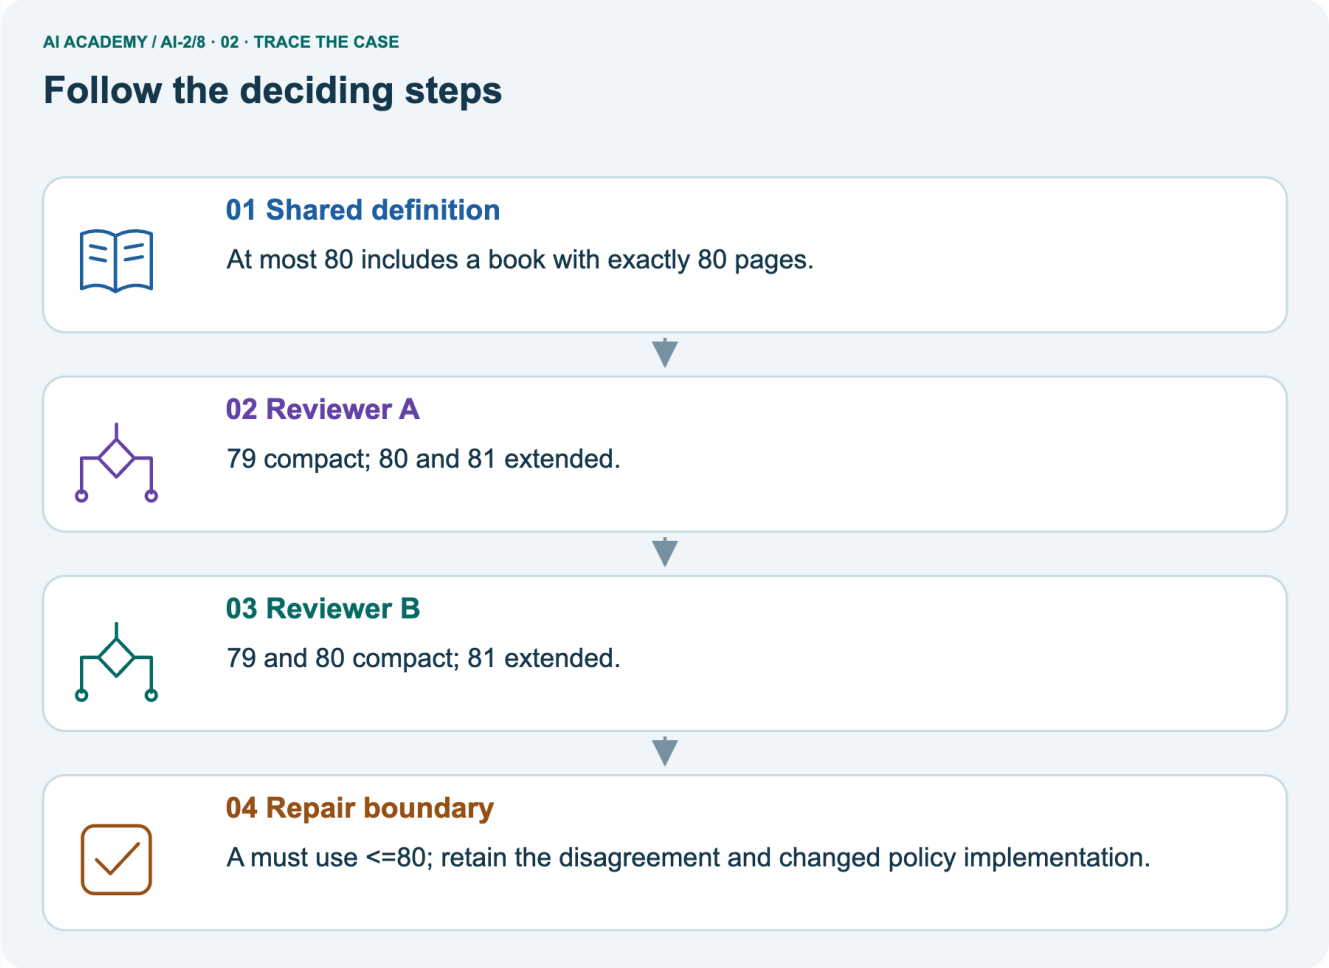

Follow the labelled picture with the matching explanation. Open the vector diagram

Two fictional catalogue reviewers **label** books compact or extended. Supplied facts: Agreed policy: compact means at most 80 pages; extended means more than 80. Reviewer A uses pages<80; reviewer B uses pages<=80.

