AI ACADEMY · LEVEL 2 · GRADE 7 · WEEK 29 · STUDENT LESSON

Evidence and Sources

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Transparent Book Recommender

Before you start

AI-1 Week 27: verify a claim using evidence suited to it.

Plan time to read, investigate and explain. Keep predictions separate from observations.

STUDENT LESSON · 1 OF 18

Your mission

> Start with the target: Explain the mechanism and terminology of claim support and citation evaluation. Try the recall before opening notes.

Your learning target

I can explain the **mechanism** and terminology of **claim** support and citation evaluation.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Prompt Experiments. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Image and Voice Pipelines. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Recommendation Scores. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Week 29: **Evidence** and **Source**s

Claims require **source**s matched to the question and checked **independent**ly.

THINKER MISSION

Verify a generated answer using two suitable **source**s.

Thinker name and date:

> **Write or draw your reasoning and evidence.**

Readiness for the connected explanation

Recall Building a grounded answer. Explain why a recorded result needs its **input** conditions and **evidence source** before it can support a **claim**.

This week's end goal

By the end, I can separate citation presence, **link validity** and support for an exact **claim**.

STUDENT LESSON · 2 OF 18

Notice the evidence

> Investigate the supplied Evidence and Sources case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Notice → Predict → Explain

Begin with visible **evidence**. Do not explain more than the picture and information support.

Start with this puzzle

MYSTERY

The learners must use **evidence** and **source**s to solve a problem. What information do they have? What decision or calculation do they make? What would count as **evidence** that it worked?

Three **observation**s (what you can point to):

> **Write or draw your reasoning and evidence.**

My **prediction** and the clue supporting it:

> **Write or draw your reasoning and evidence.**

A closer explanation

Citation evaluation checks **source** existence, exact passage support and coverage of answer **claim**s. A real citation can still be irrelevant.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

STUDENT LESSON · 3 OF 18

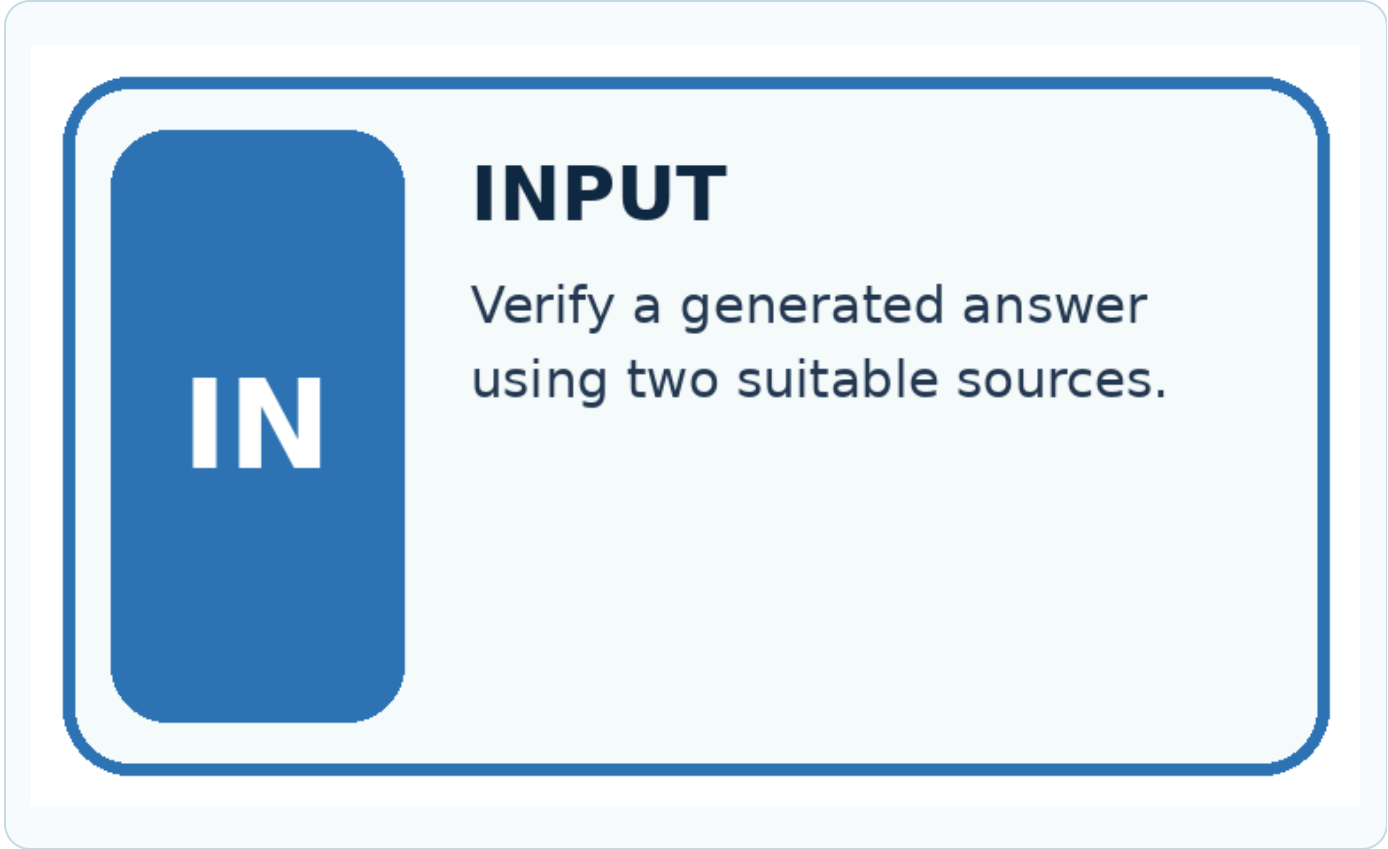

See how it works

> Follow the mechanism for Evidence and Sources. Connect each labelled input, deciding step and result.

VISUAL MECHANISM

Input → Process → Output

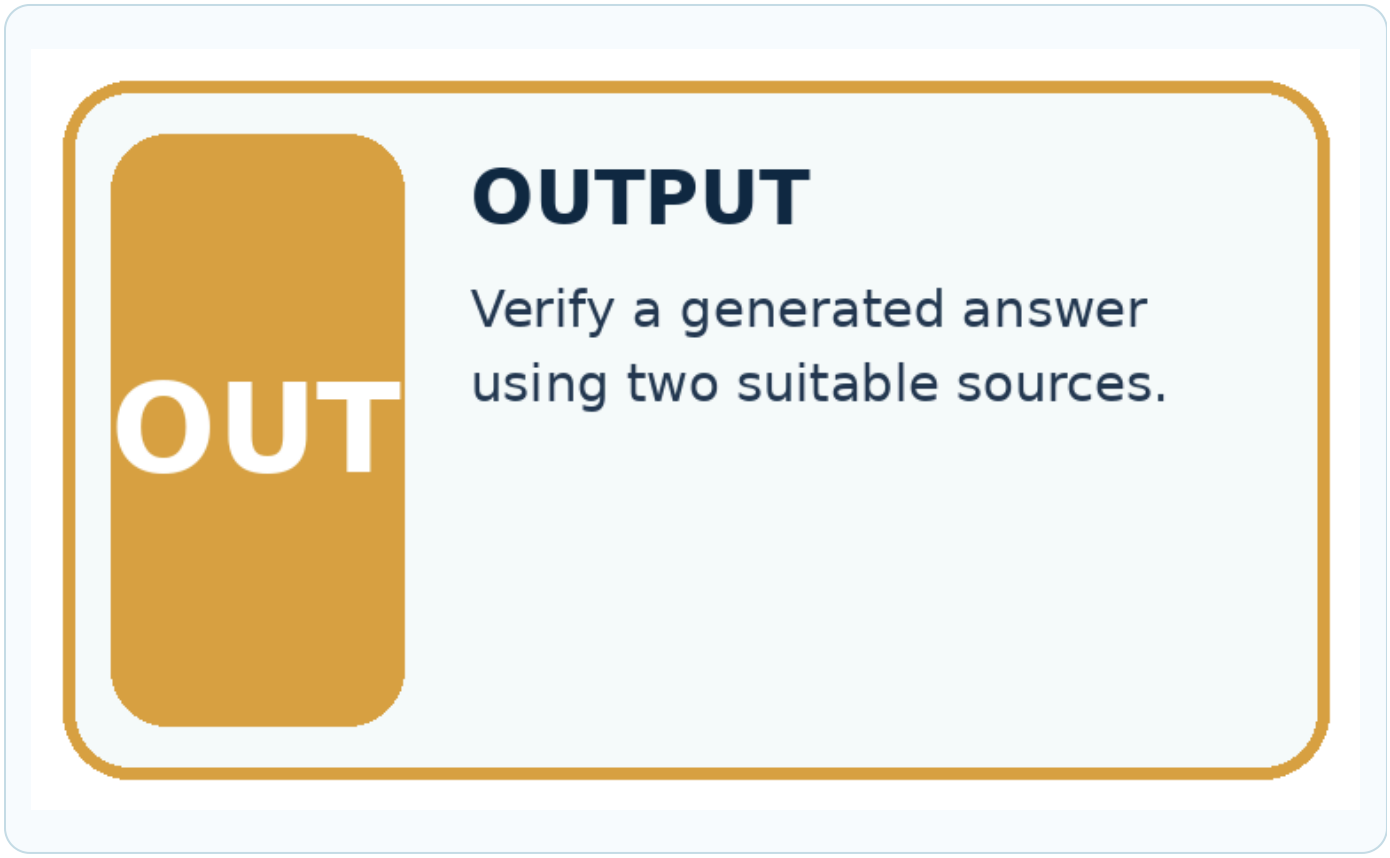

Trace the information. At each stage, ask what changed and how you could test it.

