AI ACADEMY · LEVEL 3 · GRADE 8 · WEEK 36 · STUDENT LESSON

Creator Defense

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Verified Study Buddy

Before you start

Weeks 33–35: defend claims with per-case records and limitations.

Plan time to read, investigate and explain. Keep predictions separate from observations.

STUDENT LESSON · 1 OF 18

Your mission

> Start with the target: Explain the mechanism and terminology of generative systems defense. Try the recall before opening notes.

Your learning target

I can explain the **mechanism** and terminology of generative systems **defense**.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or **limitation** and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Capstone Evaluate and Improve. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Capstone Design. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Bias and Representation. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

Week 36: Creator **Defense**

A creator explains **architecture**, **evidence**, **limitation**s, provenance, and responsible use.

CREATOR MISSION

Demo and defend against fresh test and design questions.

Creator name and date:

> **Write or draw your reasoning and evidence.**

Readiness for the connected explanation

Recall Capstone evaluation and revision. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

This week's end goal

By the end, I can explain creator **defense** using a traced example and a stated **limitation**.

STUDENT LESSON · 2 OF 18

Notice the evidence

> Investigate the supplied Creator Defense case. Separate observations, given facts and assumptions before choosing an explanation.

PICTURE STORY

Notice → Predict → Explain

Begin with visible **evidence**. Do not explain more than the picture and information support.

Start with this puzzle

MYSTERY

The learners must use creator **defense** to solve a problem. What information do they have? What decision or calculation do they make? What would count as **evidence** that it worked?

Three **observation**s (what you can point to):

Write or draw your reasoning and evidence.

My **prediction** and the clue supporting it:

Write or draw your reasoning and evidence.

A closer explanation

A generative-system **defense** presents the question, **architecture**, corpus, permissions, baseline, evaluation and unresolved failures. Demonstration fluency is only one observable property.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

STUDENT LESSON · 3 OF 18

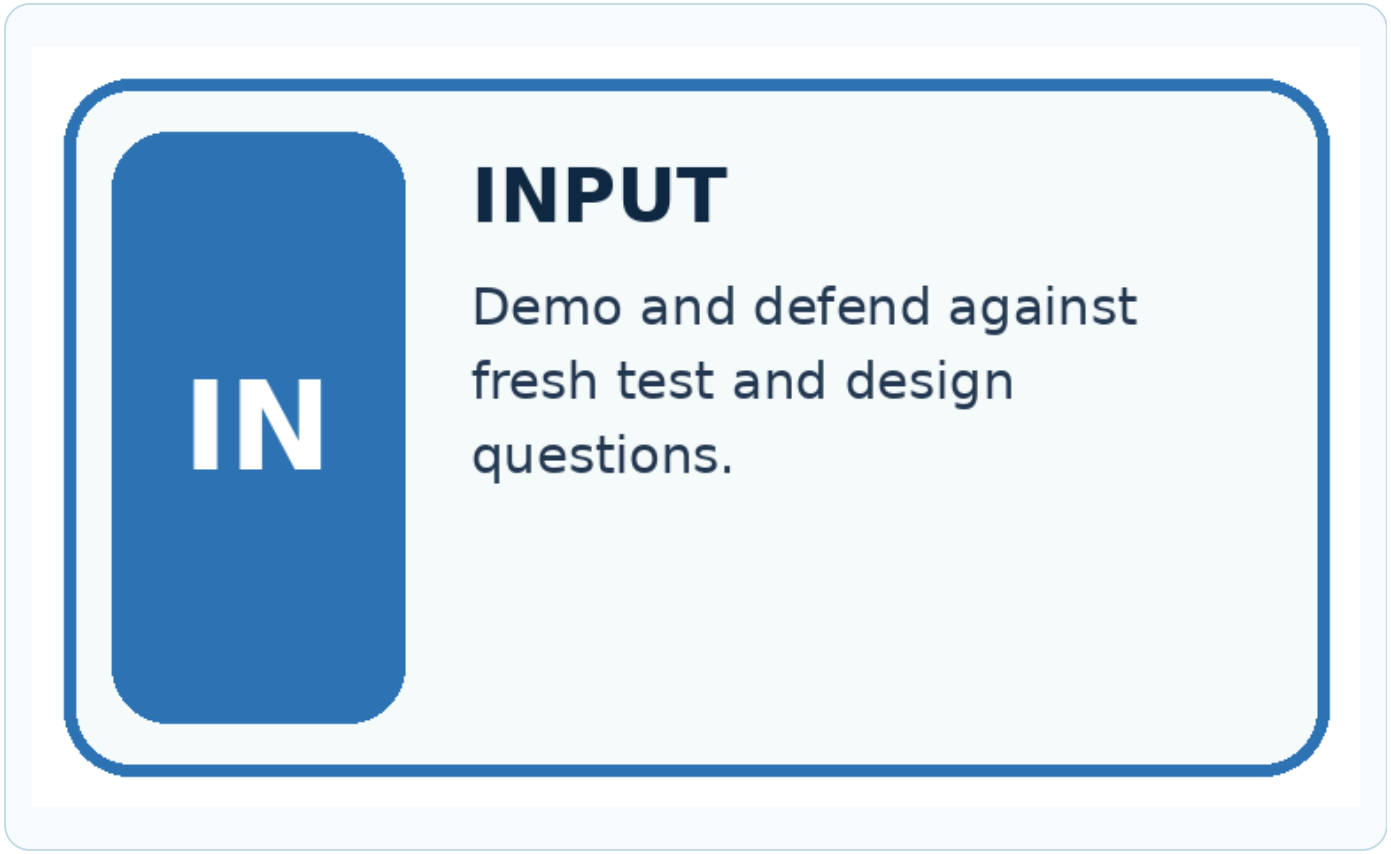

See how it works

> Follow the mechanism for Creator Defense. Connect each labelled input, deciding step and result.

