AI ACADEMY · LEVEL 3 · GRADE 8 · WEEK 32 · STUDENT LESSON

Human AI Workflow

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Verified Study Buddy

Before you start

Week 25: meeting format criteria does not satisfy all learning requirements.

Plan time to read, investigate and explain. Keep predictions separate from observations.

STUDENT LESSON · 1 OF 18

Your mission

> Start with the target: Explain the mechanism and terminology of human review and consequential use. Try the recall before opening notes.

Your learning target

I can explain the **mechanism** and terminology of human review and consequential use.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Safety Boundaries. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Copyright and Provenance. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Evaluation Sets. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Week 32: Human + AI **Workflow**

Allocate tasks according to strengths, **accountability**, and **verification** needs.

CREATOR MISSION

Map who drafts, checks, decides, and signs off.

Creator name and date:

> **Write or draw your reasoning and evidence.**

Readiness for the connected explanation

Recall Representation and bias evaluation. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

This week's end goal

By the end, I can explain human ai **workflow** using a traced example and a stated limitation.

STUDENT LESSON · 2 OF 18

Notice the evidence

> Investigate the supplied Human AI Workflow case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Notice → Predict → Explain

Begin with visible **evidence**. Do not explain more than the picture and information support.

Start with this puzzle

MYSTERY

The learners must use human + ai **workflow** to solve a problem. What information do they have? What decision or calculation do they make? What would count as **evidence** that it worked?

Three **observation**s (what you can point to):

> **Write or draw your reasoning and evidence.**

My **prediction** and the clue supporting it:

> **Write or draw your reasoning and evidence.**

A closer explanation

Human review needs a responsible actor, **evidence** packet and explicit authority. Adding a person to a **workflow** does not guarantee effective oversight.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

STUDENT LESSON · 3 OF 18

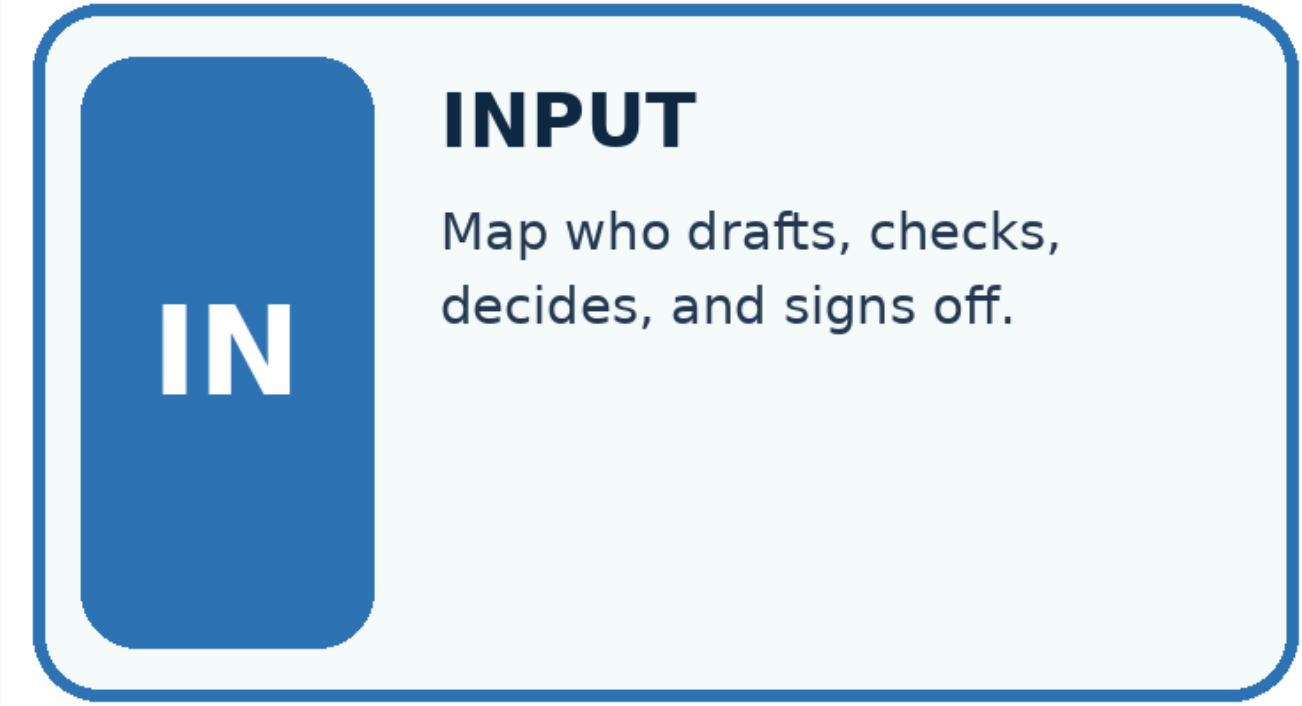

See how it works

> Follow the mechanism for Human AI Workflow. Connect each labelled input, deciding step and result.

VISUAL MECHANISM

Input → Process → Output

Trace the information. At each stage, ask what changed and how you could test it.

↓

SYSTEM

Allocate tasks according to strengths, accountability, and verification needs.

↓

OUT

EVIDENCE

Map who drafts, checks, decides, and signs off.

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

For this fictional **workflow** the assistant drafts a room request but only the coordinator can approve and submit it. **Review packet**s include sources, uncertainty, requested action and the exact version.

Any material change requires new approval.

Human review and consequential use — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Coordinator approves draft v1 for room B. Assistant changes room to C in v2 and submits using the old approval.	For this fictional workflow the assistant drafts a room request but only the coordinator can approve and submit it. Review packets include sources, uncertainty, requested action and the exact version. Any material change requires new approval.	The submission violates version-bound approval. Preserve v1 approval, request review of v2 and prevent submission until its exact action is approved.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