↓

↻
PROCESS
Claims require sources matched to the question and checked independently.

↓

OUT
OUTPUT
Verify a generated answer using two suitable sources.

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

For this classroom rubric count a **claim** as supported only when its cited passage entails it. Separately count correct citation links. Use the number of factual **claim**s as the support denominator.

Claim support and citation evaluation — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
An answer has four factual claims. Three have citations, but only two are supported by their cited passages. All links exist.	For this classroom rubric count a claim as supported only when its cited passage entails it.	Claim support is 2/4=50%; citation presence is 3/4=75%; link existence among three citations is 3/3. These measure different failures.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

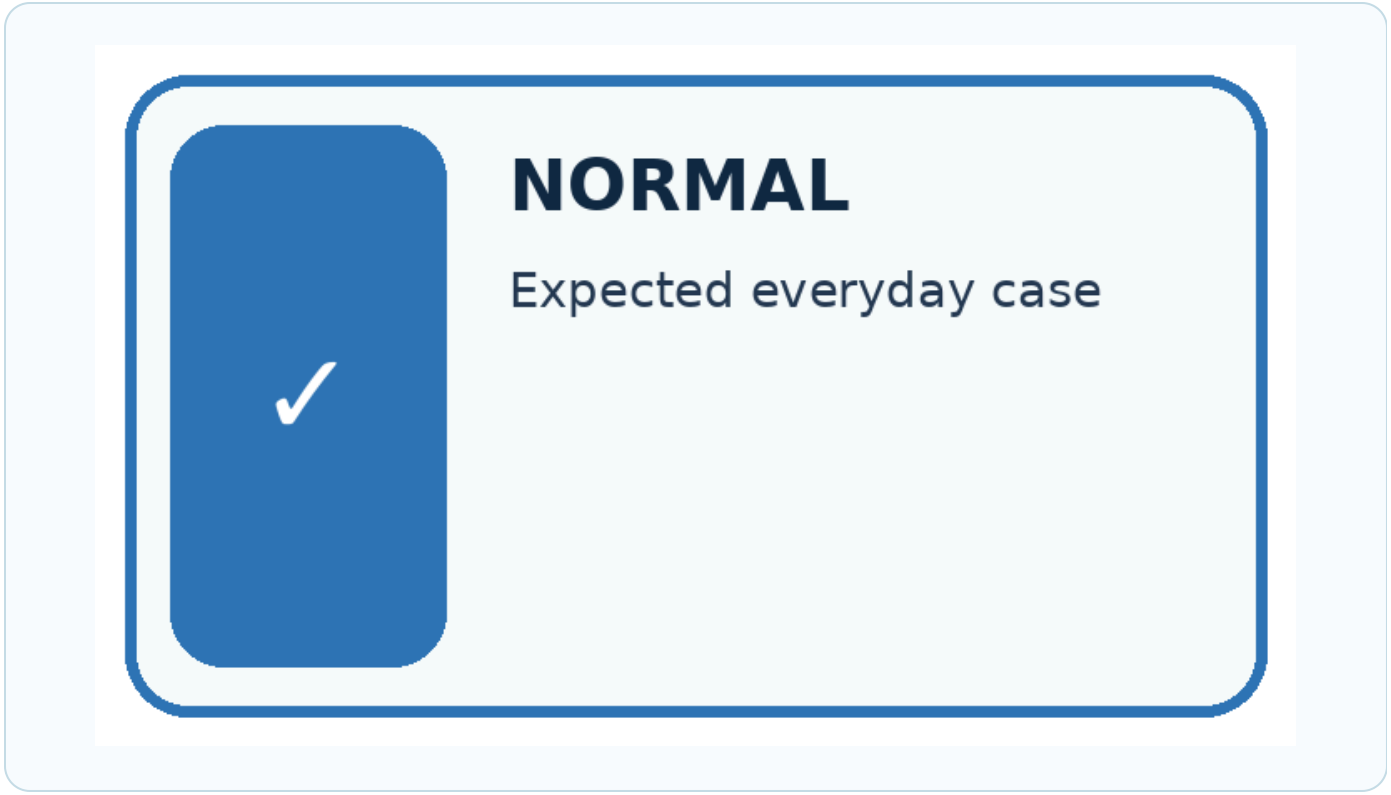

> Compare the supplied cases for Evidence and Sources. Identify the detail that changes the conclusion.

