Architecture and data flow

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Grounded Learning Service

WORKBOOK · 1 OF 15

Recall and choose your starting point

> Record your starting explanation for Architecture and data flow before opening notes. Show any later correction separately.

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Requirements and service boundaries

Without opening the old lesson, explain one key idea from Requirements and service boundaries. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

Practise with fading help

> Complete the supported Architecture and data flow trace and record the first step you can explain without help.

Use W2: Trace the worked case for Architecture and **data flow**. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs	Procedure I chose	Middle steps	Result and check

> **The step I completed without help, and the hint I needed**

Individual reasoning check

> Check the proposed Architecture and data flow explanation against the supplied facts before discussing it.

Use the worked case for Architecture and **data flow**. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

WORKBOOK · 4 OF 15

Independent transfer case

> Write one first attempt at the reserved independent case before feedback. Repeated copies of that case refer to the same recorded attempt.

Independent case: Apply a new case independently

Input is malformed, yet lookup runs and then a validator rejects **output**. Locate the first stage that should stop.

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

WORKBOOK · 5 OF 15

W1 Explain the mechanism

> Explain the mechanism. Apply the supplied Architecture and data flow facts and keep your reasoning.

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

My reasoning and evidence

W2 Trace the worked case

> Trace the worked case. Apply the supplied Architecture and data flow facts and keep your reasoning.

A student request bypasses the role filter and sends teacher records directly to a generator. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

W3 Audit the limit

> Audit the limit. Apply the supplied Architecture and data flow facts and keep your reasoning.

A report omits this qualification: A **component** diagram is a plan, not **evidence** that the running implementation enforces its arrows.

Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

> **My reasoning and evidence**

W4 Apply a new case independently

> Attempt before feedback. If this repeats the selected independent case, reuse that first attempt; otherwise keep a separate record. Apply a new case independently. Apply the supplied Architecture and data flow facts and keep your reasoning.

Input is malformed, yet lookup runs and then a validator rejects **output**. Locate the first stage that should stop.

> **My reasoning and evidence**

WORKBOOK · 9 OF 15

W5 Design a revealing follow-up

> Design a revealing follow-up. Apply the supplied Architecture and data flow facts and keep your reasoning.

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

WORKBOOK · 10 OF 15

Project checkpoint and reflection

> Connect Architecture and data flow to Grounded Learning Service, identify a limit and choose the next useful test.

Add a labelled architecture and **data flow evidence** sheet to Grounded Learning Service. Show how you can explain the **mechanism** and terminology of architecture and **data flow**.

Use the supplied fictional case and keep its **input**s, intermediate steps, calculation or **prediction**, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

My project change, supporting evidence and remaining limit

WORKBOOK · 11 OF 15

Feedback, return check and learning record

> Record the first repaired step and a different case to revisit after a delay.

Evidence	My record
Worked alone / hint / model	
First step I repaired and why	
New case checked later; date and result	
What I can now explain without notes	
One remaining question	

