AI ACADEMY · LEVEL 7 · GRADE 12 · WEEK 6 · STUDENT LESSON

A literature comparison matrix

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Reproducible AI Research Study

Before you start

Recall Replication and reproduction. Explain why a recorded result needs its input conditions and evidence source before it can support a claim.

Plan time to read, investigate and explain. Keep predictions separate from observations.

STUDENT LESSON · 1 OF 18

Your mission

> Start with the target: Explain the mechanism and terminology of a literature comparison matrix. Try the recall before opening notes.

Your learning target

I can explain the **mechanism** and terminology of a literature comparison matrix.

I can apply the stated procedure to a new case with a traceable result.

I can identify an assumption or limitation and design a revealing follow-up.

Remember before reading

Close your notes first. A rough first answer helps us choose the right starting point; it is not a score for your ability.

Without opening the old lesson, explain one key idea from Replication and reproduction. Give an example and a mistake that the idea helps you avoid.

Without opening the old lesson, explain one key idea from Finding primary research. Give an example and a mistake that the idea helps you avoid.

After trying, check the relevant lesson or ask your teacher. Change the part of your explanation that the **evidence** shows was wrong.

This week you will practise:

Explain the **mechanism** and terminology of a literature comparison matrix

Apply the stated procedure to a new case with a traceable result

Identify an assumption or limitation and design a revealing follow-up

Retrieve what you already know

Recall Replication and reproduction. Explain why a recorded result needs its **input** conditions and **evidence** source before it can support a claim.

> **My starting explanation**

This week's end goal

Explain a literature comparison matrix using the records and boundaries of this fictional investigation.

Notice the evidence

> Investigate the supplied A literature comparison matrix case. Separate observations, given facts and assumptions before choosing an explanation.

A **literature matrix** compares studies using aligned columns rather than sorting headline numbers with different meanings.

Begin by writing the question the procedure is intended to answer. Identify the information already supplied, the information it will produce and the information still missing.

These are constructed classroom examples; they do not require live accounts, private records or an external service. Do not treat a plausible explanation as a measured outcome.

> **List the given facts and one fact that is not supplied.**

STUDENT LESSON · 3 OF 18

See how it works

> Follow the mechanism for A literature comparison matrix. Connect each labelled input, deciding step and result.

Record question, data, unit, baseline, metric, split, resources and limitations. Mark incomparable fields rather than forcing a ranking.

A literature comparison matrix — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Study A reports accuracy90% on easy classification; B reports claim support80% on difficult generated answers.	Record question, data, unit, baseline, metric, split, resources and limitations. Mark incomparable fields rather than forcing a ranking.	Different tasks and metrics cannot establish A superior to B. Keep separate columns and identify a common evaluation needed.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Before applying the procedure, write its units, denominator or decision boundary where relevant. A partner should be able to repeat each step using the same **input**s.

If a required **input** is absent or violates the stated contract, record that condition explicitly instead of quietly replacing it with a convenient value.

Connect the picture and the explanation

Point to the **input**, the deciding step and the result in this week's visual. Explain the same step in ordinary words. A picture helps when you can say what each part represents.

STUDENT LESSON · 4 OF 18

Compare the cases

> Compare the supplied cases for A literature comparison matrix. Identify the detail that changes the conclusion.

Compare a familiar case with a changed case

Study A reports accuracy90% on easy classification; B reports claim support**80%** on difficult generated answers. Show the intermediate steps and give the conclusion with its scope.

Keep the procedure fixed. Explain what changed in the inputs and result.

Change one thing in the pictured case

Change one thing

Change: Remove the indoor/outdoor column.

Predicted result

Prediction: The matrix conceals an important condition difference.

Why the result follows

Reason: A reader might now mistake unlike studies for a controlled head-to-head comparison.

STUDENT LESSON · 5 OF 18

Words that unlock the idea

Use the vocabulary of A literature comparison matrix to explain a concrete decision, rather

> than only memorising definitions.

Word	Meaning
Literature matrix	A structured comparison of study methods and results
Comparable metric	A measure with aligned definition and scope
Evidence gap	Information needed but not supplied

Use two terms to explain a step in this week's example.

STUDENT LESSON · 6 OF 18

Follow a worked example

> Follow the worked trace for A literature comparison matrix, predict a step, then compare with its explanation.

Study A reports accuracy90% on easy classification; B reports claim support**80%** on difficult generated answers.

Different tasks and metrics cannot establish A superior to B. Keep separate columns and identify a common evaluation needed.

Worked explanation · A literature comparison matrix

Compare the intermediate **evidence** with the final statement. Explain why each number or decision follows from the stated **input**s.

