Capstone Expo

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Transparent Book Recommender

Before you start

Weeks 32–35: defend a requirement, trace, test and limitation.

Plan time to read, investigate and explain. Keep predictions separate from observations.

Your mission

> Start with the target: Defend an application using reproducible evidence. Try the recall before opening notes.

Your learning target

I can defend an application using reproducible **evidence**.

I can explain failures and limits honestly.

I can demonstrate a new case without hidden help.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Improve and Challenge. Give an example and a mistake that the idea helps you avoid.

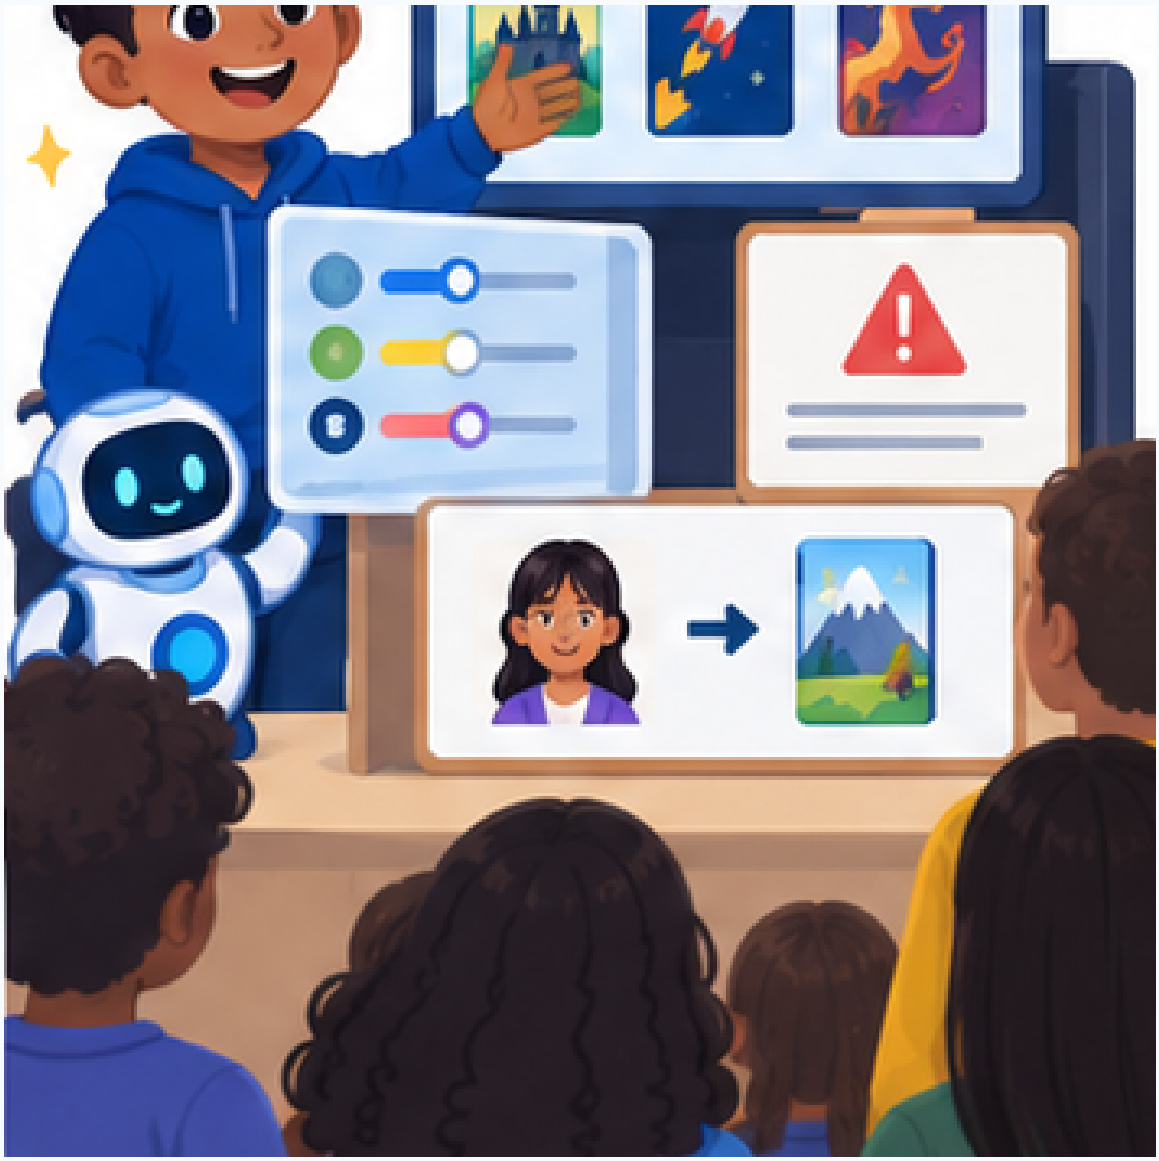

Without opening the old lesson, explain one key idea from Build the Recommender. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Agents and Tools. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Week 36: **Capstone** Expo

Ownership is demonstrated by a fresh recommendation and **evidence**-based **defense**.

THINKER MISSION

Demo, calculate, critique, and answer an unseen user case.

Thinker name and date:

Write or draw your reasoning and evidence.

Readiness for the connected explanation

What makes a project result reproducible?

This week's end goal

By the end, I can defend a complete recommendation with validation, eligibility and reproducible ranking.

STUDENT LESSON · 2 OF 18

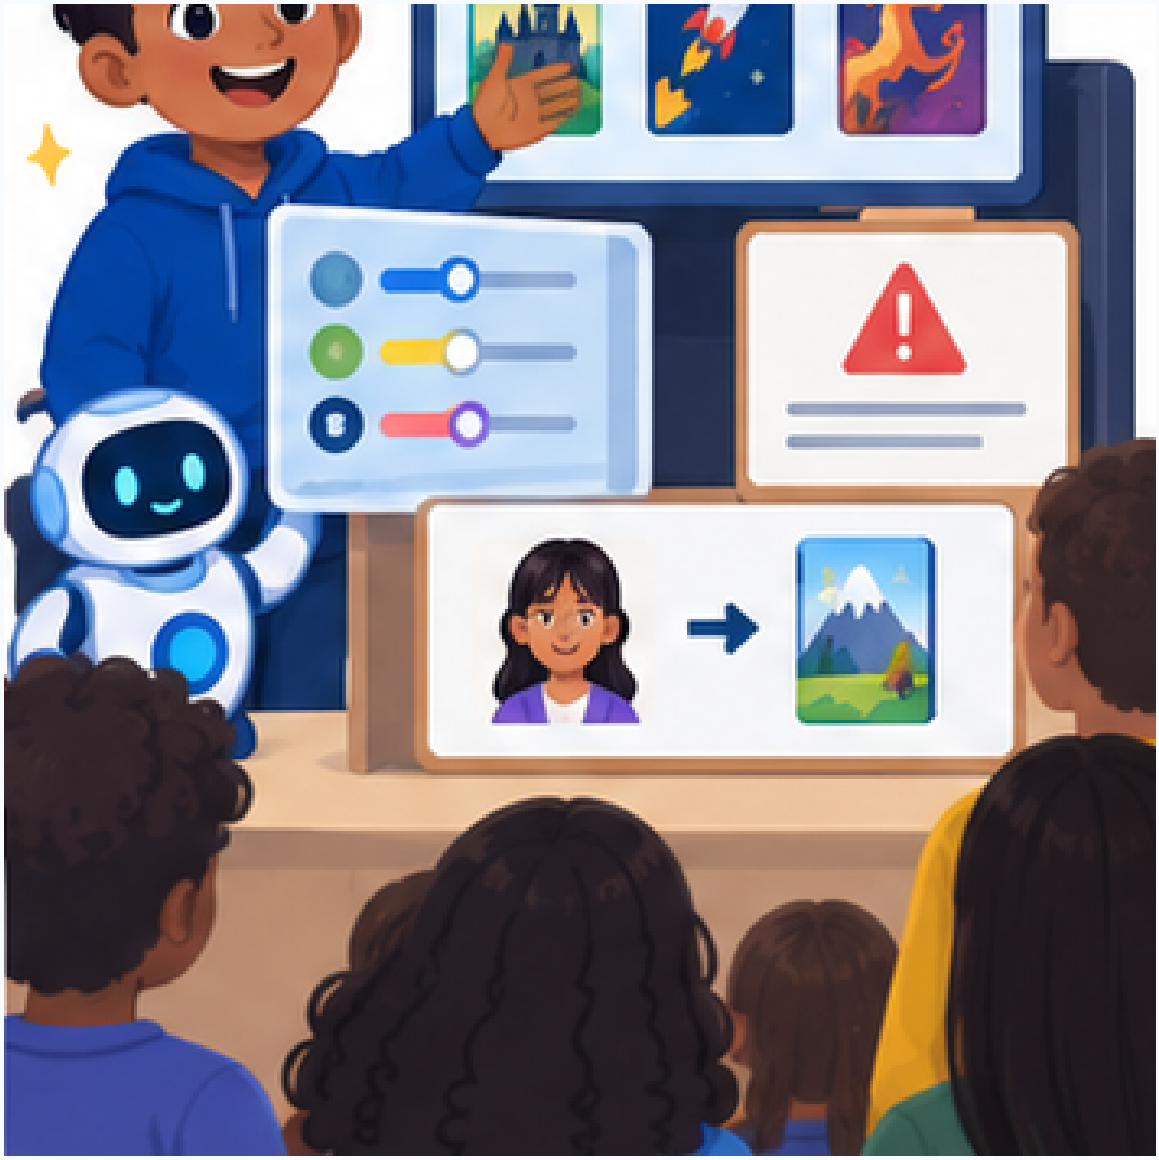

Notice the evidence

Investigate the supplied Capstone Expo case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Notice → Predict → Explain

Begin with visible **evidence**. Do not explain more than the picture and information support.