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

WORKBOOK · 12 OF 15

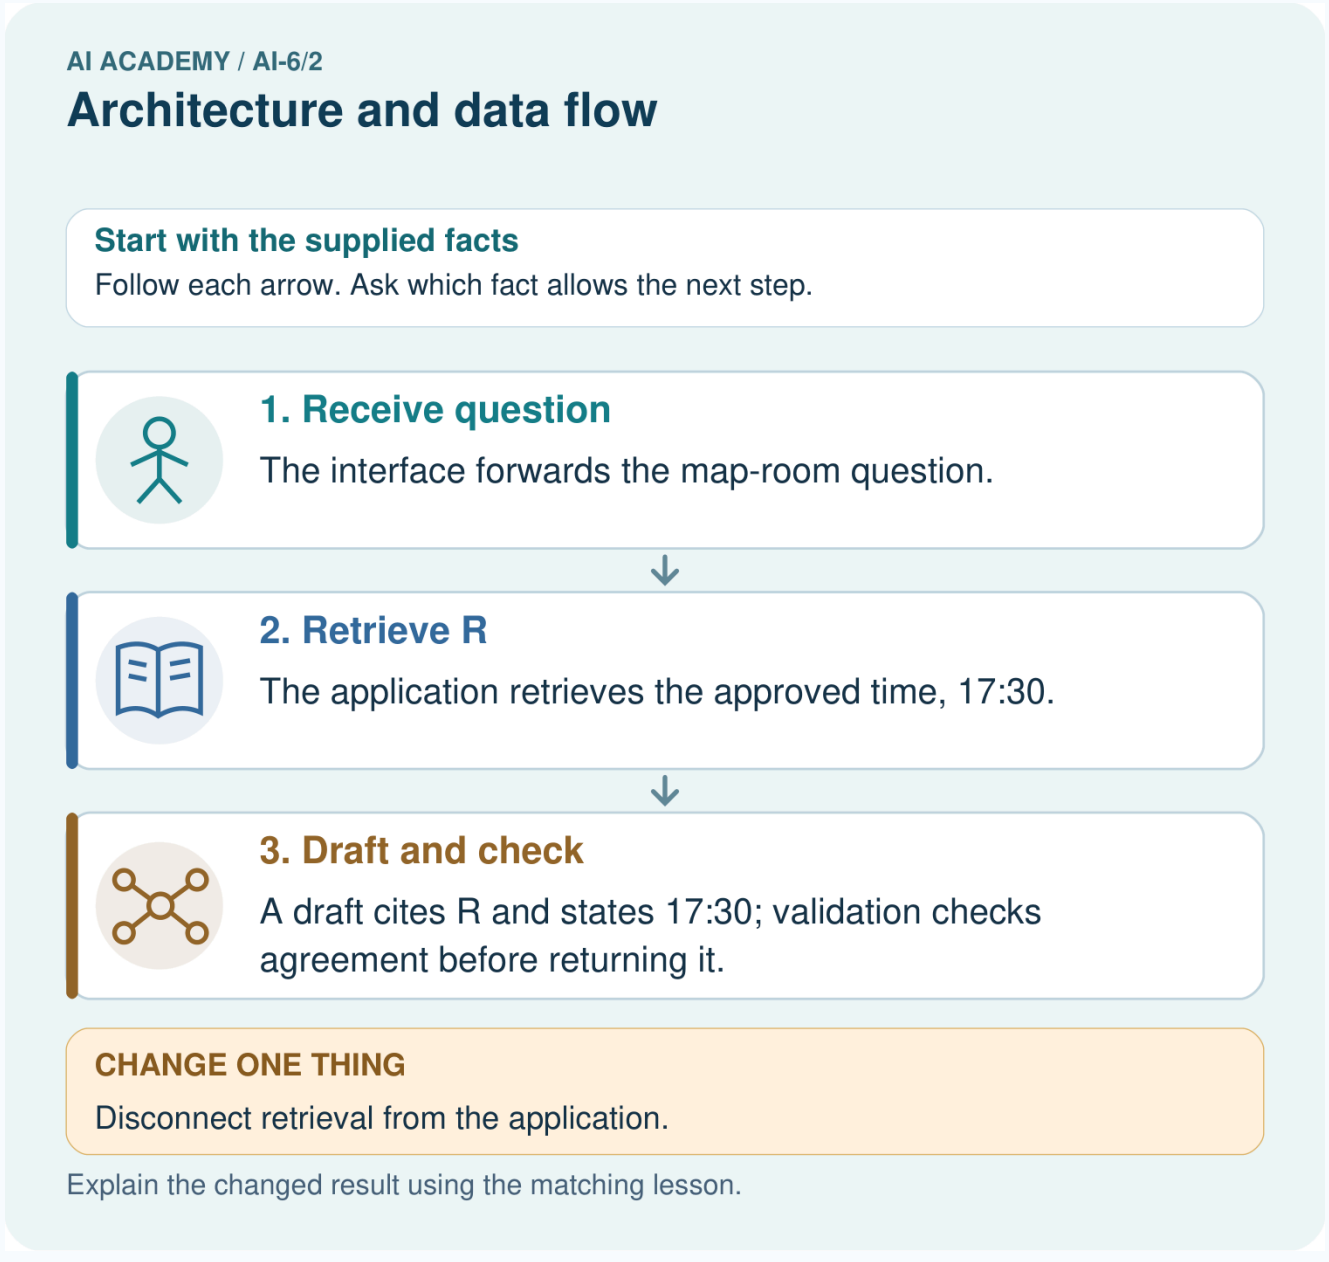

Pictorial case practice: Architecture and data flow

> Four boxes for a library reply. A learner asks when the map room closes. Follow the request

> through the service. Explain the labelled step before checking the changed condition.