> The conclusion belongs to this scenario and procedure; changing the **input**s, evaluation population or authority can change what it establishes. Retain the raw record so a later revision can be compared honestly.

Learn from the worked case

Cover the result before checking it. Say what is given, choose the procedure, and follow one step at a time. Then uncover the result and explain your first mismatch. Ask why a step is allowed, not only what number it produces.

A pictorial worked case: A literature comparison matrix

A **literature matrix** that preserves differences. Two fictional studies evaluate related tools under different conditions.

The facts we will use

> **Supplied facts**
>
> Study S1: 8/10 correct on indoor photos. S2: 16/20 on outdoor photos. Both report **80%**.

AI ACADEMY / AI-7/6

Same rate, different study conditions

	Correct	Total	Condition
Study S1	8	10	Indoor
Study S2	16	20	Outdoor

Read a cell using both its row and column labels.

Follow the labelled picture with the matching explanation. Open the vector diagram

AI ACADEMY / AI-7/6

A literature comparison matrix

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Record each method

Keep population, task, model version and scoring in separate columns.

2. Compare rates carefully

Both rates are 80%, with different denominators and conditions.

3. Name missing comparison

Neither study directly compares both tools on the same photos.

CHANGE ONE THING

Remove the indoor/outdoor column.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Read the picture one step at a time

STEP	WHAT HAPPENS AND WHY
1. Record each method	Keep population, task, model version and scoring in separate columns.
2. Compare rates carefully	Both rates are 80%, with different denominators and conditions.
3. Name missing comparison	Neither study directly compares both tools on the same photos.

Match each pictured step to the supplied facts. This is a worked teaching case, not an independent assessment.

Why this result follows

Why the result follows

A **literature matrix** helps compare **evidence** without flattening differences. Equal percentages do not mean equivalent tasks, samples or methods.

What this example does not establish

Keep the stated limit

These fictional studies illustrate comparison practice; no real literature finding is asserted.

Keep the stated limit

Read the labelled picture: Explain why 8/10 indoors and 16/20 outdoors share a rate but not a controlled comparison. Which condition column must the **literature matrix** preserve?

Keep the stated limit

Change one thing: Remove the indoor/outdoor column. Predict the result before checking the explanation. What remains the same?

STUDENT LESSON · 7 OF 18

Find and repair a mistake

> Find the unsupported step in the A literature comparison matrix claim and explain a repair using the supplied evidence.

A matrix documents comparison limits; it does not create missing common **evidence**.

Check the claim against the facts

A useful check asks what would make the reasoning fail. Distinguish a failure to execute the declared procedure from a weakness in the procedure itself.

The first may require a correction; the second requires an explicitly revised method and new **evidence**. Preserve unsuccessful cases so an improved result cannot hide the original problem.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Locate the earliest unsupported step

A report omits this qualification: A matrix documents comparison limits; it does not create missing common **evidence**. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

State one repair and the checks you would rerun.

STUDENT LESSON · 8 OF 18

Practise together

> Practise A literature comparison matrix with support, then explain the deciding step in your own words.

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

Guided: restate the worked result, then name the assumption or limitation that prevents a broader conclusion.

Explain your prediction to a partner before comparing results.

Practise with less help: Trace the worked case

Use workbook W2 for the connected example “A literature comparison matrix”. First fill the **input** and rule boxes. Try the middle steps before asking for a hint. After a hint, try the next step yourself.

Plan	Do	Check
What is given? Which rule or procedure applies?	Record each intermediate step.	Does the result follow? What remains unknown?

Explain your trace to a partner. Your partner points to one step to check. Swap roles on the next case. Each person writes their own explanation.

Check your reasoning

Use the worked case for A literature comparison matrix. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

Answer on your own before discussion. If you are unsure, say which step you need help with.

Explain the picture

> Explain why 8/10 indoors and 16/20 outdoors share a rate but not a controlled comparison. Which condition column must the **literature matrix** preserve?

My explanation using a pictured step and the given facts

This is supported practice. Keep the separately named independent case for an attempt before feedback.

STUDENT LESSON · 9 OF 18

Run the investigation

> Investigate A literature comparison matrix. Record the prediction, actual observation or labelled paper trace, explanation and next test separately.

Predict, investigate and preserve the evidence

Study A reports accuracy90% on easy classification; B reports claim support**80%** on difficult generated answers. Show the intermediate steps and give the conclusion with its scope.

Record	Your evidence
Given input and fixed rule	
Prediction before checking	
Actual result, or “not run”	

Record	Your evidence
First mismatch and one explanation	
Boundary or missing input and expected response	

On paper, trace the supplied procedure. If code is provided, predict before running it in a local practice file. Never write an expected answer as though it were an observed run.