Start with this puzzle

MYSTERY

The learners must use **capstone** expo to solve a problem. What information do they have? What decision or calculation do they make? What would count as **evidence** that it worked?

Three **observation**s (what you can point to):

Write or draw your reasoning and evidence.

My **prediction** and the clue supporting it:

Write or draw your reasoning and evidence.

A closer explanation

Finish the fictional activity chooser with a short **evidence**-based presentation and a reproducible **handover**.

Show the purpose, contract, pipeline, one ordinary trace, one boundary or failure case, improvements and remaining limits. A working **demonstration** supports a software claim, not a claim of proven learning benefit.

STUDENT LESSON · 3 OF 18

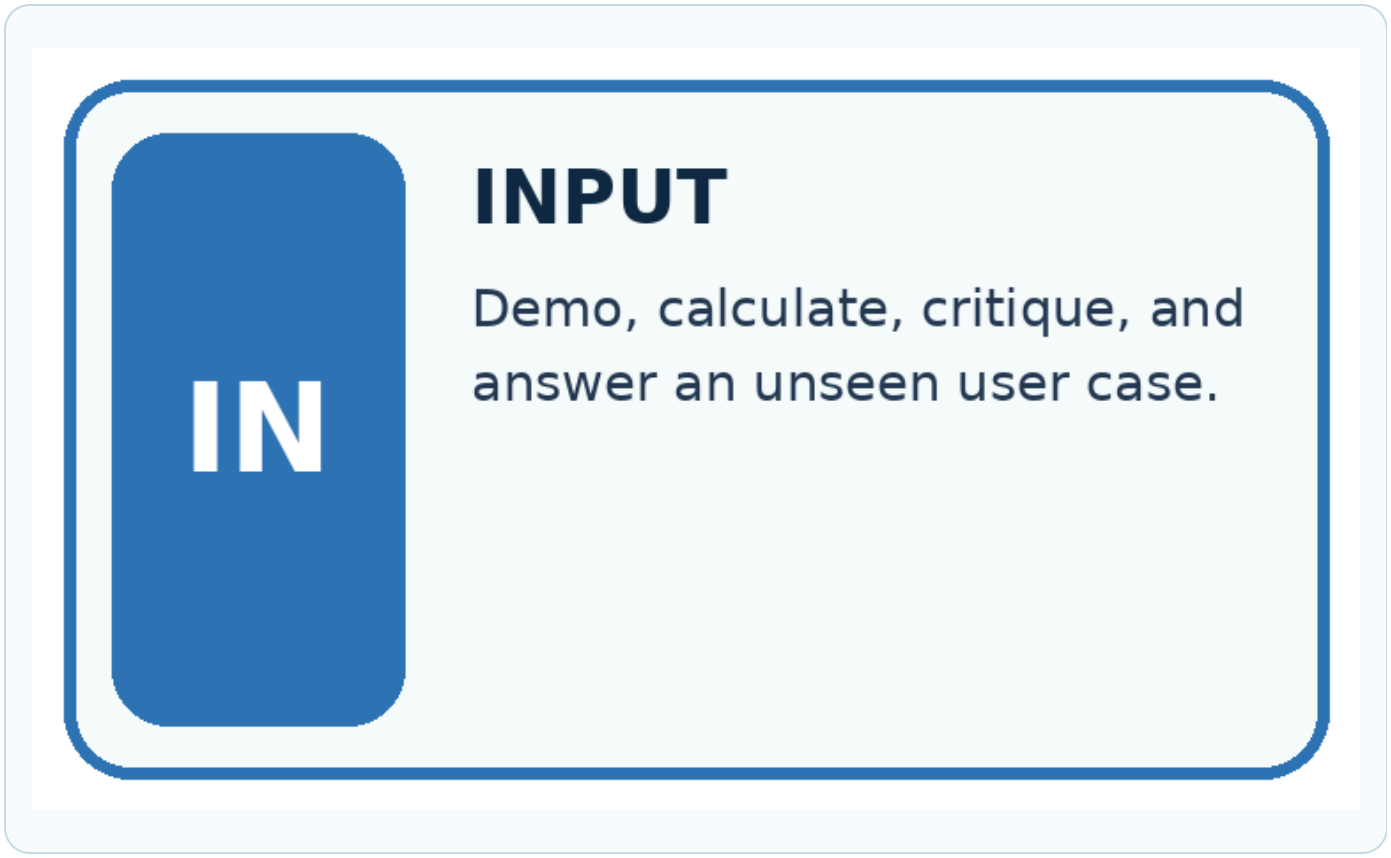

See how it works

> Follow the mechanism for Capstone Expo. Connect each labelled input, deciding step and result.

VISUAL MECHANISM

Input → Process → Output

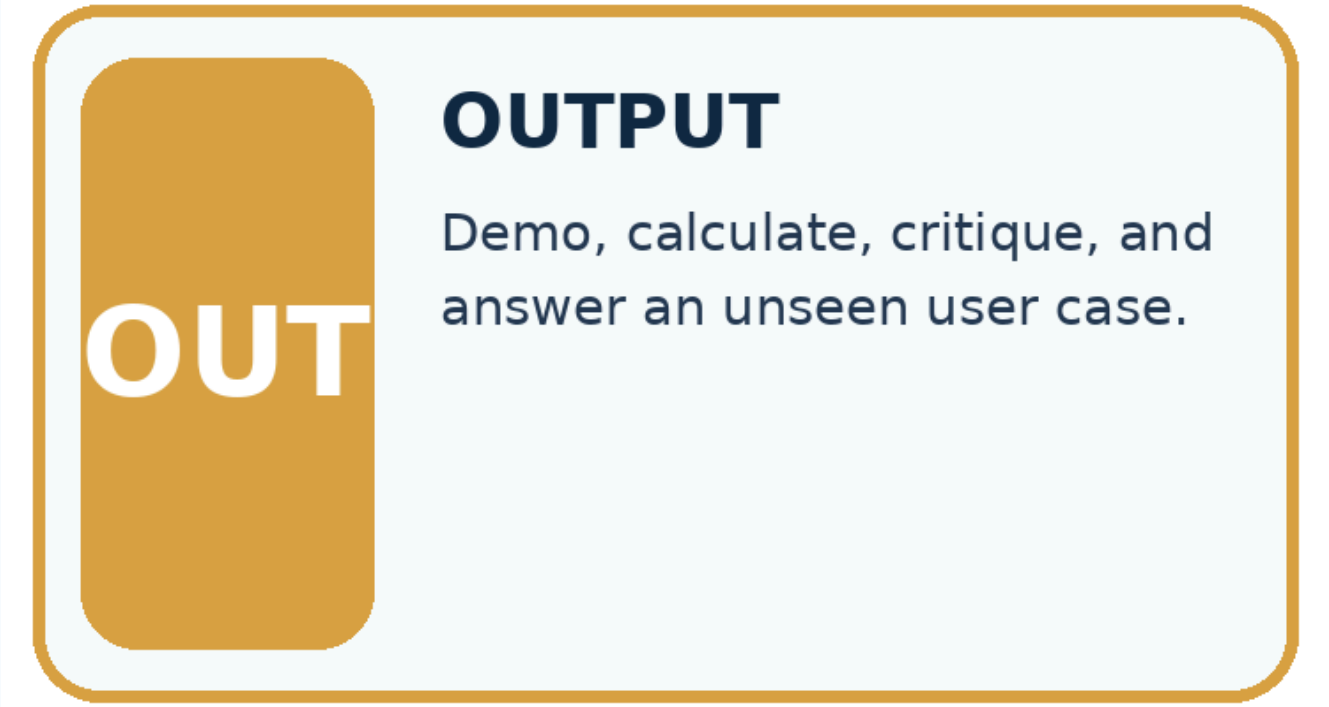

Trace the information. At each stage, ask what changed and how you could test it.

IN
INPUT
Demo, calculate, critique, and answer an unseen user case.

↓

PROCESS
Ownership is demonstrated by a fresh recommendation and evidence-based defense.

↓

Which stage could fail even when the other two are correct? Explain:

> **Write or draw your reasoning and evidence.**

A closer explanation

```
report = {"supplied": 4, "accepted": 3, "rejected": 1,
          "eligible": 2, "selected": "A", "score": 8}
assert report["accepted"] + report["rejected"] == report["supplied"]
assert report["eligible"] <= report["accepted"]
print(report["selected"], report["score"])
```

Follow the evidence

STEP OR CASE	EVIDENCE	MEANING
Claim	A selected by stated policy	Show trace and inputs
Quality	Tested cases and failures	Show full denominators
Handover	Versions and run steps	Peer can reproduce

Read each row from left to right and connect the evidence to the stated rule.

The example report prints A 8 and its counts are internally consistent. These checks do not prove A is the correct winner; the **input** records and scoring trace are also needed.

Keep raw fictional data, source code, settings, test results and change log together.

Explain a result so someone can check it

A useful **handover** joins a claim to its **evidence**. Show the fictional **input** records, the policy and version, which records passed validation, which met the time limit, the scores and any tie decision. Then show the report.

Its counts should agree, but consistent counts alone do not prove the selected item is correct.