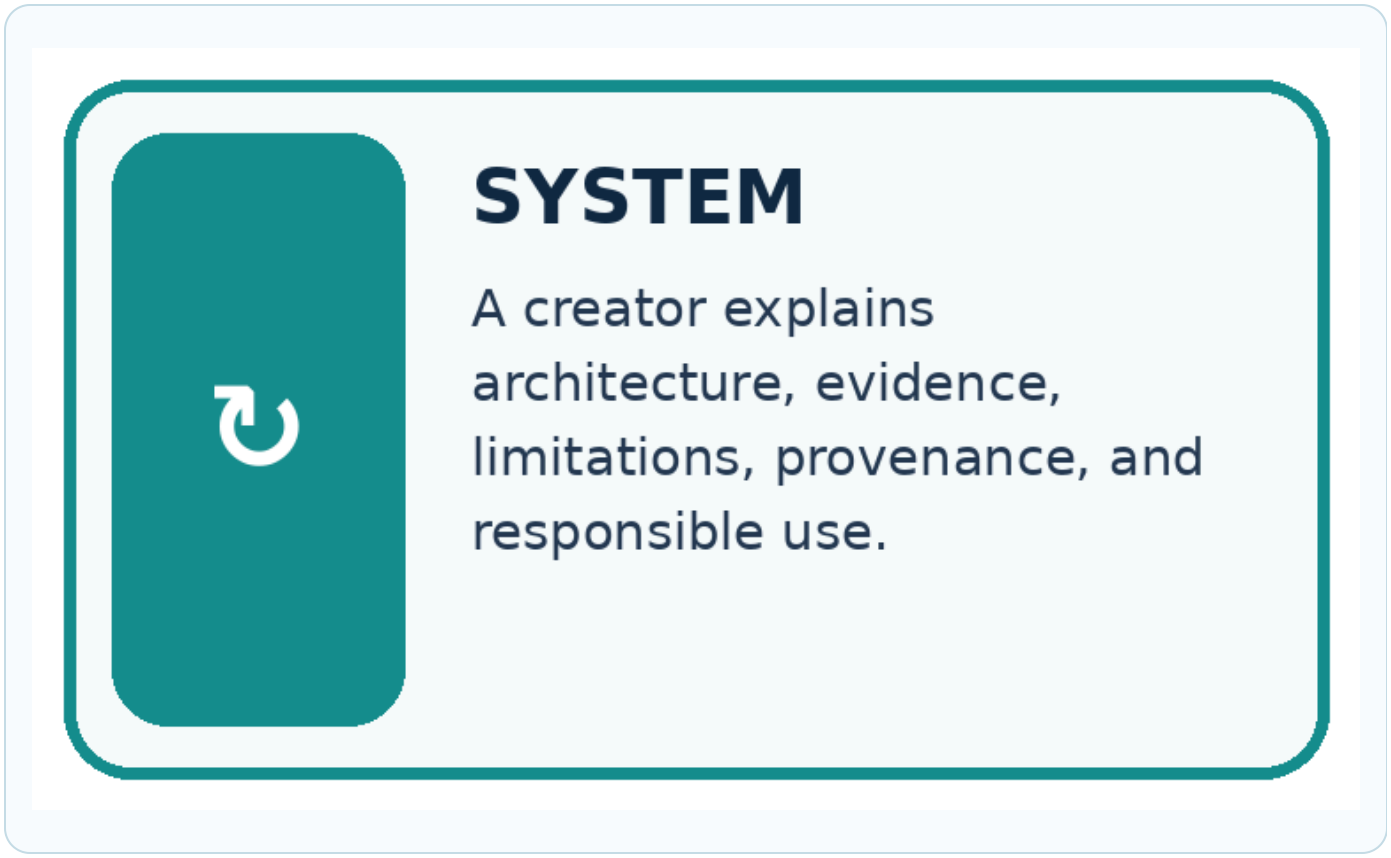

VISUAL MECHANISM

Input → Process → Output

Trace the information. At each stage, ask what changed and how you could test it.

↓

SYSTEM
A creator explains architecture, evidence, limitations, provenance, and responsible use.
OUT
EVIDENCE
Demo and defend against fresh test and design questions.

Which stage could fail even when the other two are correct? Explain:

Write or draw your reasoning and evidence.

A closer explanation

Link each claim to a recorded result. State the distinction between retrieval relevance, claim support, fallback and permissions. Give a **reproduction packet** and answer challenges without inventing missing measurements.

Generative systems defense — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
System reports 9/10 retrieved relevant records, 7/10 supported answers and zero actions in a read-only run.	Link each claim to a recorded result. State the distinction between retrieval relevance, claim support, fallback and permissions. Give a reproduction packet and answer challenges without inventing missing measurements.	Retrieval rate 90% and support rate 70% differ. Action trace supports zero actions in that run; no timing evidence supports speed. Correct the full-correctness and speed claims.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

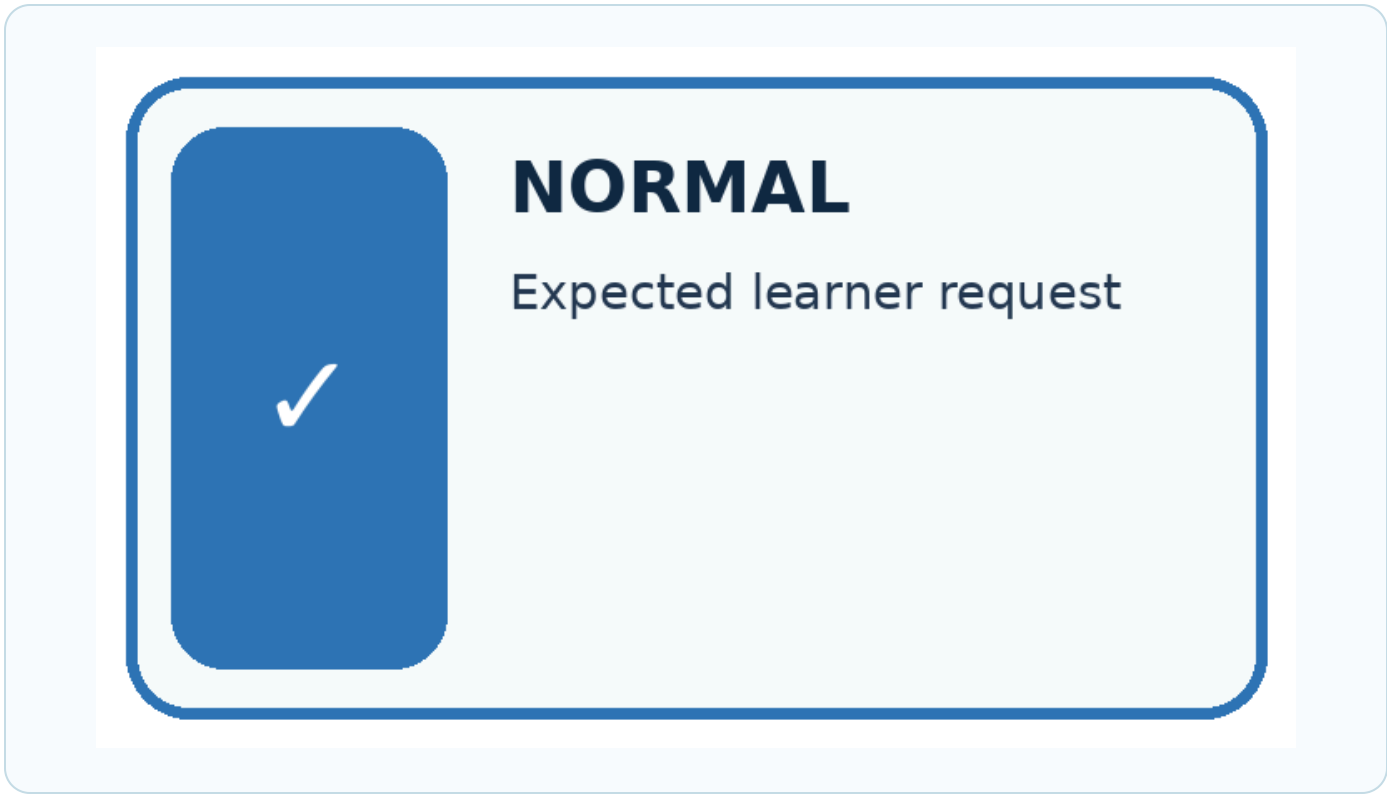

> Compare the supplied cases for Creator Defense. Identify the detail that changes the conclusion.