Plan → try → check

Before trying: what do I expect, and why? While trying: which step could first go wrong? Afterwards: what did I actually observe, and what should change? Keep “not run” if you only traced the procedure.

STUDENT LESSON · 10 OF 18

Build your understanding

> Move from recall to tracing, diagnosis and transfer in A literature comparison matrix. Explain why each step is justified.

Explain → apply → challenge

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

A report omits this qualification: A matrix documents comparison limits; it does not create missing common **evidence**. Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

Explain which evidence supports your conclusion and which claim remains unproved.

STUDENT LESSON · 11 OF 18

Connect your project

> Apply this week's idea to Reproducible AI Research Study. Keep an annotated decision and the evidence supporting it.

Add a labelled a literature comparison matrix **evidence** sheet to Reproducible AI Research Study. Show how you can explain the **mechanism** and terminology of a literature comparison matrix.

Use the supplied fictional case and keep its **input**s, intermediate steps, calculation or **prediction**, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

Project evidence	Record
Component and version	
Inputs permitted at prediction time	
Trace and comparison with earlier work	
Failure, limit and human review	

Evidence for your project

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

STUDENT LESSON · 12 OF 18

Show what you know

> Use a genuinely new case for independent evidence. Previously discussed examples remain practice; use the separately named independent case before feedback.

Complete the supported workbook tasks before attempting W4 independently. Record any hints or help used. After feedback, use the teacher's fresh retry rather than copying the earlier answer.

For a project, select a relevant new case, predict the outcome from the declared rule and preserve the result alongside any revision.

> **Exit: propose one revealing change to the worked scenario. State the expected outcome and the evidence that would make you revise your explanation.**

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

My limited claim and a useful next check

STUDENT LESSON · 13 OF 18

Study a complete case

> Revisit the complete A literature comparison matrix case for supported practice. Repeated examples do not become fresh assessments.

Complete evidence record

A literature comparison matrix — evidence trace

INPUT AND SCOPE	CHECK OR CALCULATION	CONCLUSION AND LIMIT
Study A reports accuracy90% on easy classification; B reports claim support80% on difficult generated answers.	Record question, data, unit, baseline, metric, split, resources and limitations. Mark incomparable fields rather than forcing a ranking.	Different tasks and metrics cannot establish A superior to B. Keep separate columns and identify a common evaluation needed.

The figure connects this chapter's worked input, declared procedure and result. Read the complete worked reasoning for qualifiers and intermediate steps; the abbreviated labels do not replace that reasoning.

Follow the **input** through the stated procedure to its result. Cover the result first, predict it, then explain every intermediate step. The text/table accompanies the figure so the example can be read without colour.

My complete trace of the worked case

STUDENT LESSON · 14 OF 18

Try a new case independently

Attempt the reserved new case before feedback. Record support; the earlier examples below remain additional practice.

Independent case: Apply a new case independently

A has recall@5 .8; B has precision@3 .9 on another corpus. Can you rank them?

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

Attempt this without hints

> A has recall@5 .8; B has precision@3 .9 on another corpus. Can you rank them?

My independent procedure, result and limitation

Record support used: none, hint or teacher explanation. After feedback, a different case is needed to demonstrate independence.

Use feedback to improve

Attempt the independent case before hints. Record whether you worked alone, used a hint or followed a model. After feedback, fix the first unsupported step and explain why it changed.

A later check uses a changed case, not a copied answer.

STUDENT LESSON · 15 OF 18

Your lesson route

> Use this map to navigate A literature comparison matrix, connect the goals to tasks and keep one evidence record for each attempt.

Start with this question: A **literature matrix** that preserves differences. Two fictional studies evaluate related tools under different conditions.

By the end, I can	How I will show it
Explain the mechanism and terminology of a literature comparison matrix	Explain the deciding step, show a trace or test, and state one limit.

By the end, I can	How I will show it
Apply the stated procedure to a new case with a traceable result	Explain the deciding step, show a trace or test, and state one limit.
Identify an assumption or limitation and design a revealing follow-up	Explain the deciding step, show a trace or test, and state one limit.

Remember → watch and explain → try with help → investigate → try independently → keep project **evidence**. Your teacher may spread this lesson across several classes.

Keep your first **prediction**. Compare it with what the **evidence** shows and explain any change.

STUDENT LESSON · 16 OF 18

Finish and return

> Explain A literature comparison matrix without notes, identify a remaining question and plan a later check with a changed case.

Close your notes. Explain this goal in your own words: Explain the **mechanism** and terminology of a literature comparison matrix

> **My deciding step, evidence and one remaining question**

If you are unsure, return to the worked picture and explain one arrow. If you are ready, change an **input** or assumption and justify your **prediction**.

Save your workbook **evidence**. At the next review, try a different case before opening your old answer.