Include an earlier failure and repair, and separate demonstrated software behaviour from educational benefits that have not been measured.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

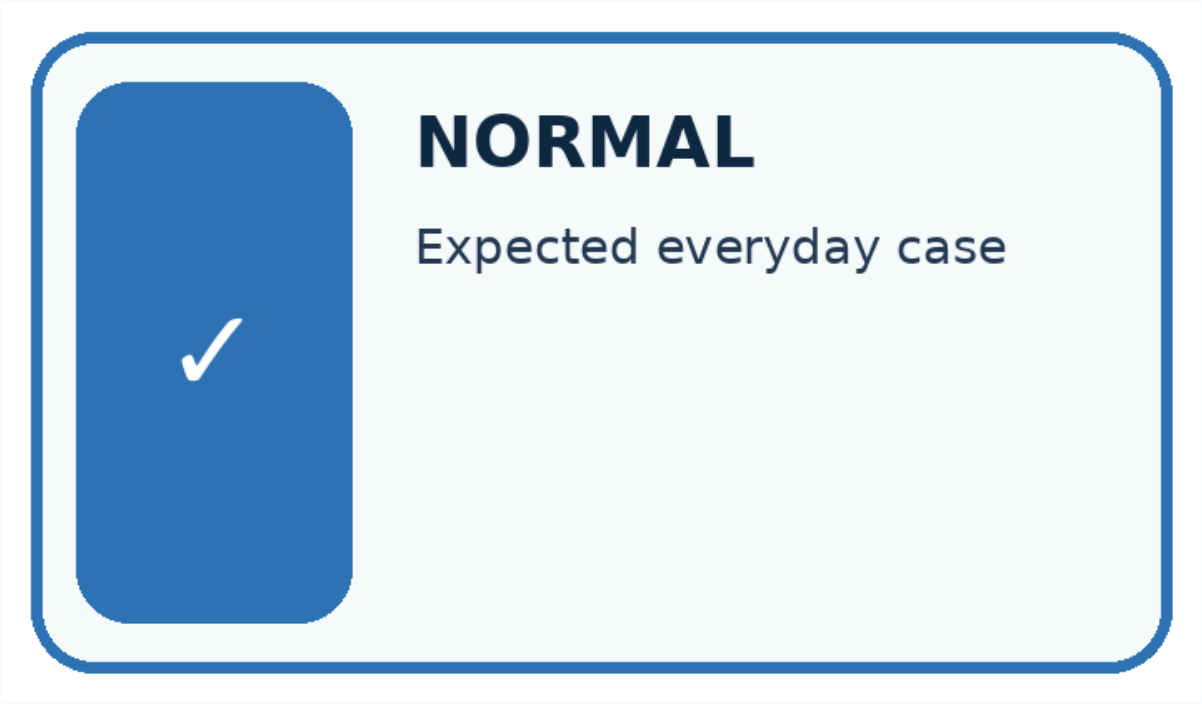

> Compare the supplied cases for Capstone Expo. Identify the detail that changes the conclusion.

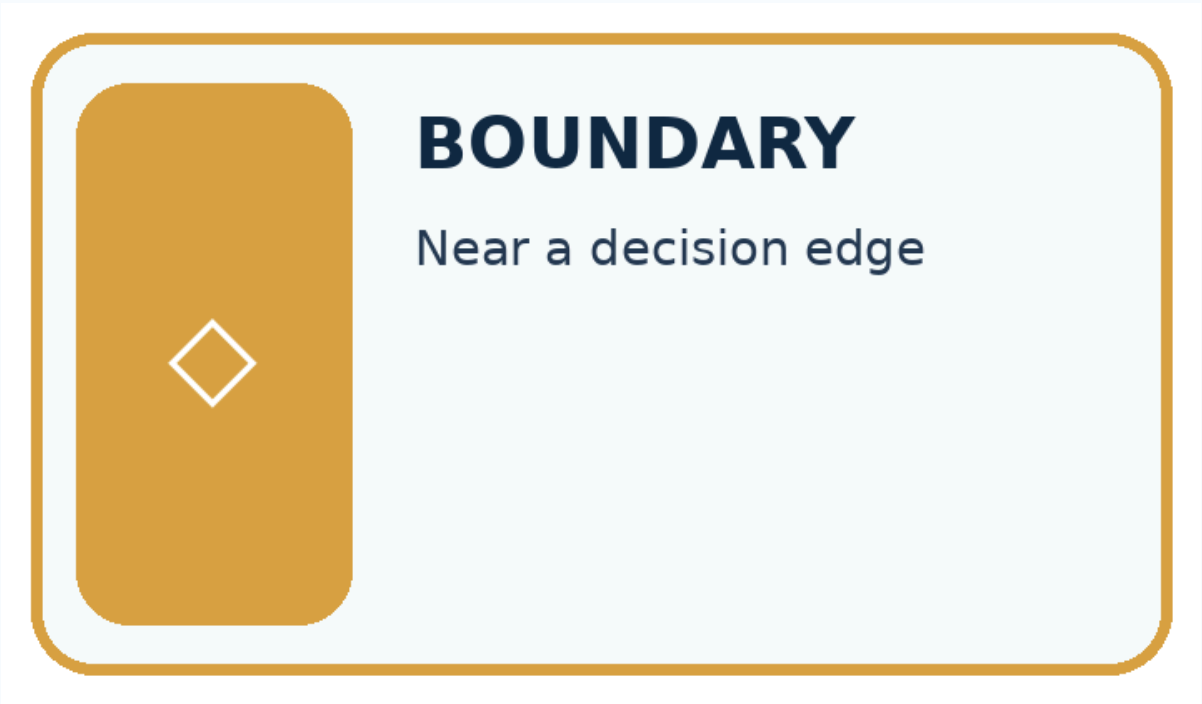

The case to investigate

CASE GALLERY

Four Tests, Four Kinds of **Evidence**

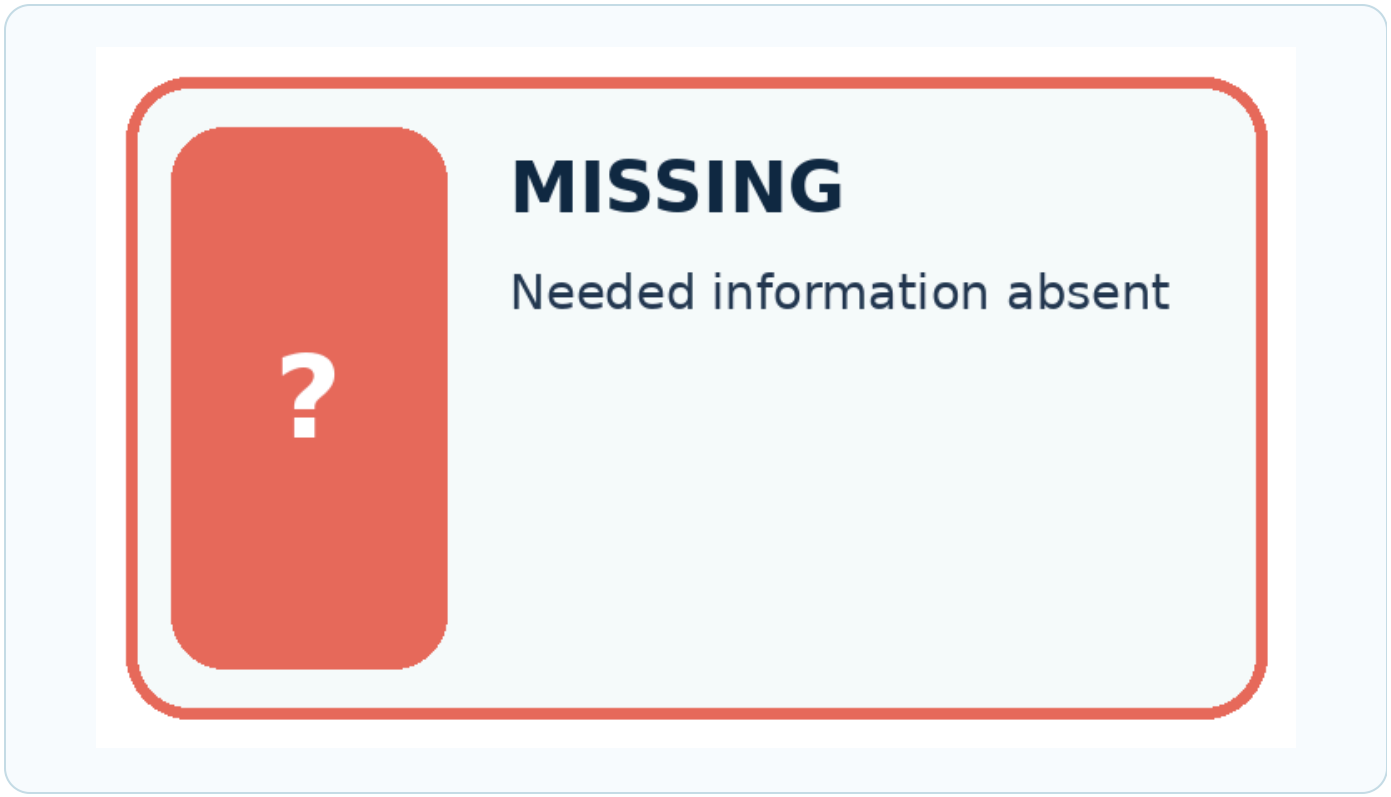

A system is not understood until it survives more than one comfortable example.

The normal case

NORMAL CASE: predict and name **evidence**. BOUNDARY CASE: predict and name **evidence**.

?
MISSING
Needed information absent

→
TRANSFER
Fresh situation or user

Check missing information

MISSING INFORMATION: predict and name **evidence**. **TRANSFER** CASE: predict and name **evidence**.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change one thing

Change: An authorised repair converts D's interest to integer 4.