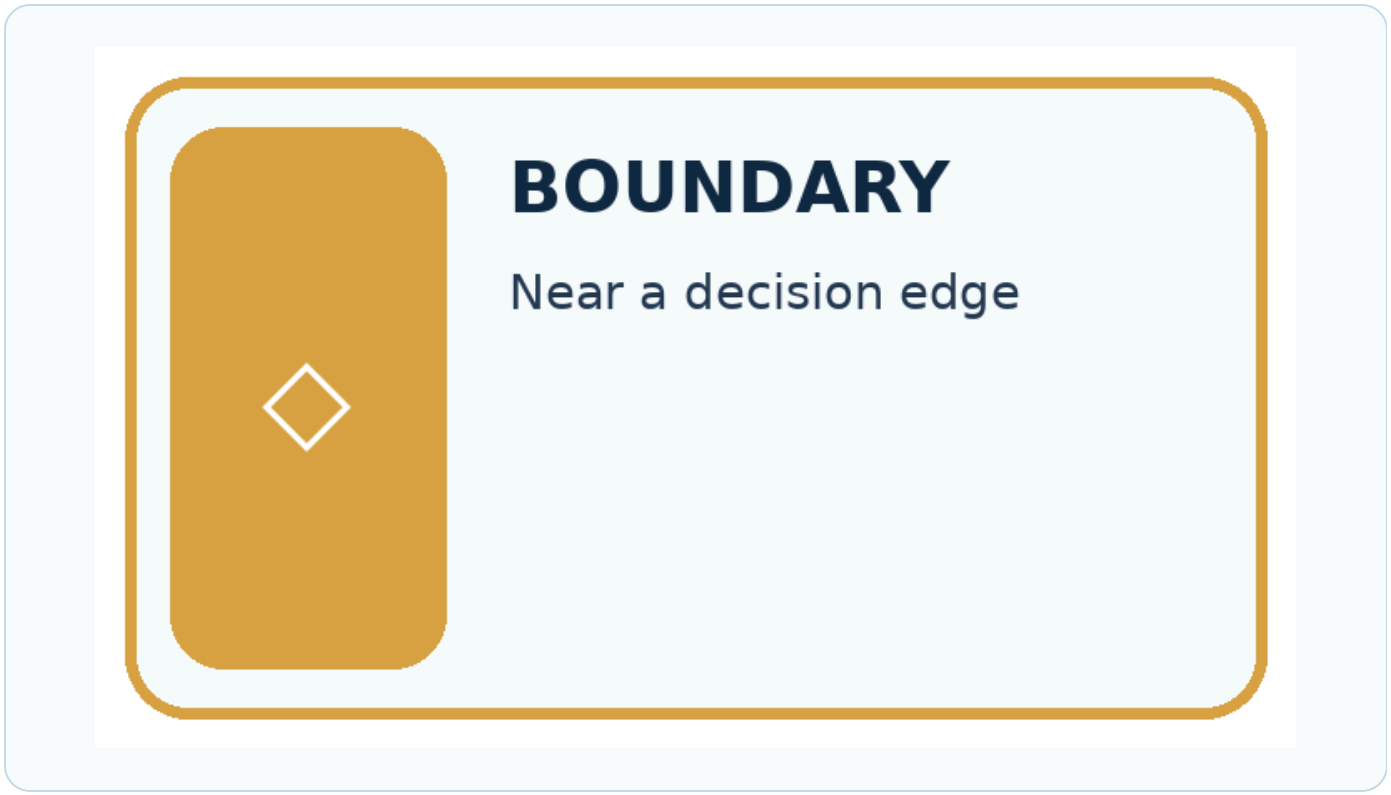

The case to investigate

CASE GALLERY

Four Tests, Four Kinds of **Evidence**

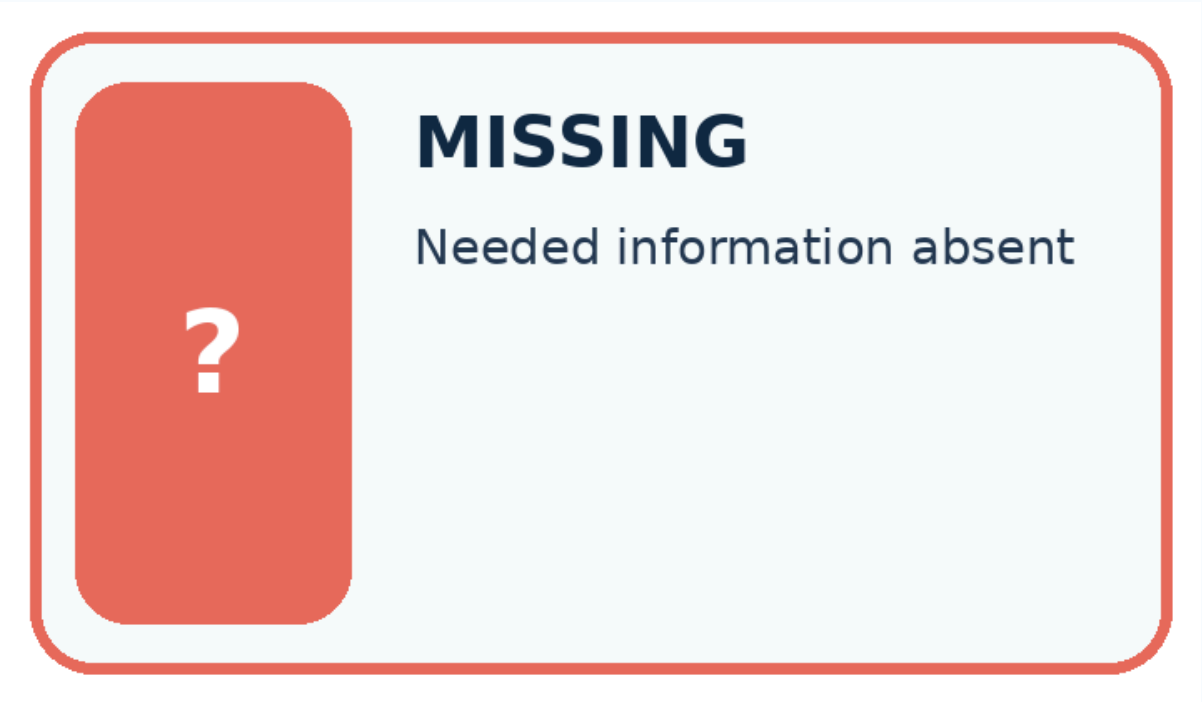

A system is not understood until it survives more than one comfortable example.

NORMAL
Expected everyday case

BOUNDARY
Near a decision edge

The normal case

NORMAL CASE: predict and name **evidence**. BOUNDARY CASE: predict and name **evidence**.

Check missing information

MISSING INFORMATION: predict and name **evidence**. TRANSFER CASE: predict and name **evidence**.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change one thing

Change: Change the third **claim** to “the record does not assess suitability”.

Predicted result

Prediction: That statement accurately describes the supplied record’s limits.

Why the result follows

Reason: R gives pages and shelf only; it contains no suitability assessment.

STUDENT LESSON · 5 OF 18

Words that unlock the idea

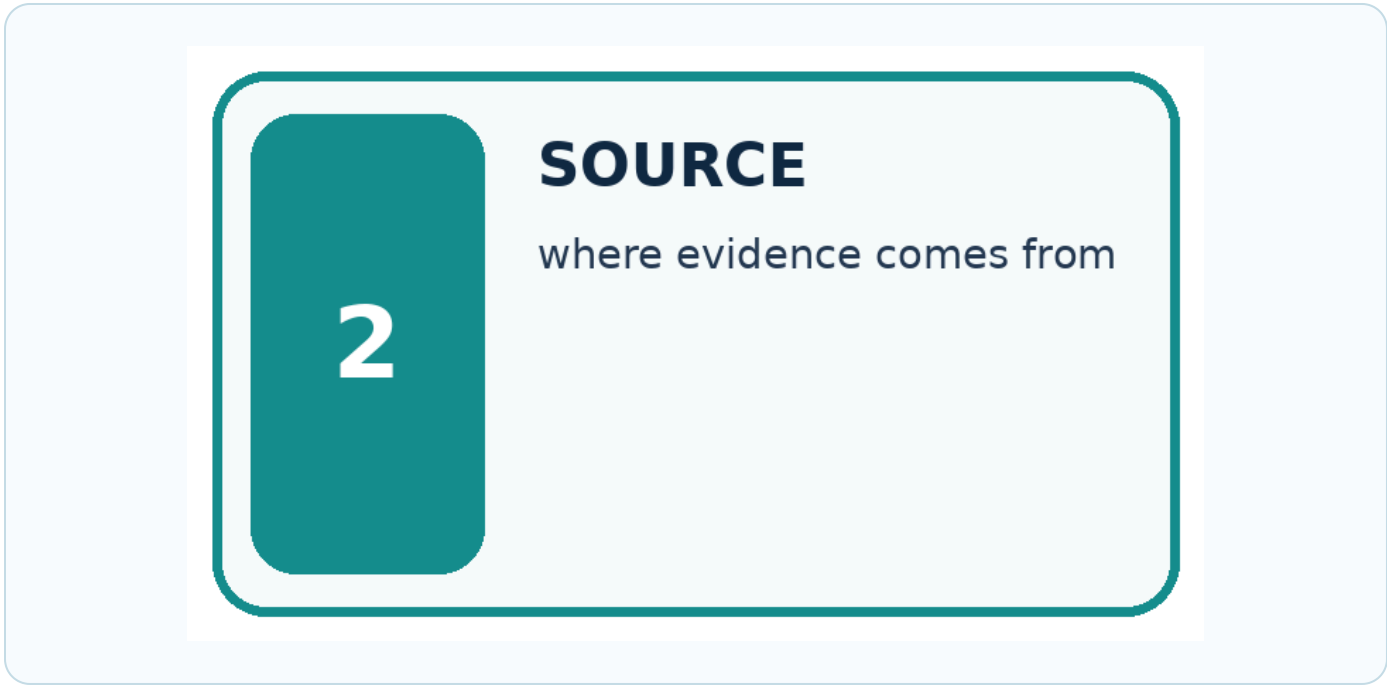

> Use the vocabulary of Evidence and Sources to explain a concrete decision, rather than only memorising definitions.

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

1
CLAIM
statement that can be checked

2
SOURCE
where evidence comes from

Word	My own example	Not this / boundary
claim	A statement that can be examined using evidence and reasoning.	
source	The record, person or material from which information is obtained.	
independent	Produced or assessed without the specific influence being excluded; state whether this means uncoached work or separate test data.	

Word	My own example	Not this / boundary
corroborate	Support a claim with additional relevant evidence, ideally independent of the first source.	

Words used in the closer explanation

Word	Meaning
Entailment	Whether the cited passage supports the specific claim
Citation coverage	Which claims include source references
Link validity	Whether a source reference resolves to the intended record

---

STUDENT LESSON · 6 OF 18

Follow a worked example

> Follow the worked trace for Evidence and Sources, predict a step, then compare with its explanation.

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

WEEK 29 • WORKED EVIDENCE

1. Claim: a book won an award in 2024.
2. Find the award organization’s record and the publisher’s page.
3. Check exact title, year, edition, and whether sources are independent.
4. If evidence conflicts or is absent, mark ‘not verified’ rather than guess.

1. **Claim**: a book won an award in 2024.

2. Find the award organization’s record and the publisher’s page.

3. Check exact title, year, edition, and whether **source**s are **independent**.

4. If **evidence** conflicts or is absent, mark ‘not verified’ rather than guess.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the **evidence** answer the exact question? Did the total, path, or **source** record stay consistent?

A closer explanation

An answer has four factual **claim**s. Three have citations, but only two are supported by their cited passages. All links exist.

Claim support is 2/4=50%; citation presence is 3/4=75%; link existence among three citations is 3/3. These measure different failures.

Worked explanation · Evidence and Sources

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Evidence and Sources

A fictional catalogue answer contains three factual statements and cites existing records.