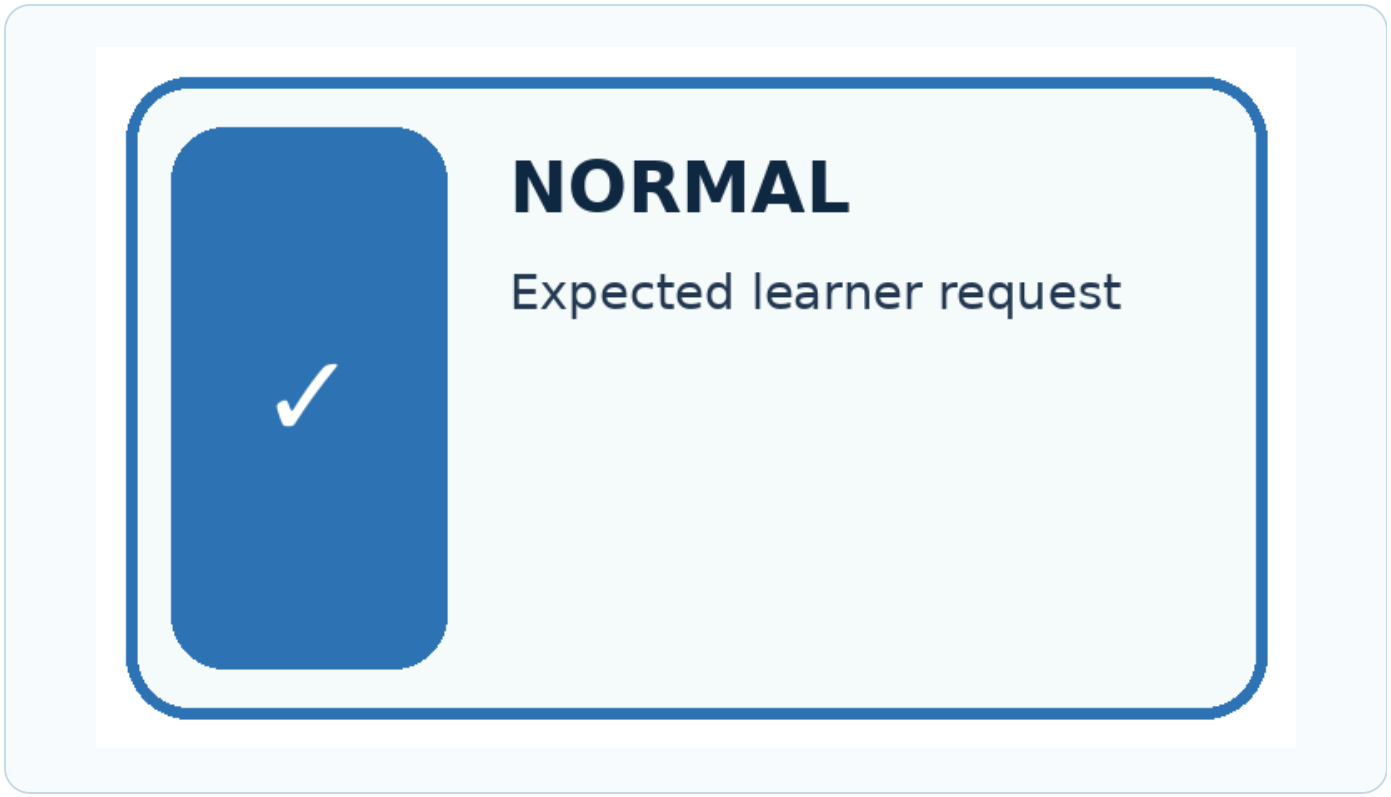

> Compare the supplied cases for Human AI Workflow. Identify the detail that changes the conclusion.

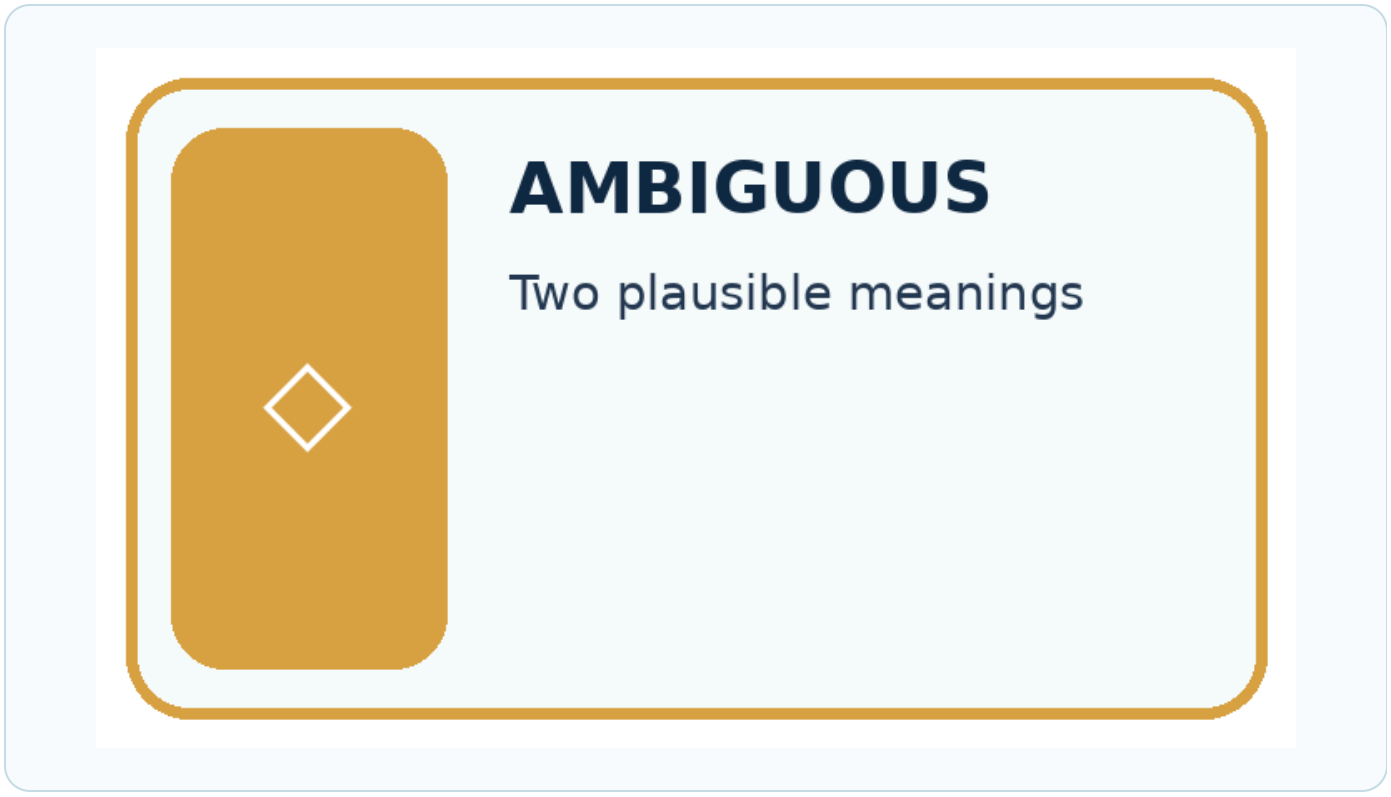

The case to investigate

CASE GALLERY

Four Tests, Four Kinds of **Evidence**

A system is not understood until it survives more than one comfortable example.

NORMAL
Expected learner request

AMBIGUOUS
Two plausible meanings

The normal case

NORMAL CASE: predict and name **evidence**. BOUNDARY CASE: predict and name **evidence**.

Check missing information

MISSING INFORMATION: predict and name **evidence**. TRANSFER CASE: predict and name **evidence**.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change one thing

Change: H2 is replaced with unchanged H1 for classroom printing.

Predicted result

Prediction: The original approval covers that declared action.

Why the result follows

Reason: Both the approved content and its distribution scope now match.

