Replication and reproduction

Learn to understand, design, build, test and explain AI systems responsibly.

Project: Reproducible AI Research Study

Recall and choose your starting point

> Record your starting explanation for Replication and reproduction before opening notes. Show any later correction separately.

Try the recall before opening notes. Then use a different colour or a labelled second line to correct your explanation.

Methods results and limitations

Without opening the old lesson, explain one key idea from Methods results and limitations. Give an example and a mistake that the idea helps you avoid.

> **My remembered idea, example and correction**

Reading a research claim

Without opening the old lesson, explain one key idea from Reading a research claim. Give an example and a mistake that the idea helps you avoid.

My remembered idea, example and correction

WORKBOOK · 2 OF 15

Practise with fading help

> Complete the supported Replication and reproduction trace and record the first step you can explain without help.

Use W2: Trace the worked case for **Replication** and reproduction. Record the answer once; the lesson and workbook refer to the same attempt.

Given inputs	Procedure I chose	Middle steps	Result and check

The step I completed without help, and the hint I needed

WORKBOOK · 3 OF 15

Individual reasoning check

> Check the proposed Replication and reproduction explanation against the supplied facts

before discussing it.

Use the worked case for **Replication** and reproduction. Proposed explanation: “The worked result establishes every future case”. Decide whether this explanation is supported.

Point to the step or supplied fact that decides; explain your repair if needed.

My explanation before partner discussion

WORKBOOK · 4 OF 15

Independent transfer case

Write one first attempt at the reserved independent case before feedback. Repeated copies of that case refer to the same recorded attempt.

Independent case: Apply a new case independently

Team repeats old six queries, then evaluates four newly reserved queries. How many distinct cases and which are new **evidence**?

My independent explanation, trace and limits

Attempt this case before feedback. Record any help. Earlier examples below are further practice; a case already practised with feedback cannot establish fresh transfer.

WORKBOOK · 5 OF 15

W1 Explain the mechanism

> Explain the mechanism. Apply the supplied Replication and reproduction facts and keep your reasoning.

Explain the weekly **mechanism** in your own words. Use the worked scenario to name its **input**, decision rule and **output**.

My reasoning and evidence

WORKBOOK · 6 OF 15

W2 Trace the worked case

> Trace the worked case. Apply the supplied Replication and reproduction facts and keep your reasoning.

Partner reruns the same eight cases and gets the same score. Team counts sixteen independent cases. Show the intermediate steps and give the conclusion with its scope.

My reasoning and evidence

WORKBOOK · 7 OF 15

W3 Audit the limit

> Audit the limit. Apply the supplied Replication and reproduction facts and keep your reasoning.

A report omits this qualification: Exact **replay** can preserve the original design flaws; new data can change conditions and needs its own record.

Explain how omitting it could change a reader's interpretation, and write an accurate replacement.

My reasoning and evidence

WORKBOOK · 8 OF 15

W4 Apply a new case independently

> Attempt before feedback. If this repeats the selected independent case, reuse that first attempt; otherwise keep a separate record. Apply a new case independently. Apply the supplied Replication and reproduction facts and keep your reasoning.

Team repeats old six queries, then evaluates four newly reserved queries. How many distinct cases and which are new **evidence**?

My reasoning and evidence

W5 Design a revealing follow-up

Design a revealing follow-up. Apply the supplied Replication and reproduction facts and keep your reasoning.

For the worked scenario, propose one additional case that could reveal a failure, describe its expected outcome before running it, and explain what would need to remain fixed for a fair comparison.

Do not reuse W4 as a new final test after receiving feedback.

My reasoning and evidence

Project checkpoint and reflection

> Connect Replication and reproduction to Reproducible AI Research Study, identify a limit and choose the next useful test.

Add a labelled **replication** and reproduction **evidence** sheet to Reproducible AI Research Study. Show how you can explain the **mechanism** and terminology of **replication** and reproduction.

Use the supplied fictional case and keep its **input**s, intermediate steps, calculation or **prediction**, and limitation. Connect this record to last week's record; a matching answer without a trace is insufficient.

> **My project change, supporting evidence and remaining limit**

Feedback, return check and learning record

> Record the first repaired step and a different case to revisit after a delay.