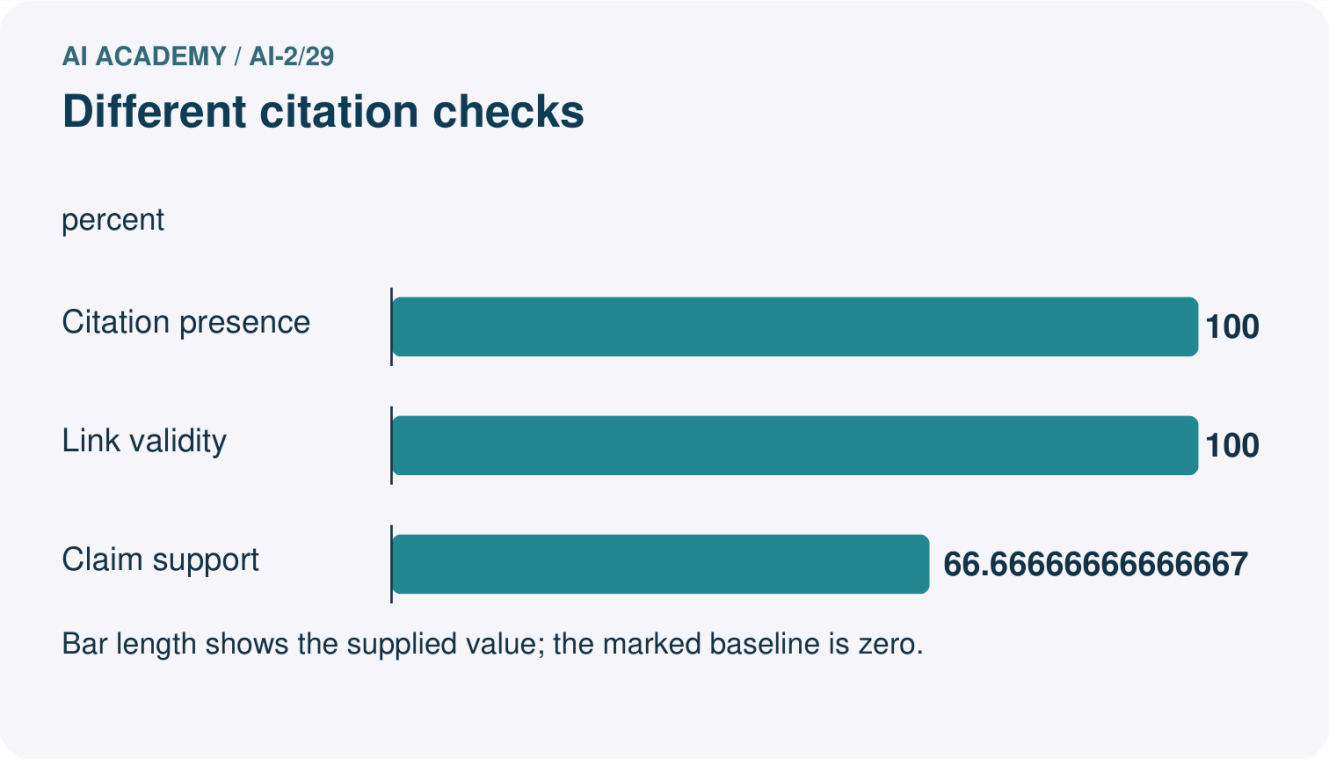

The facts we will use

Supplied facts

Record R: book Ocean Maps has 80 pages and is available on shelf 2.

Supplied facts

Claims: 80 pages [R]; shelf 2 [R]; suitable for every child [R]. All three citations resolve to R.

Follow the labelled picture with the matching explanation. Open the vector diagram

AI ACADEMY / AI-2/29

Evidence and Sources

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Break into claims

Count three factual claims rather than treating the answer as one blob.

2. Check links

All three citation links resolve to the intended R.

3. Check exact source support

R supports page count and shelf, not universal suitability.

4. Report separately

Citation presence 3/3; link validity 3/3; supported claims 2/3.

CHANGE ONE THING

Change the third claim to "the record does not assess suitability".

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Break into claims	Count three factual claims rather than treating the answer as one blob.
2. Check links	All three citation links resolve to the intended R.
3. Check exact source support	R supports page count and shelf, not universal suitability.
4. Report separately	Citation presence 3/3; link validity 3/3; supported claims 2/3.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

An existing citation is not automatically **evidence** for every nearby sentence. Read the cited passage and compare its exact scope with the **claim**. The universal suitability statement extends beyond what R says.

Remove or qualify unsupported content; adding more copies of the same link does not create the missing **evidence**.

What this example does not establish

Keep the stated limit

Source support is relative to supplied records; those records can themselves be incomplete, outdated or incorrect.

Keep the stated limit

Read the labelled picture: Why is the original answer not fully supported despite having citations on every **claim**?

Keep the stated limit

Change one thing: Change the third **claim** to “the record does not assess suitability”. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Evidence and Sources claim and explain a repair using the supplied evidence.

Find the first error

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak **evidence**.

!

COMPARE • DIAGNOSE

Weak idea: Two websites always count as two independent sources. Strong move: locate evidence, change one cause, and retest.

Evidence record	Expected	Actual	Likely cause / next test
normal case	works		
boundary case	stated rule		
missing input	safe response		
fresh transfer	generalizes		

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

Check the claim against the facts

Complete the supported workbook tasks before attempting W4 **independent**ly. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

STUDENT LESSON · 8 OF 18

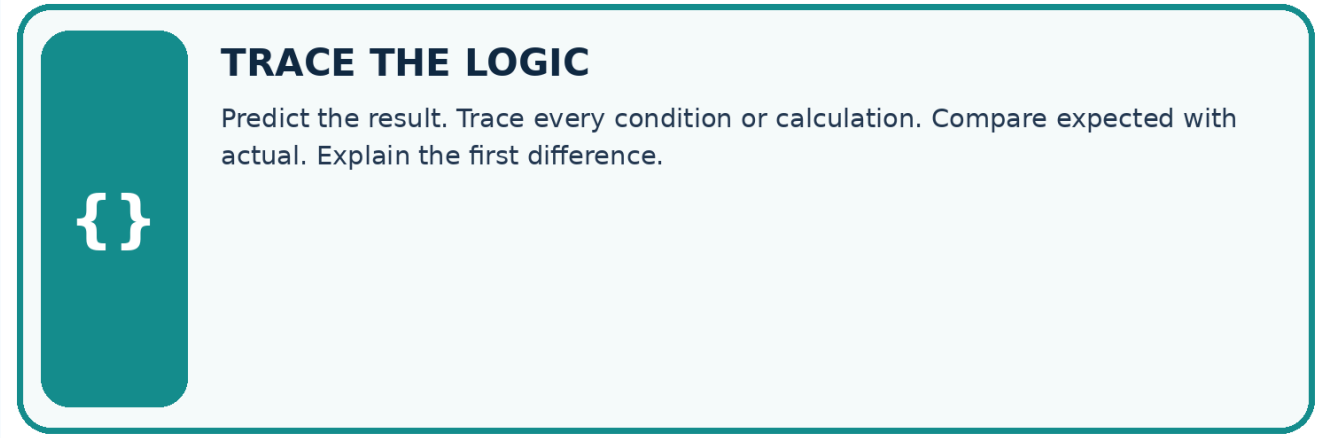

Practise together

Practise Evidence and Sources with support, then explain the deciding step in your own words.

LOGIC STUDIO

Trace Before You Run

Block code, pseudocode, tables, and diagrams are different ways to expose the same reasoning.

SET **evidence**_record PREDICT expected_result RUN one normal case and one boundary case COMPARE actual_result with expected_result IF different: locate first cause; change one factor; RETEST EXPLAIN result, limitation, and next safe step

> Trace one **input**. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

Citation counts do not establish truth beyond the supplied **source**s or the correctness of uncited **claim**s.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Practise with less help: Trace the worked case

Use workbook W2 for the connected example "**Claim** support and citation evaluation". First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for **Claim** support and citation evaluation. Proposed explanation: "The worked result establishes every future case". Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Why is the original answer not fully supported despite having citations on every **claim**?