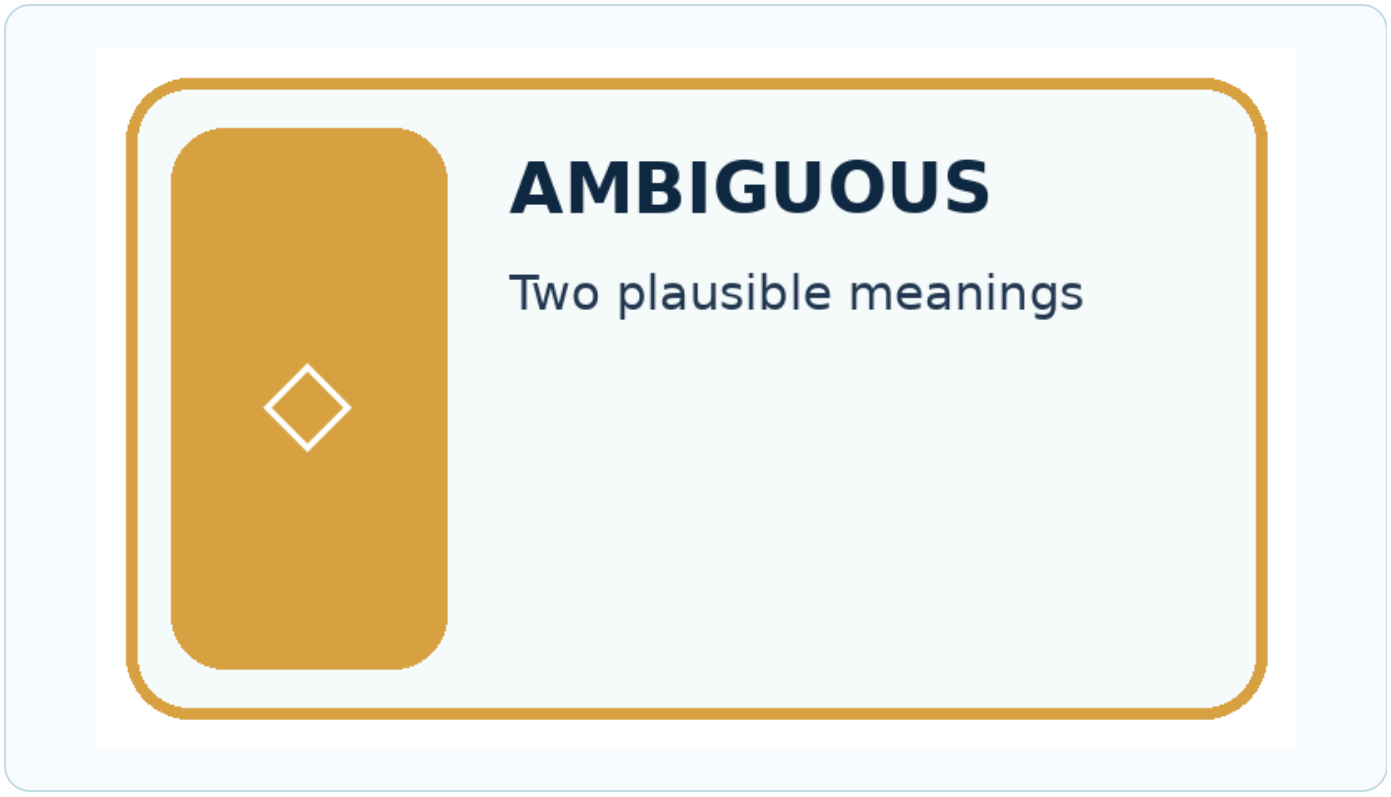

The case to investigate

CASE GALLERY

Four Tests, Four Kinds of **Evidence**

A system is not understood until it survives more than one comfortable example.

NORMAL
Expected learner request

AMBIGUOUS
Two plausible meanings

The normal case

NORMAL CASE: predict and name **evidence**. BOUNDARY CASE: predict and name **evidence**.

Check missing information

MISSING INFORMATION: predict and name **evidence**. TRANSFER CASE: predict and name **evidence**.

Which case is most likely to reveal a hidden assumption? Why?

Write or draw your reasoning and evidence.

Change one thing in the pictured case

Change one thing

Change: Only the retrieval rate is put on the presentation poster.

Predicted result

Prediction: The poster omits the lower supported-answer rate and cannot imply **80%** fully correct answers.

Why the result follows

Reason: Retrieving useful **evidence** is an intermediate step, not proof that the final answer uses it correctly.

STUDENT LESSON · 5 OF 18

Words that unlock the idea

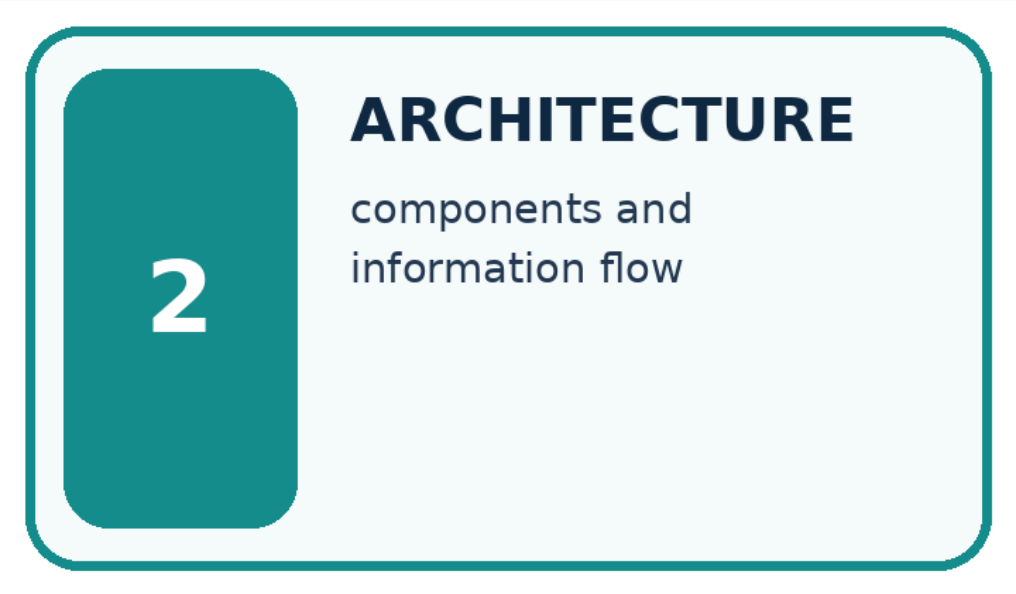

> Use the vocabulary of Creator Defense to explain a concrete decision, rather than only memorising definitions.

VOCABULARY LAB

Words You Can Use to Reason

A definition matters when you can recognize the idea, use it, and contrast it with a near-miss.

1
DEFENSE
evidence-based explanation of choices

2
ARCHITECTURE
components and information flow

Word	My own example	Not this / boundary
defense	An explanation of a project decision supported by evidence and an account of its limitations.	
architecture	The arrangement of a system's parts and the connections between them.	

Word	My own example	Not this / boundary
limitation	A condition or missing capability that restricts what a result can establish or a system can safely do.	
transfer test	A fresh task that checks whether learning can be applied without the original supports.	

Words used in the closer explanation

Word	Meaning
Defense claim	A statement tied to inspectable project evidence
Reproduction packet	Artifacts needed to repeat a reported procedure
Unmeasured outcome	A property for which the experiment supplies no observation

---

STUDENT LESSON · 6 OF 18

Follow a worked example

> Follow the worked trace for Creator Defense, predict a step, then compare with its explanation.

WORKED EVIDENCE

Reason Step by Step

Predict first. Then check each step. A correct answer without visible reasoning is incomplete **evidence**.

WEEK 36 • WORKED EVIDENCE

1. Trace one question through retrieval, generation, validation, and citation.
2. Recompute one evaluation score and show source support.
3. Run an unseen missing-source or conflicting-source case.
4. State intended use, do-not-use case, privacy/provenance controls, and human responsibility.

1. Trace one question through retrieval, generation, validation, and citation.

2. Recompute one evaluation score and show source support.

3. Run an unseen missing-source or conflicting-source case.

4. State intended use, do-not-use case, privacy/provenance controls, and human responsibility.

Recalculate, retrace, or restate the reasoning in your own representation:

Write or draw your reasoning and evidence.

CHECK Did the **evidence** answer the exact question? Did the total, path, or source record stay consistent?

A closer explanation

System reports 9/10 retrieved relevant records, 7/10 supported answers and zero actions in a read-only run. Presenter claims 90% fully correct and faster than baseline.

Retrieval rate 90% and support rate **70%** differ. Action trace supports zero actions in that run; no timing **evidence** supports speed. Correct the full-correctness and speed claims.

Worked explanation · Creator Defense

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: Creator Defense

Defend a study-buddy project using separate claims and matching **evidence**.

The facts we will use

Supplied facts

Set A: 15 answerable questions, with 12 relevant retrievals and 9 supported answers. Separate set B: 5 missing-source questions, with 4 appropriate fallbacks. No speed measurements exist.

Supplied facts

All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

AI ACADEMY / AI-3/36

Creator Defense

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Retrieval claim

Relevant retrieval rate is 12/15=80%.