Evidence	My record
Worked alone / hint / model	
First step I repaired and why	
New case checked later; date and result	
What I can now explain without notes	
One remaining question	

Revisit this idea with your teacher after a delay. Familiarity is different from explaining and using it on a changed case.

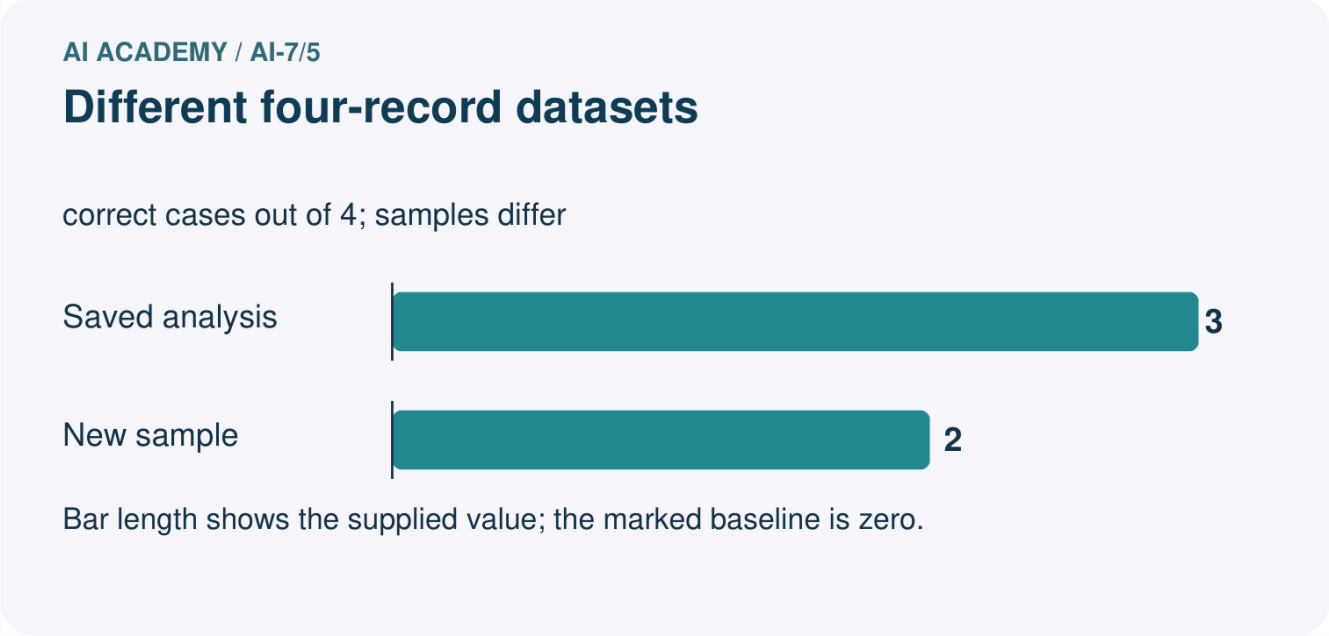

WORKBOOK · 12 OF 15

Pictorial case practice: Replication and reproduction

> Same records versus new experiment. A team first reruns a supplied analysis, then collects new records with the same protocol. Explain the labelled step before checking the changed condition.

Same records versus new experiment. A team first reruns a supplied analysis, then collects new records with the same protocol.

Original recorded labels: [1,0,1,1]. Analysis counts correct cases. New independent set: [1,1,0,0]. Binary entries mean 1=correct and 0=incorrect.

Follow the labelled picture with the matching explanation. Open the vector diagram

AI ACADEMY / AI-7/5

Replication and reproduction

Start with the supplied facts

Follow each arrow. Ask which fact allows the next step.

1. Reproduce the analysis

Reusing the supplied four records gives 3/4=75%.

2. Repeat the protocol

The new four-record set gives 2/4=50%.

3. Compare purposes

The first checks computational reproduction; the second probes repeatability with new observations.

CHANGE ONE THING

The rerun of the original records outputs 2/4.

Explain the changed result using the matching lesson.

Follow the labelled picture with the matching explanation. Open the vector diagram

Calculate the scores from the original and new four-record sets. Which activity reproduces saved analysis, which repeats the protocol, and why does a different rerun of the original data need investigation?

My picture-based explanation and changed-case prediction

Record the help used

Support used: alone / hint / worked example. This record is practice **evidence**.