STUDENT LESSON · 5 OF 18

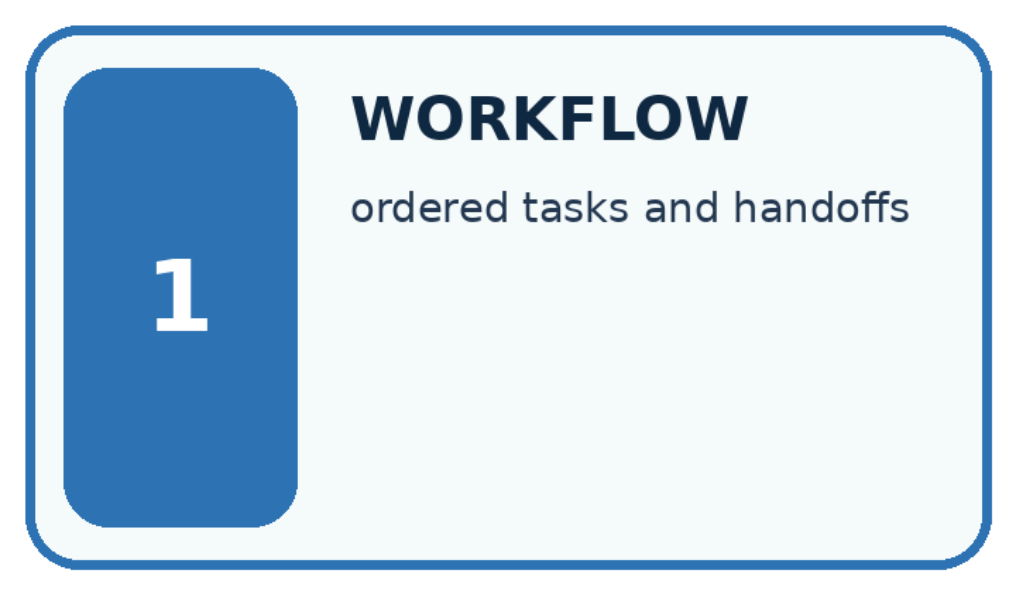

Words that unlock the idea

> Use the vocabulary of Human AI Workflow to explain a concrete decision, rather than only memorising definitions.

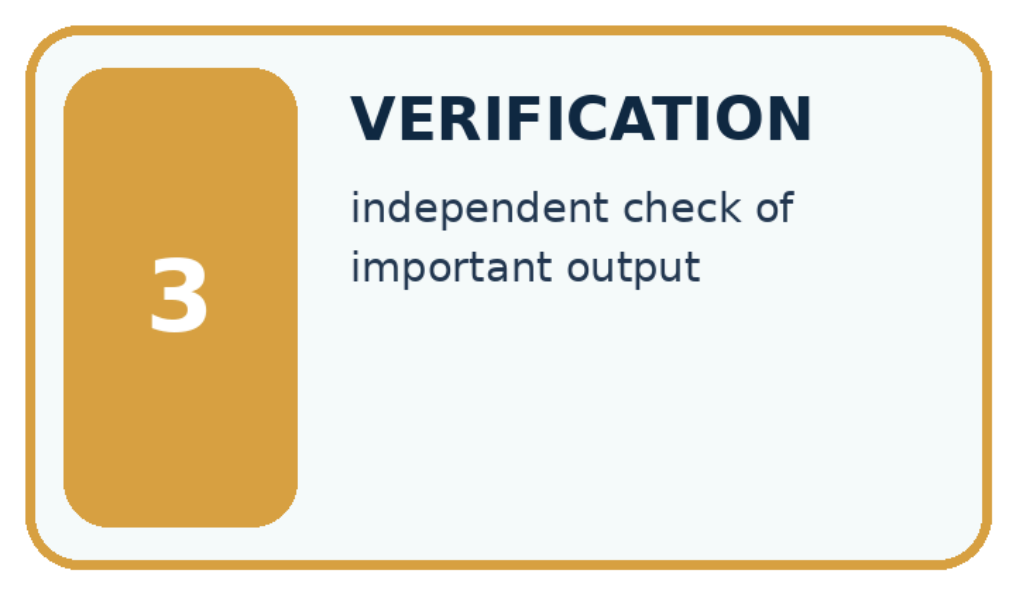

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

1
WORKFLOW
ordered tasks and handoffs

2
ACCOUNTABILITY
who owns the consequence

Word	My own example	Not this / boundary
workflow	An organised sequence of tasks, reviews and handoffs used to complete work.	
accountability	Responsibility for explaining decisions, checking outcomes and addressing mistakes.	

Word	My own example	Not this / boundary
verification	Checking a claim or result against an appropriate independent source, calculation or observation.	
sign-off	Explicit recorded approval that specified work meets the required review conditions.	

Words used in the closer explanation

Word	Meaning
Review packet	Evidence and proposed action supplied to a reviewer
Version-bound approval	Permission tied to an exact proposal version
Escalation	Routing a decision to an authorised responsible person

---

STUDENT LESSON · 6 OF 18

Follow a worked example

> Follow the worked trace for Human AI Workflow, predict a step, then compare with its explanation.

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

WEEK 32 • WORKED EVIDENCE

1. AI drafts questions from approved notes.
2. Learner checks clarity; retrieval evidence supports claims.
3. Teacher decides whether material is appropriate.
4. Product records who verified and approved without shifting accountability to AI.

1. AI drafts questions from approved notes.

2. Learner checks clarity; retrieval **evidence** supports claims.

3. Teacher decides whether material is appropriate.

4. Product records who verified and approved without shifting **accountability** to AI.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the **evidence** answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

Coordinator approves draft v1 for room B. Assistant changes room to C in v2 and submits using the old approval.

The submission violates **version-bound approval**. Preserve v1 approval, request review of v2 and prevent submission until its exact action is approved.

Worked explanation · Human AI Workflow

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Human AI Workflow

A human approval belongs to the exact draft and action reviewed.

The facts we will use

Supplied facts

A teacher approves study handout H1 for classroom printing. H2 adds a pupil email address and proposes public posting. No H2 approval exists.

Supplied facts

All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

AI ACADEMY / AI-3/32

Human AI Workflow

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Identify approval

The recorded approval covers H1 and classroom printing.

2. Inspect change

H2 changes both content and distribution scope.

3. Require review

Stop public posting and show H2's changed content and intended audience to the reviewer.

CHANGE ONE THING

H2 is replaced with unchanged H1 for classroom printing.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Identify approval	The recorded approval covers H1 and classroom printing.
2. Inspect change	H2 changes both content and distribution scope.
3. Require review	Stop public posting and show H2′s changed content and intended audience to the reviewer.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

Read the picture in order. Stop public posting and show H2′s changed content and intended audience to the reviewer. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

What this example does not establish

Keep the stated limit

Human review helps only when the reviewer sees the material changes, **evidence** and actual consequences.

Keep the stated limit

Read the labelled picture: Why can H1's approval not automatically approve H2? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

Keep the stated limit

Change one thing: H2 is replaced with unchanged H1 for classroom printing. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Human AI Workflow claim and explain a repair using the supplied evidence.

Find the first error

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak **evidence**.

!

COMPARE • DIAGNOSE

Weak idea: Human review means clicking approve without checking evidence. Strong move: inspect the claim, source, stage, schema, or test evidence; repair one cause; rerun.