Inspect books of 79,80,81 pages.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

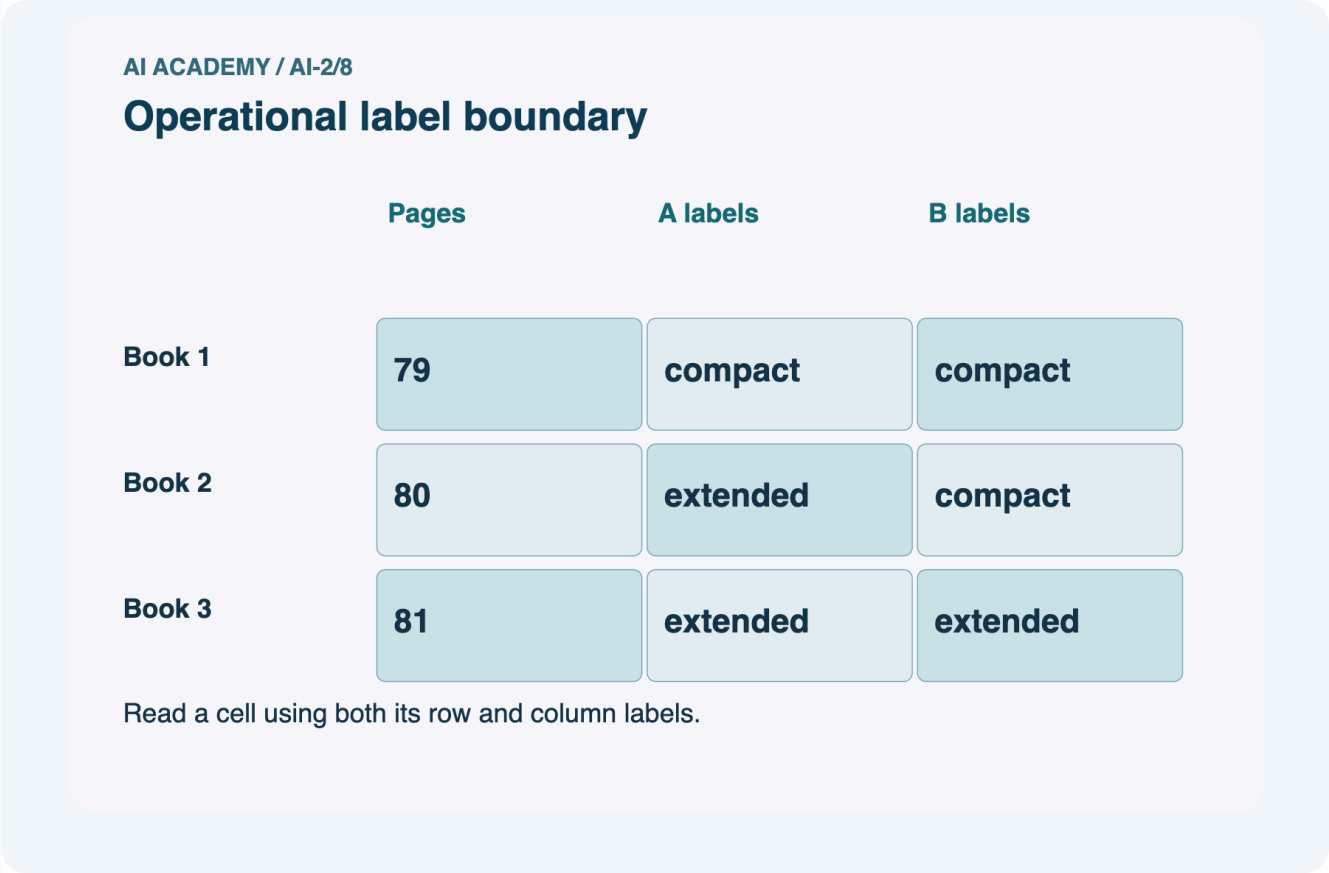

Follow the labelled picture with the matching explanation. Open the vector diagram