2. Answer claim

Supported-answer rate is 9/15=60%; retrieval success is not answer success.

3. Fallback claim

Appropriate fallback is 4/5=80%. Make no measured speed claim.

CHANGE ONE THING

Only the retrieval rate is put on the presentation poster.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Retrieval claim	Relevant retrieval rate is 12/15=80%.
2. Answer claim	Supported-answer rate is 9/15=60%; retrieval success is not answer success.
3. Fallback claim	Appropriate fallback is 4/5=80%. Make no measured speed claim.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

Read the picture in order. Appropriate fallback is 4/5=**80%**. Make no measured speed claim. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

What this example does not establish

Keep the stated limit

These invented counts illustrate **defense** structure; the class must replace them with its own documented **evidence**.

Keep the stated limit

Read the labelled picture: Which numbers would you display to make the **defense** honest? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

Keep the stated limit

Change one thing: Only the retrieval rate is put on the presentation poster. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the Creator Defense claim and explain a repair using the supplied evidence.

Find the first error

ERROR DETECTIVE

Compare → Diagnose → Repair

Do not patch the answer. Find the earliest unsupported assumption, wrong step, or weak **evidence**.

!

COMPARE • DIAGNOSE

Weak idea: A smooth demo proves the system is reliable. Strong move: inspect the claim, source, stage, schema, or test evidence; repair one cause; rerun.

Evidence record	Expected	Actual	Likely cause / next test
normal case	works		
boundary case	stated rule		
missing input	safe response		
fresh transfer	generalizes		

Repair one cause. Why is this repair better than changing several things?

Write or draw your reasoning and evidence.

A closer explanation

Check the claim against the facts

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.

STUDENT LESSON · 8 OF 18

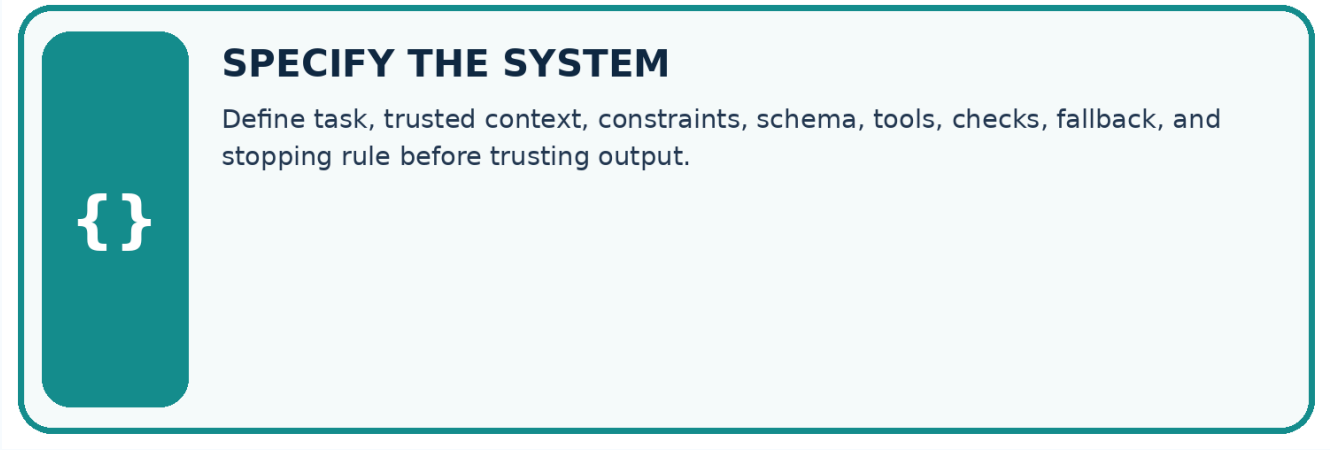

Practise together

> Practise Creator Defense with support, then explain the deciding step in your own words.

LOGIC STUDIO

Specify Before You Run

Prompts, schemas, retrieval, tool calls, and code are inspectable parts of one AI product.

SET task, audience, constraints, **output**_schema LOAD approved_context or retrieval_result CALL model or allowed_tool VALIDATE fields, claims, citations, and safety IF **evidence** missing: ask, retrieve, or abstain RETURN useful **output** + source trail + **limitation**s

> Trace one **input**. Which line changes the state or chooses a path?

Write or draw your reasoning and evidence.

A closer explanation

A **defense** should preserve negative **evidence** and uncertainty rather than treating polished presentation as proof.

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Practise with less help: Trace the worked case

Use workbook W2 for the connected example “Generative systems **defense**”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for Generative systems **defense**. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

Which numbers would you display to make the **defense** honest? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

Run the investigation

> Investigate Creator Defense. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

EVIDENCE LAB

Predict → Test → Record → Explain

Keep expected and actual results separate. Surprises are useful data when recorded honestly.

Present **architecture** and **evidence** bundle, accept a fresh case, explain a failure without hiding it, and defend one tradeoff.

Test / input · Prediction · Actual · Evidence / calculation · Change or keep?

> **Test / input:** normal
>
> **Prediction:** _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: boundary

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: missing

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

Test / input: fresh transfer

Prediction: _____

Actual: _____

Evidence / calculation: _____

Change or keep?: _____

What did the hardest test teach you that the normal test did not?

Write or draw your reasoning and evidence.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

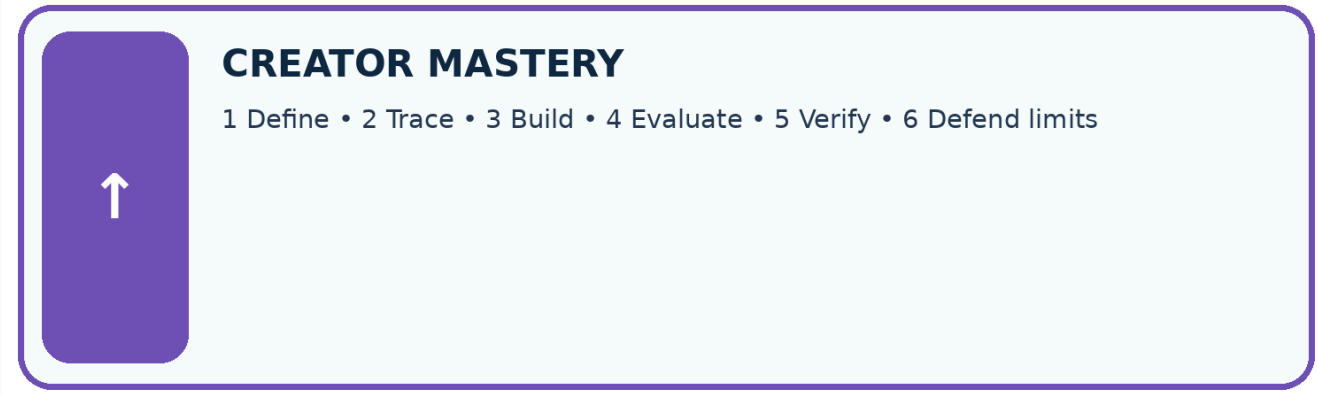

Build your understanding

> Move from recall to tracing, diagnosis and transfer in Creator Defense. Explain why each step is justified.

MASTERY

From Knowing the Word to Owning the Idea

Move upward only when you can produce **evidence** without copying the worked example.

1 • NAME: Define the concept without repeating the textbook.

2 • TRACE: Show the information, state, branch, calculation, or **evidence** path.

3 • APPLY: Solve a different example independently.

4 • CHALLENGE: Find a boundary case, counterexample, or unfair outcome.

5 • EXPLAIN LIMITS: Say when the result should not be trusted or used alone.

My strongest **evidence** of independent understanding:

> **Write or draw your reasoning and evidence.**

STUDENT LESSON · 11 OF 18

Connect your project

> Apply this week's idea to Verified Study Buddy. Keep an annotated decision and the evidence supporting it.