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named **independent** case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

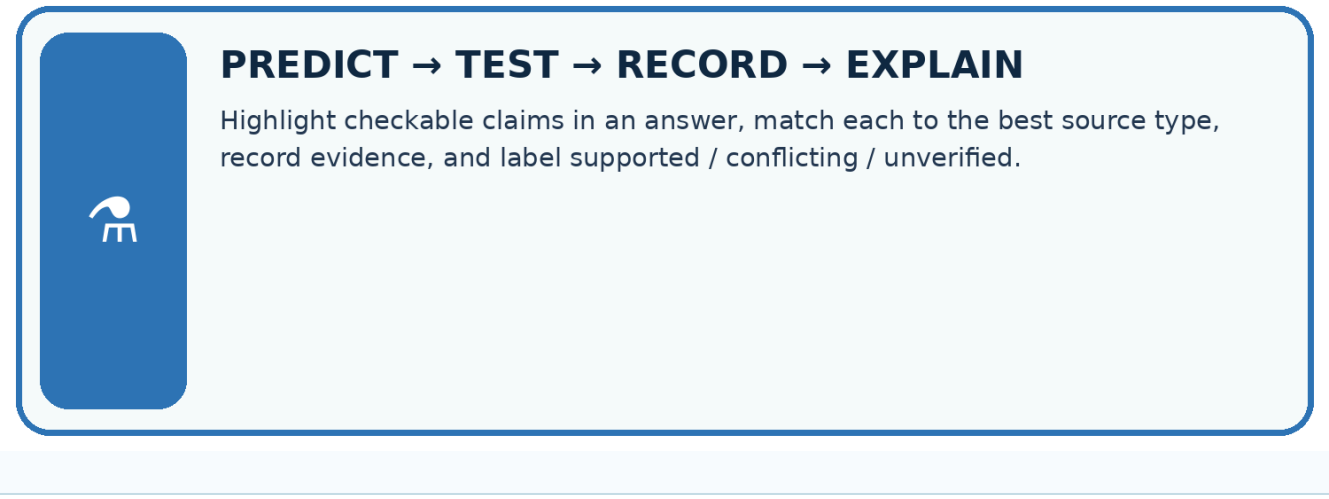

Run the investigation

> Investigate Evidence and Sources. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

Highlight checkable **claim**s in an answer, match each to the best **source** type, record **evidence**, and label supported / conflicting / unverified.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

> **Test / input:** normal
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** boundary
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** missing
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** fresh transfer
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

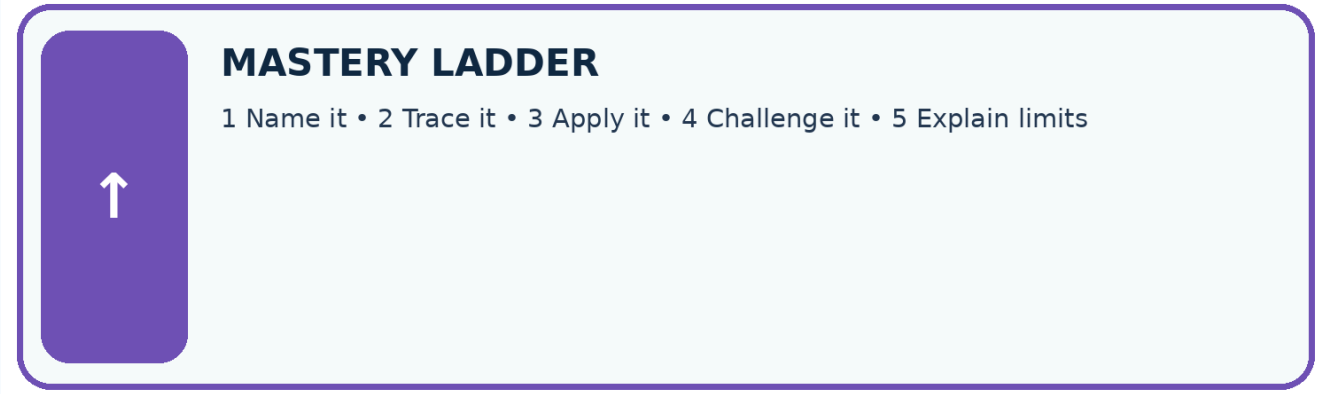

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Evidence and Sources. Explain why each step is justified.

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce **evidence** without copying the worked example.

1 • NAME: Define the concept without repeating the textbook.

2 • TRACE: Show the information, state, branch, calculation, or **evidence** path.

3 • APPLY: Solve a different example **independent**ly.

4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest **evidence** of **independent** understanding:

> **Write or draw your reasoning and evidence.**

STUDENT LESSON · 11 OF 18

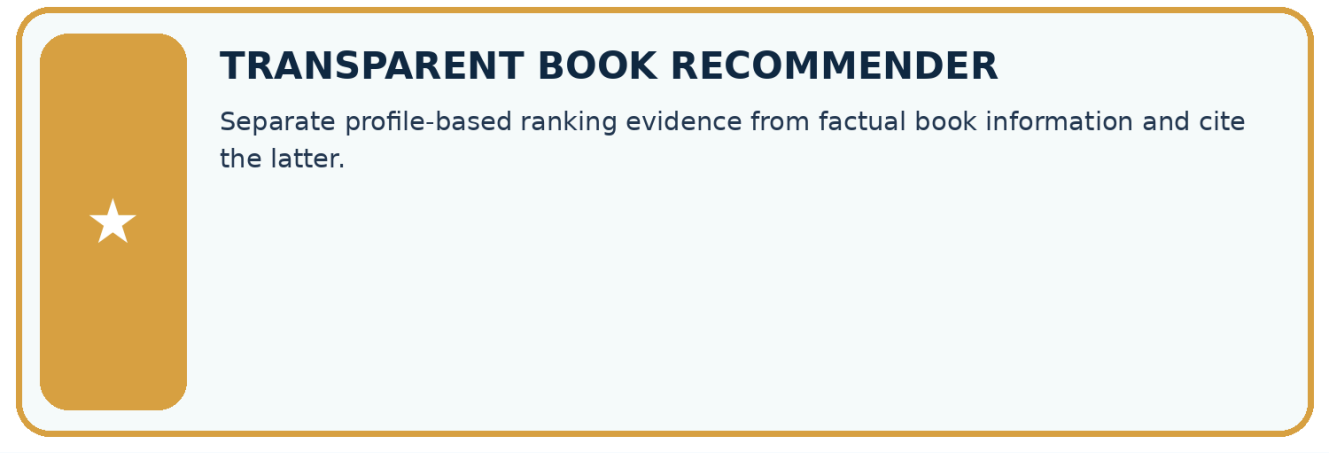

Connect your project

> Apply this week's idea to Transparent Book Recommender. Keep an annotated decision and the evidence supporting it.

CUMULATIVE PROJECT

Transparent Book Recommender

Every week adds one inspectable piece. The system must show how it reached a result.

THIS WEEK'S CHECKPOINT Separate profile-based ranking **evidence** from factual book information and cite the latter.

Trace the system

SYSTEM MAP Reader need → allowed **input**s → transparent rule or score → ranked candidates → explanation → test record → **human decision**

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under **human control**?

Write or draw your reasoning and evidence.

Responsible design

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse a ranking with a fact about a person.

Evidence for your project

Attach **source** IDs to recommender explanation facts and separately audit whether each **source** supports its precise statement.

STUDENT LESSON · 12 OF 18

Show what you know

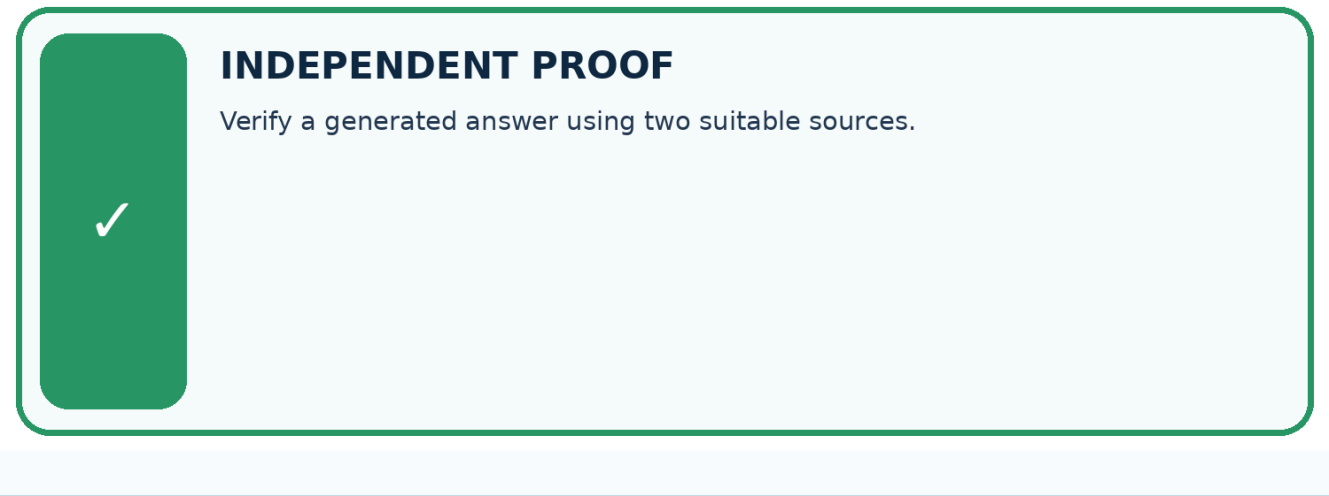

Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Independent evidence

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

Try a more demanding case

CHALLENGE Verify a generated answer using two suitable **source**s.