Shared definition: At most 80 includes a book with exactly 80 pages. → Reviewer A: 79 compact; 80 and 81 extended. → Reviewer B: 79 and 80 compact; 81 extended. → Repair boundary: A must use <=80; retain the **disagreement** and changed policy implementation.

Point to each numbered stage and explain which recorded **input** it uses.

03. Operational label boundary

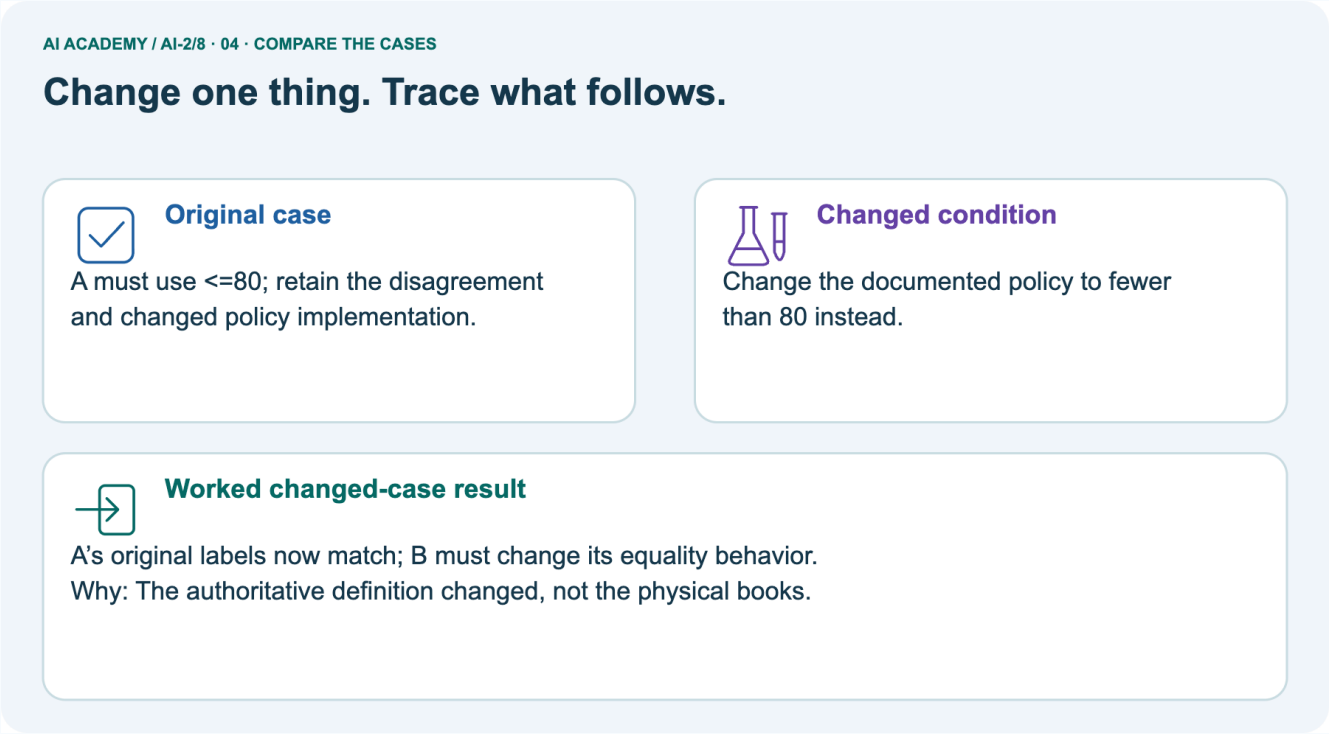

Follow the labelled picture with the matching explanation. Open the vector diagram

Operational **label** boundary. Book 1: Pages = 79, A **label**s = compact, B **label**s = compact. Book 2: Pages = 80, A **label**s = extended, B **label**s = compact. Book 3: Pages = 81, A **label**s = extended, B **label**s = extended.