CUMULATIVE PROJECT

Verified Study Buddy

Every week adds one inspectable piece. The system must show how it reached a result.

VERIFIED STUDY BUDDY

Final product card documents purpose, system map, sources, evals, limits, risks, and human oversight.

THIS WEEK'S CHECKPOINT Final product card documents purpose, system map, sources, evals, limits, risks, and human oversight.

Trace the system

SYSTEM MAP Learner need → prompt/schema → approved sources/retrieval → model/tool → structured answer → verification → **human decision**

What will you add, change, or verify in the project this week?

Write or draw your reasoning and evidence.

What should remain under **human control**?

Write or draw your reasoning and evidence.

Responsible design

RESPONSIBLE DESIGN Collect only necessary information. Show uncertainty and limits. Never confuse fluent **output** with verified truth.

Evidence for your project

For your Verified Study Buddy, save the **input**, procedure, observed result and **limitation** of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding.

STUDENT LESSON · 12 OF 18

Show what you know

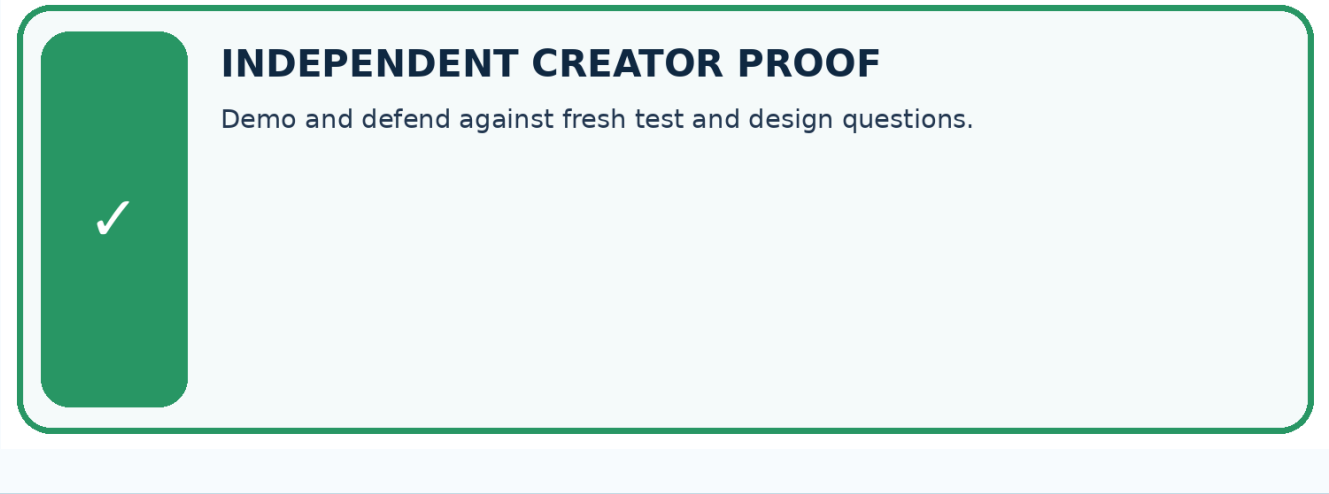

Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Independent evidence

INDEPENDENT MASTERY PROOF

Explain • Transfer • Test • Defend

Complete this page without copying the worked example. Your reasoning matters more than decoration.

Try a more demanding case

CHALLENGE Demo and defend against fresh test and design questions.

1. My fresh example, trace, calculation, or design:

Write or draw your reasoning and evidence.

2. My **evidence** that it works (include a boundary or missing-data case):

Write or draw your reasoning and evidence.

3. One **limitation**, fairness concern, or situation needing human review:

Write or draw your reasoning and evidence.

Check your explanation

SELF-CHECK ☐ I explained the **mechanism** ☐ I used **evidence** ☐ I tested a fresh case ☐ I named a **limitation** ☐ I can answer 'why?'

STUDENT LESSON · 13 OF 18

Study a complete case

Revisit the complete Creator Defense case for supported practice. Repeated examples do not become fresh assessments.

Week 36 Worked case

Use the supplied details to practise the weekly concept before attempting the independent question. This case extends the illustrated lesson.

The situation

Ten successful demos lead to a never hallucinates claim.

The question

Write a defensible conclusion.

Worked explanation

Report those ten specified passes, show **evidence** and fallback, and state untested conditions. Demonstrate an unanswerable question.

Explain it in your own words

> Which detail supports the answer, and why does it matter?

Write or draw your reasoning and evidence.

Trace the supplied case visually

Defend a bounded claim

Evidence or stage	Value or result
Result	Ten specified demonstrations passed
Evidence	Show sources and checks
Limit	Other conditions remain untested
Demonstration	Show an unanswerable question

Ten successful demos lead to a never hallucinates claim.

Write a defensible conclusion.

Report those ten specified passes, show **evidence** and fallback, and state untested conditions. Demonstrate an unanswerable question.

STUDENT LESSON · 14 OF 18

Try a new case independently

> Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Apply a new case independently

A **defense** has retrieval 8/10, support 6/10, fallback 3/4 and no measured latency. State the three rates and reject one unsupported claim.

> **My independent explanation, trace and limits**

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Week 36 Independent application

Close the worked explanation. Apply the idea to this different question without copying.

An audience asks whether your assistant is always correct. Give an **evidence**-based **defense** using results and a limit.

My answer, with a trace, calculation or supporting **evidence**

Write or draw your reasoning and evidence.

Create and test

Change one relevant detail. Predict the result before testing. Include a boundary or missing-information case when it helps reveal a limit.

My changed **input** and expected result

Write or draw your reasoning and evidence.

Connect to your project

Final product card documents purpose, system map, sources, evals, limits, risks, and human oversight.

The **evidence** I will keep

Write or draw your reasoning and evidence.

Your teacher has the independent answer and scoring criteria. Complete the matching workbook week to keep your practice **evidence** together.

Transfer practice from the original programme

Your assistant passes 9/12 final questions, including all six direct facts but only 3/6 ambiguous or absent-**evidence** cases. Report results and argue for a focused next step.

> **Explain the mechanism, evidence and one limit.**

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate Creator Defense, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: Defend a study-buddy project using separate claims and matching **evidence**.

By the end, I can	How I will show it
Explain the mechanism and terminology of generative systems defense	Explain the deciding step, show a trace or test, and state one limit.
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.

By the end, I can	How I will show it
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain Creator Defense without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of generative systems **defense**

My deciding step, evidence and one remaining question

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

STUDENT LESSON · 17 OF 18

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Defend a study-buddy project using separate claims and matching **evidence**.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Appropriate fallback is 4/5=**80%**. Make no measured speed claim.

1. Fallback claim

2. Answer claim

3. Retrieval claim

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Fallback claim Appropriate fallback is 4/5=**80%**. Make no measured speed claim. Read the picture in order. Appropriate fallback is 4/5=**80%**.

Make no measured speed claim. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Only the retrieval rate is put on the presentation poster. Which conclusion is supported by the supplied facts?

1. This one example guarantees correct results for every future **input**.

2. The poster omits the lower supported-answer rate and cannot imply **80%** fully correct answers.

3. We can decide the result without examining the changed **input** or the procedure.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: The poster omits the lower supported-answer rate and cannot imply **80%** fully correct answers.

Retrieving useful **evidence** is an intermediate step, not proof that the final answer uses it correctly.

Repair a missing building block

Review Capstone Evaluate and Improve (ai-3/35). Goal: Explain the **mechanism** and terminology of capstone evaluation and revision. Short practice: May the team call the repaired validation cases an untouched final test?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Capstone Design (ai-3/33). Goal: Explain the **mechanism** and terminology of capstone requirements and corpus. Short practice: What should the project plan record before the new flower test?

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Review Bias and Representation (ai-3/30). Goal: Explain the **mechanism** and terminology of representation and bias evaluation. Short practice: Explain why comparing six correct answers in each group would mislead.

Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

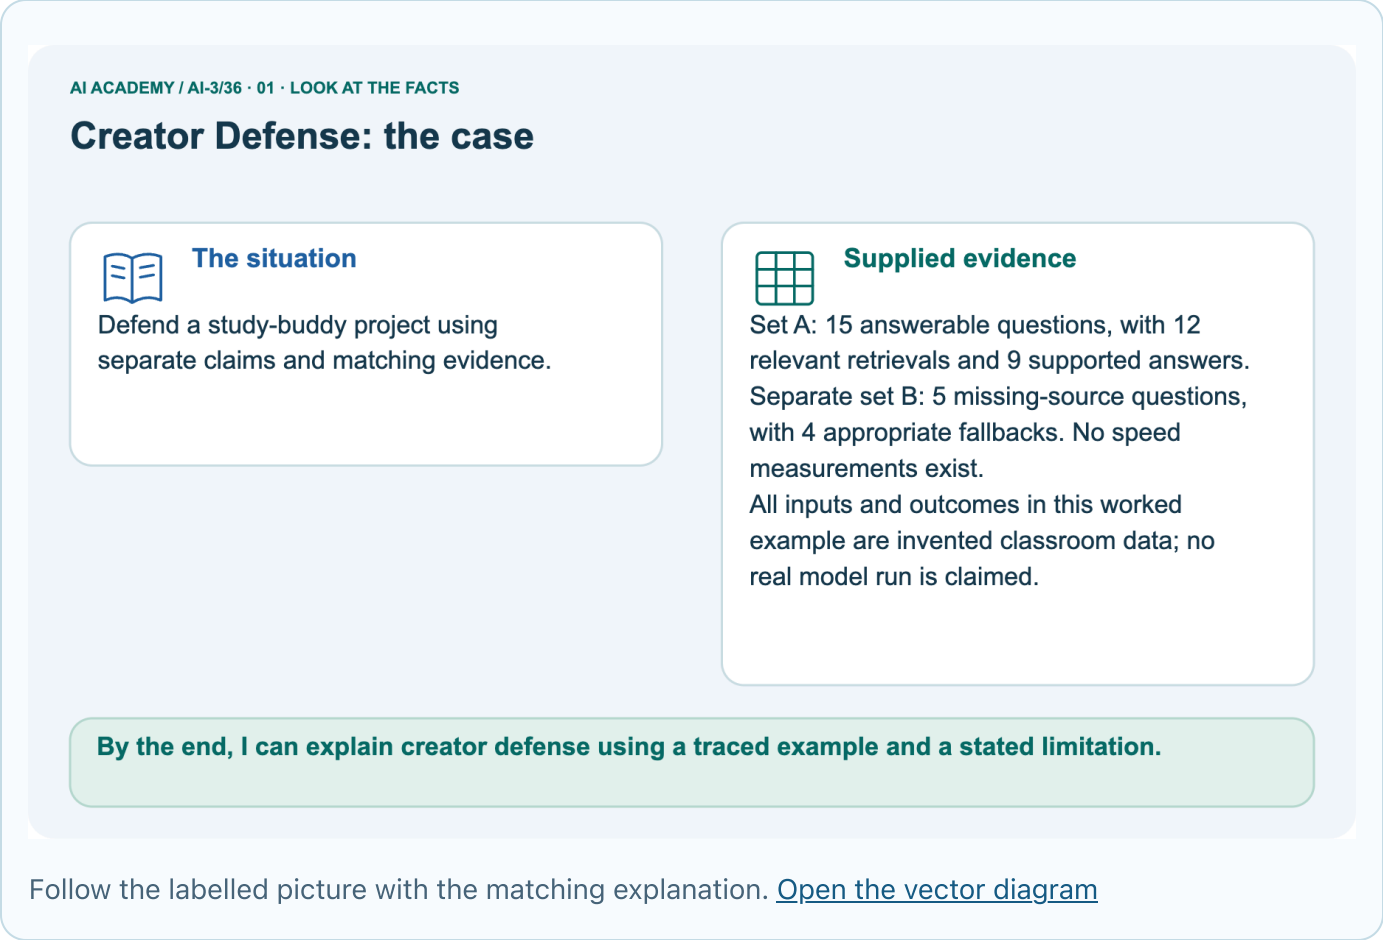

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each Creator Defense graphic using its labels, deciding evidence and relevant limitation.

01. Creator Defense: the case

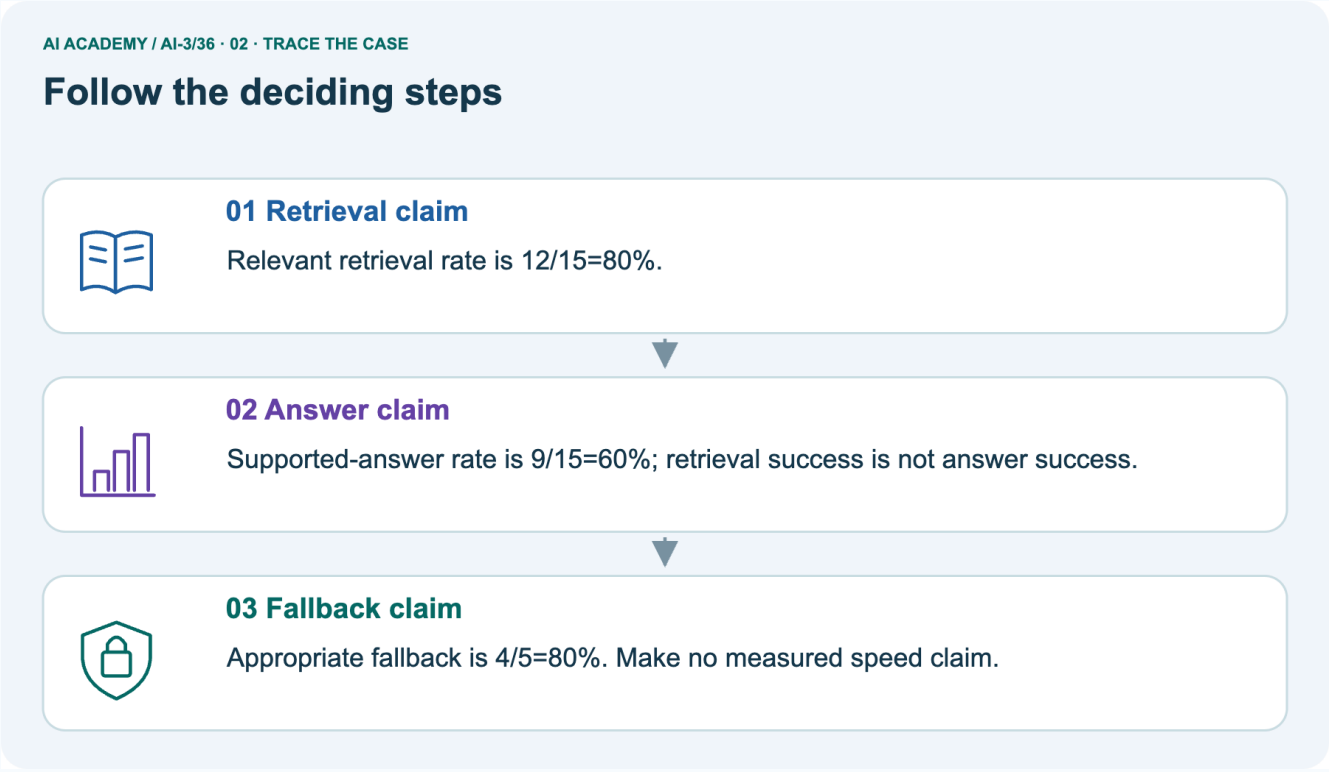

Follow the labelled picture with the matching explanation. Open the vector diagram

Defend a study-buddy project using separate claims and matching **evidence**. Supplied facts: Set A: 15 answerable questions, with 12 relevant retrievals and 9 supported answers.