Four boxes for a library reply. A learner asks when the map room closes. Follow the request through the service.

Approved schedule R says 17:30. The model may phrase facts but cannot replace them.

Follow the labelled picture with the matching explanation. Open the vector diagram

Label what moves along the library request, retrieval and drafting arrows. Where does 17:30 come from, and why must the service stop if the retrieval arrow is disconnected?

My picture-based explanation and changed-case prediction

Record the help used

Support used: alone / hint / worked example. This record is practice **evidence**.

Project connection: For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or **evidence** that makes the deciding step valid, so another team can review it.

Project portfolio milestone

Keep this week’s input, deciding step, result and limit together in the Grounded Learning Service record.

Project: Grounded Learning Service

Current milestone: Frame the need. Name the user, the problem, allowed **input**s and a safe simple starting method.

For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or **evidence** that makes the deciding step valid, so another team can review it.

Evidence to keep	My record
This week's input and deciding step	
Prediction and actual result (or labelled paper trace)	
One change since the previous checkpoint and why	
One error or limit and the next test	

> **Explain what this week adds to your project. Reuse last week's record rather than starting again.**

WORKBOOK · 14 OF 15

Supported practice and learning evidence

> Try the supported questions before comparing with hints and feedback. Record what you repaired and the evidence you retained.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Four boxes for a library reply. A learner asks when the map room closes. Follow the request through the service.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? A draft cites R and states 17:30; validation checks agreement before returning it.

1. Retrieve R

2. Draft and check

3. Receive question

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Draft and check A draft cites R and states 17:30; validation checks agreement before returning it.

An architecture assigns responsibilities and carries data between **component**s. Retrieval provides **evidence**; drafting supplies wording.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: Disconnect retrieval from the application. Which conclusion is supported by the supplied facts?

1. Return review status rather than inventing a time.

2. This one example guarantees correct results for every future **input**.

3. We can decide the result without examining the changed **input** or the procedure.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Return review status rather

than inventing a time. The supported-answer path lacks its required **evidence input**.

Repair a missing building block

Review Requirements and service boundaries (ai-6/1). Goal: Explain the **mechanism** and terminology of requirements and service boundaries. Short practice: Split the museum visitor's request into two operations.

Which can the service perform for P, and what happens to each operation when Q has no approved card?. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

Drafts stay in this browser when storage is available; clear drafts on a shared device.