Project connection: For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning.

Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Project portfolio milestone

> Keep this week's input, deciding step, result and limit together in the Reproducible AI Research Study record.

Project: Reproducible AI Research Study

Current milestone: Frame the need. Name the user, the problem, allowed **input**s and a safe simple starting method.

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Evidence to keep	My record
This week's input and deciding step	
Prediction and actual result (or labelled paper trace)	
One change since the previous checkpoint and why	
One error or limit and the next test	

> **Explain what this week adds to your project. Reuse last week's record rather than starting again.**

WORKBOOK · 14 OF 15

Supported practice and learning evidence

> Try the supported questions before comparing with hints and feedback. Record what you repaired and the evidence you retained.

Use this supported practice once, in the browser or on paper. Keep the reserved independent assessment for a separate first attempt before teacher feedback.

Same records versus new experiment. A team first reruns a supplied analysis, then collects new records with the same protocol.

Practice 1: explain the deciding evidence

Which labelled step matches this detail? The first checks computational reproduction; the second probes repeatability with new **observation**s.

1. Compare purposes

2. Reproduce the analysis

3. Repeat the protocol

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Read the steps in the pictorial case. Match the supplied detail to the stage that performs or records it.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Compare purposes The first checks computational reproduction; the second probes repeatability with new **observation**s.

Reusing data and collecting new data answer different questions. A different new-sample result can arise without a code error; inspect both protocols and variability.

Practice 2: explain the deciding evidence

Changed case · predict first

Changed-case practice: The rerun of the original records **output**s 2/4. Which conclusion is supported by the supplied facts?

1. This one example guarantees correct results for every future **input**.

2. We can decide the result without examining the changed **input** or the procedure.

3. Investigate code, version, **input** or scoring differences.

My selected conclusion, deciding fact and explanation

Hint · try first

Hint if needed: Use the changed condition and the deciding step in the pictorial trace. The answer must say what follows from those facts.

Feedback · compare after trying

After your attempt, compare with the supported explanation: Investigate code, version, **input** or scoring differences. The same fixed records should give the same deterministic count.

Repair a missing building block

Review Methods results and limitations (ai-7/4). Goal: Explain the **mechanism** and terminology of methods results and limitations.

Short practice: Place the five-photo procedure, 3/5 versus 4/5 finding and missing outdoor **evidence** in their proper categories. Why cannot the result establish that B is best for outdoor farming?.

Return to this week and explain what you changed.

Review Reading a research claim (ai-7/2). Goal: Explain the **mechanism** and terminology of reading a research claim. Short practice: Calculate the baseline and new rates for 2/10 and 4/10.

Explain both twice the rate and the percentage-point change, and say why neither measures every learner’s improvement.. Return to this week and explain what you changed.

Keep your completed work

Use Download completed work in the hosted lesson to export your answers, reflections, practice feedback and code-run **evidence**. Open the HTML copy to read or print it.