Evidence record	Expected	Actual	Likely cause / next test
normal case	works		
boundary case	stated rule		
missing input	safe response		
fresh transfer	generalizes		

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

Check the claim against the facts

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

STUDENT LESSON · 8 OF 18

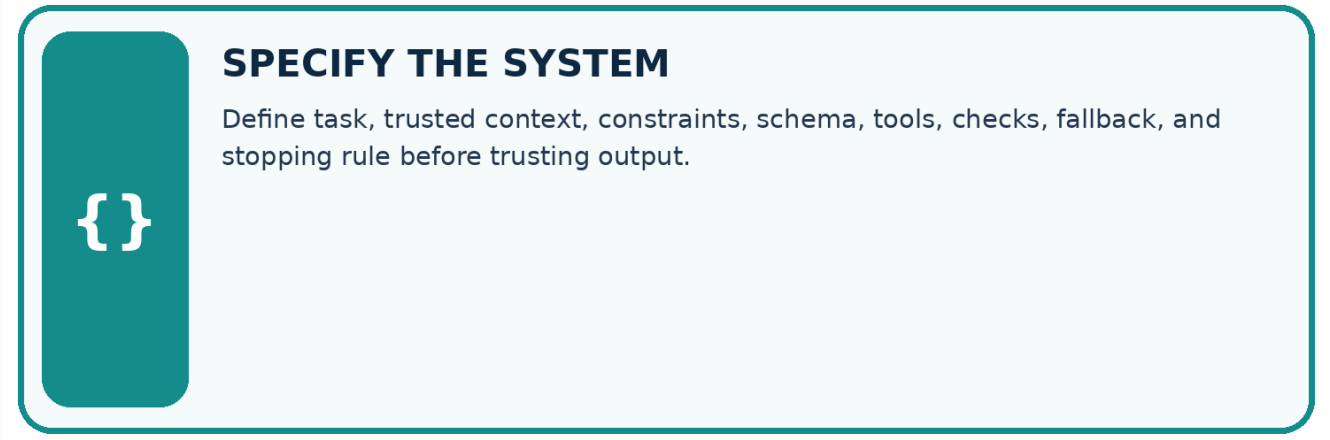

Practise together

Practise Human AI Workflow with support, then explain the deciding step in your own words.

LOGIC STUDIO

Specify Before You Run

Prompts, schemas, retrieval, tool calls, and code are inspectable parts of one AI product.

SET task, audience, constraints, **output**_schema LOAD approved_context or retrieval_result CALL model or allowed_tool VALIDATE fields, claims, citations, and safety IF **evidence** missing: ask, retrieve, or abstain RETURN useful **output** + source trail + limitations

Trace one **input**. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

Review effectiveness depends on usable **evidence**, time and authority; a checkbox is not **evidence** of informed review.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

> **Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.**

Practise with less help: Trace the worked case

Use workbook W2 for the connected example “Human review and consequential use”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Human review and consequential use. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Why can H1’s approval not automatically approve H2? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

Run the investigation

> Investigate Human AI Workflow. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

Allocate tasks on a **workflow** map, justify each owner, simulate a failed tool or unsupported claim, and verify the stop/**escalation** path.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

> **Test / input:** normal
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** boundary
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** missing
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

> **Test / input:** fresh transfer
> **Prediction:** _____
> **Actual:** _____
> **Evidence / calculation:** _____
> **Change or keep?:** _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

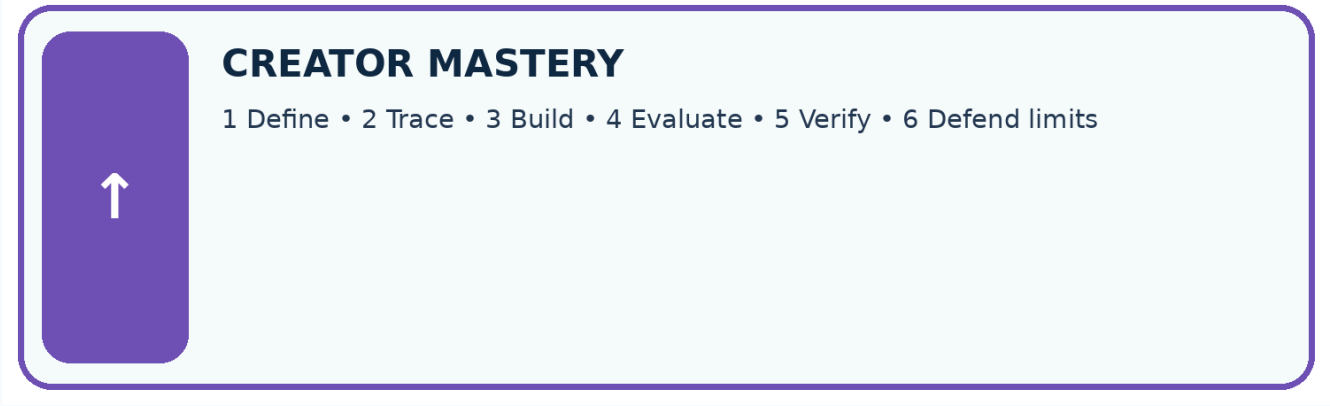

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Human AI Workflow. Explain why each step is justified.

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce **evidence** without copying the worked example.

1 • NAME: Define the concept without repeating the textbook.

2 • TRACE: Show the information, state, branch, calculation, or **evidence** path.

3 • APPLY: Solve a different example independently.

4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest **evidence** of independent understanding:

> **Write or draw your reasoning and evidence.**

STUDENT LESSON · 11 OF 18

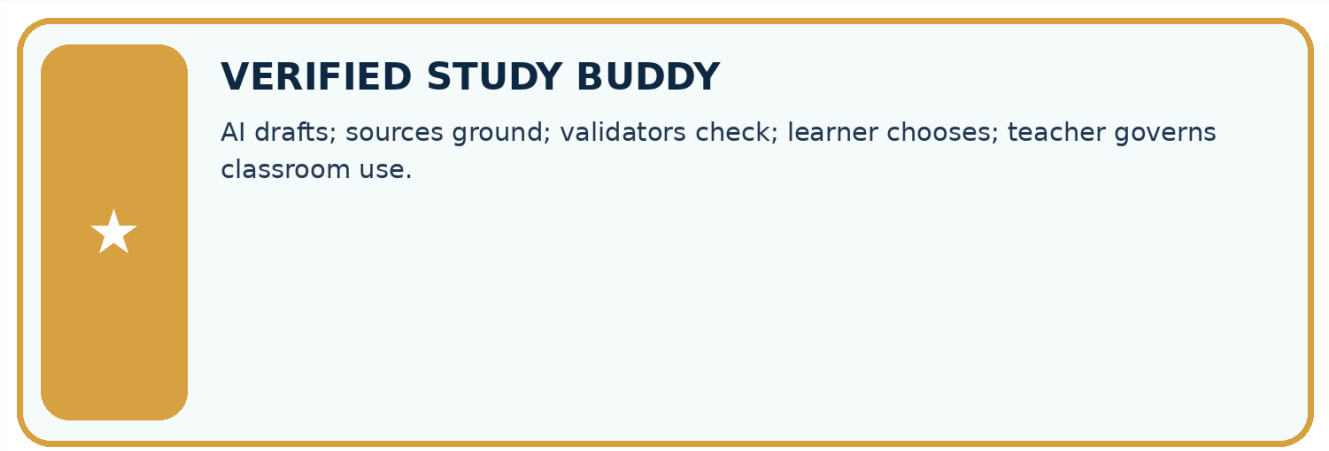

Connect your project

> Apply this week's idea to Verified Study Buddy. Keep an annotated decision and the evidence supporting it.