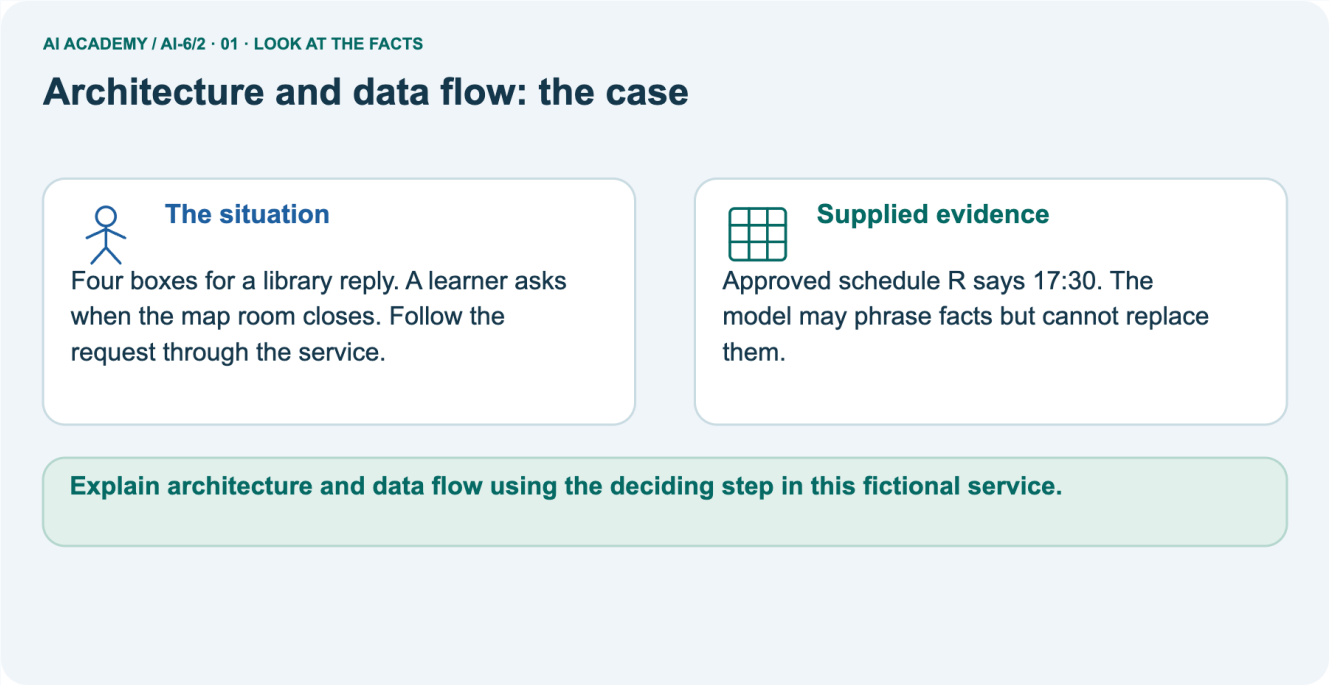

What I repaired, the evidence I kept and the next test

WORKBOOK · 15 OF 15

Visual concept journey

Explain each Architecture and data flow picture from its labels, then record a relevant limit.