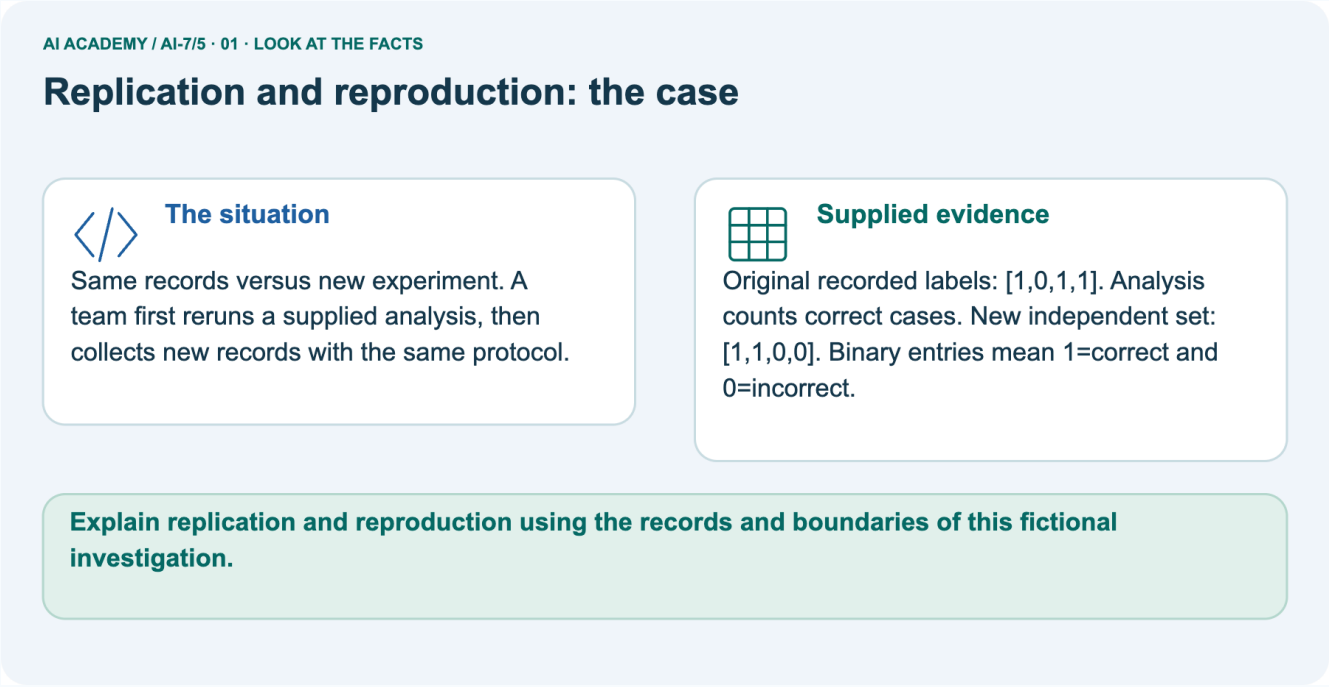

Drafts stay in this browser when storage is available; clear drafts on a shared device.

What I repaired, the evidence I kept and the next test

Visual concept journey

> Explain each Replication and reproduction picture from its labels, then record a relevant limit.

01. Replication and reproduction: the case

Follow the labelled picture with the matching explanation. Open the vector diagram