Predicted result

Prediction: D becomes eligible and scores 9, so it wins.

Why the result follows

Reason: The **evidence**-backed **input** repair changes validation and then ranking; record this as a new case/version.

STUDENT LESSON · 5 OF 18

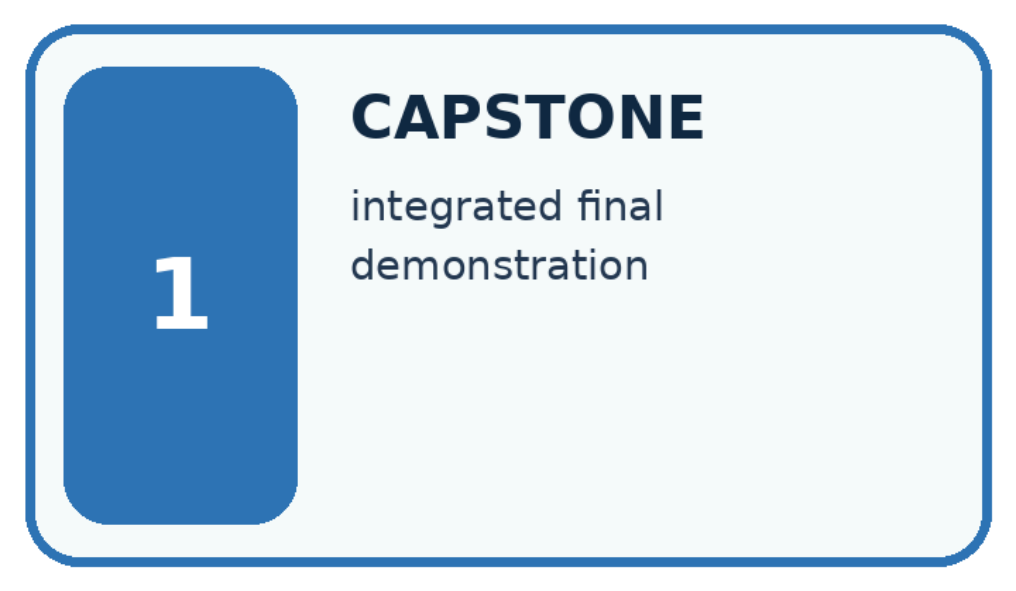

Words that unlock the idea

> Use the vocabulary of Capstone Expo to explain a concrete decision, rather than only memorising definitions.

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

2
DEFENSE
explain and justify choices
3
TRANSFER
apply learning to a new case

Word	My own example	Not this / boundary
capstone	A final project combining skills and evidence developed across the course.	
defense	An explanation of a project decision supported by evidence and an account of its limitations.	
transfer	Apply an idea or skill to a new case rather than copy the worked example.	
limitation	A condition or missing capability that restricts what a result can establish or a system can safely do.	

Words used in the closer explanation

Word	Meaning
Evidence bundle	The records needed to check a project claim
Demonstration	Showing the application on specified inputs
Handover	Giving another person enough information to use or check the work

STUDENT LESSON · 6 OF 18

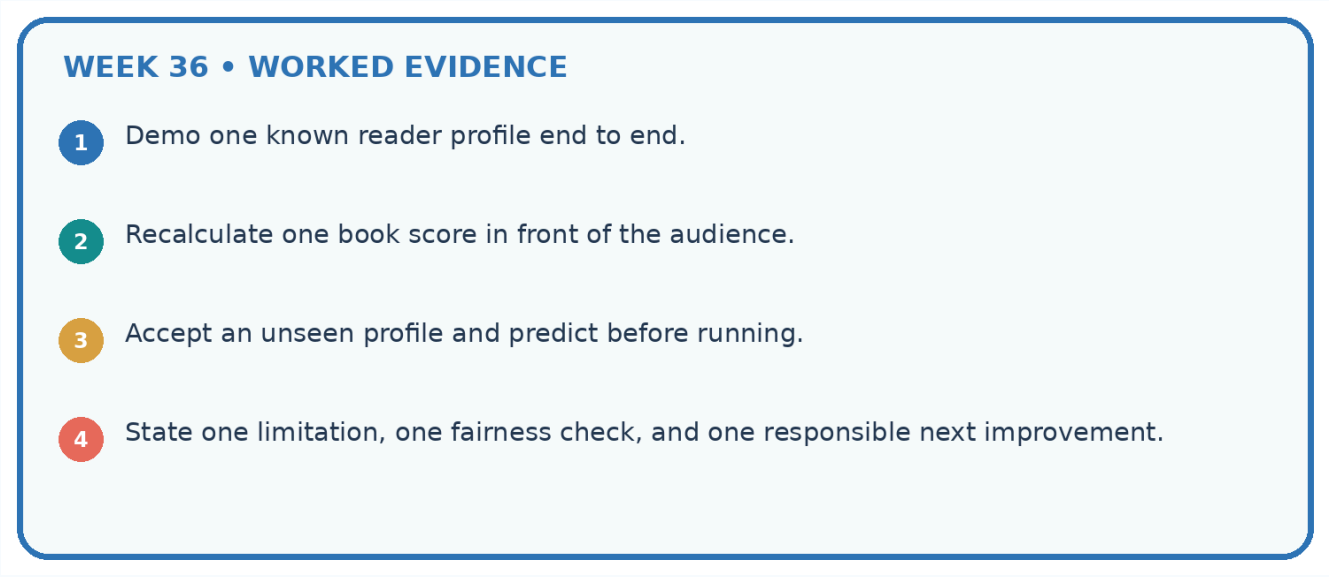

Follow a worked example

> Follow the worked trace for Capstone Expo, predict a step, then compare with its explanation.

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

1. Demo one known reader profile end to end.

2. Recalculate one book score in front of the audience.

3. Accept an unseen profile and predict before running.

4. State one **limitation**, one fairness check, and one responsible next improvement.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the **evidence** answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

A demonstration shows only the winning name. Name two pieces of evidence needed to explain that choice.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Capstone Expo

A fictional team presents its transparent book recommender on a reserved catalogue.

The facts we will use

Supplied facts

Request maximum 120 pages; score=2×interest+illustrated, where illustrated is 1 for True and 0 for False; tie by ID.

Supplied facts

A pages120 interest3 True; B pages100 interest4 False; C pages121 interest5 True; D pages90 interest"4" True. Numeric fields require exact integers.

AI ACADEMY / AI-2/36

Capstone Expo

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Validate

D has text interest and is rejected; A,B,C have valid fields.

2. Filter

A and B meet the page limit; C exceeds it.

3. Rank

A scores 7; B scores 8, so B wins.

4. Defend evidence

Explain two eligible items, one page-limit exclusion and one type rejection.

CHANGE ONE THING

An authorised repair converts D's interest to integer 4.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Validate	D has text interest and is rejected; A,B,C have valid fields.
2. Filter	A and B meet the page limit; C exceeds it.
3. Rank	A scores 7; B scores 8, so B wins.
4. Defend evidence	Explain two eligible items, one page-limit exclusion and one type rejection.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

A presentation should let someone rebuild the result from the stated contract. A's equality is accepted; D is not silently converted; C's high preference score cannot override the page requirement.

Reversing rows must preserve B because it has the unique highest eligible score. Keep the reserved case distinct from practice **demonstration**s.

What this example does not establish

Keep the stated limit

A defensible algorithmic trace does not prove B will be liked or that classroom learning improved.

Keep the stated limit

Read the labelled picture: Give the original winning ID, its score, and counts of eligible, excluded and invalid rows.

Keep the stated limit

Change one thing: An authorised repair converts D's interest to integer 4. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Capstone Expo claim and explain a repair using the supplied evidence.

Find the first error

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak **evidence**.

!

COMPARE • DIAGNOSE

Weak idea: A polished presentation is enough to prove technical understanding.
Strong move: locate evidence, change one cause, and retest.

Evidence record	Expected	Actual	Likely cause / next test
normal case	works		
boundary case	stated rule		
missing input	safe response		
fresh transfer	generalizes		

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

The final independent task must be attempted before hints. Record support honestly and use a new case after support.

Keep teacher answers separate from student materials and do not publish private credentials or real student records in the **handover**.

> **After passing the new case, what remains unproven and what is a reasonable next step?**

STUDENT LESSON · 8 OF 18

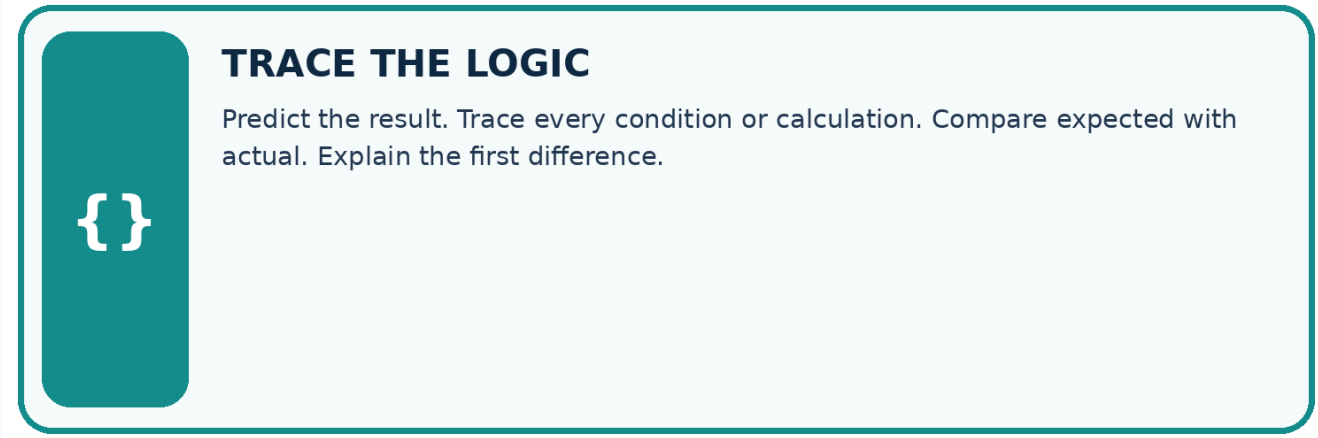

Practise together

> Practise Capstone Expo with support, then explain the deciding step in your own words.