01. Architecture and data flow: the case

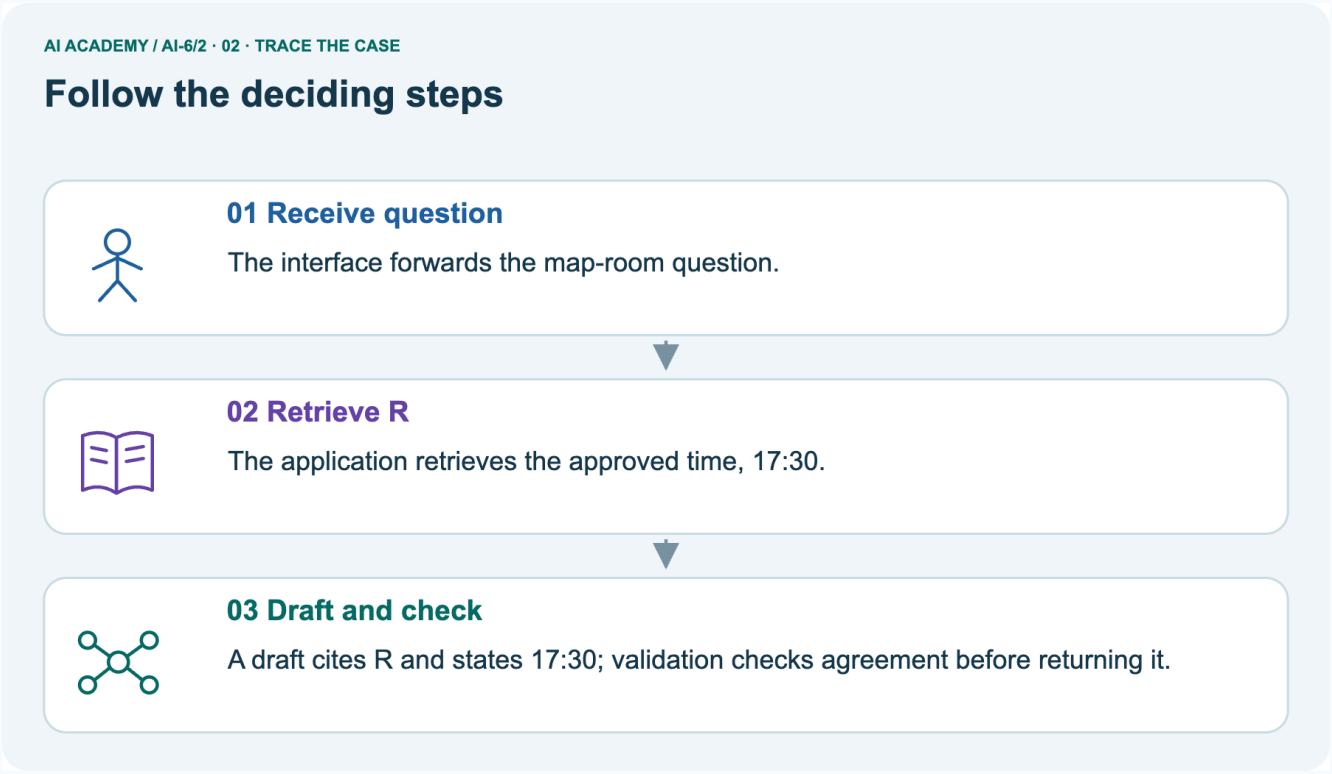

Follow the labelled picture with the matching explanation. Open the vector diagram

Four boxes for a library reply. A learner asks when the map room closes. Follow the request through the service. Supplied facts: Approved schedule R says 17:30. The model may phrase facts but cannot replace them.

> Point to the given fact that matters most. Explain why it matters.

My picture explanation, deciding evidence and one limit

02. Follow the deciding steps

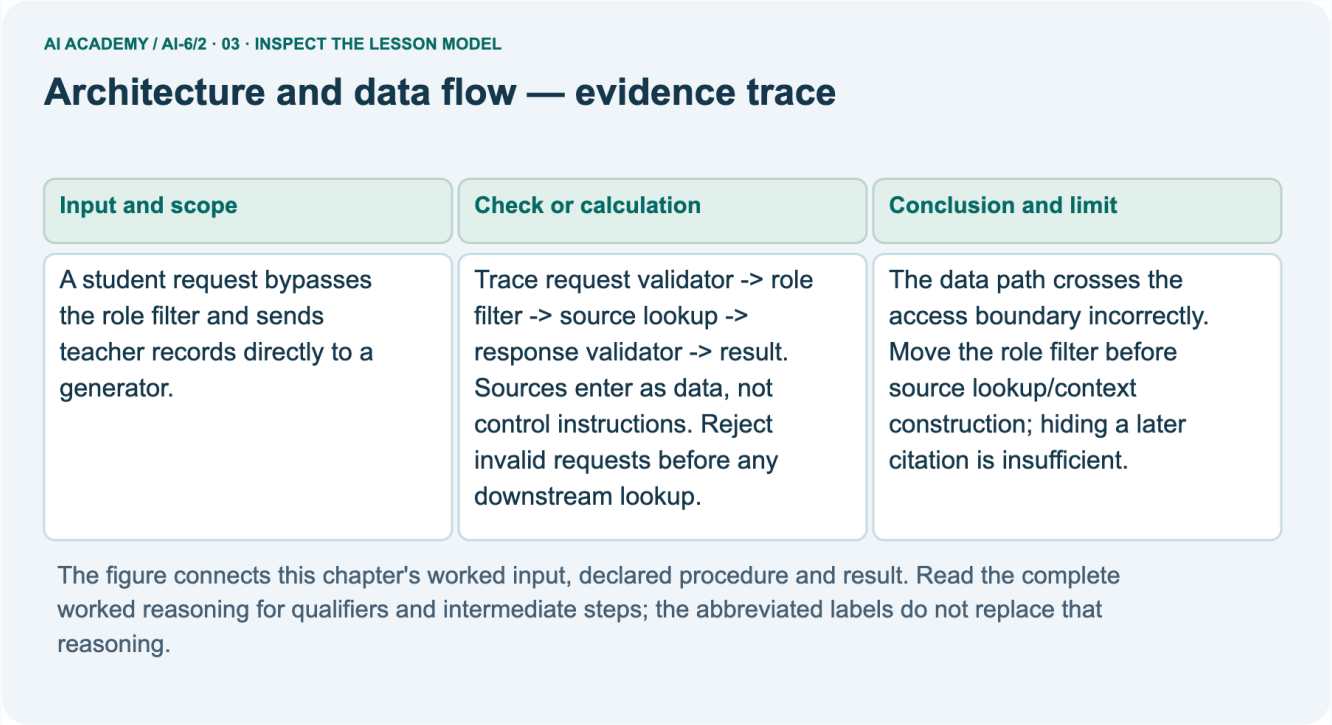

Follow the labelled picture with the matching explanation. Open the vector diagram