Supported practice, repair and portfolio

> Attempt supported questions before using hints or feedback. Review a missing building block, then keep the completed work.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

A **literature matrix** that preserves differences. Two fictional studies evaluate related tools under different conditions.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? Neither study directly compares both tools on the same photos.

1. Name missing comparison

2. Record each method

3. Compare rates carefully

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Name missing comparison Neither study directly compares both tools on the same photos. A **literature matrix** helps compare **evidence** without flattening differences.

Equal percentages do not mean equivalent tasks, samples or methods.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Remove the indoor/outdoor column. Which conclusion is supported by the supplied facts?

1. The matrix conceals an important condition difference.

2. We can decide the result without examining the changed **input** or the procedure.

3. This one example guarantees correct results for every future **input**.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: The matrix conceals an important condition difference. A reader might now mistake unlike studies for a controlled head-to-head comparison.

Repair a missing building block

Review Replication and reproduction (ai-7/5). Goal: Explain the **mechanism** and terminology of replication and reproduction. Short practice: Calculate the scores from the original and new four-record sets.

Which activity reproduces saved analysis, which repeats the protocol, and why does a different rerun of the original data need investigation?. Return to this week and explain what you changed.

Review Finding primary research (ai-7/3). Goal: Explain the **mechanism** and terminology of finding primary research. Short practice: Separate what the blog claims from what the original report records.

Which methods and denominator must be inspected, and what status is honest if the original report is unavailable?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

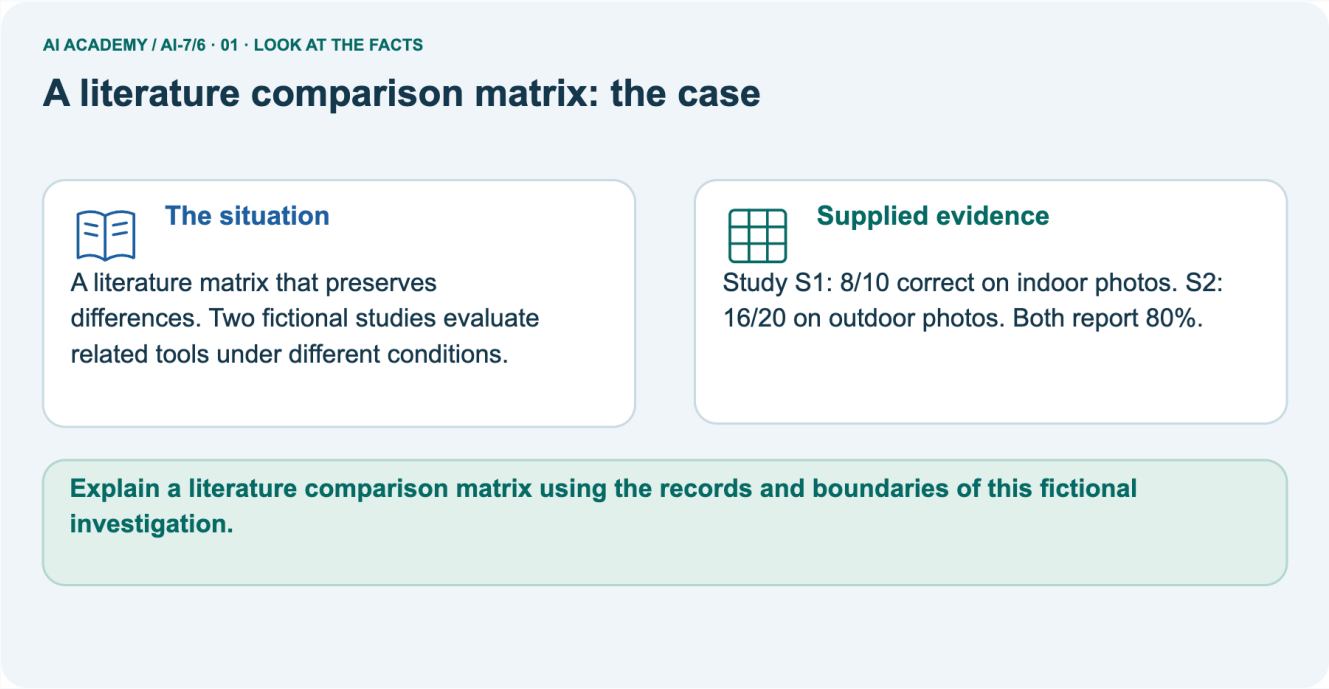

Drafts stay in this browser when storage is available; clear drafts on a shared device.

STUDENT LESSON · 18 OF 18

Visual concept journey

> Explain each A literature comparison matrix graphic using its labels, deciding evidence and relevant limitation.