Read the **label**s and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

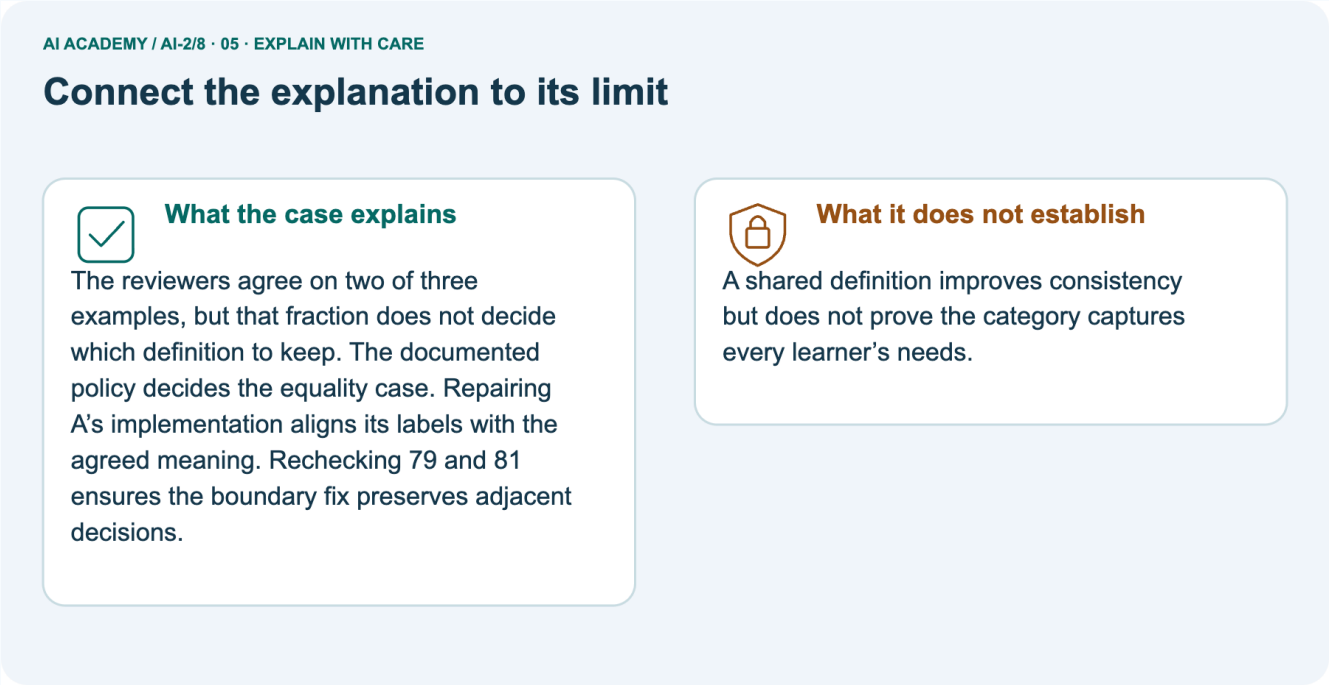

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: A must use <=80; retain the **disagreement** and changed policy implementation. Changed condition: Change the documented policy to fewer than 80 instead.