LOGIC STUDIO

Trace Before You Run

Block code, pseudocode, tables, and diagrams are different ways to expose the same reasoning.

SET **evidence**_record PREDICT expected_result RUN one normal case and one boundary case COMPARE actual_result with expected_result IF different: locate first cause; change one factor; RETEST EXPLAIN result, **limitation**, and next safe step

> Trace one **input**. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

A polished presentation can conceal missing **evidence**. Replace claims such as works for everyone with the exact requirements met, cases executed and known **limitation**s.

Show one prior failure and its repair rather than deleting it from the story.

Practise with less help: Check report consistency

Use workbook W2 for the connected example “Defending the data application”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Defending the data application. Proposed explanation: “A successful run proves the conclusion”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Give the original winning ID, its score, and counts of eligible, excluded and invalid rows.

> **My explanation using a pictured step and the given facts**
>
> _____
>
> _____
>
> _____
>
> _____

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

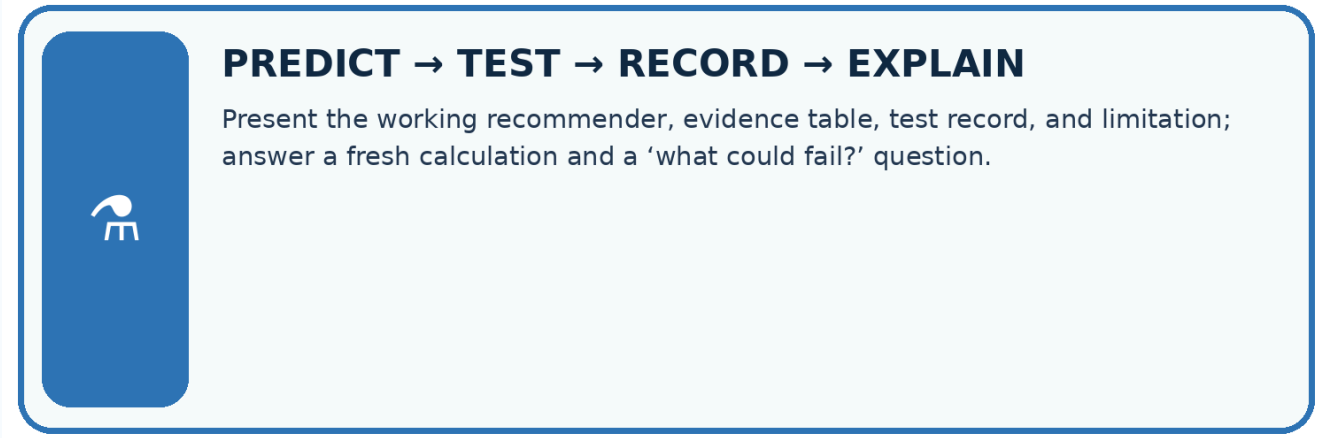

Run the investigation

> Investigate Capstone Expo. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

Present the working recommender, **evidence** table, test record, and **limitation**; answer a fresh calculation and a ‘what could fail?’ question.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

> **Test / input:** normal
>
> **Prediction:** _____
>
> **Actual:** _____
>
> **Evidence / calculation:** _____
>
> **Change or keep?:** _____

> **Test / input:** boundary
>
> **Prediction:** _____
>
> **Actual:** _____
>
> **Evidence / calculation:** _____
>
> **Change or keep?:** _____

Test / input: missing

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: fresh transfer

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

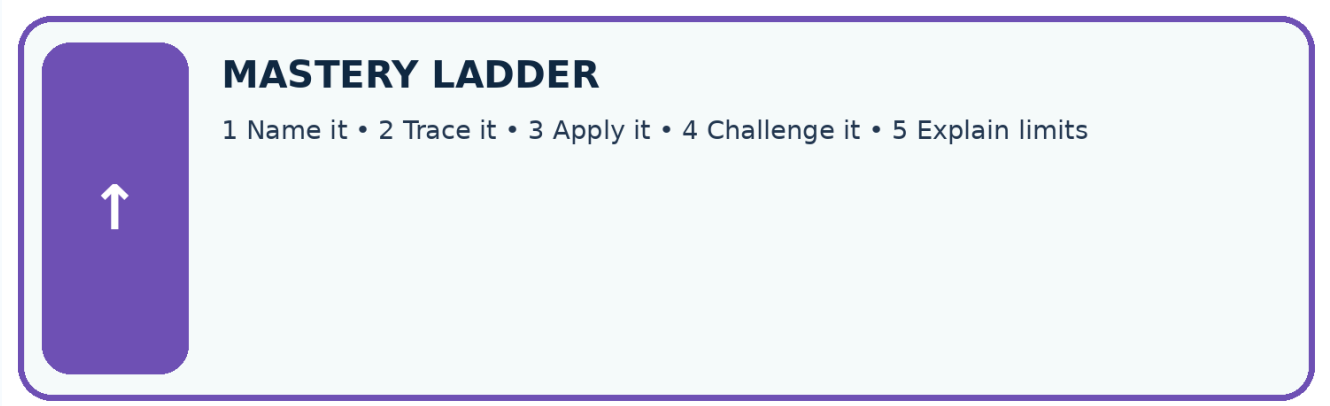

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Capstone Expo. Explain why each step is justified.

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce **evidence** without copying the worked example.

1 • NAME: Define the concept without repeating the textbook.

2 • TRACE: Show the information, state, branch, calculation, or **evidence** path.

3 • APPLY: Solve a different example independently.

4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest **evidence** of independent understanding:

Write or draw your reasoning and evidence.

STUDENT LESSON · 11 OF 18

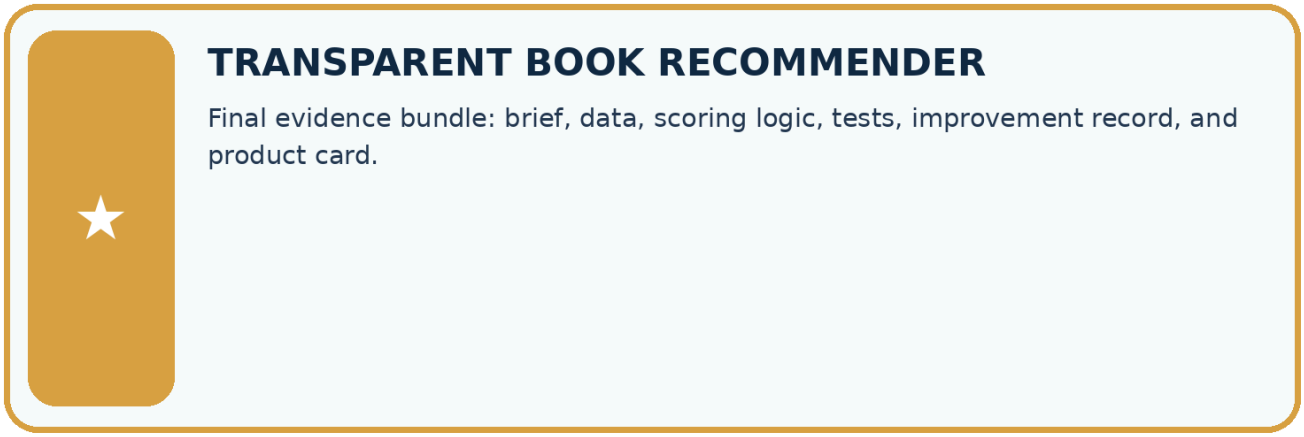

Connect your project

> Apply this week's idea to Transparent Book Recommender. Keep an annotated decision and the evidence supporting it.

CUMULATIVE PROJECT

Transparent Book Recommender

Every week adds one inspectable piece. The system must show how it reached a result.

THIS WEEK'S CHECKPOINT Final **evidence bundle**: brief, data, scoring logic, tests, improvement record, and product card.

Trace the system

SYSTEM MAP Reader need → allowed **input**s → transparent rule or score → ranked candidates → explanation → test record → **human decision**

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under **human control**?

Write or draw your reasoning and evidence.

Responsible design

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse a ranking with a fact about a person.

Evidence for your project

Present the Transparent Book Recommender's code, baseline, full-case traces, reserved results and **limitation**s, without claiming fictional results as pupil work.