01. A literature comparison matrix: the case

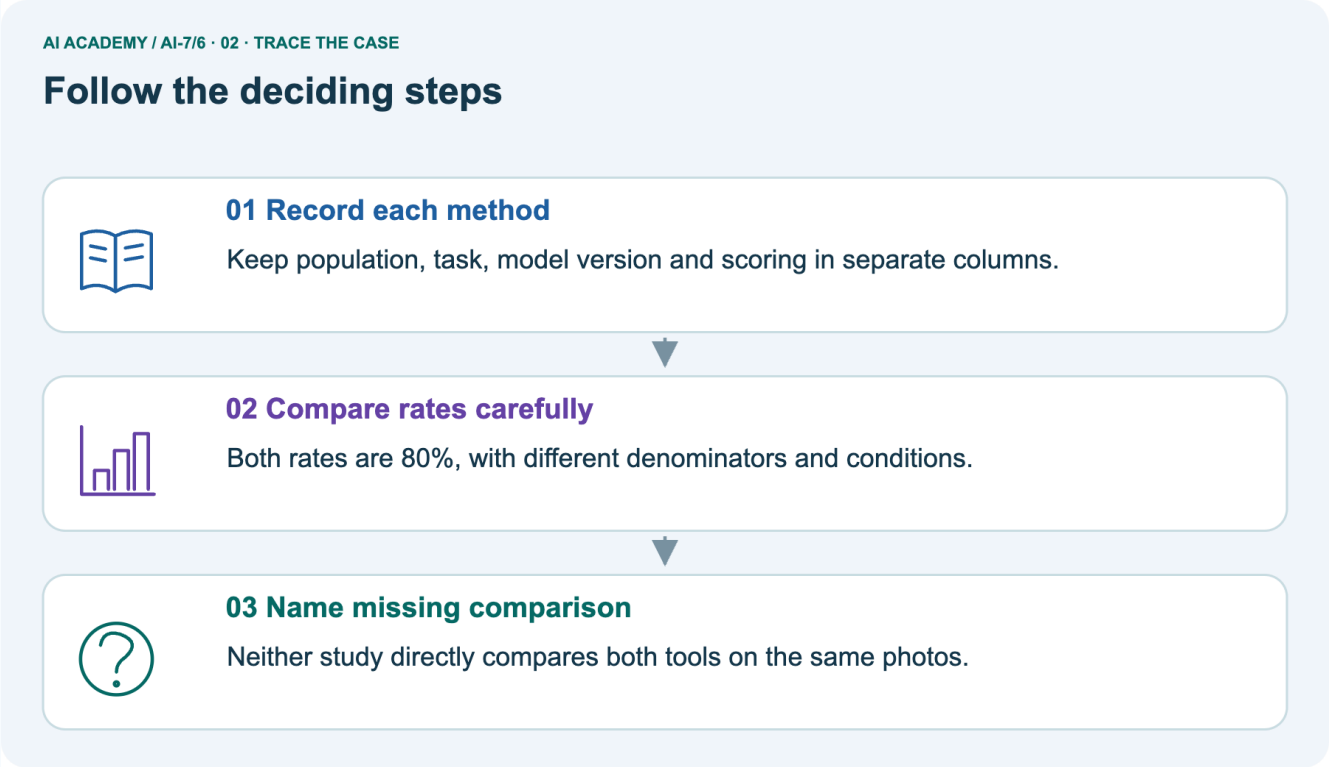

Follow the labelled picture with the matching explanation. Open the vector diagram

A **literature matrix** that preserves differences. Two fictional studies evaluate related tools under different conditions. Supplied facts: Study S1: 8/10 correct on indoor photos. S2: 16/20 on outdoor photos. Both report **80%**.

Point to the given fact that matters most. Explain why it matters.