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My **evidence** that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One limitation, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

Check your explanation

SELF-CHECK ☐ I explained the **mechanism** ☐ I used **evidence** ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

STUDENT LESSON · 13 OF 18

Study a complete case

Revisit the complete Evidence and Sources case for supported practice. Repeated examples do not become fresh assessments.

Week 29 Worked case

Use the supplied details to practise the weekly concept before attempting the **independent** question. This case extends the illustrated lesson.

The situation

An answer says 80 pages, but the catalogue for that edition says 120.

The question

> What **evidence** guides correction?

Worked explanation

Check the exact edition and authoritative catalogue record. Record the supporting **source**.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Check the claim against the exact edition

Evidence or stage	Value or result
Answer	80 pages
Catalogue	120 pages for this edition
Resolution	Verify edition and cite the correct record

An answer says 80 pages, but the catalogue for that edition says 120.

What **evidence** guides correction?

Check the exact edition and authoritative catalogue record. Record the supporting **source**.

STUDENT LESSON · 14 OF 18

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Apply a new case independently

Five **claim**s; four cited; three supported by cited passages; one cited ID is nonexistent. Compute support and citation presence and explain link limits.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 29 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

An answer cites a page about opening hours to support a **claim** about book prices. Is a citation enough? What must be checked?

My answer, with a trace, calculation or supporting **evidence**

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

Write or draw your reasoning and evidence.

Connect to your project

Separate profile-based ranking **evidence** from factual book information and cite the latter.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the **independent** answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

Two catalogue records list 96 and 112 pages for a title. A helper averages them and reports 104. Explain the mistake and a better verification **process**.

> **Explain the mechanism, evidence and one limit.**

Use feedback to improve

Attempt the **independent** case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Evidence and Sources, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: A fictional catalogue answer contains three factual statements and cites existing records.

By the end, I can	How I will show it
Explain the mechanism and terminology of claim support and citation evaluation	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.

By the end, I can	How I will show it
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try **independent**ly → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Evidence and Sources without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of **claim** support and citation evaluation

My deciding step, evidence and one remaining question

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved **independent** assessment for a separate first attempt before teacher feedback.

A fictional catalogue answer contains three factual statements and cites existing records.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Citation presence 3/3; **link validity** 3/3; supported **claim**s 2/3.

1. Check exact **source** support

2. Check links

3. Report separately

4. Break into **claim**s

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Report separately Citation presence 3/3; **link validity** 3/3; supported **claim**s 2/3. An existing citation is not automatically **evidence** for every nearby sentence.

Read the cited passage and compare its exact scope with the **claim**. The universal suitability statement extends beyond what R says.

Remove or qualify unsupported content; adding more copies of the same link does not create the missing **evidence**.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Change the third **claim** to “the record does not assess suitability”. Which conclusion is supported by the supplied facts?

1. That statement accurately describes the supplied record’s limits.

2. This one example guarantees correct results for every future **input**.

3. We can decide the result without examining the changed **input** or the procedure.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: That statement accurately describes the supplied record’s limits. R gives pages and shelf only; it contains no suitability assessment.

Repair a missing building block

Review Prompt Experiments (ai-2/28). Goal: Explain the **mechanism** and terminology of controlled prompt experiments. Short practice: Name the case P passes and Q fails, and explain why it matters..

Return to this week and explain what you changed.

Review Image and Voice Pipelines (ai-2/26). Goal: Explain the **mechanism** and terminology of speech pipelines and multimodal **evidence**.

Short practice: Which stage first fails, and why should the faulty transcript not be silently overwritten?. Return to this week and explain what you changed.

Review Recommendation Scores (ai-2/23). Goal: Compute a weighted score. Short practice: Why does B not become the winner when its score is largest?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

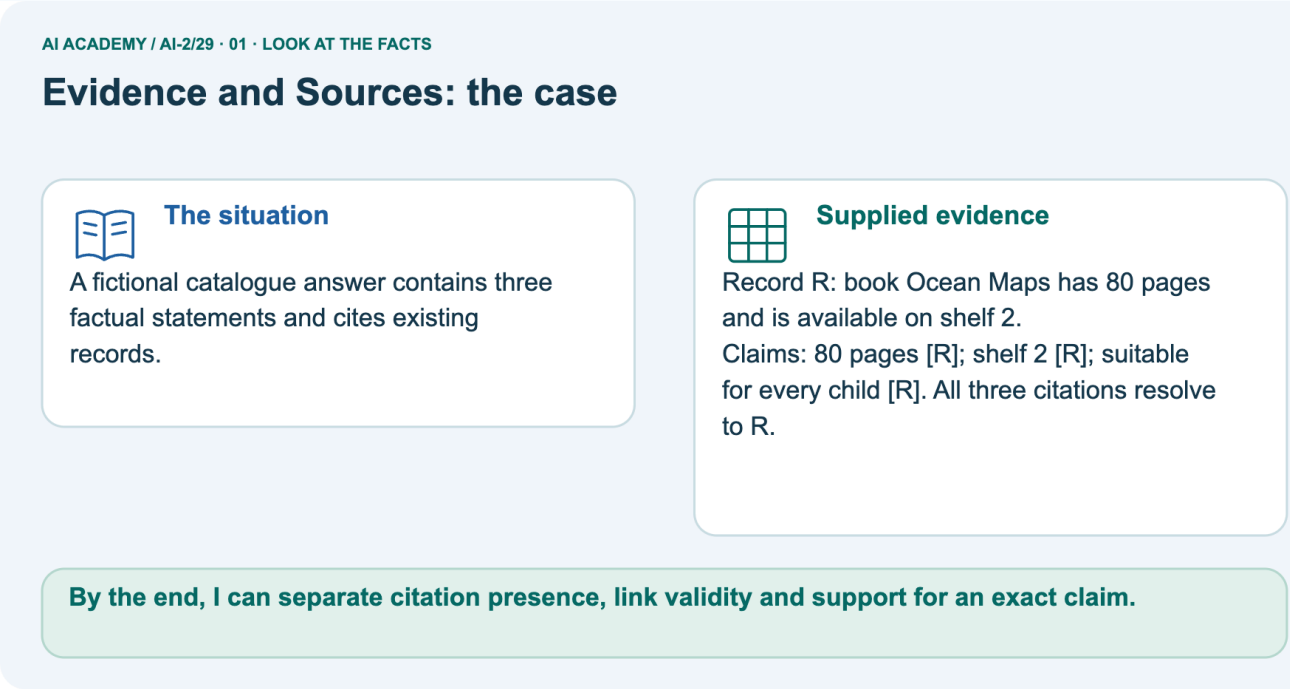

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Evidence and Sources graphic using its labels, deciding evidence and relevant limitation.