Expected result: A's original **label**s now match; B must change its equality behavior. Reason: The authoritative definition changed, not the physical books.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

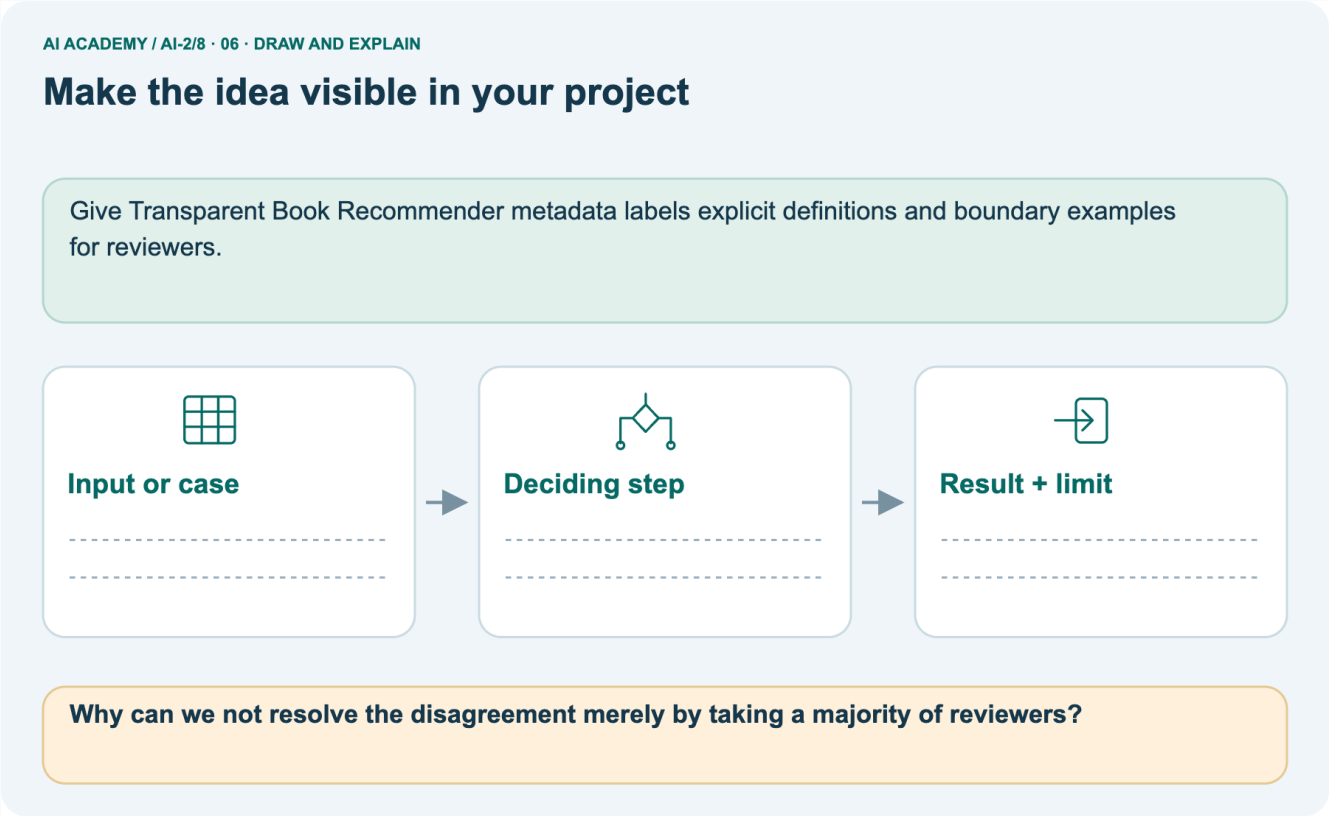

Follow the labelled picture with the matching explanation. Open the vector diagram

The reviewers agree on two of three examples, but that fraction does not decide which definition to keep. The documented policy decides the equality case. Repairing A's implementation aligns its **label**s with the agreed meaning.

Rechecking 79 and 81 ensures the boundary fix preserves adjacent decisions. Limit: A shared definition improves consistency but does not prove the **category** captures every learner's needs.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Give Transparent Book Recommender metadata **label**s explicit definitions and boundary examples for reviewers. Draw your **input**, deciding step, result and limit.

Supported question: Why can we not resolve the **disagreement** merely by taking a majority of reviewers?

Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