02. Follow the deciding steps

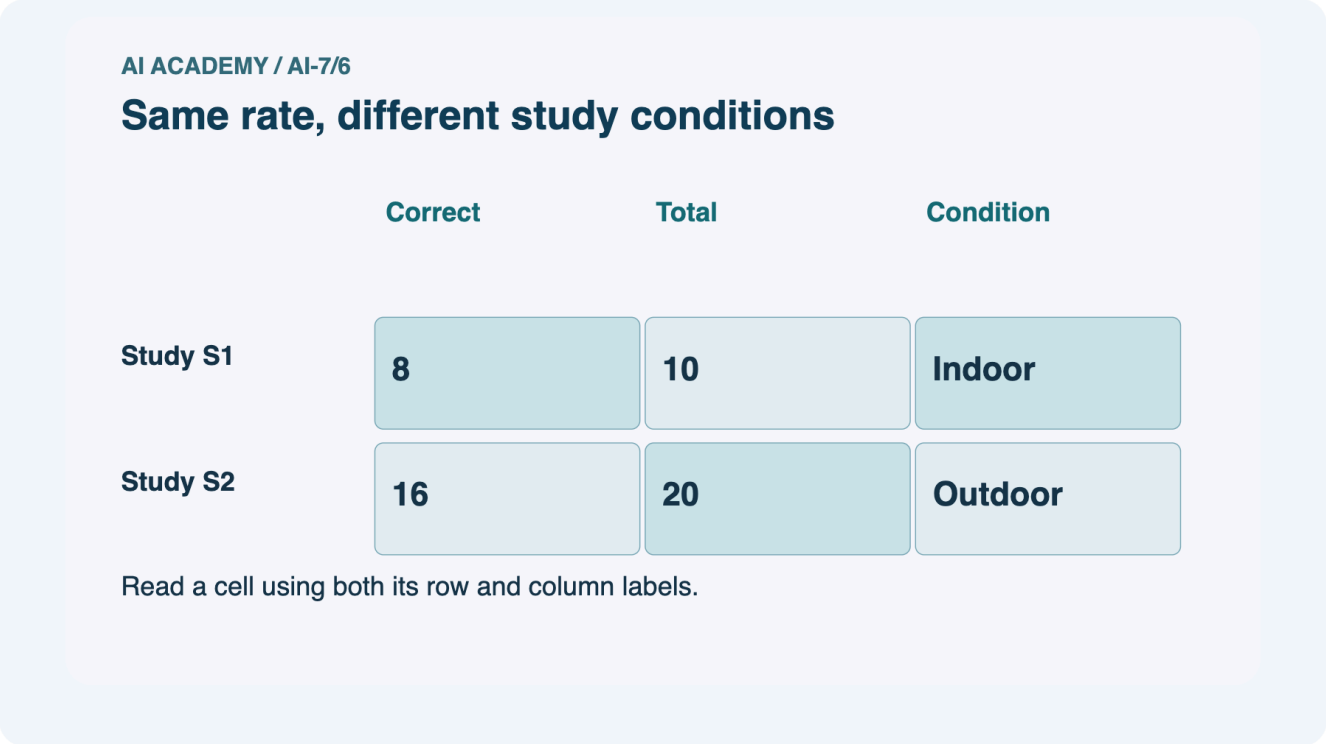

Follow the labelled picture with the matching explanation. Open the vector diagram

Record each method: Keep population, task, model version and scoring in separate columns. → Compare rates carefully: Both rates are **80%**, with different denominators and conditions. → Name missing comparison: Neither study directly compares both tools on the same photos.

Point to each numbered stage and explain which recorded **input** it uses.