Receive question: The interface forwards the map-room question. → Retrieve R: The application retrieves the approved time, 17:30. → Draft and check: A draft cites R and states 17:30; validation checks agreement before returning it.

Point to each numbered stage and explain which recorded **input** it uses.

My picture explanation, deciding evidence and one limit

03. Architecture and data flow — evidence trace

Follow the labelled picture with the matching explanation. Open the vector diagram

Architecture and **data flow** — **evidence** trace.

A student request bypasses the role filter and sends teacher records directly to a generator. | Trace request validator -> role filter -> source lookup -> response validator -> result.

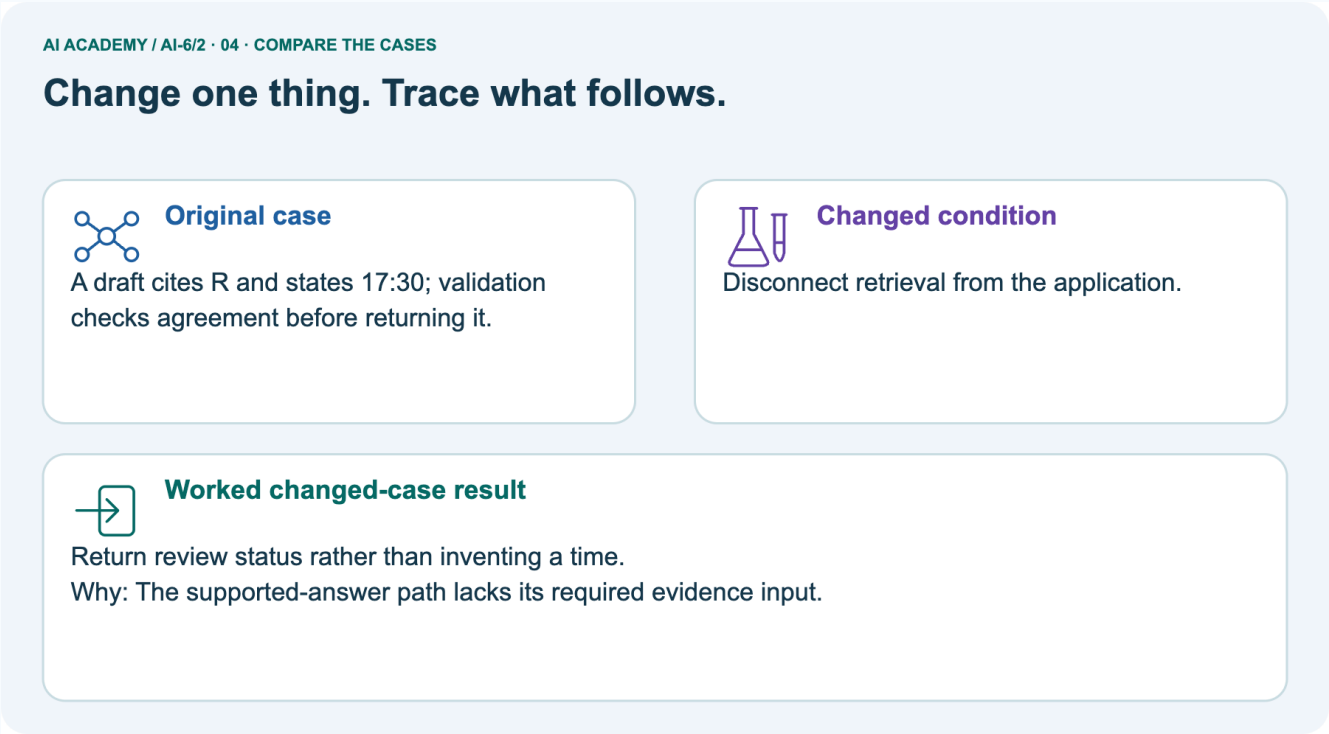

Sources enter as data, not control instructions. Reject invalid requests before any downstream lookup. | The data path crosses the access boundary incorrectly.