STUDENT LESSON · 12 OF 18

Show what you know

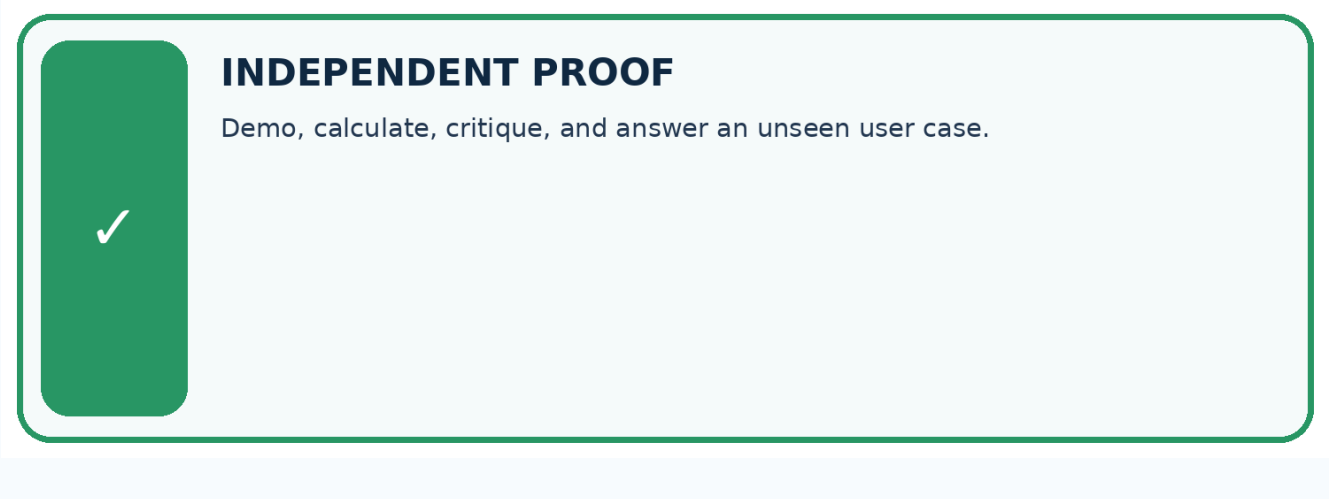

> Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Independent evidence

INDEPENDENT MASTERY PROOF

Explain • **Transfer** • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

Try a more demanding case

CHALLENGE Demo, calculate, critique, and answer an unseen user case.

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My **evidence** that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One **limitation**, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

Check your explanation

SELF-CHECK ☐ I explained the **mechanism** ☐ I used **evidence** ☐ I tested a fresh case ☐ I named a **limitation** ☐ I can answer 'why?'

STUDENT LESSON · 13 OF 18

Study a complete case

> Revisit the complete Capstone Expo case for supported practice. Repeated examples do not become fresh assessments.

Week 36 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

An expo claim says the recommender knows everybody's favourite book after twelve tests.

The question

Rewrite the defence.

Worked explanation

Explain trait-based ranking, report the twelve outcomes and limits, and demonstrate no-match handling. It cannot know unstated preferences.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Defend a transparent recommender

Evidence or stage	Value or result
Inputs	Explain necessary data
Logic	Show a score and tie decision
Tests	Report successes and failures
Limits	Demonstrate a missing or uncertain case

An expo claim says the recommender knows everybody's favourite book after twelve tests.

Rewrite the defence.

Explain trait-based ranking, report the twelve outcomes and limits, and demonstrate no-match handling. It cannot know unstated preferences.

STUDENT LESSON · 14 OF 18

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Defend a new case independently

Limit is 10. A has minutes 10, fun 2, learning 4; B has 9,3,2; C has 11,5,5; D has 8,"4",2. Validate, rank, give counts, explain the winner, then reverse the **input** order. Present without hints.

> **My independent explanation, trace and limits**

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh **transfer**.

Week 36 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

Your demo recommends the right book once. An audience member asks why they should trust it. Name **evidence** and one **limitation** you should present.

My answer, with a trace, calculation or supporting **evidence**

> **Write or draw your reasoning and evidence.**

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

Write or draw your reasoning and evidence.

Connect to your project

Final **evidence bundle**: brief, data, scoring logic, tests, improvement record, and product card.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

Present a recommender that gets 8/10 final requests right. One failure invents a title; another violates a hard page limit. Is '**80%**, ready for everyone' justified? Propose release criteria.

Explain the mechanism, evidence and one limit.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Capstone Expo, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: A fictional team presents its transparent book recommender on a reserved catalogue.

By the end, I can	How I will show it
Defend an application using reproducible evidence	Explain the deciding step, show a trace or test, and state one limit.
Explain failures and limits honestly	Explain the deciding step, show a trace or test, and state one limit.
Demonstrate a new case without hidden help	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Capstone Expo without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Defend an application using reproducible **evidence**

> **My deciding step, evidence and one remaining question**
>
> _____
>
> _____
>
> _____
>
> _____

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A fictional team presents its transparent book recommender on a reserved catalogue.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Explain two eligible items, one page-limit exclusion and one type rejection.

1. Defend **evidence**

2. Validate

3. Filter

4. Rank

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Defend **evidence** Explain two eligible items, one page-limit exclusion and one type rejection.

A presentation should let someone rebuild the result from the stated contract. A's equality is accepted; D is not silently converted; C's high preference score cannot override the page requirement.

Reversing rows must preserve B because it has the unique highest eligible score. Keep the reserved case distinct from practice **demonstration**s.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: An authorised repair converts D's interest to integer 4. Which conclusion is supported by the supplied facts?

1. We can decide the result without examining the changed **input** or the procedure.

2. This one example guarantees correct results for every future **input**.

3. D becomes eligible and scores 9, so it wins.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: D becomes eligible and scores 9, so it wins. The **evidence**-backed **input** repair changes validation and then ranking; record this as a new case/version.

Repair a missing building block

Review Improve and Challenge (ai-2/35). Goal: Repair a specific observed failure. Short practice: Why are tests at both 100 and 101 needed?. Return to this week and explain what you changed.

Review Build the Recommender (ai-2/33). Goal: Implement a deterministic recommender. Short practice: Explain why B does not win after D is excluded even though it has fewer pages..

Return to this week and explain what you changed.

Review Agents and Tools (ai-2/30). Goal: Explain the **mechanism** and terminology of state machines for bounded agents. Short practice: Can the assistant accept Trace B because its final state is done?.

Return to this week and explain what you changed.

Predict, run and debug

The browser lab lets you edit the supported Python examples already included in this lesson. Predict first, run, inspect the actual **output** or error, change one **input**, then run again.

Keep code, **prediction**s, actual results and a reasoned revision together. On paper, label your result as a trace rather than an execution.

Keep your completed work

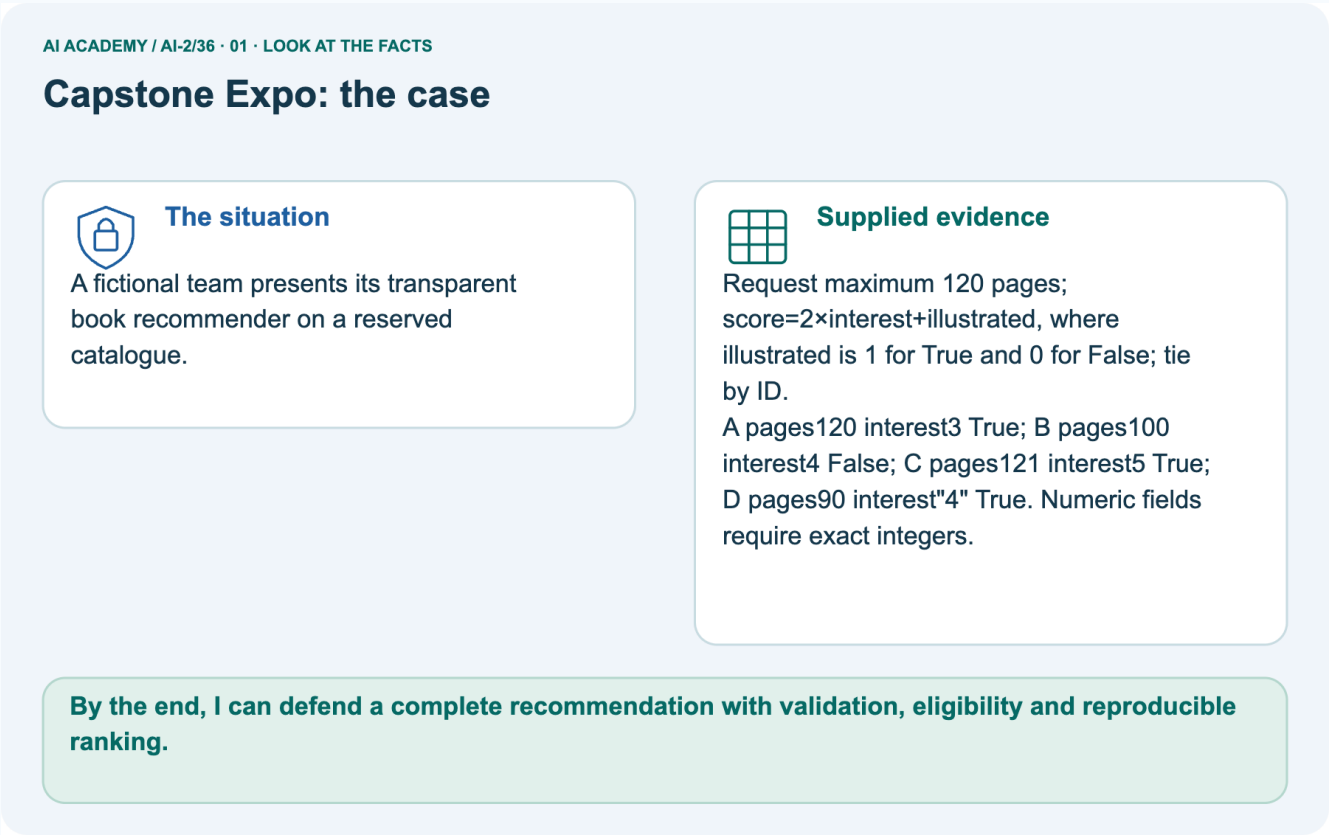

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

Visual concept journey

> Explain each Capstone Expo graphic using its labels, deciding evidence and relevant limitation.