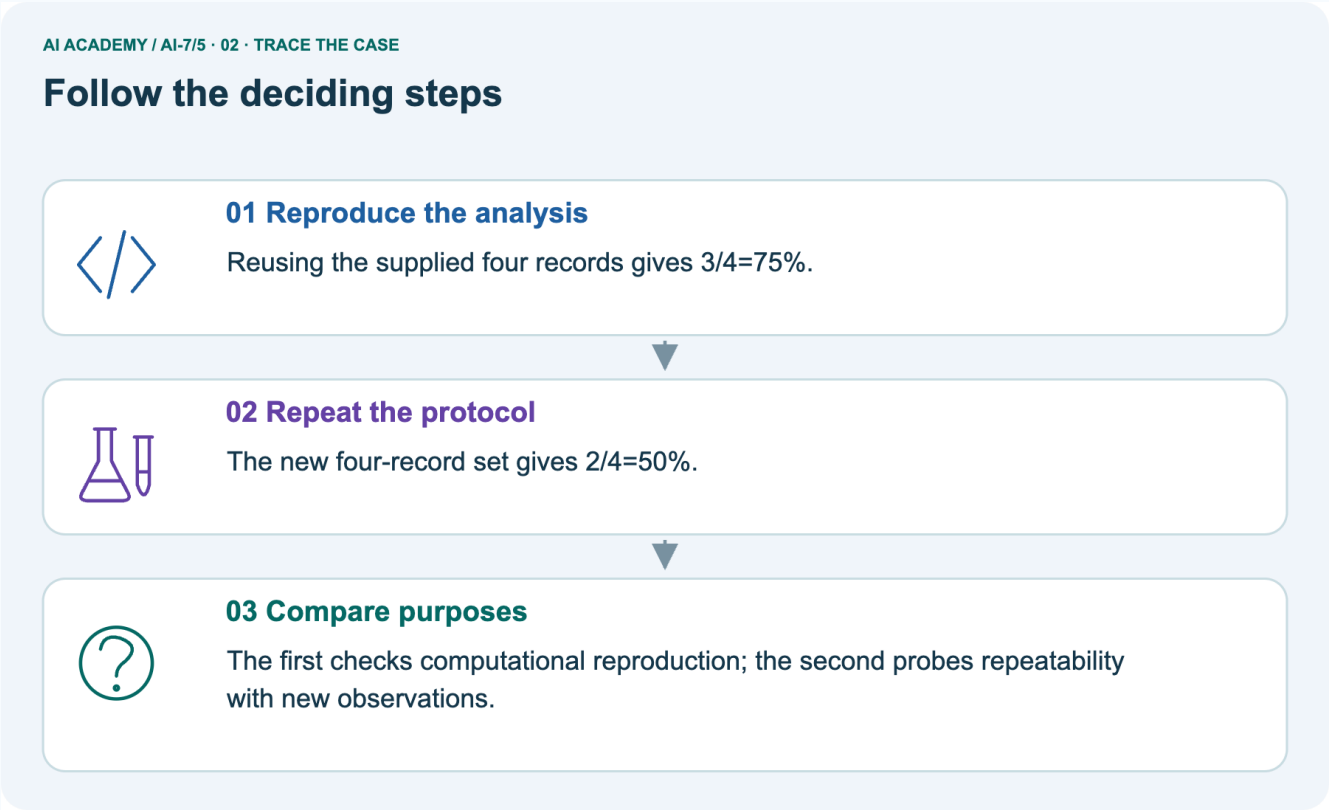

Same records versus new experiment. A team first reruns a supplied analysis, then collects new records with the same protocol. Supplied facts: Original recorded labels: [1,0,1,1]. Analysis counts correct cases.

New independent set: [1,1,0,0]. Binary entries mean 1=correct and 0=incorrect.

> Point to the given fact that matters most. Explain why it matters.

My picture explanation, deciding evidence and one limit

02. Follow the deciding steps

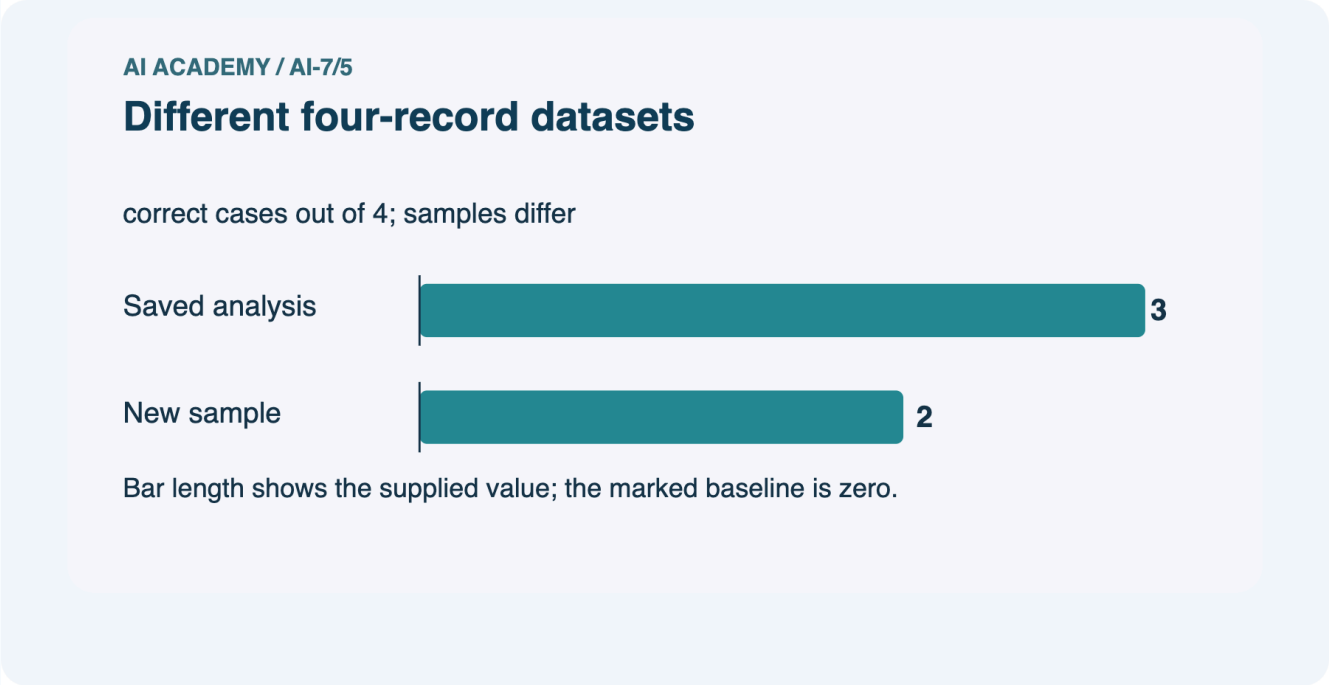

Follow the labelled picture with the matching explanation. Open the vector diagram

Reproduce the analysis: Reusing the supplied four records gives 3/4=75%. → Repeat the protocol: The new four-record set gives 2/4=50%. → Compare purposes: The first checks computational reproduction; the second probes repeatability with new **observation**s.