Move the role filter before source lookup/context construction; hiding a later citation is insufficient.

> Read the labels and values. Explain the relationship the model shows.

My picture explanation, deciding evidence and one limit

04. Change one thing. Trace what follows.

Follow the labelled picture with the matching explanation. Open the vector diagram

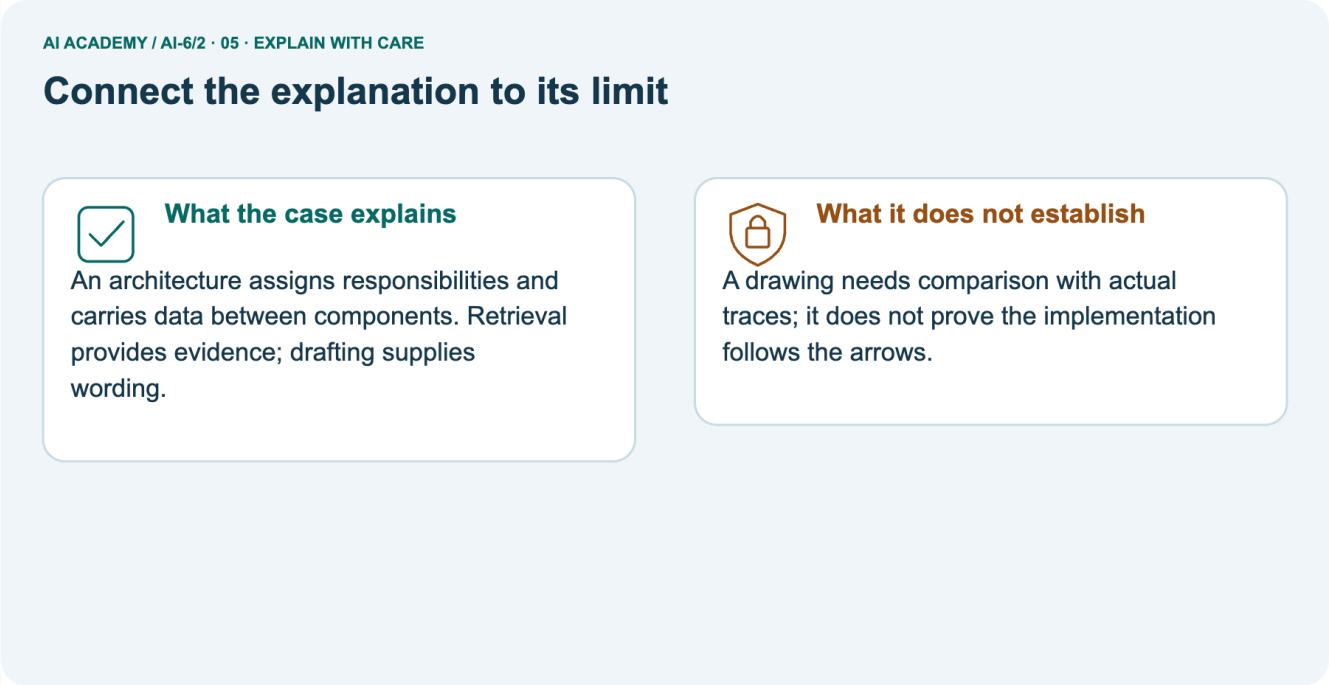

Original case: A draft cites R and states 17:30; validation checks agreement before returning it.
Changed condition: Disconnect retrieval from the application.