01. Capstone Expo: the case

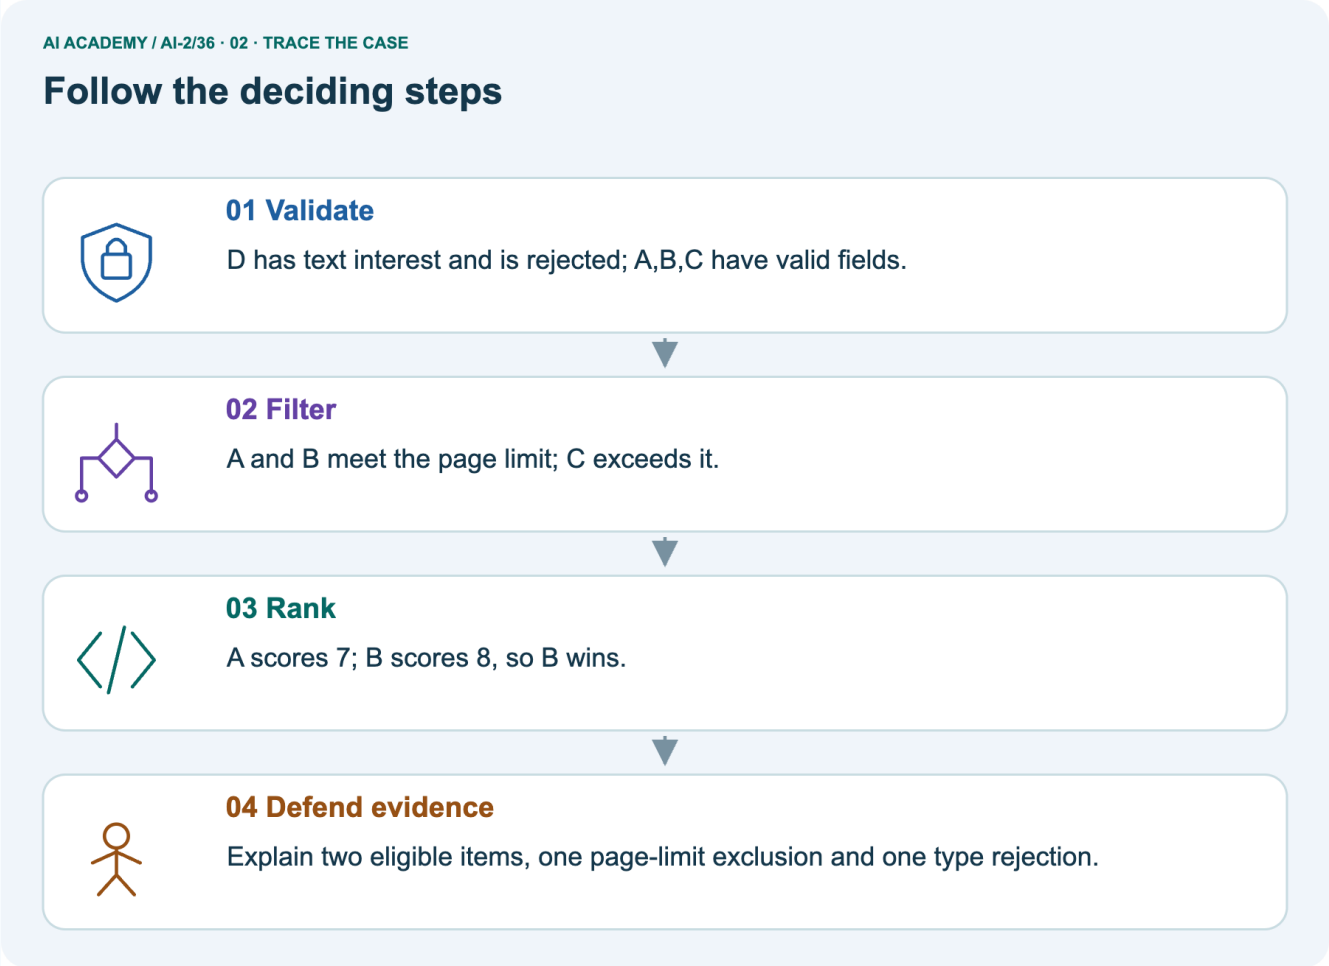

Follow the labelled picture with the matching explanation. Open the vector diagram

A fictional team presents its transparent book recommender on a reserved catalogue. Supplied facts: Request maximum 120 pages; score=2×interest+illustrated, where illustrated is 1 for True and 0 for False; tie by ID.

A pages120 interest3 True; B pages100 interest4 False; C pages121 interest5 True; D pages90 interest"4" True. Numeric fields require exact integers.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

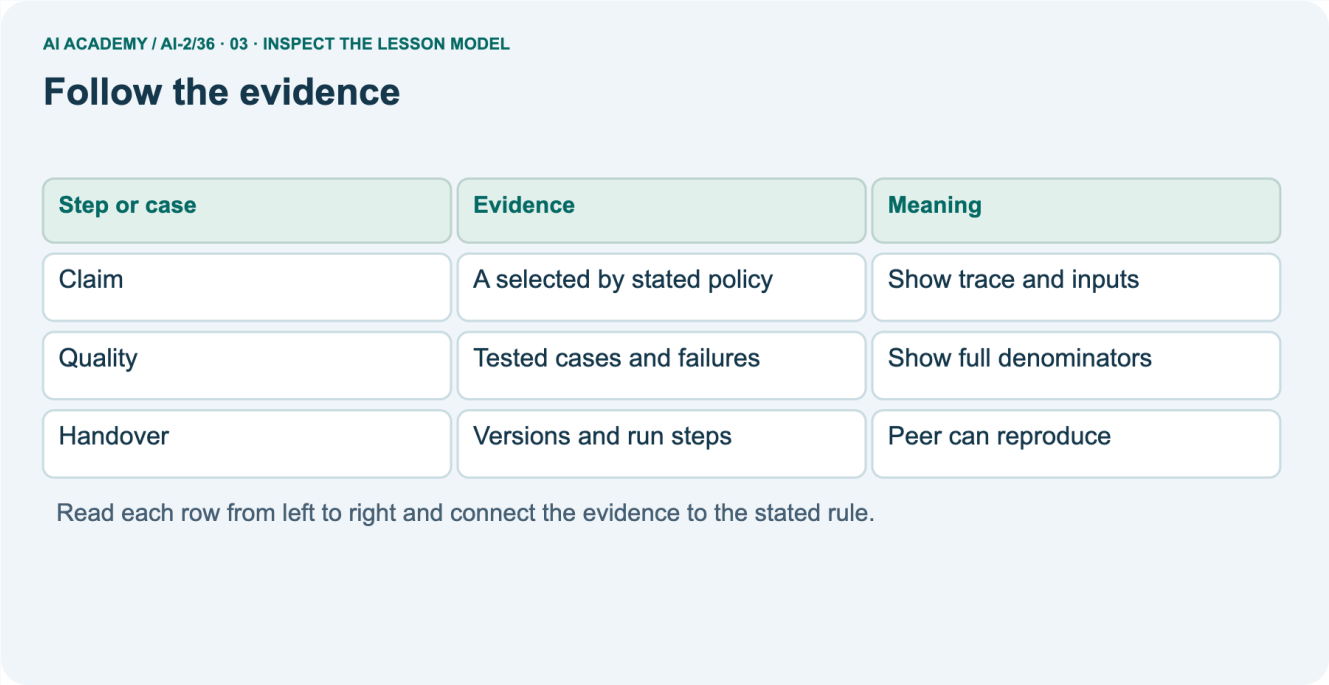

Follow the labelled picture with the matching explanation. Open the vector diagram

Validate: D has text interest and is rejected; A,B,C have valid fields. → Filter: A and B meet the page limit; C exceeds it. → Rank: A scores 7; B scores 8, so B wins. → Defend **evidence**: Explain two eligible items, one page-limit exclusion and one type rejection.

Point to each numbered stage and explain which recorded **input** it uses.