01. Evidence and Sources: the case

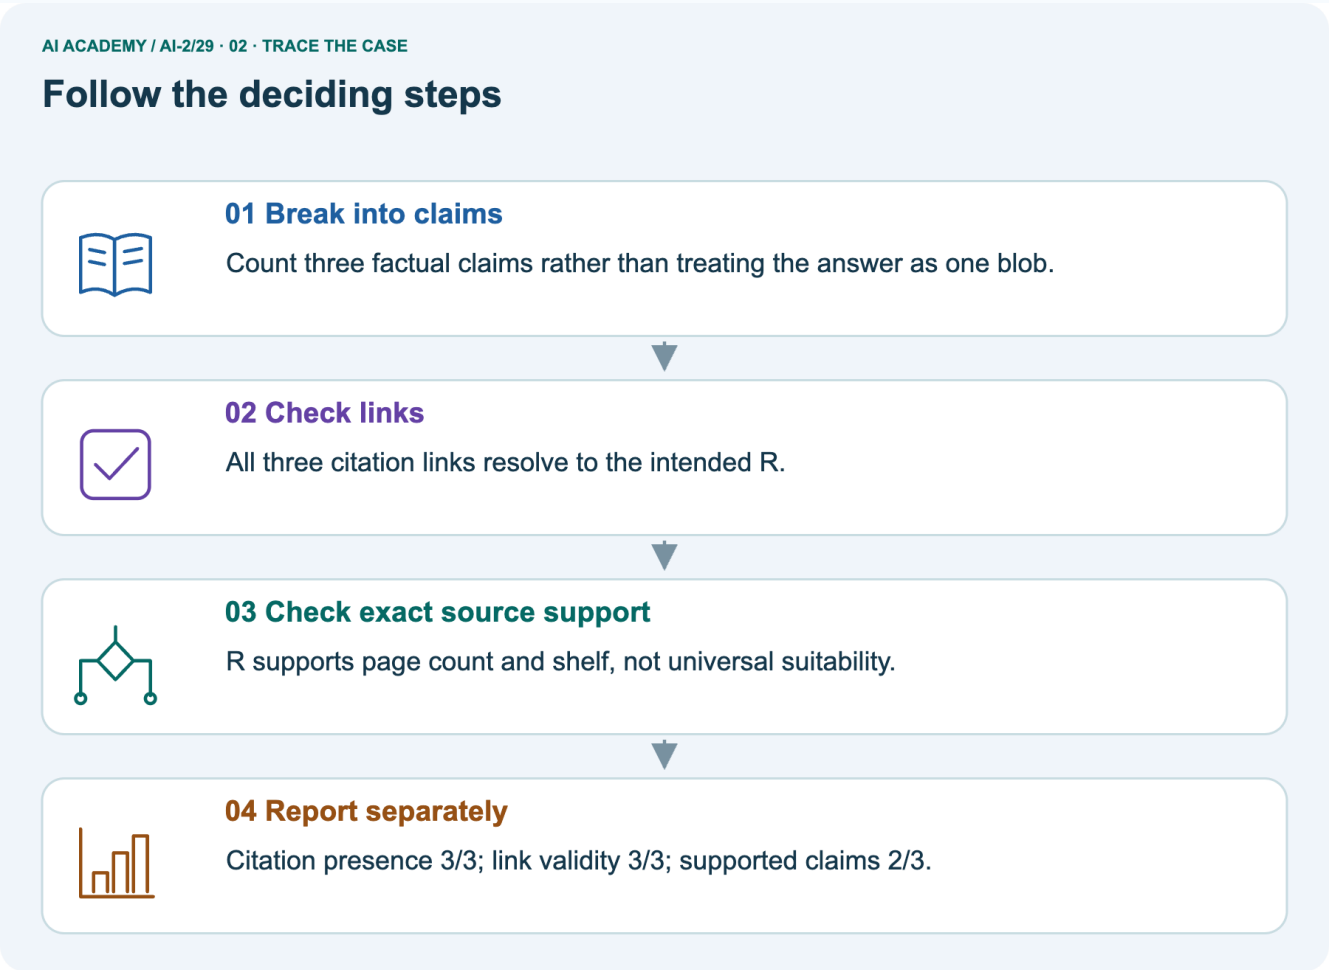

Follow the labelled picture with the matching explanation. Open the vector diagram

A fictional catalogue answer contains three factual statements and cites existing records. Supplied facts: Record R: book Ocean Maps has 80 pages and is available on shelf 2.

Claims: 80 pages [R]; shelf 2 [R]; suitable for every child [R]. All three citations resolve to R.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

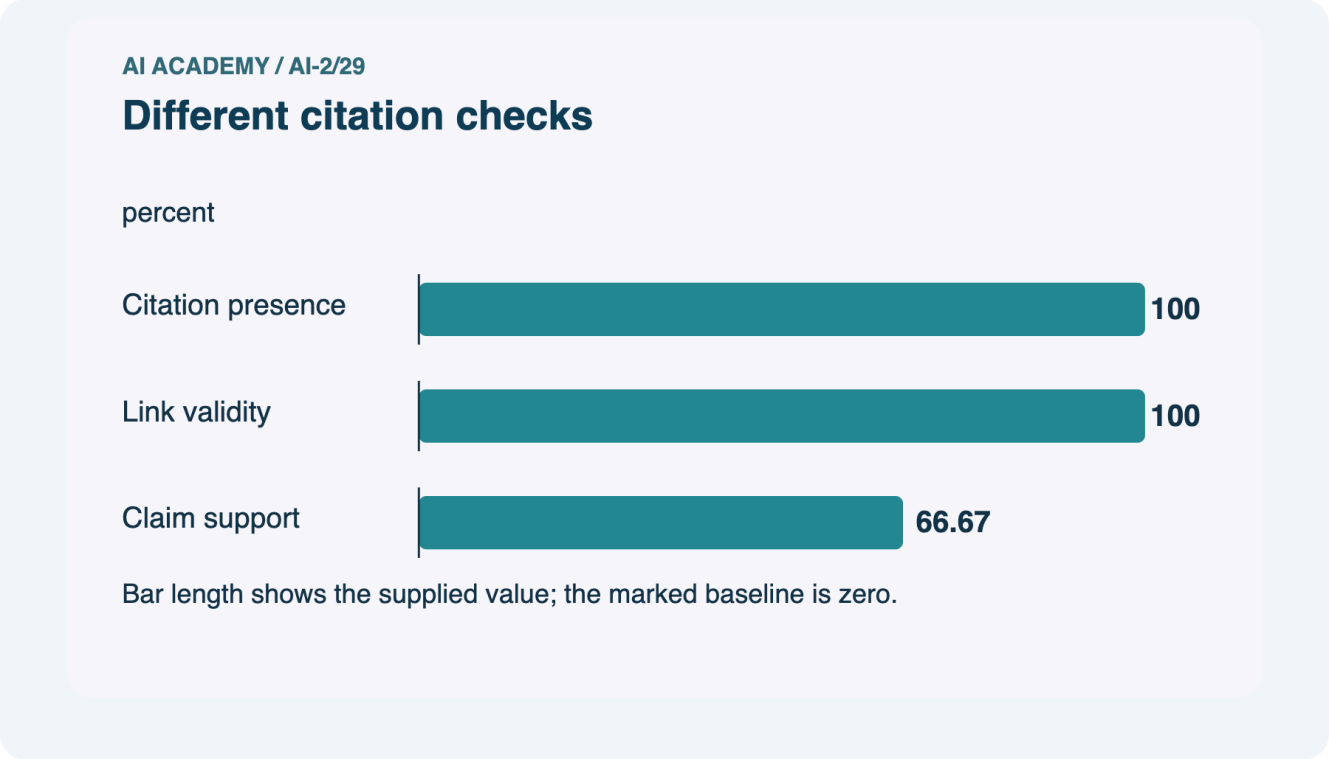

Follow the labelled picture with the matching explanation. Open the vector diagram

Break into **claim**s: Count three factual **claim**s rather than treating the answer as one blob. → Check links: All three citation links resolve to the intended R. → Check exact **source** support: R supports page count and shelf, not universal suitability. → Report separately: Citation presence 3/3; **link validity** 3/3; supported **claim**s 2/3.

Point to each numbered stage and explain which recorded **input** it uses.

03. Different citation checks

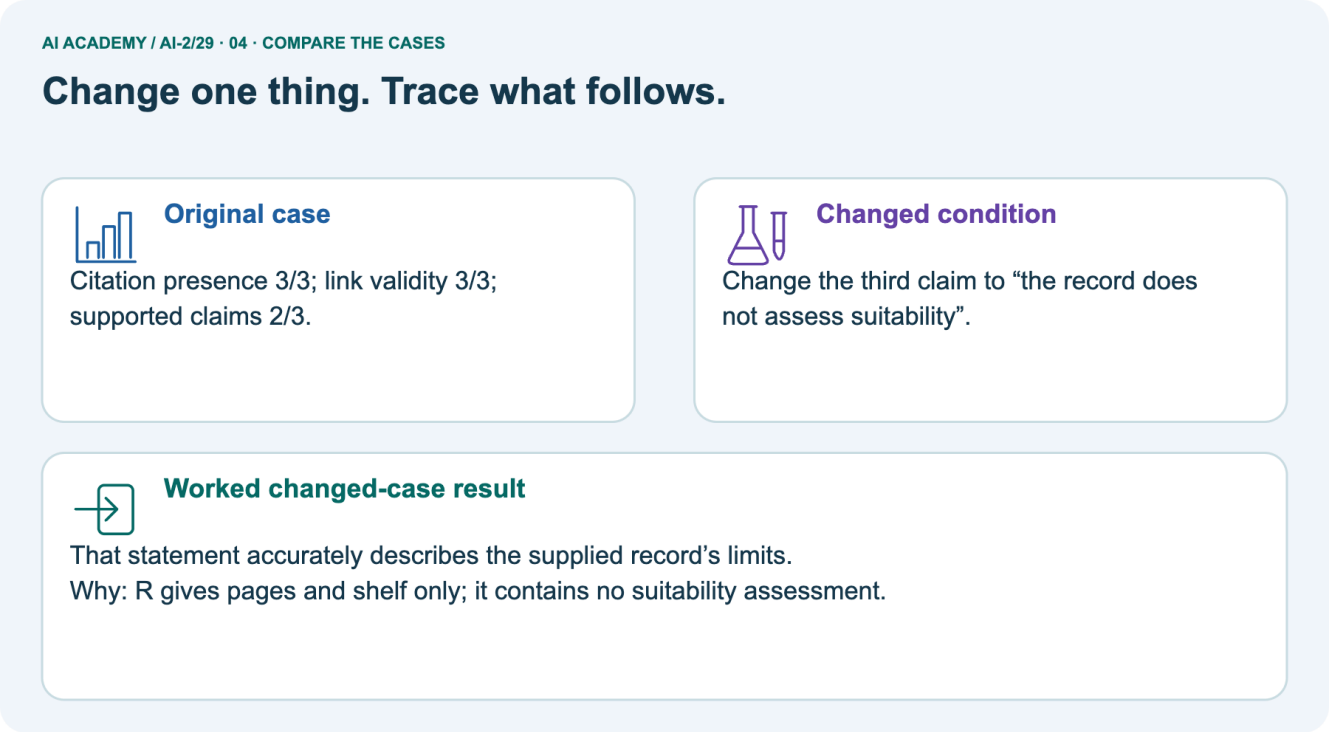

Follow the labelled picture with the matching explanation. Open the vector diagram

Different citation checks. Units: percent. Citation presence: 100. **Link validity**: 100. **Claim** support: 66.66666666666667.

Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

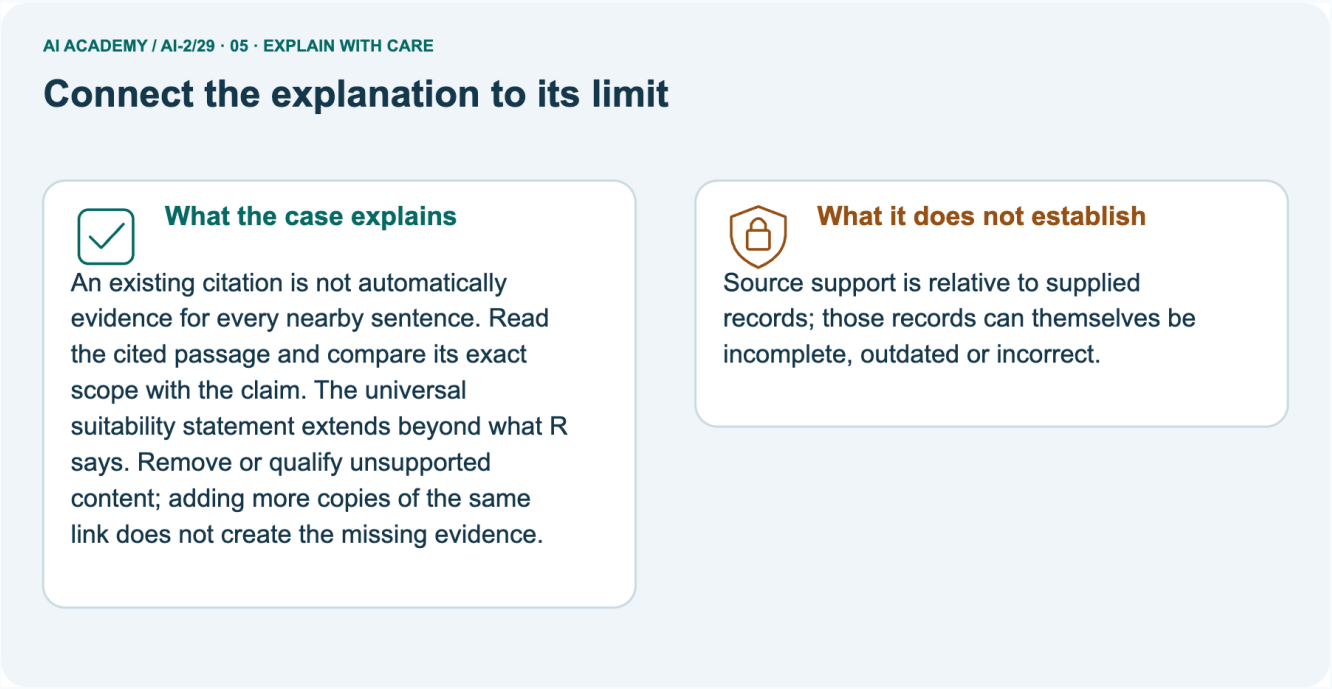

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Citation presence 3/3; **link validity** 3/3; supported **claim**s 2/3. Changed condition: Change the third **claim** to “the record does not assess suitability”.

Expected result: That statement accurately describes the supplied record’s limits. Reason: R gives pages and shelf only; it contains no suitability assessment.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

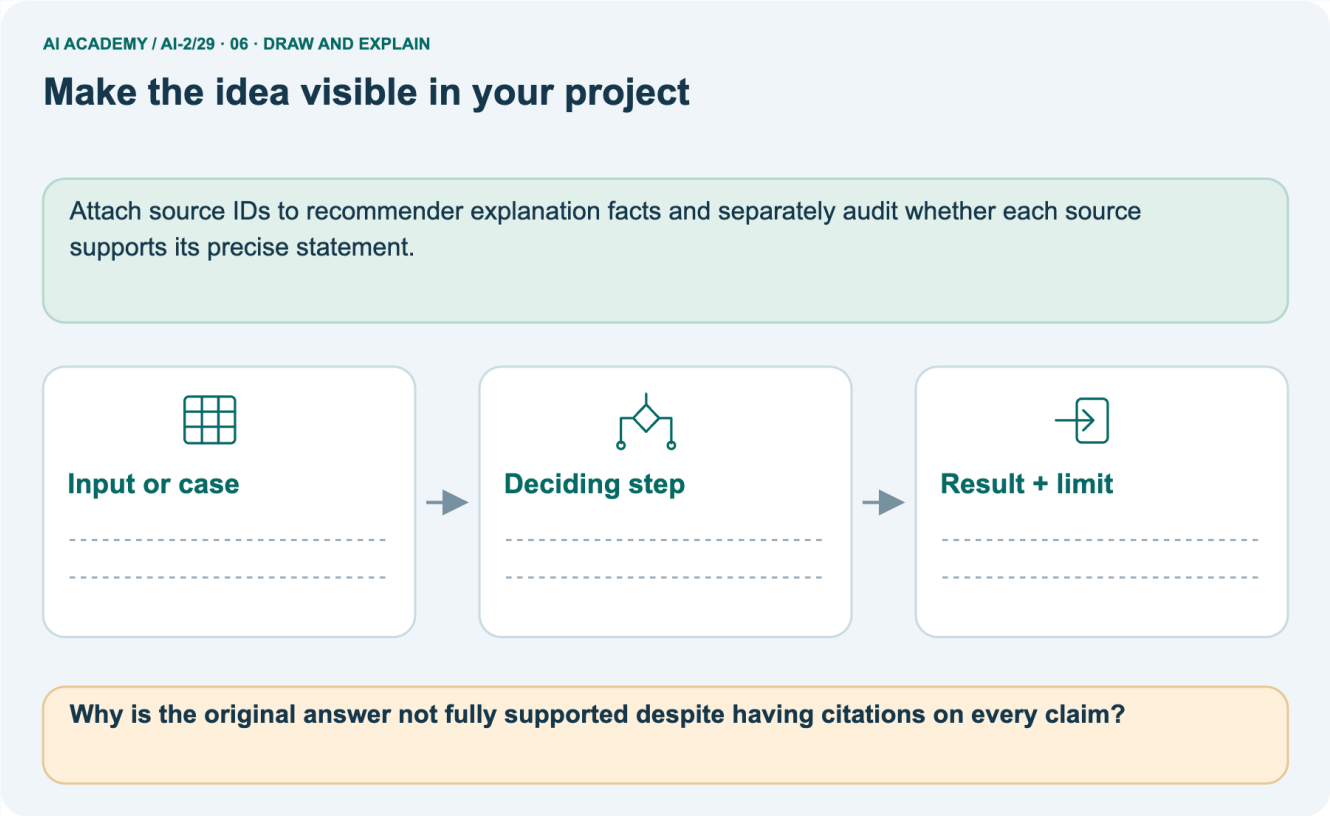

An existing citation is not automatically **evidence** for every nearby sentence. Read the cited passage and compare its exact scope with the **claim**. The universal suitability statement extends beyond what R says.

Remove or qualify unsupported content; adding more copies of the same link does not create the missing **evidence**.

Limit: **Source** support is relative to supplied records; those records can themselves be incomplete, outdated or incorrect.

> Explain the case, then point to a limit on the **claim**.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Attach **source** IDs to recommender explanation facts and separately audit whether each **source** supports its precise statement. Draw your **input**, deciding step, result and limit.

Supported question: Why is the original answer not fully supported despite having citations on every **claim**?

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