CUMULATIVE PROJECT

Verified Study Buddy

Every week adds one inspectable piece. The system must show how it reached a result.

THIS WEEK'S CHECKPOINT AI drafts; sources ground; validators check; learner chooses; teacher governs classroom use.

Trace the system

SYSTEM MAP Learner need → prompt/schema → approved sources/retrieval → model/tool → structured answer → **verification** → **human decision**

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under **human control**?

Write or draw your reasoning and evidence.

Responsible design

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse fluent **output** with verified truth.

Evidence for your project

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding.

STUDENT LESSON · 12 OF 18

Show what you know

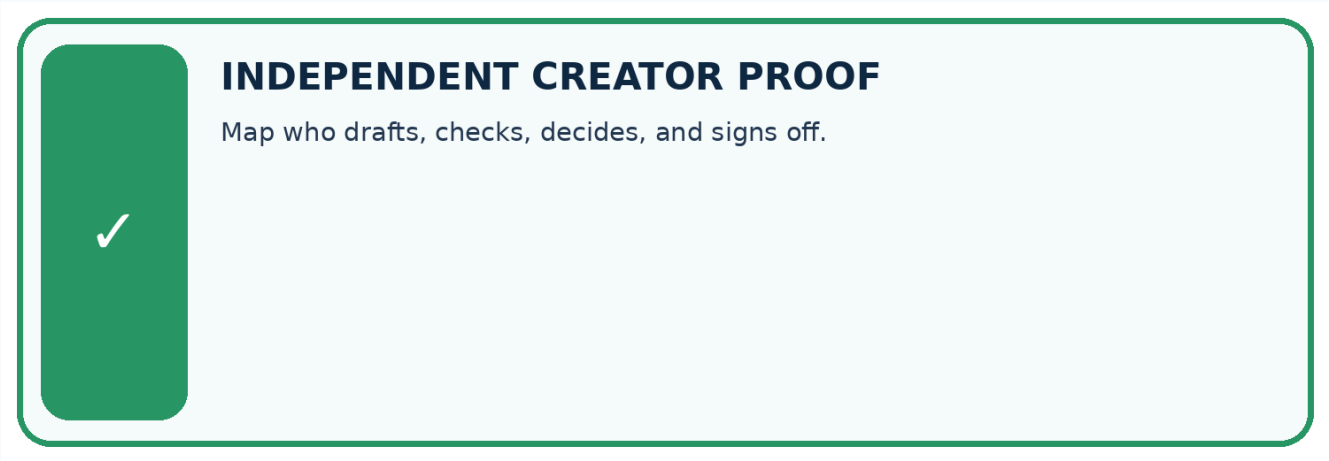

Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Independent evidence

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

Try a more demanding case

CHALLENGE Map who drafts, checks, decides, and signs off.

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My **evidence** that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One limitation, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

Check your explanation

SELF-CHECK ☐ I explained the **mechanism** ☐ I used **evidence** ☐ I tested a fresh case ☐ I named a limitation ☐ I can answer 'why?'

STUDENT LESSON · 13 OF 18

Study a complete case

Revisit the complete Human AI Workflow case for supported practice. Repeated examples do not become fresh assessments.

Week 32 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

An AI drafts, verifies and submits a student's assessment without review.

The question

> Where should responsibility remain?

Worked explanation

The student reviews, verifies, follows class rules and remains responsible. Submission requires authorisation and must not bypass learning.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Keep the learner responsible

Evidence or stage	Value or result
Task	Student defines permitted help

Evidence or stage	Value or result
Draft	Assistant provides support
Review	Student verifies and follows class rules
Submit	Student authorises final work

An AI drafts, verifies and submits a student's assessment without review.

> Where should responsibility remain?

The student reviews, verifies, follows class rules and remains responsible. Submission requires authorisation and must not bypass learning.

STUDENT LESSON · 14 OF 18

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Apply a new case independently

> Teacher approves read-only report R1. System adds email distribution in R2. What permission is missing and what should the reviewer see?

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 32 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

A **workflow** drafts a class email, checks its claims and then sends it. Where should approval occur, and what should the approver see?

My answer, with a trace, calculation or supporting **evidence**

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

Write or draw your reasoning and evidence.

Connect to your project

AI drafts; sources ground; validators check; learner chooses; teacher governs classroom use.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

A student asks a helper to submit an unchecked generated essay under their name. Design a **workflow** that preserves student reasoning and follows classroom rules.

Explain the mechanism, evidence and one limit.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Human AI Workflow, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: A human approval belongs to the exact draft and action reviewed.

By the end, I can	How I will show it
Explain the mechanism and terminology of human review and consequential use	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Human AI Workflow without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of human review and consequential use

> **My deciding step, evidence and one remaining question**

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A human approval belongs to the exact draft and action reviewed.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Stop public posting and show H2′s changed content and intended audience to the reviewer.

1. Identify approval

2. Require review

3. Inspect change

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Require review Stop public posting and show H2′s changed content and intended audience to the reviewer. Read the picture in order.

Stop public posting and show H2′s changed content and intended audience to the reviewer. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: H2 is replaced with unchanged H1 for classroom printing. Which conclusion is supported by the supplied facts?

1. This one example guarantees correct results for every future **input**.

2. The original approval covers that declared action.

3. We can decide the result without examining the changed **input** or the procedure.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: The original approval covers

> that declared action. Both the approved content and its distribution scope now match.

Repair a missing building block

Review Safety Boundaries (ai-3/31). Goal: Explain the **mechanism** and terminology of untrusted **input** boundaries. Short practice: If AB7 passes the pattern, may it access teacher-only material?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Copyright and Provenance (ai-3/29). Goal: Explain the **mechanism** and terminology of copyright and permitted sources. Short practice: Does acknowledging Fern make a cropped version permitted?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Evaluation Sets (ai-3/26). Goal: Explain the **mechanism** and terminology of system evaluation sets. Short practice: Did the added cases demonstrate better answering?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