Point to each numbered stage and explain which recorded **input** it uses.

My picture explanation, deciding evidence and one limit

03. Different four-record datasets

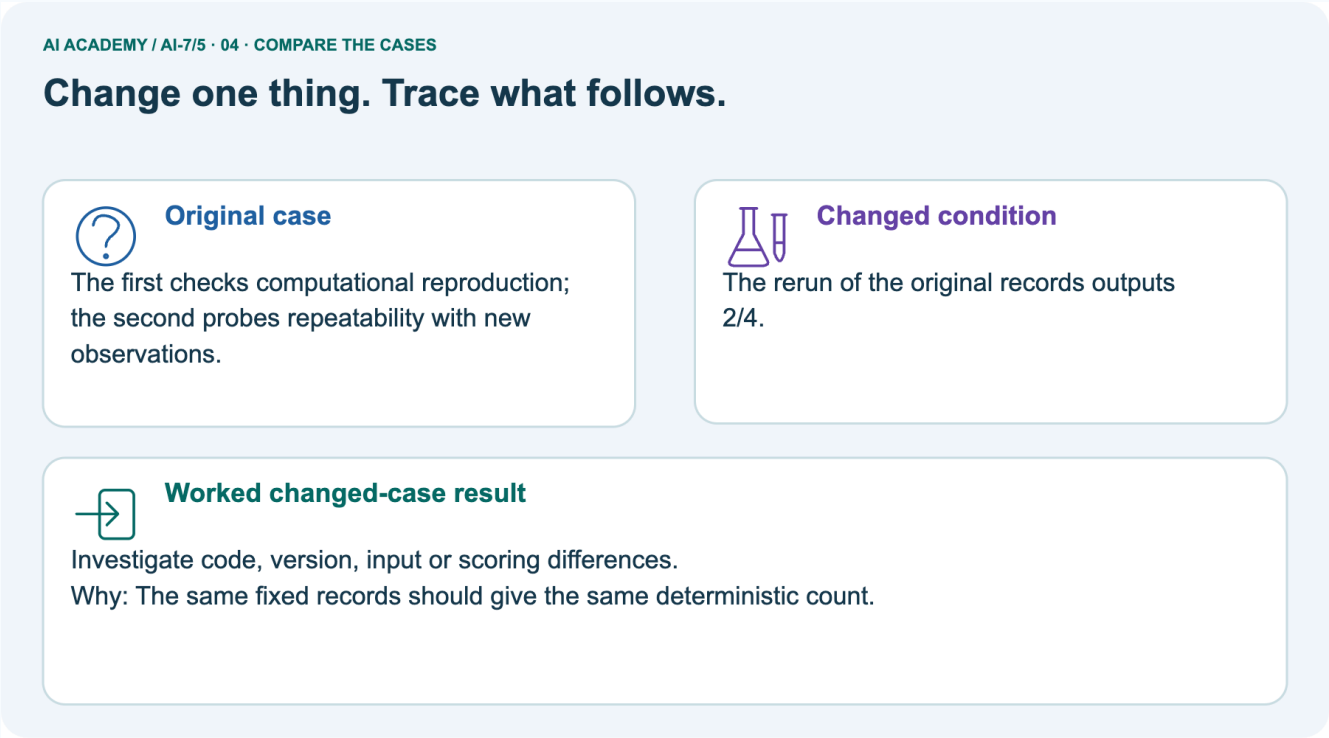

Follow the labelled picture with the matching explanation. Open the vector diagram

Different four-record datasets. Units: correct cases out of 4; samples differ. Saved analysis: 3. New sample: 2.

Read the labels and values. Explain the relationship the model shows.