03. Same rate, different study conditions

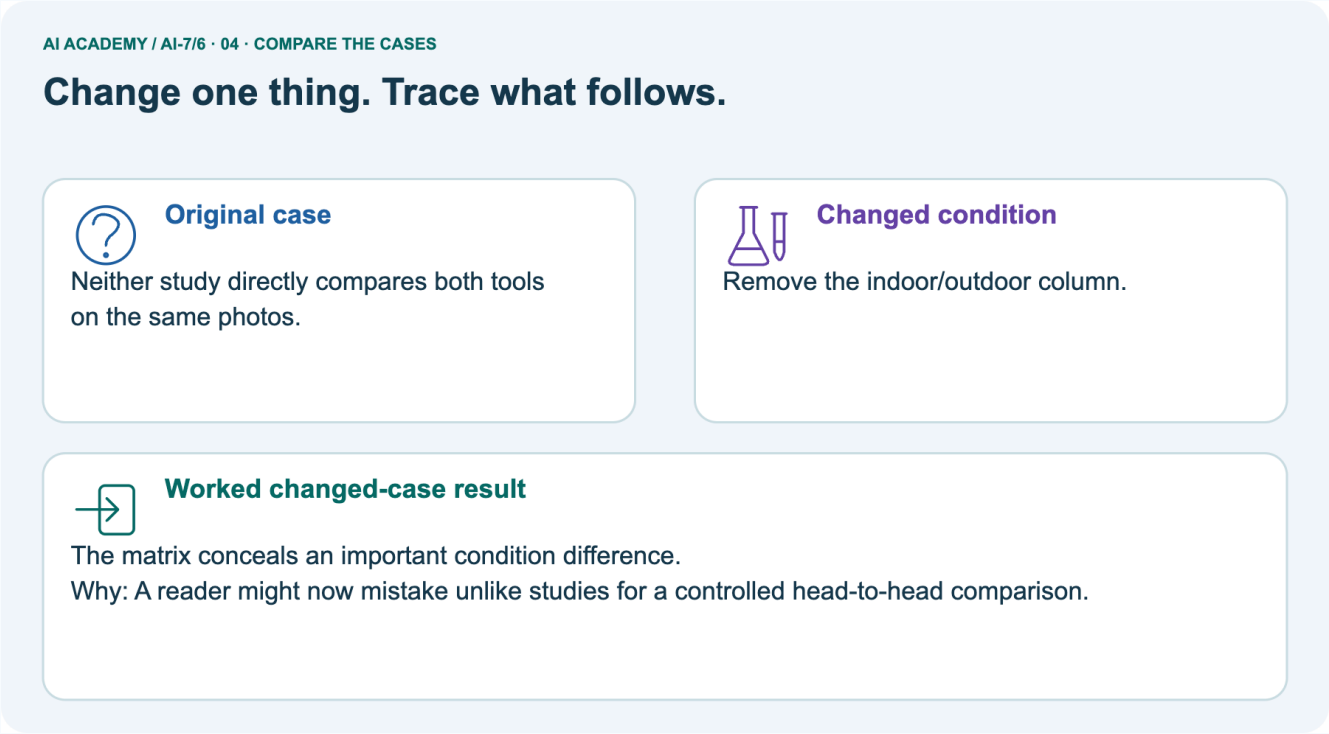

Follow the labelled picture with the matching explanation. Open the vector diagram

Same rate, different study conditions. Study S1: Correct = 8, Total = 10, Condition = Indoor. Study S2: Correct = 16, Total = 20, Condition = Outdoor.

> Read the labels and values. Explain the relationship the model shows.

04. Change one thing. Trace what follows.

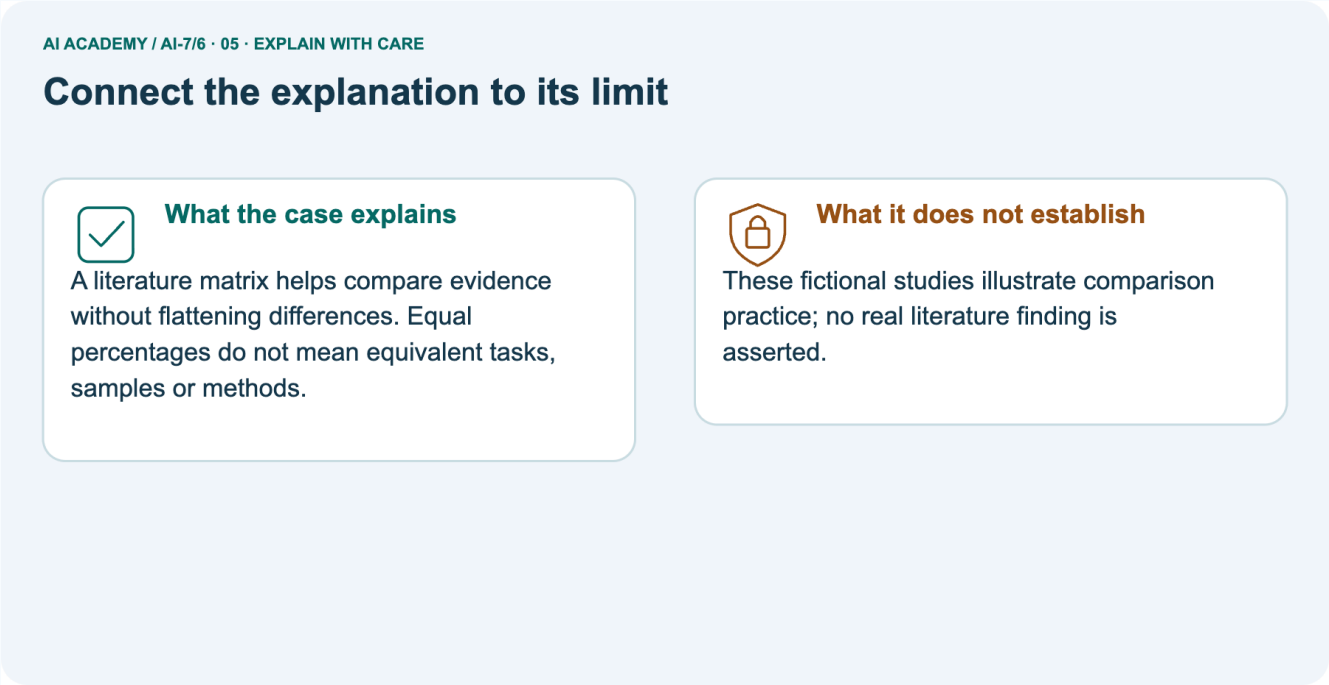

Follow the labelled picture with the matching explanation. Open the vector diagram

Original case: Neither study directly compares both tools on the same photos. Changed condition: Remove the indoor/outdoor column. Expected result: The matrix conceals an important condition difference.