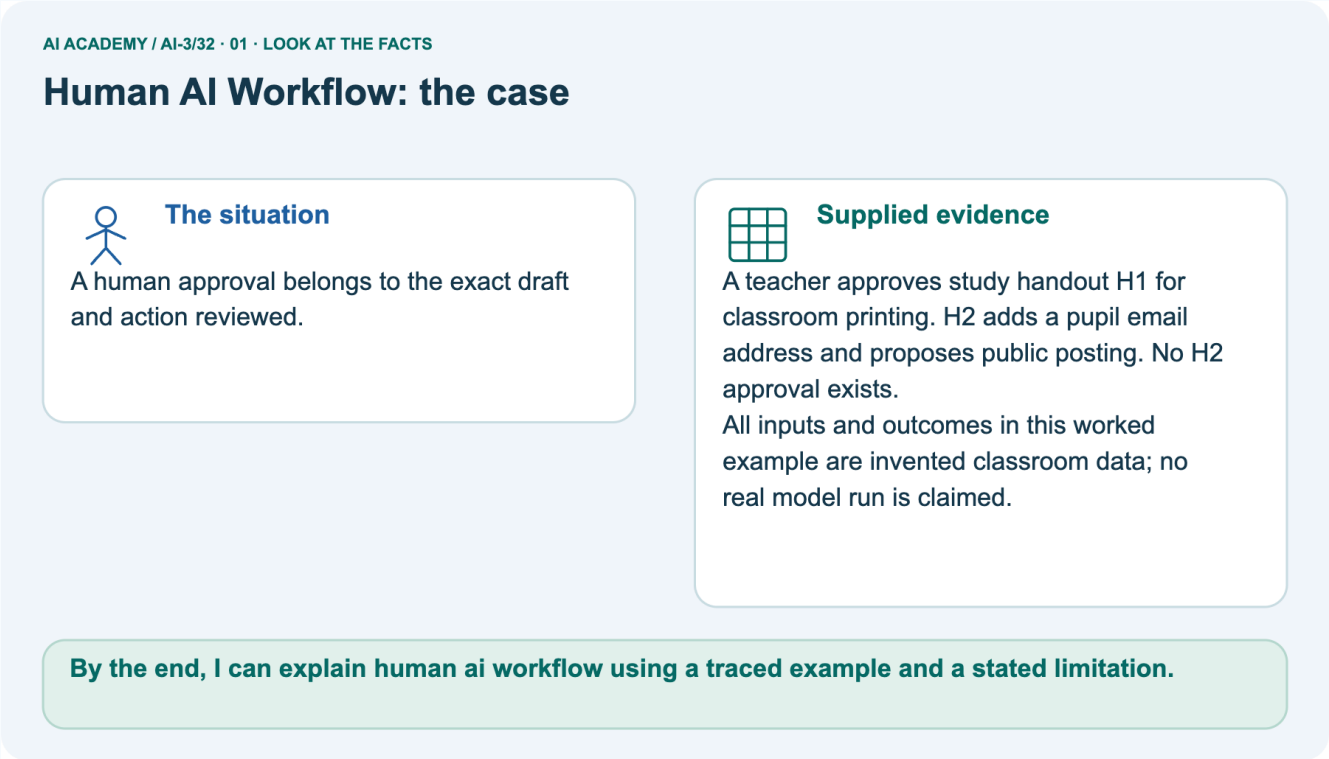

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Human AI Workflow graphic using its labels, deciding evidence and relevant limitation.

01. Human AI Workflow: the case

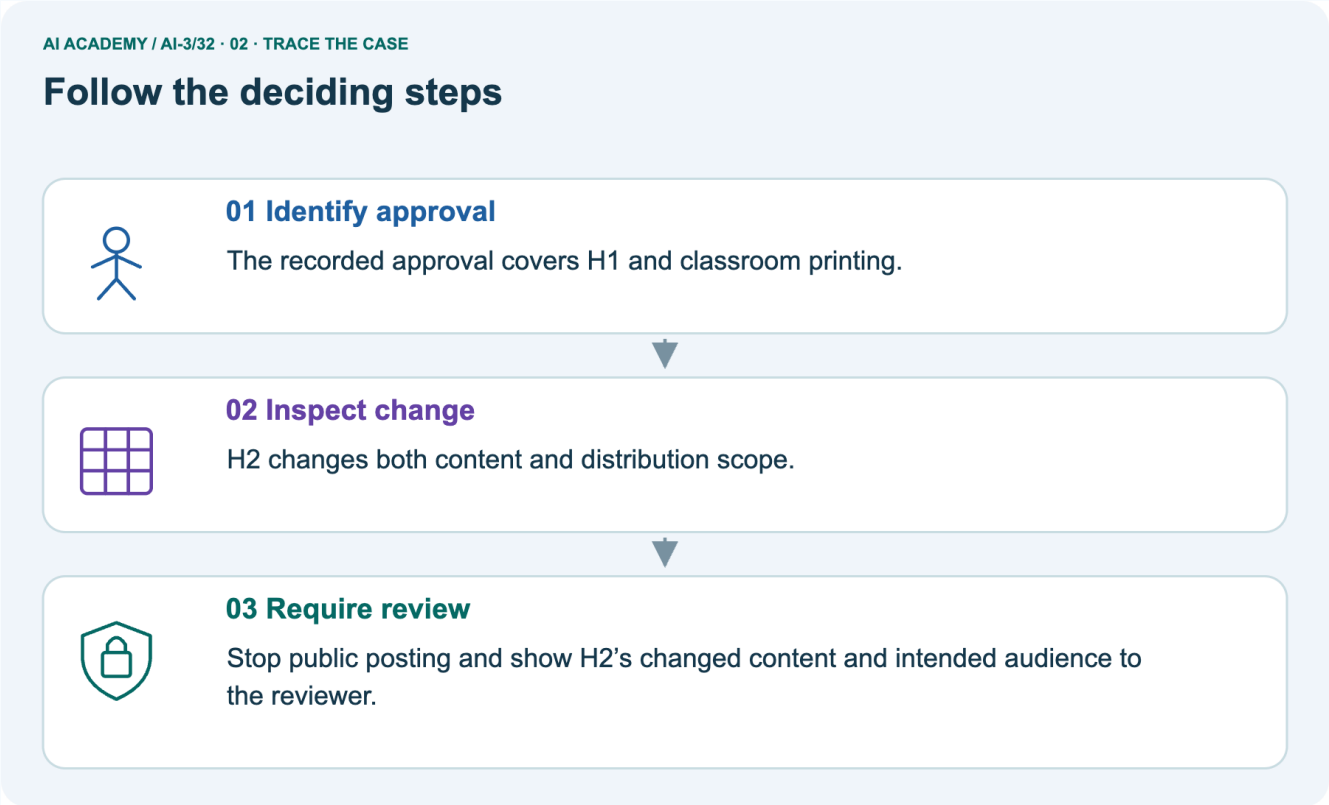

Follow the labelled picture with the matching explanation. Open the vector diagram

A human approval belongs to the exact draft and action reviewed. Supplied facts: A teacher approves study handout H1 for classroom printing. H2 adds a pupil email address and proposes public posting. No H2 approval exists.