My picture explanation, deciding evidence and one limit

04. Change one thing. Trace what follows.

Follow the labelled picture with the matching explanation. Open the vector diagram

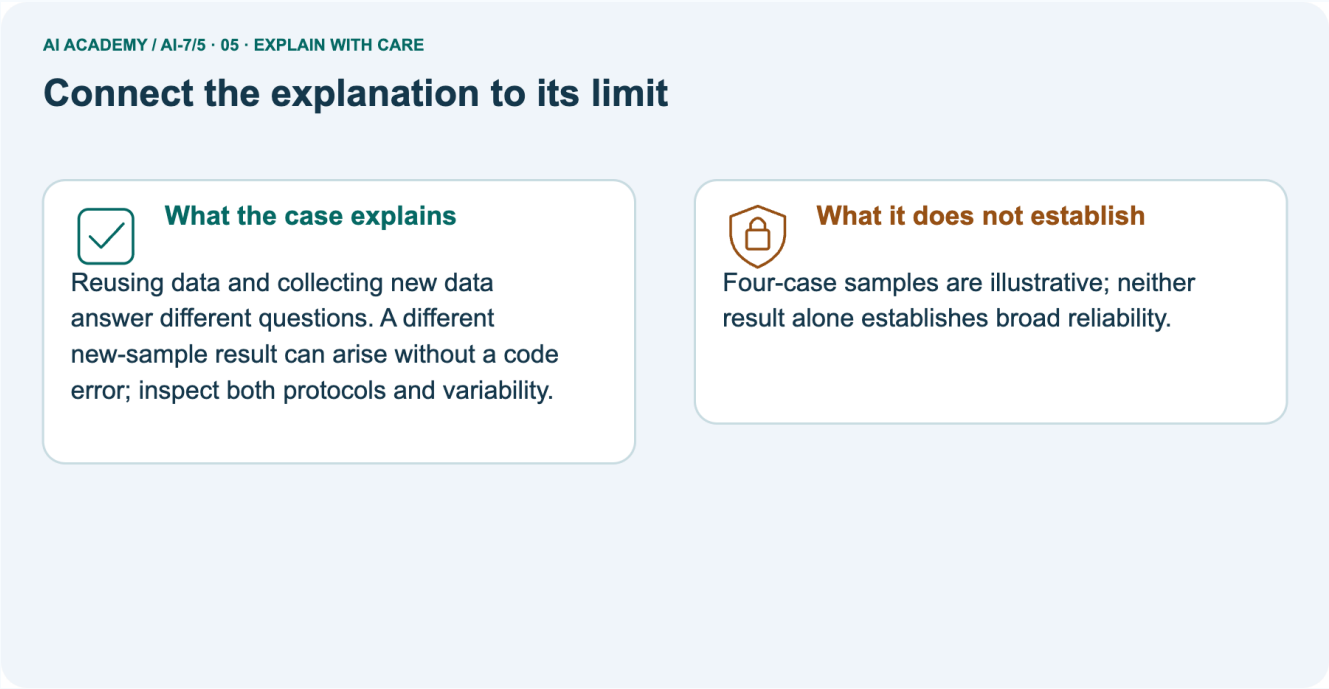

Original case: The first checks computational reproduction; the second probes repeatability with new **observation**s. Changed condition: The rerun of the original records **output**s 2/4.

Expected result: Investigate code, version, **input** or scoring differences. Reason: The same fixed records should give the same deterministic count.

Predict before checking the worked changed-case result. Name what changed and what the supplied facts allow you to conclude.

My picture explanation, deciding evidence and one limit

05. Connect the explanation to its limit

Follow the labelled picture with the matching explanation. Open the vector diagram