03. Follow the evidence

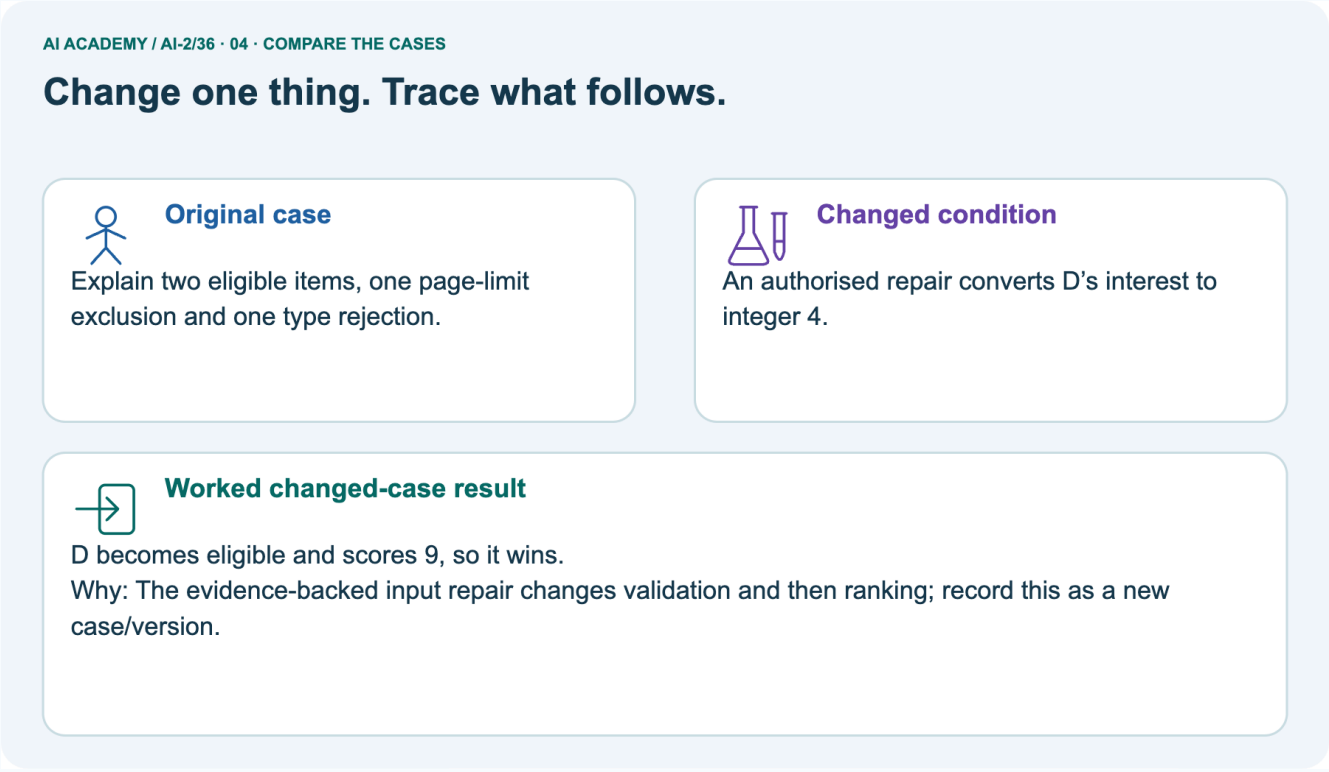

Follow the labelled picture with the matching explanation. Open the vector diagram

Follow the **evidence**. Claim | A selected by stated policy | Show trace and **input**s. Quality | Tested cases and failures | Show full denominators. **Handover** | Versions and run steps | Peer can reproduce

> Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

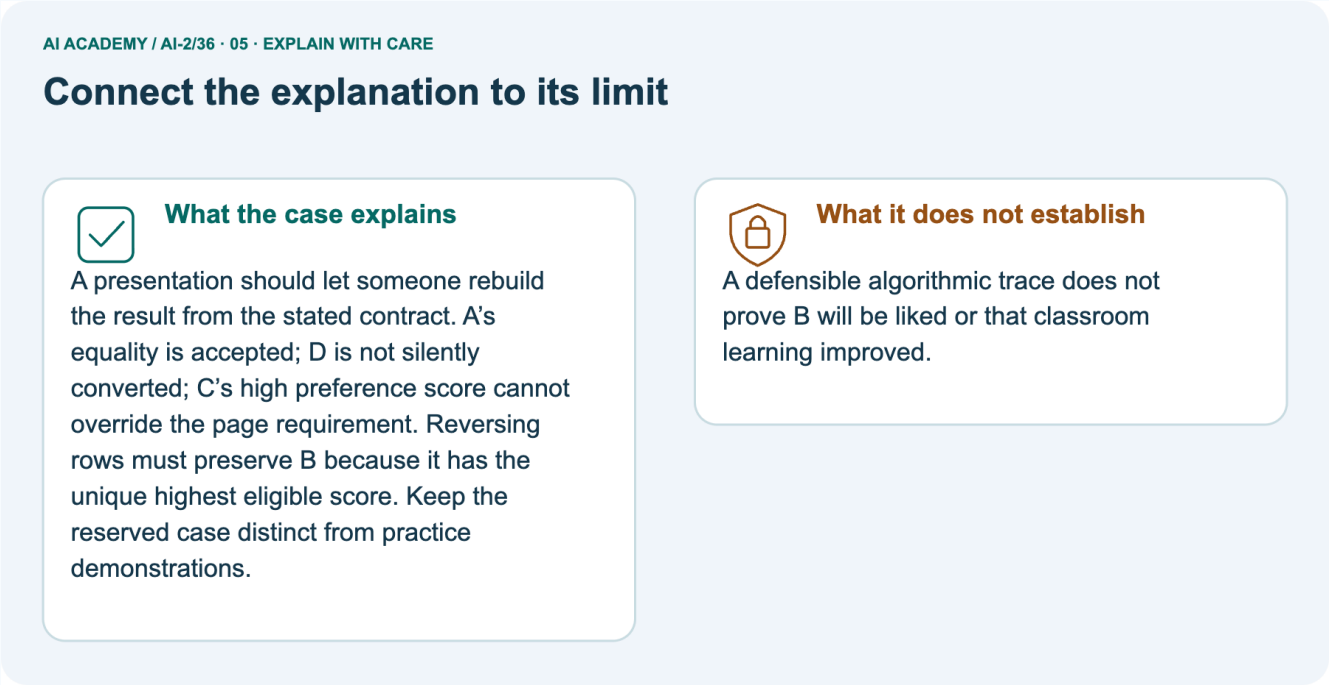

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Explain two eligible items, one page-limit exclusion and one type rejection. Changed condition: An authorised repair converts D's interest to integer 4.

Expected result: D becomes eligible and scores 9, so it wins. Reason: The **evidence**-backed **input** repair changes validation and then ranking; record this as a new case/version.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

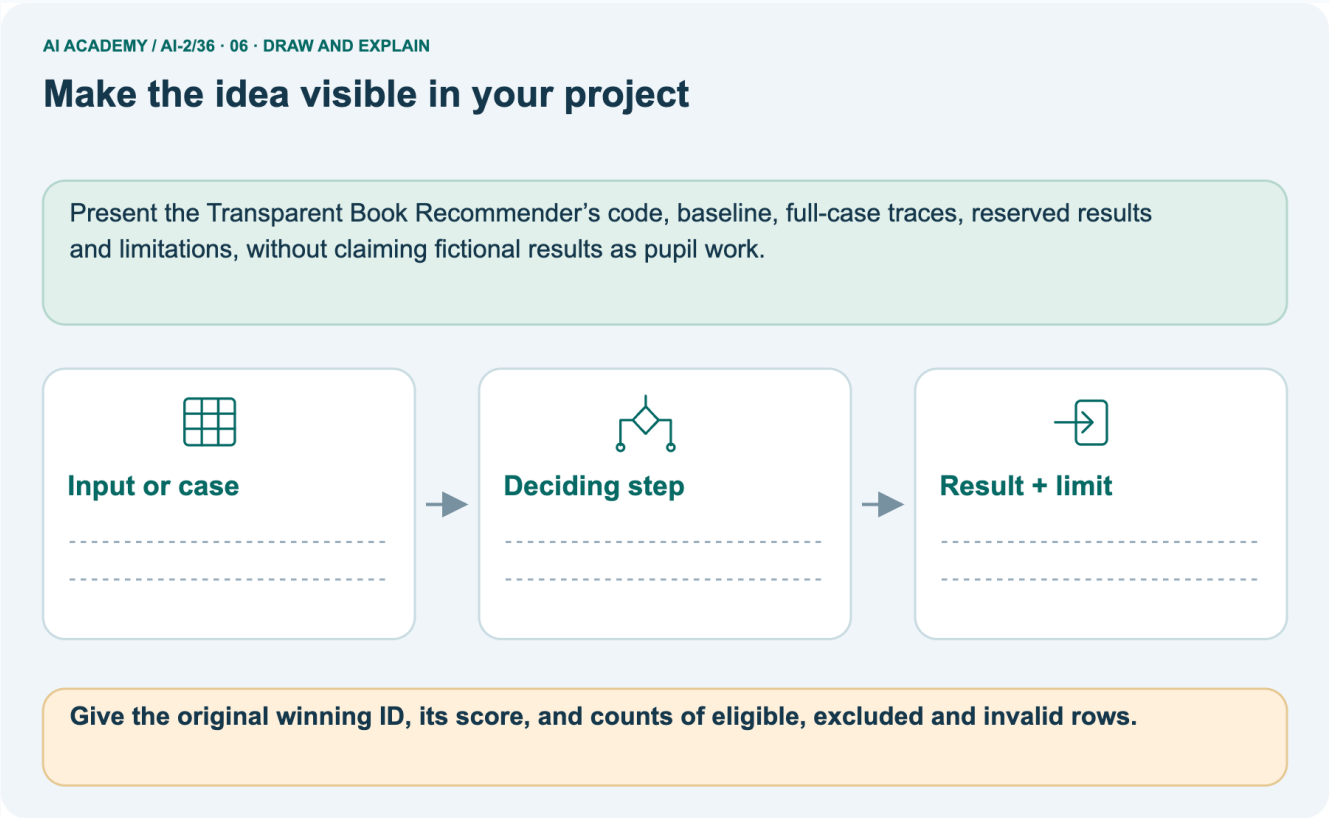

A presentation should let someone rebuild the result from the stated contract. A's equality is accepted; D is not silently converted; C's high preference score cannot override the page requirement.

Reversing rows must preserve B because it has the unique highest eligible score. Keep the reserved case distinct from practice **demonstration**s.

Limit: A defensible algorithmic trace does not prove B will be liked or that classroom learning improved.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

Present the Transparent Book Recommender's code, baseline, full-case traces, reserved results and **limitation**s, without claiming fictional results as pupil work. Draw your **input**, deciding step, result and limit.

Supported question: Give the original winning ID, its score, and counts of eligible, excluded and invalid rows.

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