All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

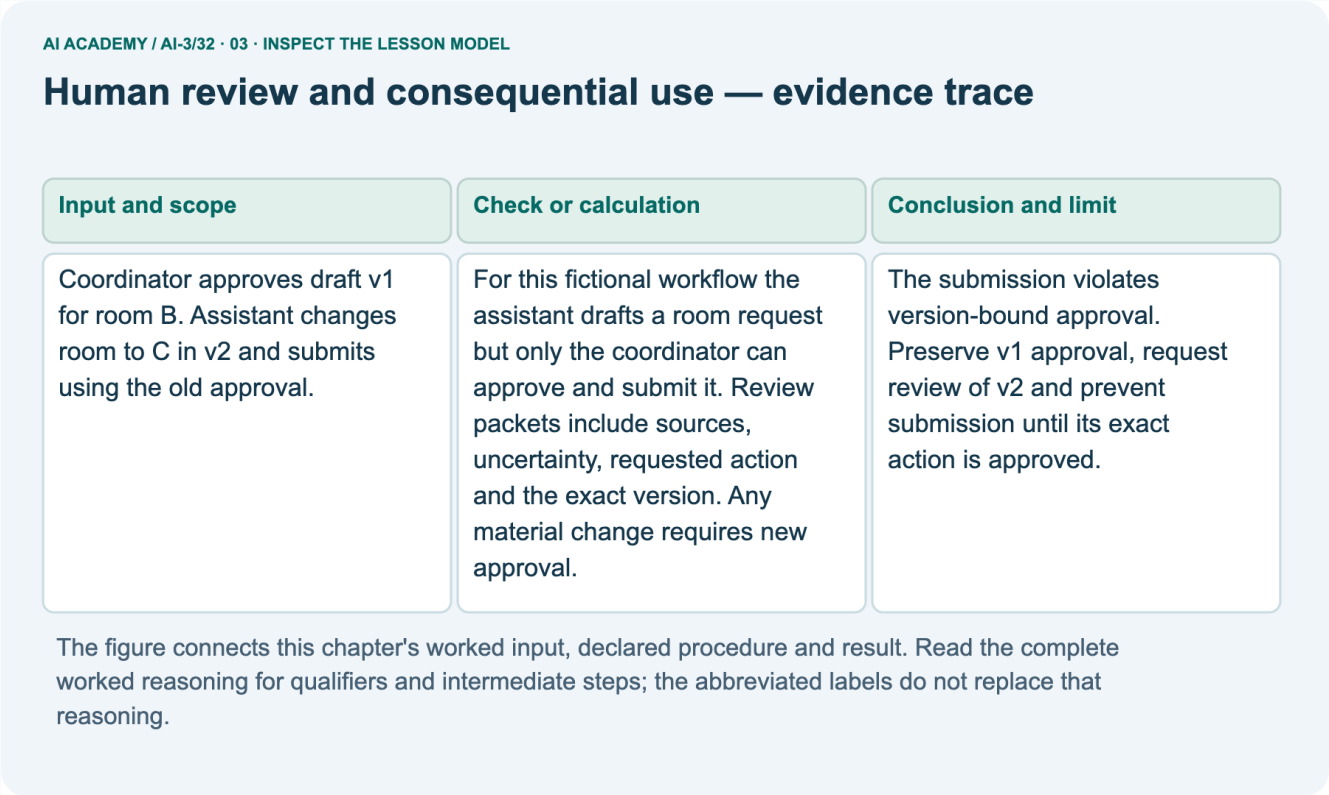

Follow the labelled picture with the matching explanation. Open the vector diagram

Identify approval: The recorded approval covers H1 and classroom printing. → Inspect change: H2 changes both content and distribution scope. → Require review: Stop public posting and show H2's changed content and intended audience to the reviewer.

> Point to each numbered stage and explain which recorded **input** it uses.

03. Human review and consequential use — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

Human review and consequential use — **evidence** trace. Coordinator approves draft v1 for room B.

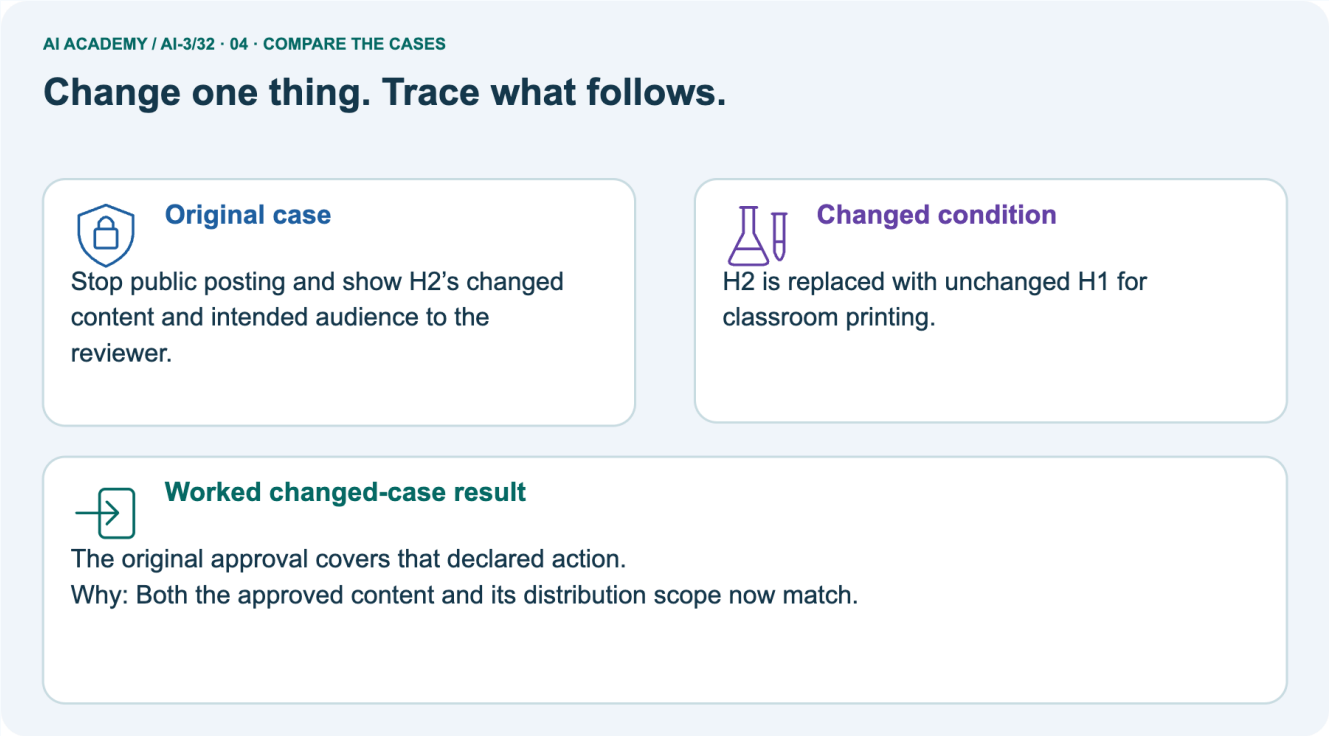

Assistant changes room to C in v2 and submits using the old approval. | For this fictional **workflow** the assistant drafts a room request but only the coordinator can approve and submit it.

Review packets include sources, uncertainty, requested action and the exact version. Any material change requires new approval. | The submission violates **version-bound approval**.

Preserve v1 approval, request review of v2 and prevent submission until its exact action is approved.

> Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

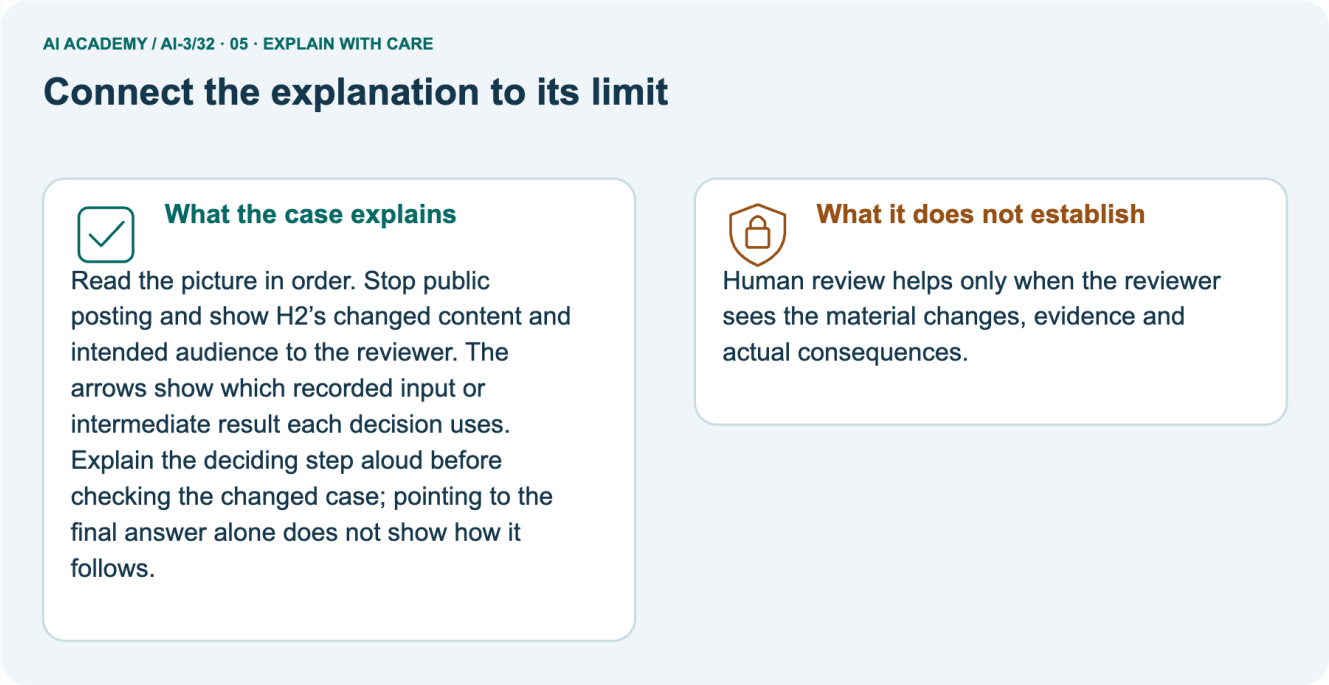

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Stop public posting and show H2′s changed content and intended audience to the reviewer. Changed condition: H2 is replaced with unchanged H1 for classroom printing.

Expected result: The original approval covers that declared action. Reason: Both the approved content and its distribution scope now match.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

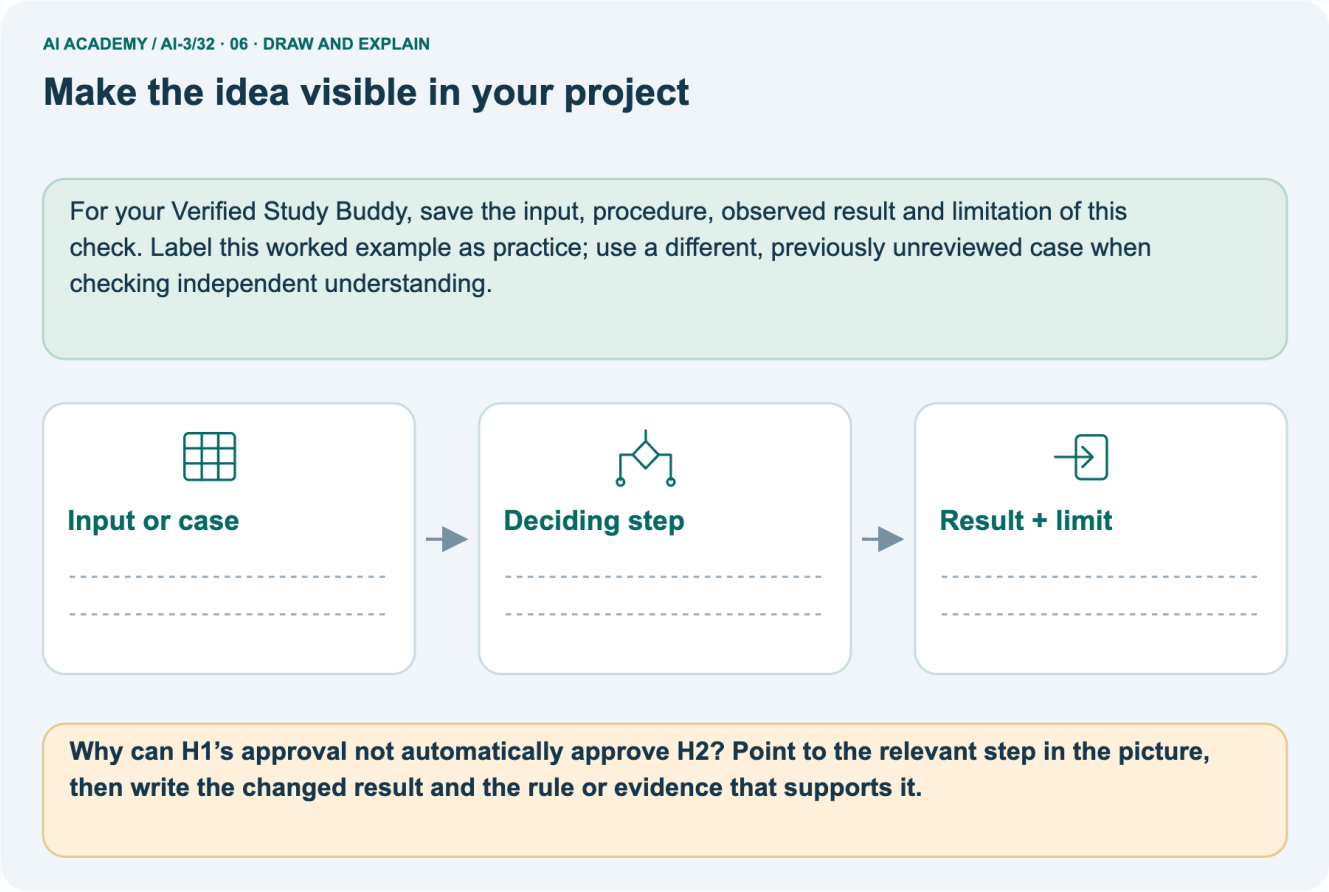

Read the picture in order. Stop public posting and show H2's changed content and intended audience to the reviewer. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Limit: Human review helps only when the reviewer sees the material changes, **evidence** and actual consequences.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For your Verified Study Buddy, save the **input**, procedure, observed result and limitation of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding. Draw your **input**, deciding step, result and limit.

Supported question: Why can H1's approval not automatically approve H2? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