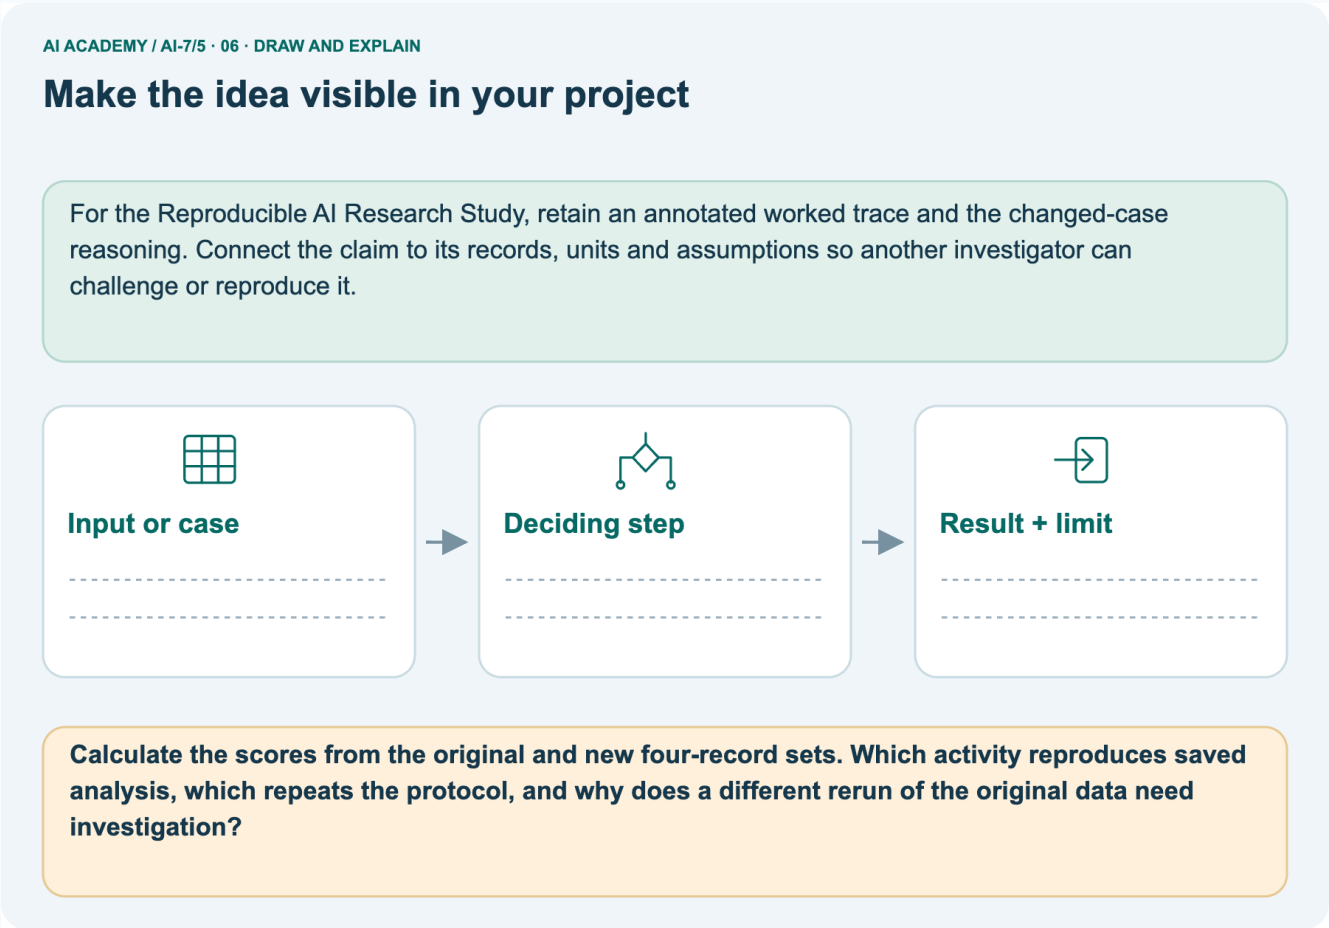

Reusing data and collecting new data answer different questions. A different new-sample result can arise without a code error; inspect both protocols and variability.

Limit: Four-case samples are illustrative; neither result alone establishes broad reliability.

Explain the case, then point to a limit on the claim.

My picture explanation, deciding evidence and one limit

06. Make the idea visible in your project

Follow the labelled picture with the matching explanation. Open the vector diagram

For the Reproducible AI Research Study, retain an annotated worked trace and the changed-case reasoning. Connect the claim to its records, units and assumptions so another investigator can challenge or reproduce it.

Draw your **input**, deciding step, result and limit. Supported question: Calculate the scores from the original and new four-record sets.

Which activity reproduces saved analysis, which repeats the protocol, and why does a different rerun of the original data need investigation?

Draw your project trace and justify the deciding step using **evidence**.

My picture explanation, deciding evidence and one limit

Save or print your responses for your portfolio. Progress and drafts on the hosted website stay in the current browser. Use only fictional or teacher-approved data.