Reason: A reader might now mistake unlike studies for a controlled head-to-head comparison.

> Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

05. Connect the explanation to its limit

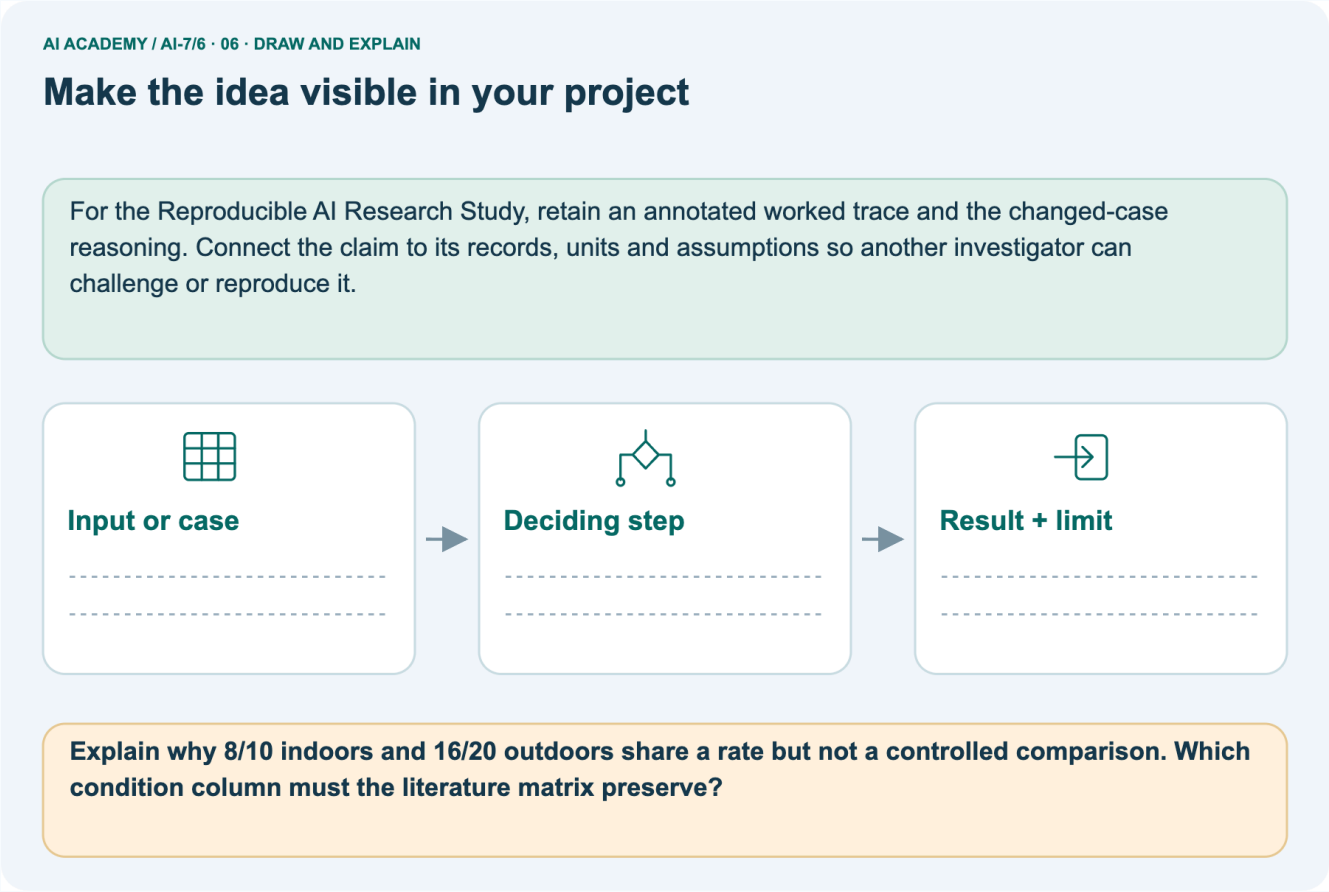

Follow the labelled picture with the matching explanation. Open the vector diagram

A **literature matrix** helps compare **evidence** without flattening differences. Equal percentages do not mean equivalent tasks, samples or methods.

Limit: These fictional studies illustrate comparison practice; no real literature finding is asserted.

> Explain the case, then point to a limit on the claim.

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Draw your **input**, deciding step, result and limit. Supported question: Explain why 8/10 indoors and 16/20 outdoors share a rate but not a controlled comparison. Which condition column must the **literature matrix** preserve?

> Draw your project trace and justify the deciding step using **evidence**.

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