Expected result: Return review status rather than inventing a time. Reason: The supported-answer path lacks its required **evidence input**.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

My picture explanation, deciding evidence and one limit

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

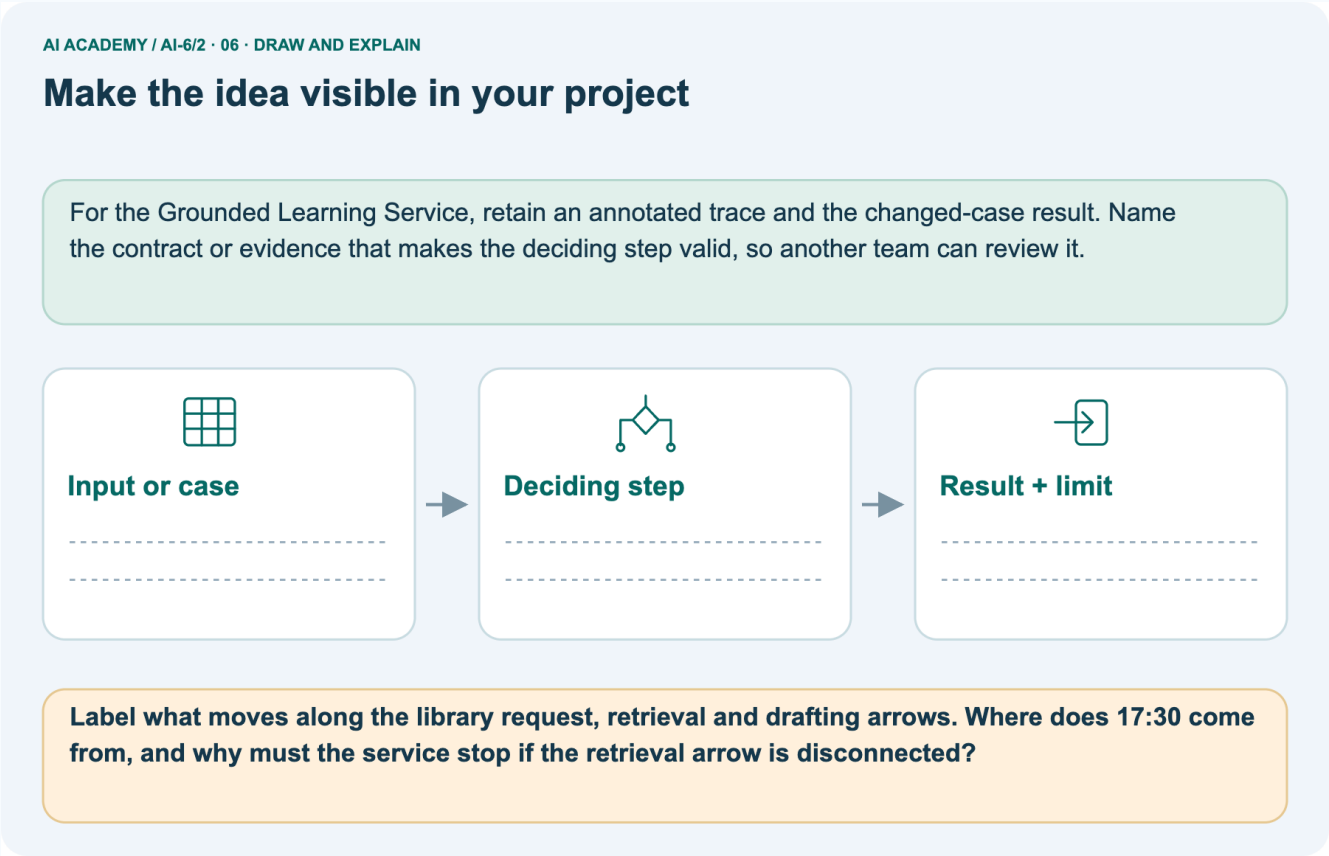

An architecture assigns responsibilities and carries data between **component**s. Retrieval provides **evidence**; drafting supplies wording.

Limit: A drawing needs comparison with actual traces; it does not prove the implementation follows the arrows.

Explain the case, then point to a limit on the claim.

My picture explanation, deciding evidence and one limit

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Grounded Learning Service, retain an annotated trace and the changed-case result. Name the contract or **evidence** that makes the deciding step valid, so another team can review it.

Draw your **input**, deciding step, result and limit. Supported question: Label what moves along the library request, retrieval and drafting arrows.

Where does 17:30 come from, and why must the service stop if the retrieval arrow is disconnected?

Draw your project trace and justify the deciding step using **evidence**.

My picture explanation, deciding evidence and one limit

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