Separate set B: 5 missing-source questions, with 4 appropriate fallbacks. No speed measurements exist. All **input**s and outcomes in this worked example are invented classroom data; no real model run is claimed.

> Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

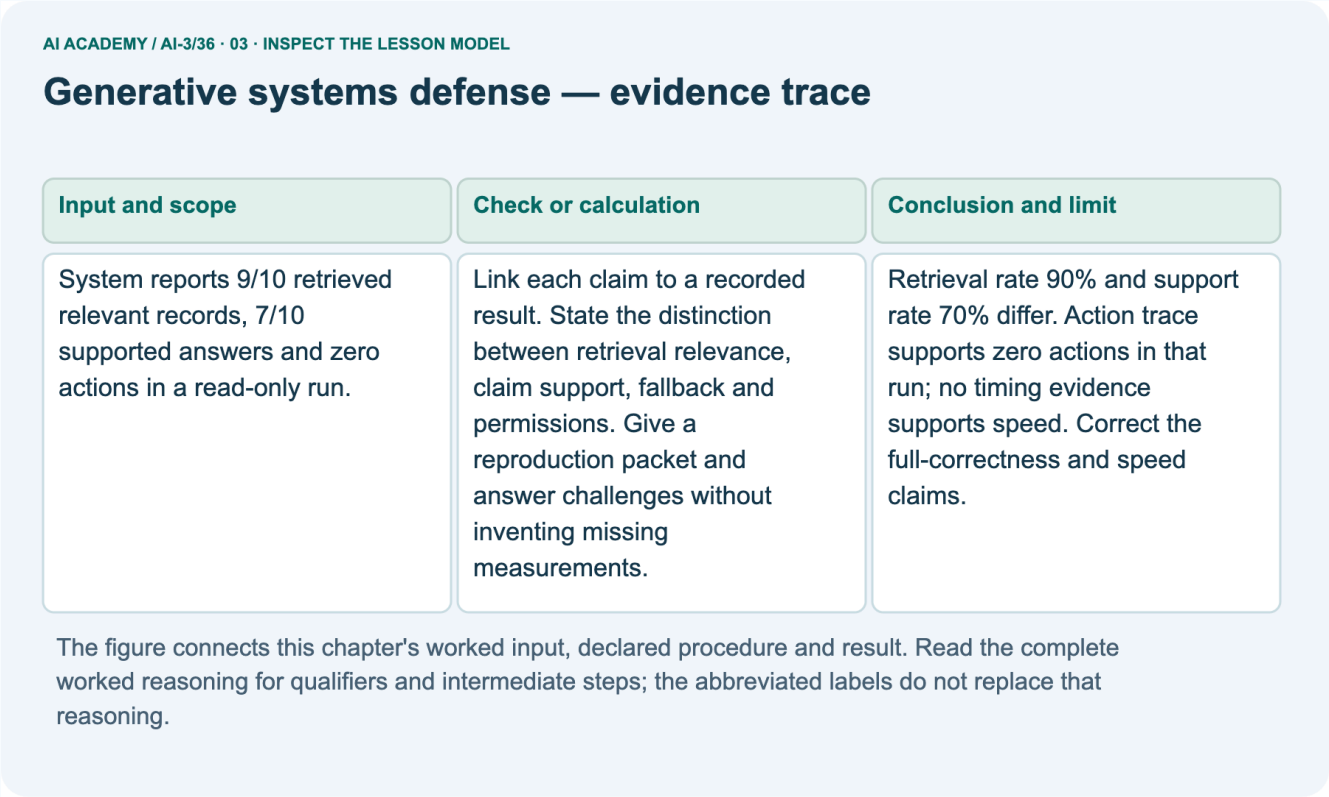

Follow the labelled picture with the matching explanation. Open the vector diagram

Retrieval claim: Relevant retrieval rate is 12/15=**80%**. → Answer claim: Supported-answer rate is 9/15=**60%**; retrieval success is not answer success. → Fallback claim: Appropriate fallback is 4/5=**80%**.

Make no measured speed claim.

> Point to each numbered stage and explain which recorded **input** it uses.

03. Generative systems defense — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

Generative systems **defense** — **evidence** trace. System reports 9/10 retrieved relevant records, 7/10 supported answers and zero actions in a read-only run. | Link each claim to a recorded result.

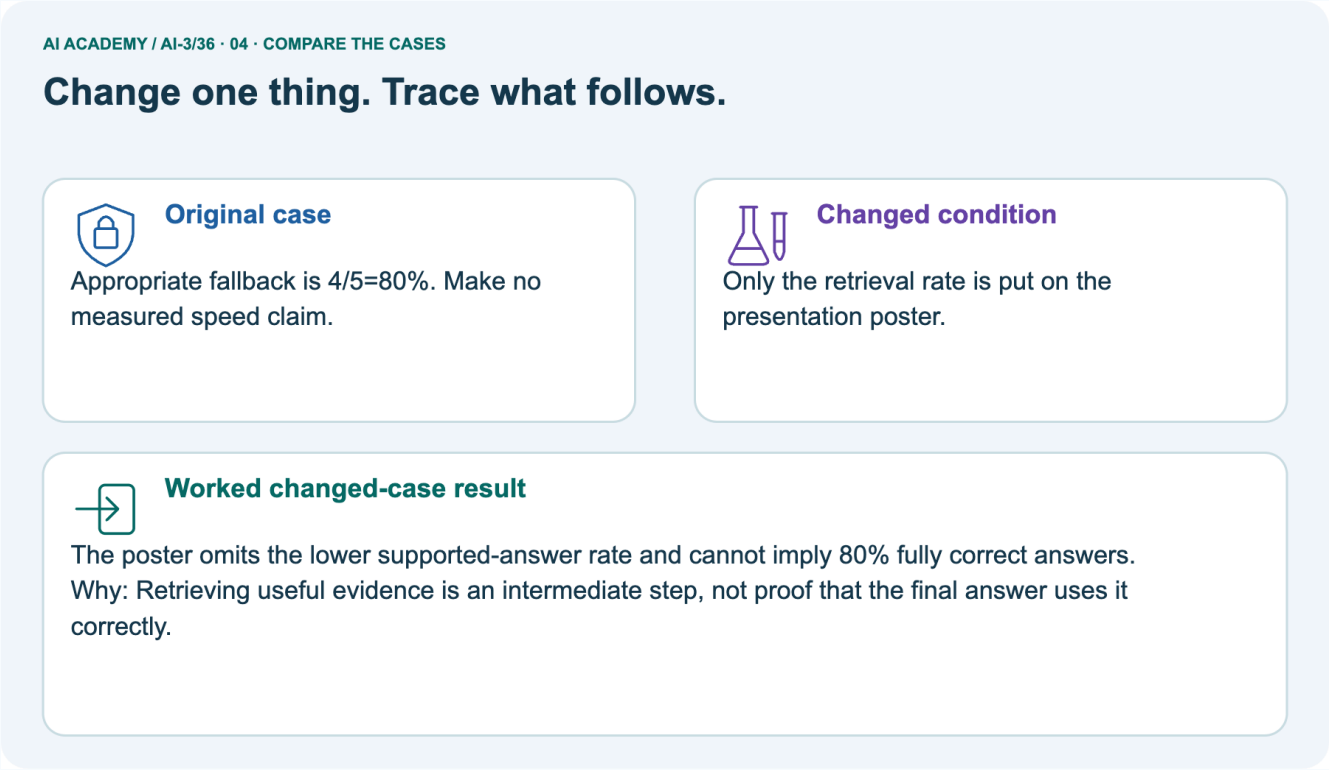

State the distinction between retrieval relevance, claim support, fallback and permissions.

Give a **reproduction packet** and answer challenges without inventing missing measurements. | Retrieval rate 90% and support rate **70%** differ. Action trace supports zero actions in that run; no timing **evidence** supports speed.

Correct the full-correctness and speed claims.

> Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

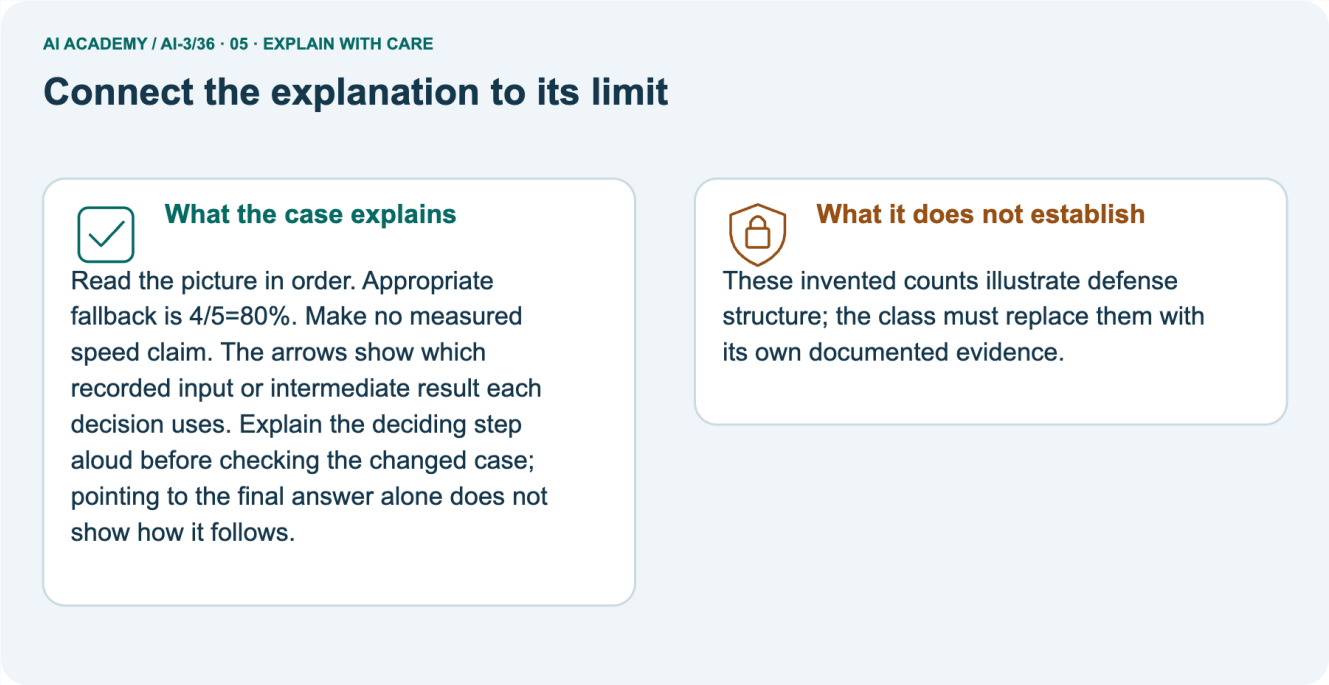

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Appropriate fallback is 4/5=**80%**. Make no measured speed claim. Changed condition: Only the retrieval rate is put on the presentation poster.

Expected result: The poster omits the lower supported-answer rate and cannot imply **80%** fully correct answers. Reason: Retrieving useful **evidence** is an intermediate step, not proof that the final answer uses it correctly.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

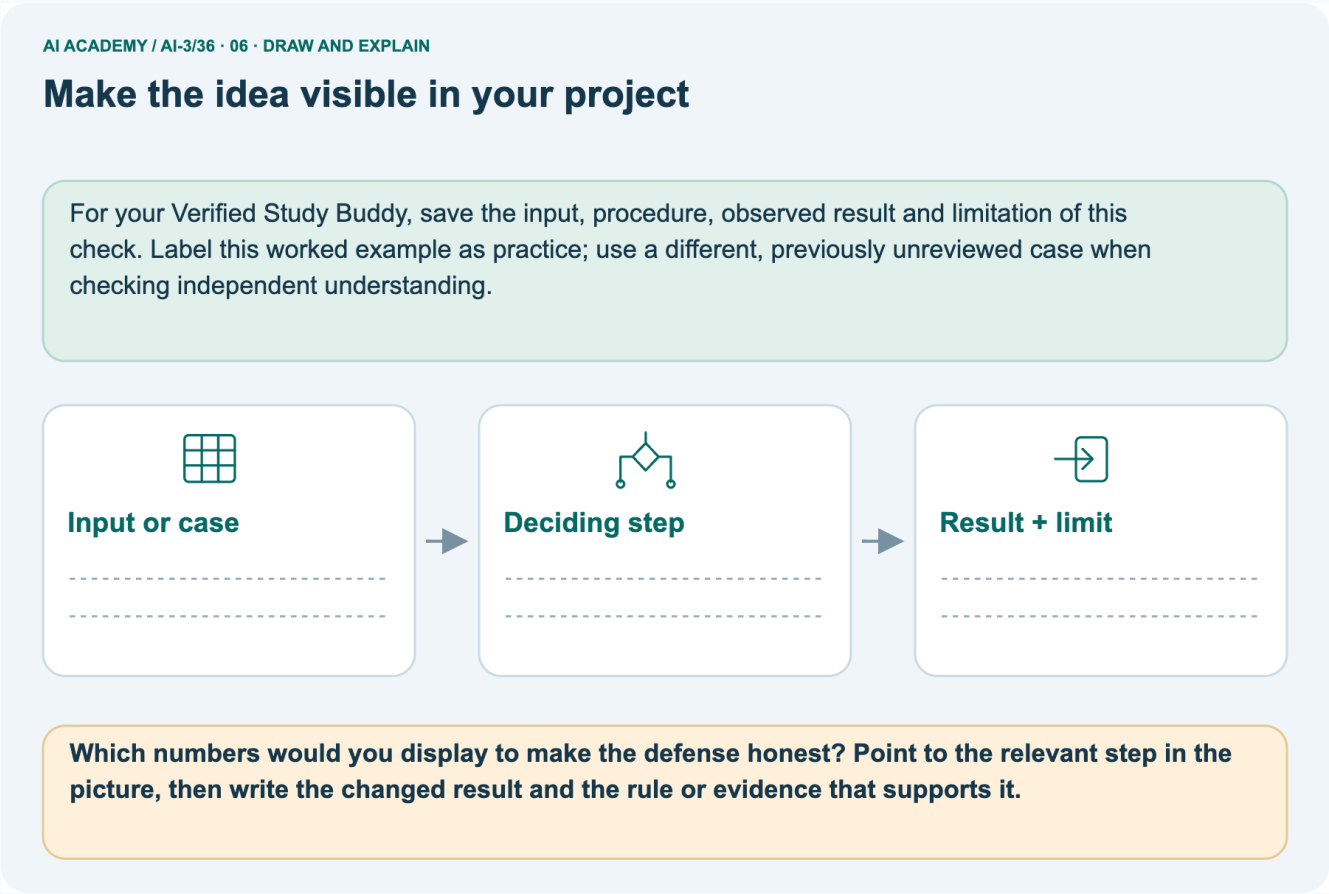

Read the picture in order. Appropriate fallback is 4/5=**80%**. Make no measured speed claim. The arrows show which recorded **input** or intermediate result each decision uses.

Explain the deciding step aloud before checking the changed case; pointing to the final answer alone does not show how it follows.

Limit: These invented counts illustrate **defense** structure; the class must replace them with its own documented **evidence**.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For your Verified Study Buddy, save the **input**, procedure, observed result and **limitation** of this check.

Label this worked example as practice; use a different, previously unreviewed case when checking independent understanding. Draw your **input**, deciding step, result and limit.

Supported question: Which numbers would you display to make the **defense** honest? Point to the relevant step in the picture, then write the changed result and the rule or **evidence** that supports it.

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
